CALIFORNIA FARMER AND JOURNAL OF USEFUL SCIENCES.

VOLUME XVI. SAN FRANCISCO, CALIFORNIA, FRIDAY MORNING, SEPTEMBER 6, 1861. NUMBER 1.

The California Farmer.

AND JOURNAL OF USEFUL SCIENCES.

COLONEL WARREN, Editor and Proprietor.

PUBLISHED EVERY FRIDAY MORNING.
Office—No. 156 Montgomery street (up stairs), near Jackson
SAN FRANCISCO.

TERMS.—By mail, for one year, $4; for six months, 2 50. For a club of five new subscribers, a sixth copy will be sent gratis To City subscribers, delivered by carrier, 12½ cents a number, or $5 a year in advance.

☞ Advertisements and Subscriptions must be paid for in advance.

JOB-WORK—Of every description, done with promptness, at fair rates; orders will be faithfully attended to.

The Turf.

The Greatest Race on Record.

It has been the intention of the editors of the Farmer to publish all the races of the olden time at such periods as there was a stagnation in local racing matters; accordingly we publish Black Maria's great victory. Two generations have passed away since this fearful struggle took place on the great racing-ground of America, which bears equality to the Beacon Course of New-market, England, where Flying Childers and O'Kelly's Eclipse made their great performances. Our readers will bear in mind that this is the only four-mile race in which five heats were actually *run* to decide the race, although Charmer once won the fourth heat and galloped over for the fifth, at New Orleans. This sketch is, we believe, from the pen of the late Cadwallader D. Colden, Esq., a member of the New York Bar. It was written for the American Turf Register for December, 1832:

After the horses were brought upon the ground, much anxiety was exhibited as to the event of the coming contest; and the interesting little Trifle appeared to be the favorite among the betters, as well as the spectators. "Five to four, Trifle against the field," was current betting; and "five to three, Trifle against Black Maria," were repeatedly offered and refused. Indeed, this offspring of the far-famed Lady Lightfoot seemed to have but few friends or well-wishers, comparatively speaking; and bets were repeatedly offered that she would not take *a heat*. Prepossessions in favor of the Southern mare appeared to exist among a decided majority of the spectators; and as she was foaled "south of Mason and Dixon's line," it seemed a matter of course that she was to win. Indeed, if unfailing spirits, beauty of form, and a peculiar quietness of manner, could supply the defect of size, Trifle would not be considered as *such* in any thing but *name*. She is *race-horse* in every just sense of the word, but a race-horse of the smallest pattern—not over fourteen hands and a half high—of just proportions, undoubted bottom, and considerable power. Her color a bright chestnut, with a blaze, indicating spirit and blood.

Black Maria, in size and general appearance, is in all respects unlike her rival, as is well known to Southern as well as Northern sportsmen. Her color is indicated by her name, and her great size, strength, and stride, show her a worthy daughter of a noble sire. Indeed, in her the blood of Eclipse and Lady Lightfoot are in no way disgraced, as this race will most fully prove.

Lady Relief and Slim were almost unknown to fame; but certain individuals present were aware that the former had, upon a previous occasion, won the last half of sixteen miles; and *they* looked for sport, unexpected by others, if it should happen that the two first heats were not taken either by Trifle or Maria. The latter, it was known, had the *foot* of Relief; as they met on the first of the month at Poughkeepsie, and contended together for the three-mile purse, which was taken by Maria with great ease. As the trumpet sounded for the horses to come up to the starting-post, they severally appeared, exhibiting their various tempers by their individual behavior. Black Maria—who had the inside track—showed neither alarm nor anxiety. She was as calm and unimpassioned as if she had been a mere spectator; and this coldness of demeanor won no "golden opinions" among the lookers-on. Trifle exhibited high spirits, brought down to their proper level by judicious breaking and training. A slight tremor ran through her frame; and an impatient lifting of the fore-foot, now and then, showed that she was alive to the coming struggle.

Lady Relief, on the contrary, was all fire and animation—ready to break away from her groom, and dash through all obstacles for the sake of victory.

Slim exhibited an impatient spirit, and seemed, by her anxiety, to show herself a descendant from that Childers who always ran—at least on our course—without "whip or spur."

At the tap of the drum the four went off well together, Relief taking the lead within the first quarter, closely followed by Slim, then by Trifle, and last, but not least, by Black Maria. The first mile indicated a "waiting-race," as all the riders had their horses under the hardest pull; each seeming desirous that his antagonists should take the lead. Trifle, impatient at such *trifling*, began to make play, and this aroused Black Maria, who was trailing along quietly, behind the whole. With a few huge strides, she brought herself up to the front, passed the whole before she came to the Judges'-stand, followed closely by the gallant little Trifle, who "stuck to" her like an accompanying phantom. At the beginning of the third mile the leading nags made play, and during the whole of it Maria held the lead, followed closely by Trifle; while Relief and Slim were—and, as we believe, *not* willingly—at a most respectable distance in the rear.

After passing the Judges'-stand and entering upon the fourth mile, and after compassing the turn upon the southerly side of the course, Trifle "made a dash" at Maria, and ran her so hard down the descending ground upon the straight side, that her sable antagonist—perhaps not unwillingly—gave up the track, which was taken by the Southern lady, and kept, with apparent ease, round the turn, until you come to that part of the course which looks up towards the Judges'-stand. Here, at a moment when all opinions had given Trifle the heat, as a "safe thing that could not be missed," Maria "went at her," and before you could count one she shot by Trifle like an arrow, and won the heat with ease; there being a considerable gap between herself and Trifle, and a much greater one between the latter and the hindmost horses.

Here, then, was a disappointment on all sides. Black Maria, that was not "to take a heat," or who, at all events, had not foot enough to brush with the speedy little Trifle, had beat the field, in the last quarter, in what she was not supposed to possess; namely, *speed*. Indeed, we think that the rider of Trifle committed a mistake in making his dash at Maria at the beginning of the fourth mile. As he had commenced a trailing-race, his obvious policy was to wait until he came to the last turn; then run up to his antagonist upon ground where he had a decided advantage, from the size and form of his horse, and finally make "his run" upon the straight side, coming in. Had he followed this course in the first heat—as he did in the second—we might possibly have had a different tale to tell; for his little nag obeys the spur well, and is a hard one to beat upon a brush. But, by running *at* Maria on the northerly side of the course, he distressed his mare, enabled his antagonist to come round the turn under a strong pull, and make a run at him at the very moment when he was least prepared for it. The result has already been shown. Time, first heat, 8:06.

It may be here remarked, that in consequence of the rains, which had prevailed for several days previous to the race, the course, although good, was unusually heavy; so much so, as to make a difference of several seconds, probably, in the *time* of a four-mile heat. The top of the ground was not perfectly firm, and consequently the foothold of the horses was yielding and insecure. On a hard track, the time of each heat would have been considerably reduced.

Notwithstanding the unexpected success of Maria, she seemed still to have but few *real* admirers; although her owner and his friends stood manfully by her, and kept their spirits up to the betting-point. Trifle was still the favorite, and it was a settled thing, "at all events," that Maria was not to "win the money." Lady Relief, at this moment, had not attracted much attention, except from one circumstance: her saddle—which was a very small one—slipped from under her rider, who, nevertheless, as his girths had not parted, stoutly kept his seat upon her bare back, his feet in the stirrups, with the saddle before him! It was observed, however, that she ran with great spirit; and what she *might do* the wise ones could not tell.

At the start for the second heat Black Maria appeared calm—as is usual with her—while Trifle and Lady Relief were all animation. They went off as if this heat was to be won by *running* instead of waiting, as in the first heat; Relief taking the lead, followed by Slim, then by Trifle, while Black Maria brought up the rear. Ere they had accomplished one mile, however, Trifle had passed Relief and Slim, while Black Maria, taking advantage of the rising ground as you come up to the Judges'-stand, thundered by them all with her long strides, and took up her station in front, closely followed by Trifle, whilst the others again dropped behind. Indeed, the pace at which they were running seemed so unreasonable to Miss Slim, that she concluded that she would not keep such company any longer; and as she could not run away from them by pursuing her course upon the track, she very wisely abandoned it altogether at the end of the third (seventh) mile, and quietly walked off the course. Maria, in the meantime, led Trifle, with apparent ease, round the second, third, and fourth miles, until you come to the "run-in." And here her rider, instead of giving her the "persuaders," to make "assurance doubly sure," turned his head round to look for his antagonist; and he was not long in finding her, for Trifle, close at his heels, went at him up the straight side, whip and spur, gradually gaining at every step. Maria's rider begins to "look wild." She is at her throat-latch, and the Judges'-stand not six feet off! She makes a desperate effort, and head and head they pass the stand—a *dead heat!* Time, 7:55.

Here, again, all were at fault. One party were crying out to the rider of Maria, "Why did you not stir yourself! One blow of the whip, before you came to the distance-post, would have won the race!" I had no whip, sir; Maria won't bear it; it *discourages* her. She must run under a pull, with the spur as an admonisher." Again a thousand rumors were afloat. Trifle was as gay as a bird—in no way distressed. She had *'posed* the "big 'un," who looked, as imagination said, both "sick and sorry." "It was a "safe thing," and "Black Maria can't win—she's done up!"—went round like wild-fire, from mouth to mouth.

In the meantime, Lady Relief was little thought of; but a Jerseyman was heard to say, "We'll show 'em some of the Eclipse pluck yet, before we've done!" At the sounding of the trumpet for the third heat, Trifle and Relief came up in great spirits, while Black Maria seemed in no way ambitious of another trial. But she's always cool; and, as her mode of starting is reluctant and slow, nothing can be safely argued from her spirits.

At the tap of the drum, Trifle and Relief went off from the score, leaving Maria some distance behind. In the course of the first mile, however, she lessened the gap between herself and the leading horses, and got well up to them. But it would not do; she could not pass. "What horse is that leading there? Surely it can't be Lady Relief! It is, upon my soul! The Jersey mare's ahead!" And, sure enough, so she was. The nag that had attracted so little notice, as neither to be heard nor cared for, had taken the lead upon the fourth mile; and away she ran, keeping the track in spite of them all, until you come within the distance-pole, on the last quarter's stretch. And while she was leading, well ahead, from some unaccountable circumstance the boy pulled her up at once, and Trifle shot by and won the heat. Time, 8:13.

Black Maria was "well up" during the whole race, but she now fell into complete disfavor; and "she's done up"—"an even bet she don't come again"—went round the field with great confidence. It is the writer's opinion that Relief could have taken the heat if she had been urged up to the Judges'-stand, and that she *ought* to have won it. As it was, Trifle, who well deserved her honors and the admiration of her friends, had been victorious. She had run twelve miles, winning the twelfth; and the little game creature appeared as fresh as ever. It was *now* settled that she was to win the money; although it might be that Relief, who was fast rising in favor, might make her "run for it." Indeed, the latter did not seem in full vigor until she had run two heats; and now her nostrils opened, and she pawed the ground, as if just brought upon the course.

They are saddled for the fourth heat; and here is to be a struggle until sixteen miles from the beginning are accomplished. Black Maria is in no way distressed, Relief full of spirit, but Trifle's to win the money. Off they go; Relief takes the lead, followed by Trifle, and then the Black. Miles are passed over, and yet Relief is ahead. "How is this? can't Trifle pass? Is the Jersey mare ahead?" She is, indeed; and ahead like to be. A better, truer, tougher, and more spirited piece of stuff never came from the loins of old Eclipse. She takes the track from the score. Trifle goes at her, but "can't do it." Three miles and a half are accomplished, and Black Maria has passed Trifle, and is close at the heels of Jersey. Now they come up the straight side. The black is at her, and Relief takes the whip like a glutton. Maria comes up and laps her—she's at her shoulder; but they pass the stand, and Relief takes the heat by a neck. Time, 8:39.

"Huzza for *Jersey!*" rings over the course; and a look of pity is cast upon the gallant little Trifle, who had done her utmost—"Black Maria won't come again," says a wise one, with a knowing look. "I don't know that," says a Yorker. "If she had run twenty straight yards *farther*, she would have taken the heat." "She is distressed," is the reply. "Distressed! *may be she is!* I saw her lay her ears back, and lash out with her hind feet, after the boy dismounted from the sixteen miles, as if her sinews were of whipcord!"

Here was an interesting point, *five* heats, in all, were to be run, and twenty miles to be passed over. "The like was never seen on this course before!" says a Long Islander. "Bottom's the word—how go the bets?" "At a stand still. Trifle's distressed; but Lady Relief has more life in her then anything that ever ran sixteen miles before."

Up they come for a fifth heat; Relief all fire, Trifle *very sorry*, and Black Maria now begins to *paw the ground!* This she had not done before. Off they go; Relief ahead, Trifle after her, and Black Maria allowing no gap. She sticks to them like a spirit; and in the nineteenth mile the gallant little Trifle is reluctantly compelled to give it up. The Eclipse mares are obstinately determined to "play out the play," and the little chestnut is taken off the track, completely "done up." Now comes a struggle for the honors of a *twentieth* mile, between two half-sisters—whalebone both—and "never give it up" 's the word. Black Maria pushes up the straight side, as you enter upon the fourth (twentieth) mile, with a stride that counts terribly upon the steps of the Lady, who has *relief* now in nothing but name. The black is so close upon her that she almost touches her heels. She pushes round the turn, and goes at her on the straight side like a quarter-horse. They brush down the straight side with invincible courage; but that long untiring stride is too much for relief. Maria gives her the go-by, takes the track—keeps it in spite of all exertions—leads round the turn, and thunders up toward the Judges'-stand, hard in hand, untouched by whip or spur—passes the goal for the *twentieth* time, and wins the race. Time, 8:47.

Neither of the Eclipse mares appeared much distressed, and they ran the last mile with the greatest spirit and stoutness. Relief is a nag of the most extraordinary bottom. She seems to become fresher after twelve miles, and then runs off as gay as a lark. As for Black Maria, she is literally "too fast for the speedy, and too strong for the stout." She ran the twentieth mile with a freshness and vigor that surprised everybody, and the spectators at last *actually conceded* that she is "game!" That she can conquer either Relief or Trifle, at two heats, in a *match*, there can be no manner of doubt; and that she is a "hard one to beat" in *any* race, even by a field, all sportsmen must now believe. She ran at her antagonists *every heat*, and at last let them know what it was to run for the honors of a twentieth mile!

Of the three placed first in this memorable race, Black Maria was the first to recover, though for months she was but the shadow of herself. She came out in the following May against a strong field, and won, while Trifle was crippled and laid up until the September season of the ensuing year. Lady Relief, as game a filly as ever started, and as true as steel to the last, died within a few weeks from the effects of a cold and exhaustion. Who that was present that day, and marked the meek expressive glance cast up towards the Judges by one of these doomed ones—Black Maria—when brought up to struggle through a fifth heat, will ever forget it?

Union Course, L. I., Saturday, Oct. 13, 1832 — Jockey Club Purse, $600—conditions as before—Four-mile heats.

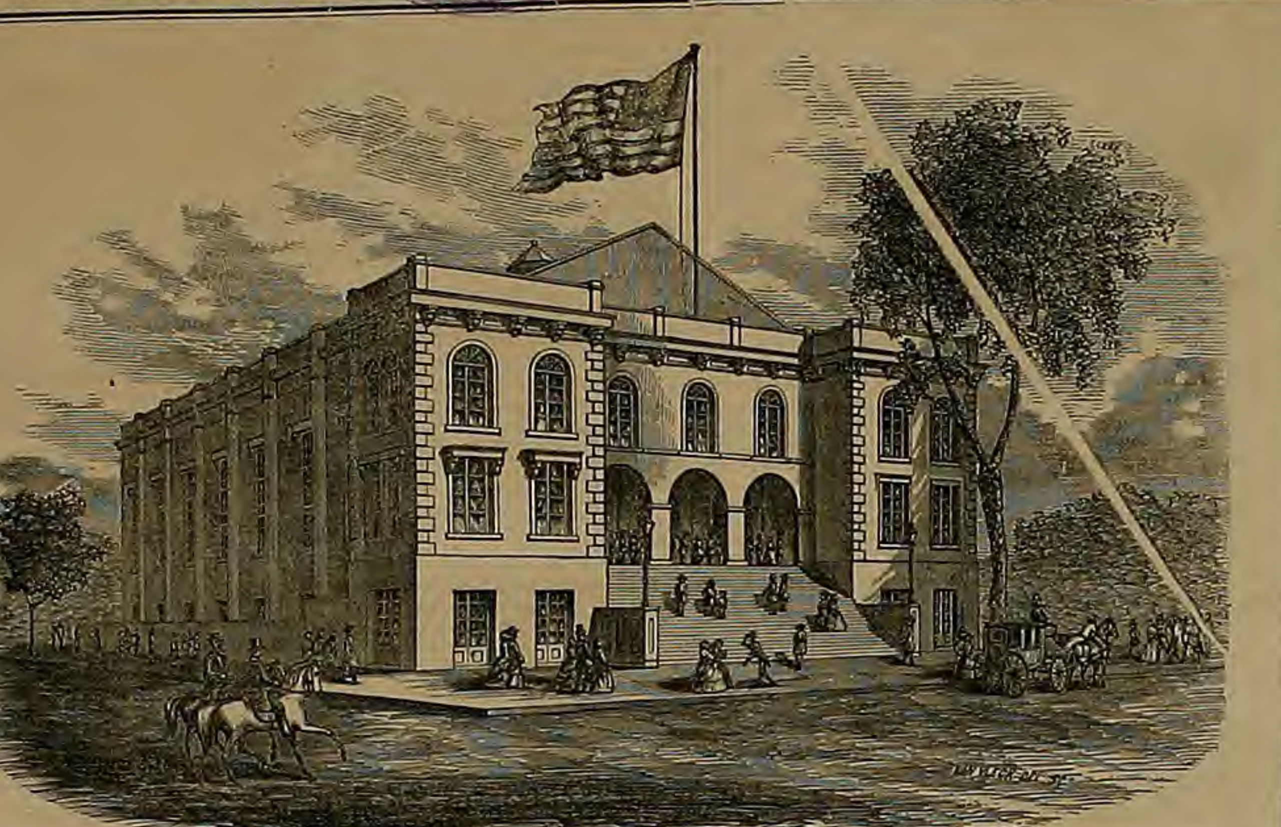
◆

Pacing.—The race last Saturday between Roe Allen and Aleck Barnes, over the Pioneer Course, was easily won by the latter, in 2:59—2:52½.

◆

Fine Horses at Mokelumne Hill.—When at this place, there were two fine Stallions of the Peacock stock from the Pulgas ranch. They were in the hands of John P. Shear, Esq., and Chas. Lombard, Esq. They were really splendid Animals.

The Ladies Riding School.—One of the best Institutions in our city, is the Riding School of Orrick Johnson. Mothers and Daughters, who value Health, should, by all means, improve the opportunity to secure the healthful exercise of this fine Establishment.



AGRICULTURAL HALL OF SACRAMENTO COUNTY, ERECTED 1859, FOR THE STATE SOCIETY'S FAIRS.

Irrigation an Injury to Vineyards.

We call immediate attention to the following letter from our excellent correspondent in France. Here is the *proof* of the truth of what we have been urging upon the readers of the Farmer in relation to Irrigation for the *past three years* or more, in fact always. Vineyards, orchards and gardens have been ruined; our warnings have been unheeded; and ruin was the result.

We now ask a careful reading of the following letter. These facts we trust must convince every reader that Irrigation has done great injury to our vineyards, not only to the crop but to the vines, and to the wine made from the crop, and to the reputation of the wine also. A different treatment must be had with our vineyards or the vineyards of California will be lost. We hope immediate action will be had among our vine-growers, and *a* stop put to the evil *before* it is too late. As we have often said, we are satisfied a great portion of the mildew on the grape arises from irrigation. We could point out many cases in proof, but every grower must observe these results himself:

LETTER NO. 4 FROM OUR PARIS CORRESPONDENT.

Epernay, France, July 25, 1861.

Editor Farmer: In your number of April 12th, 1861, I see an excellent article entitled *Irrigation an injury to the Grape*. You cannot, my dear Sir, too much insist on this important point! It is of universal experience in France that vines planted in moist or clay soil, and irrigated vines, produce Wines which are not only weak and void of *acidity* or *astringence*, but which possess an *aguish* or *watery taste*, and are without flavor whatever! This is not only the experience of France, but of *all* Wine-making countries of Europe!

What is necessary for the Vine is a dry and warm weather; in a rich soil with a frequent cultivation. The Vine not only resists dry weather but flourishes in it most happily. It is not then water that we need for our vineyards, but a frequent use of the plow; the rich soil we already possess.

What tends to prove that irrigation injures the vine is, that during the greatest heat you will see the vine-leaves clothed with the most beautiful green; let it but rain, and in a few days, in a few hours after, you will see your vineyard spotted with yellow leaves.

By irrigation you *may* produce more Wine, but all that you gain in quantity, you lose in quality, and much more, for your Wine wont keep.

Irrigation may not be the only thing which spoils the quality of California Wines; manuring, may be, comes in also for a large part in this destruction, in spite of the richness of our soil! A person who has become accustomed to a certain habit cannot get rid of it without great pains, and sometimes even without injury to his health! So it is with the manured Vine; once manured, manure is necessary for its existence, and its use cannot be stopped without danger of its perishing. This is not the only inconvenience of manuring: it always communicates more or less of its disagreeable odor to the fruit, and the Wine made from it; though the produce be more abundant, it is always to the prejudice of the fruit.

I advise all California Vine-growers to put a quick stop to both irrigation and manuring in their vineyards, for they are the destroyers of their quality and reputation.

Being engaged in a conversation the other day, on the cultivation of the Vine, with a large Vine-grower of Ay, we were overtaken by a shower of a few moments. "Do you see these few drops of rain?" remarked my companion; "they will cost me at least six per cent loss on my vines this year."

I finish as I began: you cannot too much insist on the harm done to the Vine by irrigation.

I remain, Sir, yours, truly,
ARPAD HARASZTHY.

◆

The European Markets for California.

It will be recollected that we have urged the attention of shippers of Breadstuffs and Wool, to the European markets, as a good outlet for our surplus produce.

A large amount was shipped last year, and we are rejoiced to note the present activity for that market again, this year. It will be seen by our Market Report, that quite a number of vessels have loaded for Liverpool, Sidney, and New York, each carrying a full cargo of Domestic produce. There is one feature of our shipments that is most gratifying: the quality of our Grain is far better than last year's; and it is cleaned better, and put up in neater style. Our Grain-growers should use "Hunter's Grain Separator;" all good Grain, well cleaned, will find ready sale abroad, at good and fair prices; while poor Grain, badly put up, goes hard. This was found out last year, and will be improved on this year. See Advertisement for the shipment of Grain for England.

◆

Agricultural.—We are pleased to notice the enterprising new paper, the Stockton Daily Independent, is disposed to give due attention to the important interest of Agriculture, the foundation of all prosperity; and we congratulate that paper on having secured the services of William Thompson, Esq., the able and well-known writer on Agriculture, as editor of that department. The readers of the Farmer in times past, have ample evidence of his ability. The field is vast, and we welcome so efficient a co-worker in the extensive district of San Joaquin.

THE CHINIGCHINICH.

CHAPTER VIII.

Of their Mode of Life and Occupation.

AMONG the natural inclinations with which man is endowed, is that of defending and preserving his own individual person. For this reason, he feels it his duty to consider how and in what manner he is to live, and how to procure the necessary means of sustenance. Necessity, "the mother of invention," has therefore revealed to him how to arrange the rustic implements used for securing his food. No doubt these Indians passed a miserable life, ever idle, and more like the brutes than rational beings. They neither cultivated the ground nor planted any kind of grain; but lived upon the wild seeds of the field, the fruits of the forest, and upon the abundance of game. It is really surprising, that during a a lapse of many ages, with their reason and experience, they had not advanced one iota in improving the things that would have been useful and convenient for them; for instance, in agriculture, in planting and cultivating those seeds which were most appreciated, also trees around their dwellings, bearing such fruit as they were obliged to bring from a great distance. But no! nothing of the kind; and in no part of the province was to be found aught but the common, spontaneous productions of the earth.

It cannot be denied that these Indians, like all the human race, are the descendants of Adam; endowed with reason, or in other words, with a soul. When we read of the ancients, of their having transplanted trees which were wild, thus increasing their abundance and quality, and of their planting seeds, which improved by cultivation, we cannot but wonder that a knowledge so important was unknown here until the Missionary Fathers came among them and introduced the planting of wheat, corn, beans, and other grains, that are now so abundant everywhere. I consider these Indians, in their endowments, like the soul of an infant, which is merely a will, accompanied with passions—an understanding not exercised, or without use; and for this reason, they did not comprehend the virtue of prudence, which is the result of time and reason—of the former by experience, and the latter by dissertation. Although ripe in years, they had no more experience than when in childhood—no reasoning powers, and therefore followed blindly in the footsteps of their predecessors.

Their occupation consisted in the construction of the bow and arrow, in hunting for deer, rabbits, squirrels, rats, etc., which not only provided them with food, but with *clothing*, if so it can be called. Their usual style of dress was a small skin thrown over the shoulders, leaving the remaining portion of their person unprotected; but the females formed a kind of cloak out of the skins of rabbits, which were put together after this manner: they twisted them into a kind of rope, that was sewed together so as to conform to the size of the person for whom it was intended, and the front was adorned with a kind of fringe, composed of grass, which reached down to the knees; around the collar it was adorned with beads and other ornaments prized by the Indians.

They passed their time in plays, and roaming about from house to house, dancing and sleeping; and this was their only occupation, and the mode of life most common among them from day to day. The old men and the poorer class devoted a portion of the day to constructing house utensils, their bows and arrows, and the several instruments used in making their baskets; also nets of various dimensions, which were used for sundry purposes, such as for catching fish and wild-fowl, and for carrying heavy burdens on their backs, fastened by a strap passed across the forehead. In like manner the females used them for carrying their infants.

The women were obliged to gather seeds in the fields, prepare them for cooking, and to perform all the meanest offices, as well as the most laborious. It was painful in the extreme to behold them, with their infants hanging upon their shoulders, groping about in search of herbs or seeds, and exposed as they frequently were to the inclemency of the weather. Often it was the case that they returned home severely fatigued and hungry to cook the fruits of their toil; but perhaps there would be no wood, the fire extinguished, and their lazy husband either at play or sleeping, so that they would be obliged to go out into the cold for fuel. When the brutal husband came home, or awoke from his sluggishness, he expected his meal, and if not prepared at the moment, invectives and ill-treatment were the universal consequences. Poor creatures! more unfortunate than slaves! They were in such subjection, that for the most trifling offence punishment was the result, and oftentimes death; but, thank Heaven! since the introduction of the Christian religion among this unhappy race, the females have received more liberty and better treatment. The most wonderful of God's blessings enjoyed among them was the great facility with which they underwent their accouchment, when it would seem as if they endured no suffering.

CHAPTER IX.

Of their Principal Feasts and Dances.

As on all their feast-days dancing was the principal ceremony, I will endeavor to describe many of the ludicrous customs attending it. Such was the delight with which they took part in their festivities, that they often continued dancing day and night, and sometimes entire weeks. Their whole heart and soul were wrapt up in the amusement, and hardly a day passed without some portion of it being devoted to this insipid and monotonous ceremony. Chinigchinich gave to them as a religious precept that they should adhere strictly to this custom, and once previous to his death, whilst dancing, he was carried up among the stars. So this accounts for the enthusiasm universally observed among them on such occasions, and whoever did not take an active part in the festival, they believed would be chastised and hated by him.

The costume used by them, called the *tobet*, has been already mentioned in a previous chapter, when describing the dress of the "capitans" or "puplem;" but perhaps it would not be out of place to repeat the same, and in addition to give a description of that generally worn by females. In the first place, they fixed upon the head a kind of wig, called "emetch," that was made secure by a braid of hair passed around the head, into which they inserted various kinds of feathers, forming a crown, or as they termed it, an "eneat." Then their covering for the body was also prepared from the feathers of different kinds of birds, which were sewed together, and like a sort of petticoat reached down to their knees—this they called a "paelt." The parts exposed were generally painted red and black, and not unfrequently, white.

The females painted their faces, breasts, and arms, with a sort of brown varnish, imparting a glossy, and rather a disgusting appearance to their persons. From their necks were suspended a variety of ornaments, such as beads and pieces of shells. They never danced with the males, but each sex by itself, notwithstanding all danced at the same time, and after this manner: the males formed a file by themselves, and directly behind them, say two or three yards distant, the women were placed in like manner, and the musicians seated themselves upon the ground in front of all.

Many of their dances were very modest, and diversified by a number of grotesque movements, so that for a short time one could look on and witness their performances with some degree of pleasure; but they had no variety of figures, or songs, and kept on in the same monotonous movement. There were persons selected from both sexes to conduct the music, and for this purpose they had a kind of instrument, which they called "paail."

The most celebrated of all their feasts, and which they observed yearly, was the one they called the "Panes," signifying a bird-feast. Particular adoration was observed by them for a bird resembling much in appearance the common buzzard, or vulture [the condor of California—A. S. T.] but of larger dimensions. The day selected for the feast was made known to the public on the evening previous to its celebration, and preparations were made immediately for the erection of their Vanquech, into which, when completed, and on the opening of the festival, they carried the Panes in solemn procession, and placed it upon the altar erected for the purpose. Then immediately all the young married and unmarried females commenced running to and fro, with great rapidity; some in one direction, and some in another, more like distracted than rational beings, continuing thus racing, as it were, while the elder class of both sexes remained silent spectators of the scene. The puplem, painted as has been heretofore described, looking like so many devils, in the meantime dancing around their adored Panes.

These ceremonies being concluded, they seized upon the bird and carried it in procession to the principal Vanquech or temple, all the assembly uniting in the grand display—the puplem preceding the same, dancing and singing. Arriving there, they killed the bird without losing a particle of its blood. The skin was removed entire, and preserved with the feathers, as a relic, or for the purpose of making their festival-garment, Paelt. The carcass they interred within the temple, in a hole prepared previously, around which all the old women soon collected, who, while weeping and moaning most bitterly, kept throwing upon it various kinds of seeds, or particles of food, and exclaiming at the same time: "Why did you run away? Would you not have been better with us? You would have made pinole as we do, and if you had not run away, you would not have become a 'Panes!'" Other expressions equal in simplicity were made use of, and as the ceremony was concluding the dancing commenced again, and continued for three days and nights, accompanied with all the brutalities to which they were subject.

The Indians state that said Panes was once a female, who ran off and retired to the mountains, when accidentally meeting with Chinigchinich, he changed her into a bird, and their belief is, that notwithstanding they sacrificed it every year, she became again animated and returned to her home among the mountains. But the ridiculous fable does not end here: for they believed as often as the bird was killed it became multiplied; because every year all the different Capitanes celebrated the same feast of Panes, and were firm in the opinion that the birds sacrificed were but one and the same female. They had no evidence, however, of where she lived, or where she originated, and neither were the names of her parents known. The commemoration of the festival was in compliance with the commands given to them by Chinigchinich.

The kind of dance common among the natives was introduced by first preparing a large bonfire, around and into which the men promiscuously jumped, until all the fire was extinguished. The females stood a short distance from the scene, keeping up a continual screaming and moaning during the ceremony, and not until every particle of the fire was destroyed did the crying cease—then dancing commenced. Should it so happen that they were not successful in extinguishing the flames, or if there should remain and be discovered afterwards any sparks, the dancing did not take place immediately, but they remained silent and discontented. It was a bad omen, and signified the approach of some calamity. This dance was generally performed at night, but when introduced in their large feasts, and danced during the day, then, in addition to the ceremonies already described, they dispatched one of the most active of the tribe in quest of water, which, invariably, was brought from a great distance, and from a place designated. When obtained, they emptied the same into a hole previously prepared within the Vanquech. Then all went up into the temple, each one in his turn blowing with his mouth upon the water, and uttering expressions which were apparently designed to curse and not to bless; however, the latter was the interpretation given to me, and when this was done, they went up again in the same order to sprinkle their faces with the dirty water. The women remained some distance off, and on no account were they allowed to touch it.

Another dance equally ludicrous among these natives was conducted as follows: The males commenced first, dancing alone, and continued to do so for a short time, when they formed themselves in a line, and one of the females came forward in front of them, with her arms folded upon her breast, and danced up and down the file with many graceful turns and movements, which were several times repeated, when she retired, and the males resumed their part of the performances; and so they continued dancing, the males and females alternately, until it was time to change the monotony. They had another dance very similar, with this exception: that the female was entirely exposed, and whilst she was singing and displaying her person in many disgusting attitudes, the spectators, men, women, and children, all formed a circle around her. This immodest exhibition was also one of the teachings of Chinigchinich, but was introduced twice, only, during the year, and then outside of the town.

They had another, which was introduced on the occasion of the son of the puplem or the chief's first appearing in public adorned with the tobet. Not only every one of the place was invited to attend on that day, but also many from the neighboring towns, and the arrangements were as follows: When all were congregated together, the youth was brought forward, and they put upon him the paelt, or robe of feathers, such as was used by Chinigchinich, afterwards the crown, and then the exposed parts of his person they painted black and red. Thus arrayed, he commenced dancing, with the paail in his right hand, keeping time to the music of the singers, that did not cease until the lad was completely exhausted. If he were unable to dance, then one of the puplem was dressed in like manner, who, placing him upon his shoulder, danced before the assembly. After this was accomplished, one of the women rose up—a sister, an aunt, or some one nearly related to the youth, in all cases, however, a young person — who, immediately disrobing herself, danced in presence of the multitude.

[TO BE CONTINUED.]

How to Raise Hogs.

A. G. Mullins, of Kentucky, in a communication to the Genesee Farmer, offers the following hints on the raising of hogs:

We intend not to say how a few hogs can be raised to an advantage, but how many a man may raise them as a business, with the least labor and expense, and leave the land in the best condition. All farming, in my opinion, ought to be conducted with a reference to the continued improvement of the soil. Present gain, by a deterioration of the soil, will ultimately prove to be a loss.

To succeed in raising hogs, as in other stock, we should have a good stock. The Berkshire crossed with our common hog constitutes a very good stock. The Berkshire communicates its fattening properties and early maturity—two very desirable qualities—and the common stock gives size. A cross of the Berkshire on the Irish grazier makes a very good stock.

Say we have a good stock to begin with—a stock that matures early and fattens well. The pigs should come from the middle of March to May. There is a great advantage in pigs coming at this time, as we can graze them through two summers, and have them to keep only through one winter. They come to be of fine size by the second fall or winter. Hogs may be pushed into market younger, but at more expense in grain, and they will be smaller at fattening time, which is a great disadvantage.

The greatest profit in hogs is in grazing them, and turning them upon grain fields, where they can gather for themselves, and having them large and in good condition at fattening time. The sows and pigs should be kept in good growing condition, by feeding them on Indian corn, or corn meal made into slop. As soon as the clover begins to blossom, or a little before, turn them upon it. Sows and pigs should still be given some grain, while in the clover. Having a field of oats early sown—the size of the field to be in proportion to the number of hogs—and as soon as the oats are ripe, turn the hogs upon them to gather for themselves. To pasture hogs to the best advantage through the summer, it will be necessary to sow a field of rye, as above, and after they have eaten the oats, turn them upon the rye. Though the rye will be ripe before the oats, it is thought better to let the beards rot, and it will keep good in the field until September; whereas the oats will rot in a short time. After the hogs have eaten the rye they may go upon the clover again. They then should have old corn to keep them from being reduced in flesh; the second crop of clover not being as good as the first. This method may appear very wasteful to those not familiar with it, but if a little grain is left on the field, it will be an excellent fertilizer, and the straw and everything that grew on the field is left there, except the fat that is driven off with the hogs. This leaves the field in good condition.

The hogs should be kept in good condition through the winter and spring. The best place to winter them is in the woods, and let them have low, long, dry shelters to sleep in. Let them be turned on the clover the second year about the time it blossoms, and I prefer to give them a little grain. Then let them go on the oats and rye as they did the first year. When they come off the rye the second year, it is very important to grain feed them while on clover, until they are put up to fatten. It is a great advantage to have hogs large and in good condition when fattening time commences. A lot or small field of corn, early planted, to turn on about the 15th or 20th of September, is an excellent plan; or fence off with a temporary fence, a portion of a larger field. Continue the hogs in the field until about the middle of October or the first of November; then take them to a field intended to be plowed next season (a clover field is best) and feed them plentifully until about the first of December, at which time they will be fit for market or slaughtering.

By feeding down upon the field, you save labor of gathering, and leave all that grew upon it, except what is driven off in fat upon the hogs. By sowing the field in rye a few days before the hogs are taken off, a fine crop can be obtained. The grain left upon the fields pastured during the summer will soon spring up and afford a fine fall and early winter pasture. If it be intended to sow the oat and rye fields in clover, the pasturing down of the grain makes no difference. Take off the hogs as soon as they eat the grain. The decaying straw and manure left upon the field will be an advantage to the clover.

The hogs should be well salted, and have access to water. From the middle of October to the first of November, it is important to have a good, dry shelter for them to sleep in; earlier than that, they will generally sleep in the open air. If it is desired to fatten hogs the first season after we commence raising, of course we must buy them of suitable size in the spring. The number kept to breed from must be suited to the number we want to raise. A good brood sow will raise two litters a year, and from six to ten at a litter. A little experience in this matter will direct us aright.

By a strict attention to the above method of raising and fattening hogs, as much or more can be obtained for the grain than it can be sold for, and all of it fed upon the farm, which is no small consideration. By raising grain and selling it off the farm, it will be becoming poorer. By raising and judiciously fattening hogs, the farm will be growing richer. This, in ten years, will make a great difference. I have known some farms, reduced to almost sterility by bad management, by a proper management in sowing rye and oats, and clover, and feeding them on the ground, made very productive. Feeding Indian corn upon the land is very improving to it. I once knew a field planted in corn for four years in succession, and the last crop was as good as any that preceded it.

In regard to the worth of grain fed to hogs, I made one long-continued experiment, which satisfied me that it is remunerative. Some years ago, I had a lot of corn which I could sell for only twenty cents a bushel. I concluded I would feed it to some pigs, which came about New Year's, I gave them two ears a day each until April—about ninety days, I weighed an average one on the 1st of April, and it weighed 52 pounds. It was then worth 2½ cents a pound or $1 30. It had eaten one and a half bushels of corn. I then increased the feed to three ears a day until the 15th of July, about 106 days. Each ate, from April until the 15th of July, 318 ears; weight 130 pounds, and worth $3 25. They had eaten each, from January to the 15th of July, 498 ears, not five bushels of corn, which was only worth $1; whereas the shoat was worth $3 25. While corn was worth only $1 for five bushels in the market, less than five bushels was worth $3 25 fed to hogs. This was effected without clover in the summer. By calculating, the above weights at four to five cents a pound, you will have the worth of the pigs at present prices. This convinced me that corn can be profitably fed to hogs.

I think now I have redeemed my promise; shown how hogs can be raised, as a business, at the least amount of labor and expense, and leave the land in the best condition.

THERE is a veritable hermit who resides upon one of the Islands off Los Angeles. He lives in a cabin seven miles from a neighbor, refuses to converse with any one who happens to approach his quarters, but retires at once and closes the door. He is said to possess plenty of means, and a few years ago lived in Napa Valley, where he was remarkable for his social disposition and business capacity.

Don't Know that I shall Stay Here.

DON'T know that I shall stay here! How often we hear this remark; we hear it in every county, among all trades and callings. It is said by the tillers of the soil; the mechanic utters it; the trader speaks it; and even professional men catch the infection.

"Unstable as water, thou shalt not excell."

Never a greater truth! In our travels over the State, we have always observed, that the Farmer, who changes from place to place; the miner who runs to and fro; the mechanic who works here today and is gone to-morrow; the manufacturer who moves hither and thither; or the merchant or trader, who goes from place to place, seldom can do much: while the steady worker, the fixed Home-man, is sure to win.

"The rolling stone gathers no moss," is another trite saying; and we have in our register, numerous records of events, wherein we have prophesied certain results to those whom we have seen thus moving from "Dan to Beersheba;" at each move a little cost; no gains at neither; soon all is lost. This is not always the result of change. What we protest against, is that unsatisfied spirit, that roving disposition which unsettles all that comes in contact with it. To a young man setting out in life, no habit is so fatal as that of the "Rover," and no habit or trait of character so certain to result well, as to have a fixed plan of action, a settled and determined plan of life. This roving, changing, moving, from place to place, has retarded the prosperity of California greatly.

"I expect to go Home soon; don't think I shall stay here." Under this impression no plan is matured; opportunities are lost; time is wasted; "the summer is past;" the "harvest is ended;" and the man of unfixed purpose, finds his Garner empty; the flood-tide has gone for him; and he is now drifting on and down the stream of Time, to land among the "driftwood", on the leeshore of Adversity.

"Don't know that I shall stay here." To all such, we would say in kindness, make up your mind quickly: if you mean to go—go quickly, that your place may be filled by active men. If you stay, off coat and go to work, for there is no time to be idle. California is a Working Hive, or should be; and the time is near, when Drones must leave the Hive, and the sooner the day comes the better for our State.

Feeding Horses.

THE London Omnibus Company have lately made a report on feeding horses, which discloses some interesting information, not only to farmers, but to every owner of a horse. As a great number of horses are now used in the army for cavalry, artillery and draught purposes, the facts stated are of great value at the present time.

The London Company uses no less than 6000 horses; 3000 of this number had for feed bruised oats and cut hay and straw, and the other 3000 got whole oats and hay. The allowance accorded to the first was: bruised oats, 16 pounds; cut hay 7½ pounds, cut straw 2½ pounds. The allowance accorded to the second: unbruised oats, 19 pounds; uncut hay, 13 pounds. The bruised oats cut hay and cut straw amounted to 26 pounds; and the unbruised oats, etc., to 32 pounds. The horse which had bruised oats, with cut hay and straw, and consumed 26 pounds a day, could do the same work as well, and was kept in as good condition, as the horse which received 32 pounds a day. Here was a saving of six pounds a day on the feeding of each horse receiving bruised oats and cut hay and straw. The advantage of bruised oats and cut hay over unbruised oats and uncut hay is estimated at five cents a day on each horse, amounting to $300 a day for the company's 6000 horses. It is by no means an unimportant result with which this experiment has supplied us. To the farmer who expends a large sum in the support of horse power, there are two points this experiment clearly establishes, which, in practice, must be profitable: first, the saving of food to the amount of six pounds per day, and second, no loss of horse power arising from that saving.

The Best Time to Cut Timber.

IT has often been said that when the moon is on the wane in February, when the sap does not flow, is the best time to cut timber for shipbuilding, especially on the sea-board; moreover when cut at that time, it does not sprout from the stump. The kinds of timber most apt to be eaten by grubs are hickory, ash, chestnut, beech, maple, pine, and oak. All of these, with the exception of pine, if cut in April, will sprout, and grubs will eat the bark and sap-wood through, especially if corded up, and much of it will be reduced to powder pest; the wood becoming almost worthless, if exposed to the weather. There is a time in the third quarter of the moon, in August, when, if timber is cut, it will not sprout again. The grubs will eat the bark only and not the sap-wood, and the timber will season well, becoming hard, and will stand exposure better than that cut in February. It is more dense and will not white-rot. If made into shingles, they will not become rough, and is altogether better whether made into shingles, rails, or fence-posts. At the same period of the moon, in June, if oak or hickory is cut, grubs will not eat the sap-wood, and the bark will not peel. Ash, if peeled, will prove to be very hard and stiff, and will stand the weather well. It has been asserted by those who have tested the matter, that if the top end of timber for posts is placed in the ground, they will last twice as long as they will do if the butt end is placed downwards.

I have tested this both with oak and chestnut, and find it to be the case. Timber for firewood that snaps when burning, will not do so if cut in June.—[J. S. Merriman, Burton, Ohio.

General Washington Rose.

THIS is the name given to a new, superb and distinct hybrid rose, says Hovey's Magazine, raised by our correspondent, Prof. C. G. Page of Washington, D. C., who produced the Cinderella and America. The General Washington is a true Tea of the highest order, and combines all the excellences of the best roses of this class. It is perfectly and generally of the color of its female parent, the old Tea Mansais, though variable from this and livelier, with pink shades among the outer petals, and cream color towards the center. Its great charm, however, is in the bud when half expanded. In this state, which is retained for two days or more, it presents a perfect bell form, which is very distinct and uncommon in roses. When open it is entirely full and very large, and has never thus far shown a green centre, which is so apt to occur in the first class Tea roses. It is a very free bloomer, a vigorous grower, has a hardy habit, and the foliage is clear and handsome, being well fringed with the dark mahogany color, always indicative of healthful exuberance in the rose.

To Wine and Fruit-Growers.

BY a Concurrent Resolution of the Legislature of California, three Commissioners were appointed by his Excellency Gov. Downey, on the Growth, Culture, and Improvement of the Grapevine in California, and in other respects to promote the interests of the State in raising Wine, Fruit, etc.

To do this effectually, it is resolved that the undersigned, one of the Commissioners, shall forthwith start on a tour to all the Vine-growing countries in Europe; but as the Legislature failed to make an appropriation to defray traveling expenses, the Commissioner proposes the following plan, viz:

Each person paying $25 shall receive twenty-five varieties of choice Vines, two cuttings of each, among them the seedless Sultana Raisin, the Currant, the celebrated Madeira and mammoth Palestine, two paper-shell Almonds of Smyrna and the other of Italy, two Oranges of choice variety, two Lemons, two Olives, two Figs, two large Italian Chestnuts, two Pomegranates, and a bound volume of the report, which will contain full instructions for the making and fermenting of Wine, as it is done in the different countries, also the manner in which Champagne and Cognac Brandy is made, showing the mode of curing and packing Raisins, Figs, and Currants, pickling Olives, making Olive-Oil, drying and curing the celebrated Mecklinburgh Fruit, preserving Grapes and other Fruits in cans, also giving statistics of the Wine produced by every Grape-growing country, the amount received for the produce exported, consumed, revenue, cost per acre for planting cultivating, and making the Wine, accompanied by lithographs, showing the machinery, etc. This book will not fall short of about 600 pages, and may contain more. It will be very valuable to every person cultivating the above mentioned produce.

Persons paying $50 will receive sixty varieties of Vines, two of each Grape, five Almonds, five Olives, five Lemons, five Oranges, five Figs, five Chestnuts (each of the above number will be a different variety, wherever so many varieties exist), two Pomegranates, and a bound volume of the report.

Persons paying $100 will receive one hundred and fifty varieties of Grapes, two cuttings of each variety, two Fruit trees of every variety of Almond, Olive, Orange, Lemon, Chestnut, Fig, Pomegranate, and a bound volume of the report. Persons whose soil and climate are not adapted for the culture of the Grape can have in proportion to their subscription such Fruit-trees as they can cultivate.

Persons subscribing $500 will receive two cuttings of every variety of Grape now in cultivation in the civilized world ([illegible] are known now), also two trees of every variety of Olive, Orange, Lemon, Pomegranate, Almond, Fig, etc., with a bound volume of the report.

It would be advisable for Farmers and Nurserymen to club together and subscribe $500; in this manner they can get every variety of both Grape and Fruit-tree. By propagating the same, they would possess every species of Tree and Grape now known in Europe.

The desire of the Legislature was evidently to promote the Vine-growing and Fruit interest of the State. The best mode of doing this was naturally left to the judgment of the Commissioners. The intention of the Commission is to import a large number of Vines and Trees at once, and to distribute the same among the citizens of the State. The above mode seems the most [illegible], and at the same time is practical. If the Commissioner finds that the cost of traveling and purchasing is less than [illegible], then each subscriber will receive more Vines and Trees in proportion.

The great [illegible] which prevented our success in [illegible], was that orders were badly filled, the [illegible] properly attended to, invariably when they arrived they were either entirely spoiled, or so much damaged that from [illegible] but a few lived.

To obviate this difficulty, the intention is that one or more gardeners (according to the amount subscribed) shall be employed on the steamer to water, air, and moisten the Vines and Trees. Very delicate Plants will be brought, planted in sand, in pots, on the steamer's deck.

Every Vine-grower should bear in mind that no soil, climate, or manufactory will make generous, costly Wine, unless there be a well assorted variety of Grapes; as no quality of Grape can give the so much admired bouquet to the Wine; therefore to effect this you must have foreign varieties, and the greater number the better.

The Commissioner's intention is to visit France, Spain, Portugal, Germany, Hungary, Italy, Greece, Smyrna and Egypt, and make purchases there of Vines and Trees.

Within one year from now California will possess all the varieties of Grape-vine, Almond, Olive, Chestnut, Orange, Fig, Lemon, Pomegranate, known in the civilized world, together with such other Fruits as are calculated to do well in the climate of California.

Furthermore, the undersigned will make it his especial duty to induce and form emigration companies from the Vine-growing countries to settle in California. He also proposes to make arrangements with large capitalists (who are engaged in France in purchasing Grapes from the producers, and manufacturing the same into Wine, Brandy, and Champagne) to establish houses in different parts of our State to purchase the Grapes and make Wine, etc., and erect a bottle manufactory. This is what California needs.

The undersigned has full confidence that, with proper aid and inducements, he will succeed as well with the emigrants as with the commercial houses. As the present tariff excludes all inferior French and German Wines and Brandies, now is the favorable time to act. All that is necessary is that the people of Europe should be made acquainted with our resources, and they will come to us by thousands.

Persons wishing to take advantage of this opportunity, can subscribe for any share named above at Wells, Fargo & Co.'s offices throughout the State, and will receive a receipt for the sum paid, signed by the Commissioner.

A. HARASZTHY,
Commissioner on the Growth, Culture, and Improvement
of the Grape-vine in California.

PATENT RIGHTS FOR SALE.

The following Patent Rights of very new and valuable inventions (of which we have models to show their value), are now offered for sale. We hold the rights for the States of California and Oregon, and Utah and Washington Territories.

A Fortune for a Mechanic.

We have the PATENT RIGHT for the whole Pacific Coast for the best and most celebrated HORSE HAY-RAKE known.

ALSO—A CIDER-MILL and PRESS of the most approved construction.

A fortune can be made with either of these machines, by an energetic mechanic. The models may be seen at our office.

No. 1. A New Rotary Subsoil Plow.

Patented April 6, 1858.

This invention completely pulverizes the soil after lifting it, a very valuable implement, and one which will receive universal commendation.

No. 2. A Corn Cultivator.

Patent now pending; papers expected.

With this implement the soil is first thoroughly plowed and deeply pulverized, and upon the return it smoothly and perfectly hills up and harrows the ground between the rows. A very new and valuable implement.

No. 3. An Improved Clothes Reel and Bar.

Patented January 3, 1860.

This valuable domestic piece of furniture can be used in the Laundry, the Kitchen, the Nursery or Chamber, and can be made plain or ornamental; standing in the same relation as a piece of important furniture as does Wheeler & Wilson's Sewing Machines; neat when used and ornamental when not in use.

No. 4. The Mechanic's Spirit Level.

Patented September 13, 1859.

This implement will be of great value to Contractor and Builders, being one of the most valuable inventions yet out. 2000 were ordered for the New York market just before the sailing of the steamer. Builders will do well to examine this model.

No. 5. A Musketo Bar.

This will be much wanted in California. It is simple in its contrivance, perfect in its working, and can be affixed very cheap to all styles of bedsteads. Hotels, public houses and private families will find it a useful invention.

Also, Hyde's Patent Post-Driver,

A most excellent labor and money-saving machine, for which we offer rights, as will be seen by a card in our columns.

Holding the rights to all these new inventions, we invite the public to call and see the models. All persons who may be desirous to purchase either County, City, Town, or Individual Rights, can do so on application to

2 COL. WARREN, Editor Farmer.

Farms for Sale.

A valuable Farm of about 400 acres of excellent land, well fenced, situated near Petaluma, can be had at a bargain if applied for soon.

ALSO—A valuable Farm with good buildings, an orchard and vineyard, and pleasantly located in the immediate vicinity of Sonoma. Will be exchanged for real estate in the city of San Francisco. 9

A Grand Chance for a Homestead

A valuable tract of very rich land, comprising 300 acres, situated in one of the most delightful valleys in our State, upon which there are 1000 Fruit-trees in bearing, a neat House and small buildings, and a Young Nursery, to continue the Orchards and Vineyard. A fine large stream of water runs through the grounds [illegible]. The whole is under fence of the best kind. The Fruit the present year will bring $2000. This Ranch will be sold a great bargain for Cash. Title Perfect. Inquire of Editor of the Farmer. 14

Valuable Blood-Stock For Sale.

We would invite all who desire Dairy-Stock of the very highest character, to call on us, or write to us, as we have for sale about twenty-five head of as choice Durham Stock as there is for sale in the State, as follows:

One Full-Blood Durham Bull, 2 years old, of the highest pedigree, and as handsome an animal as has ever been offered in this or any oth[illegible] [illegible], a perfect picture.

One young Full[illegible]

Several young [illegible] Durham, Devon, and

About twenty, [illegible]

Ayrshire, with [illegible] very best milkers in the

Am[illegible]

State. In[illegible] 15

Who saw the Steer.

The richest thing of the season, says the Newburyport Herald, came off the other day in the neighborhood of the market. The greenest Jonathan imaginable, decked out in a slouch hat, a long frock, and a pair of cowhide boots, big as gondolas, with a huge whip under his arm, stalked into a billiard saloon, where half a dozen persons were trundling the ivories, and after recovering from his first surprise at the (to him) singular aspect of the room, inquired if "any on 'em had seen a stray steer," affirming that the "blarsted critter got away as he came through the town with his drove, t'other day, and he hadn't seen nothin' on him sence." The bloods denied all knowledge of the animal in question, and with much sly winking at each other, proceeded to condole with him on his loss in the most heartfelt manner. He watched the game with much interest, as he evidently had never seen nor heard of anything of the kind before, and created much amusement by his demonstrations of applause when a good shot was made—Je-ru-salem! being a favorite interjection.

At last Jonathan made bold to request the privilege of trying his skill, when he set the crowd in a roar by his awkward movements. However, he gradually got his hand in, and played as well as could be expected for a poor greenhorn. All hands now began to praise him, which so elated him that he began to think himself a second Phelan; and he actually offered to bet a dollar with his opponent—which of course he lost. The loss and the laugh so irritated him that he offered to play another game, and bet two dollars, which he pulled out of a big roll—for it seems his cattle had sold well and he was quite flush. This bet he also lost, as the fool might have known he would; when, mad as a march hare, he pulled out a fifty spot, the largest bill he had, and offered to bet that on another game. The crowd mustered around and raised enough to cover it, and at it they went again—which, by some very *strange* turn of luck, Jonathan won. He now offered to put up the hundred he had just won against another hundred. Of course he couldn't blunder through another game, so they now could win back what they had lost, and fleece greeny of his roll beside. They sent out for a famous player, who happened to have money enough to bet with, and another game was played, which Jonathan also won. Another hundred was also raised and bet and won; and it was not till he had blundered through half a dozen games, and by some unaccountable run of luck won them all, draining the pockets of his opponents of some four hundred dollars, that they began to smell a very large "mice." When everybody got tired of playing, Gawky pulled off his frock over his head, took his whip under his arm, and walked quietly out, turning round at the door and remarking, "Gentlemen, if you *should* see anything of that steer, I wish you would just let me know."

At last accounts they had not seen the *steer*, but they have come to the conclusion that they saw the *elephant*—or a *bird* of strange plumage.

◆

Converting Wheat into Pork.—Mr. J. D. Garrett, writing to the Oregon Farmer in favor of raising pork, says: My way of feeding is to take the chopped wheat and make thin swill for stock hogs, but thick for fattening—always a little sour. Some of my neighbors say, for fattening they prefer feeding the dry chop, giving water to drink. For your information, and the many readers other Farmer, I will state that I have kept a strict account of the quantity of grain necessarily consumed by common hogs, to make 100 pounds of good pork, for eight consecutive years, and find that 500 pounds of chopped wheat will make 100 of pork. Add toll for grinding, and we have nearly the quantity of 10 bushels to the 100 pounds of pork. This statement will enable you, at any given price for pork, to arrive at the value of a bushel of wheat, by simply dividing the price of 100 pounds of pork by 10.

Medical Qualities of Carrots.—Stewart, in his excellent work on Stable Economy, says:

Not only do carrots give strength and endurance to sound horses, but also give recovery and health to such as are sick. There is nothing better, perhaps nothing so good. When first given, they are strictly diuretic and laxative, but as the horses become accustomed to them, these effects cease to be produced. They also improve the state of the skin. They form a good substitute for grass, and an excellent alterative for horses out of condition. To sick and idle horses they render grain unnecessary. They are beneficial in all chronic diseases connected with breathing, and have a marked influence on chronic cough and broken wind. They are serviceable in diseases of the skin; and in combination with oats restore a worn horse much sooner than oats alone.

How Carrots Affect Horses.—The carrot is the most esteemed of all roots for its feeding qualities. When analyzed it gives but little more solid matter than any other root, 85 per cent being water; but its influence in the stomach upon the other articles of food is most favorable, conducing to the most perfect digestion and assimilation. This result, long known to practical men, is explained by chemists as resulting from the presence of a substance called "pectine," which operates to coagulate or gelatine vegetable solutions, and favors this digestion in all cattle. Horses are especially benefited by the use of carrots. They should be fed with them frequently with their other food.

Preserving Game.—It is said that game may be kept perfectly fresh and sweet for several days, by a sprinkling of ground coffee. Clean your game, that is, wipe off the blood, cover the absorbent parts with paper, wrap up the heads, and then sprinkle the ground coffee over or among the feathers or fur, as the case may be; pack up carefully, and the game will be preserved sweet and fresh in the most unfavorable weather. Game sent open and loose cannot, of course, be treated in this manner; but all game packed in boxes or hampers may be deodorized as described. A teaspoonful of coffee is enough for a brace of birds, and this proportion for more or larger game.

To blend their souls and lives together, the husband and wife should coöperate, should work together as much as they can.

Nature has granted to us all to be happy, if we did but know how to use her benefits.

◆

What is Your Clip?

We solicit from all Sheep-raisers answers to the following questions:

What is the average clip of your Sheep of the following kinds:

What is the clip of common Mexican Sheep?
What is the clip of mixed flocks of Mexican and American?
What is the clip of full-blood American?
What is the clip of cross of American and Spanish Merino?
What is the clip of cross of American and French Merino?
What is the clip of cross of the American and Southdown?
What is the clip of cross of the American and Leicester?
What is the clip of cross of the American and Cotswold?
What is the average clip of full-blood Spanish Merino?
What is the average clip of full-blood French Merino?
What is the average clip of full-blood Southdown?
What is the average clip of full-blood Cotswold?
What is the average clip of full-blood Leicester?
What is the average clip of Australian flocks, mixed?
What is the average clip of Vancouver flocks, mixed?

These facts, with the clips of any particular animal, or any extraordinary Sheep, we should be glad to receive, for by the publication of such facts great good is gained by the public.

CIRCULATION OF THE FARMER ABROAD.

We have often urged the friends of our State, to aid us in the Circulation of our Journal in the Old States, and Europe, so that we might be more instrumental of good, and help to increase the population of California, and thus make the State more prosperous.

We have often published strong Letters, from various States, proving the good our Journal is doing in making our State truly known in all her vast resources. We now ask of all who feel a desire to have our State double her population, to this work.

We append a Proposition, and hope the Friends of this Journal and the cause it pleads, and all who wish to carry out the desires expressed by our excellent Citizen, in Paris, will coöperate with us. We will make liberal terms to all Societies for Emigration, or Clubs, and Commercial Houses.

With a desire to make the Resources of California known abroad as widely as possible, we feel confident that if we could Circulate the California Farmer in all the Older States, it would be the means of showing the great Masses of the People, that California is the place for them to settle in; and we believe we could greatly benefit all the interests of our State, by Circulating our Journal extensively abroad.

With such views, we ask the coöperation of our Merchants, and Business Men, and all who desire to make California truly and widely known, to aid us in the Circulation of the Farmer.

Wishing to place the Farmer at so low a price, as to enable all to send it to their friends, we offer the following Terms for all Clubs to send to the Old States, and in Europe:

For eight Copies	$25
" ten "	30
(Each Copy to be mailed separately, if so desired).	
For three Copies	10
" six "	20
" single Copy	4

CALIFORNIA WINE!

Pure Italian Bees!

Imported by S. B. Parsons.

A. J. BIGLOW,
Sole Agent for California and Oregon.

Flushing, Oct. 30, 1860.

I have this day furnished to A. J. BIGLOW one hundred and thirteen ITALIAN QUEEN BEES, which he is to take to California to propagate and sell on our joint account. Besides these, I have sold no Bees to go to California. My sales here have been to two classes—Agents, and non-Agents. The latter have been supplied only on their written agreement neither to sell, loan, or give away, prior to the first of June, 1862. The former are allowed to propagate and sell for me, making the same conditions to those to whom they sell.

S. B. PARSONS.

These Bees have been pretty generally distributed throughout the State, and as far as heard from, are coming up fully to the anticipations of the purchasers as to their superiority over the common black Bee. "Their beautiful color and graceful form render them an object of interest to every person of Taste." A Circular, containing the terms and conditions of sales, will be sent to all who send me their Post-office address.

The following-named persons have some of this lot of Bees, and are acting as Agents for me;

Rev. Hiram Hamilton, of Stockton;
J. S. & A. Harrison, of Clear Lake, Napa county;
J. V. Hoag, Yolo county;
Geo. W. Ramsdell, Marysville;
Frederick Neidholdt, Illinoistown;

Warm Springs Hotel!

Near the Mission San Jose,
28 MILES FROM OAKLAND.

THIS BEAUTIFUL PLACE OF RESORT is now open for the season for the reception of private families, tourists, invalids, and general visitors.

The Warm Springs are so widely and generally celebrated throughout California, that it is unnecessary here to recapitulate their various qualities. To invalids, they offer the greatest advantages; their medicinal virtues being unsurpassed even by those of the Rhine, so extensively patronized from all parts of Europe and America.

The buildings are new and extensive, affording accommodation for a great number of guests, and containing every requisite usually appertaining to a fashionable Watering-place.

The assistants are the best that can be procured in the State, and being under the immediate supervision of the proprietor, visitors may rely that every attention will be paid to their comforts.

The Table is supplied with every delicacy which can be procured in the State.

Fine hunting grounds and trout-fishing within a short drive of the Springs.

The California Farmer.

SAN FRANCISCO:
FRIDAY .... SEPT. 6, 1861.

☞ See List of Fairs on Last Page.

THE "LADIES' DEPARTMENT" of this Journal, under the charge of Mrs. Lizzie Wiley Warren, M. D., will be found on the sixth page, and to which we call especial attention.

TO CORRESPONDENTS AND READERS.

We ask the kind indulgence of our patrons, correspondents, and readers, for delay in publishing their many favors. Our traveling items we are hurrying up as fast as possible. Our notes from San Juan to Forest City, and to the famous Downieville, and the great Sierra Valley, and our trip upon the snowy Summits is yet delayed, as many items for coming Fairs, with new advertisements crowd us. All will soon appear.

Our Sixteenth Volume.

GENEROUS Friends of our Journal! As we write the words at the head of this Article, we look back and wonder that, with the many and mighty difficulties that have so often risen up before us in the way, that we have been enabled to live through the many trials of newspaperdom, to announce a Sixteenth Volume!

But it was by the kind and steady support given us by generous minds, that has cheered us on, and made us feel that we were in the path of duty, from whence we should issue forth into a cloudless sky and a genial atmosphere, where Trials, Disappointments, and Vexations, would not so constantly assail us.

As we review the past, we can revert with more pleasure and with a feeling of gratitude, to the many favors received and kindnesses experienced, than we can refer to the Losses and Trials arising from the changes and crosses, which must necessarily be met in a period of nearly a decade of years.

On entering upon our Sixteenth Volume, we feel we can refer briefly to the past. We can with confidence appeal to our Patrons and Readers, to our Friends everywhere, and ask them if this Journal has not been the constant, firm and unyielding advocate of the Best Interests of California. It has been as the Great Breaking-up Plow, opening to the light of day new Enterprises and giving Encouragement to "Home Manufactures," and "Home Industry," in all the varied branches of human Enterprises.

We can look back with true pride and self-consciousness, to the undeniable Truth that the CALIFORNIA FARMER has been a True Prophet, in regard to the great Agricultural, Manufacturing, Mechanical Interests of California; and that it has constantly and most faithfully been *the* Herald of California's true interests, both Abroad and at Home; that it has never pandered to party or selfish aggrandisement: but has steadily and earnestly labored to build up the State, and make it prosperous at Home and honored Abroad.

We launch our Number One of our Sixteenth Volume, and ask of the Friends of our State, of all who shall peruse its Columns, of all who shall claim to be the friends of Human Industry, of all who wish to make our State still more prosperous, to review for a moment the contrast between the years of 1852 and '53, when our State imported nearly all its Breadstuffs, and nearly all its Provisions: and the year 1860 and '61, when our Exports of Breadstuffs count in millions of bushels of Grain annually, and our Wool, Wine, and other Products, count by the millions of dollars annually also—and we ask what Journal has been the steady and faithful Advocates of these great interests through all this period of years.

We believe we can say that our Journal is now *the only one* on the entire Pacific Coast that is now in existence and continued by the Originator, dating from the time when we started, and without change of ownership or Editorial Corps. By this, we mean the steady ownership and Editorial management of a Journal. Of this, we can say we stand as the only true Representative of this character, and we can look with a confident claim upon all who make California as their Home, for their patronage and their aid in the work in which we are engaged.

We ask of all our Readers for their careful perusal of this Number of our Journal; it has a voice from "Sunny France; a voice from the "Excelsior State:" each approving and speaking in its favor; and it has voices from all Patrons of our own now highly prosperous State; and laboring as we do, may we not hope that many, very many hundreds and thousands, too, who may read this Number, will send us their names, as an Evidence of their Approval and kind coöperation: for we know that they will receive, *each year*, many times the value in the priceless truth we herald from a thousand sources. The eyes of the world are now looking to California as the "Land of Peace," the "Land of Promise."

We need only say, that we look in hope for the voluntary generous response of the good and true, while we return our most grateful thanks for the many kindnesses during the past, pledging ourselves to still more earnest labor, while life and strength shall last.

We Send You a Copy.

WE shall send Copies of this issue, No. 1 of Volume Sixteen, to many persons who have not yet become Subscribers to our Paper. We ask them to examine the FARMER, for we believe, if they will reflect upon the great interests it advocates, they will find it for their own interests to become Subscribers. We shall be very happy to enroll their names.

RARE SEED.—We acknowledge the acceptance of a package of Seeds from our esteemed friend, Col. A. J. Grayson, from Mazatlan. We spoke some weeks since of the gorgeous Clavellina, one of the most beautiful of all rare flowering Trees. This Seed we have received in order, and having planted some of it, hope to bloom this rare Gem in our favored clime.

Approaching Agricultural Fairs.

NEXT week the Agricultural Exhibitions of our State begin, we trust most sincerely, successfully to all.

The Northern District Fair, at Marysville, opens the season on Monday, the 9th inst. President Sweazy and a strong and efficient board of coworkers have been at work early and late. The county has been liberal, and the citizens have coöperated. They have a handsome Hall, fine Fair-Grounds, and the prospect for a good Fair is very flattering.

The San Joaquin District Fair open their doors on Tuesday, the 10th inst. President Holden and a corps of efficient workers have built a new Hall. The county has taken hold in good earnest, and the citizens have backed it up. Handsome Fair-Grounds, and a large and efficient District, must secure a successful Fair.

The Tehama County Society also begins the good work on the 11th inst, and they, too, have a band of working-men. Their Fair is to be held at Red Bluff. That county must send us a good report.

The Eldorado County Society, too, are in the field, and they say also from the 10th to the 14th. Eldorado must show her sister Societies that she can compete with the best; the Mountains must speak out. We hope to hear a good account from Eldorado, and trust that the Secretary or some friend will give us the items, as we *cannot* be at four Fairs at the same time *very* conveniently, especially as they are at such extreme distances apart.

The week following, the State Agricultural Society will hold their Grand Show, of which we shall speak more fully next week. We call attention to the engraved illustration of their fine Hall on our first page.

By reference to our Fair-list, the other and following Fairs will be seen. Oregon, and all in that region, are also reported; so that by our journal every Fair can be seen, with the times of holding the same.

We ask in this connection of all interested that they will give us all the information and as many reports as possible; for in the multiplicity of our engagements it must not be expected of us to report everything, therefore we ask the kind aid and coöperation of all.

The State Agricultural Fair at Sacramento

THIS Society have now all the materials to insure a grand and successful Exhibition. The State Society's Exhibition commences on the 16th of the present month, and will continue five days.

The Agricultural Hall, as now illustrated by us, is one of the finest Halls in the State. It is the largest open Hall on the Pacific Coast, and will admit of such arrangements as to make a grand display.

The Agricultural, Manufacturing, Mechanical, and Artistic Departments will have their show in this Hall and its surroundings, and all the arrangements will be under efficient Committees.

The Cattle Show, and Stock of all kinds, will be exhibited at the New Fair-Grounds on 22d street, to which access will be had by an extra Railroad-track made especially for the occasion.

The Fair-Grounds have risen as if by magic. One year since, a barren plain; now, a truly grand and beautiful Park and Fair-Grounds, equal if not superior to any in the United States. We will not describe them fully, but urge you all to go and see them. That they must be grand, we will simply say, they will have cost from $30,000 to $40,000 when completed for the Fair.

Whatever difference of opinion there may have been relative to the location of the State Fair, the question is now settled, and the interests of the cause must always be promoted by having all Fairs successfully carried on, and too much praise cannot be bestowed upon the citizens for their magnanimity in so readily and cheerfully responding and raising so large sums of money for these enterprises; and however it may affect business houses, by an increase of their trade, the fact is still manifest that the great cause of Agriculture *must* go on, for it is the foundation of all our prosperity and greatness.

The amount of Labor that has been done by the Executive Committee, and those associated with them, is an evidence of their zeal and energy, and their determination to make Sacramento their pride and glory. Their devotion to their own city is most commendable, and we truly hope, after the great expenditures made, that the coming Fair will be a success.

There need be no doubt that there will be such a display of Stock as has never yet been seen on this Coast. And for Productions of the Earth, in all their vast ramifications, goods from our Manufactories and Workshops, and from the Artists' Rooms, there will be enough to satisfy those who love to see a prosperous display. We say to all: Go and see for yourselves; it will be worth all it will cost you.

The Agricultural Fair at Victoria, V. I.

WE are glad to hear of the successful organization of an Agricultural Society at Victoria, and to receive the Report of their organization, with list of officers, together with a Premium List for their First Fair, which is announced for the 2d of October, at Victoria.

The Premium List is a very liberal one for a new Society, and includes all departments of Stock and Agricultural Produce. The Rules and Regulations are well conceived and planned, evincing the fact that there are men whose hearts are engaged in the work. The following are the officers of the Society:

Dr. W. F. Tolmie, President.
A. C. Anderson, Esq., } Vice-Presidents.
Jas. W. Fautch, Esq., }
J. T. Pidwell, Esq., Secretary.
Jas. Lowe, Esq., Treasurer.

Hon. John Todd,
E. Evans, D. D.,

Robt. Barnaby, Esq.,
P. M. Backus, Esq.,
A. F. Main, Esq.,
T. Zinevue, Esq.
Directors.

WHO HAS RAISED FLAX THIS YEAR?—If any of our Cultivators have raised Flax or Hemp, the present year, we desire they would inform us of the amount raised, with all particulars, and if it is for sale, as we can find purchasers for the Grower.

Mountain Vineyards and Orchards.—No. 1.

Our Investigation of Mountain Cultivation—The Present System—The Mistakes Made—Future Plans and Future Prospects.

FOR years this journal has been urging the importance of cultivation on the hill-sides. It has ever asserted the superiority of the hill-sides for Vineyards; and it has ever recommended the attention of Orchardists to the hills and mountains for the best Fruits that could be grown.

The present Summer we have given months of travel and examination to the subject, and we have been richly rewarded in what we have seen of the success of those who have taken our counsel and commenced in earnest the foundations of Vineyards and Orchards upon the mountains and hill-sides, and upon neglected mineral lands, upon the red lands, decomposed granite, and the overturned masses of earth and stones from which the gold has been taken by the miners, and the land left in a rough upheaved state. We have heretofore spoken of what we had seen at Folsom, Mormon Island, Rattlesnake Bar, Ione Valley, Auburn and vicinity. We shall now proceed on as we surveyed:

From Ione Valley to Jackson and Mokelumne Hill, along this entire mountain road, where the eyes are ever observing the extent and magnitude of the mining interests of California; where on all the mountain-sides, even high up, the water-ditches and water-flumes form a great and grand net-work crossing them at all points, and sending this element to supply the hardy miner wherever "a speck of oro" shall start a pick or shovel. It is really interesting to travel the stage road and see the immense labor that has been performed by the hardy miners. Every ravine and gulch has been explored, and the earth upheaved, and literally "the mountains laid low." Often we rode along excavations of the mountain-sides torn away by "hydraulic" process down to a depth of 50, 75, and 100 feet, and swept away into the valleys below, leaving only the masses of rock and stone. This is found all through the mountain towns; and when the miner finds "a lead," there is no stop to him. Roads, Farms, Orchards, dwellings, all give way before the deluge of water that comes thundering through the powerful hose, before which even the "mountains wilt," and everything is removed. It is truly wonderful to see the extent of the mining operations of our State. But our thoughts were directed to another work: we saw the upturned earth; we saw the rough condition in which the miner had left the once rich (in gold) land; and our thoughts were given to devise plans by which those "rough places should be made smooth;" and, filled with such thoughts, we rode on until we came to

MOKELUMNE HILL.

This is emphatically a mining town, and full of the usual enterprises that make up the mining districts; full of the robust, strong-limbed, hardy men that build up the business of a place, as well as tear down its hills and mountains. Our home for the time was at the Union Hotel, a most admirable house—far better than is usually found in the Mountains. The Union Hotel is kept by H. Atwood, Esq., a Bostonian. Mr. Atwood established the house in 1853, was burned out in 1854, rebuilt of stone in August of the same year, and it is now the Stage-House. It is a fine fire-proof house. Five lines of Stages arrive daily. The Restaurant of the Hotel is after the English style, and Mr. A., being a business man, oversees the house himself. The Union is directly opposite Wells, Fargo & Co.'s Office, near the Post-Office, in the heart of business, and is *the* place. This house will always be found a good home for the traveler. The population of Mokelumne Hill is about 2000.

During our stay our time was given to the Orchards, Vineyards, and Gardens, of which there were a number that gave us much pleasure.

Our first visit was to the residence of L. G. Root, Esq. Mr. R. resides upon the hill-side. His soil is the usual rocky soil and red land. He has 10,000 Vines planted; he has used but little water lately; he has Apple and Peach Trees and 1000 Vines in bearing. He expressed his regrets for having been so badly misled by the erroneous doctrines promulgated by the Culturist while it lived; that Monthly opposing hill-side Vineyards, and advocating irrigation. The result of such errors has injured many cultivators (let such read the letter of our correspondent from France). Mr. Root will plant more Vines this Autumn, but they will be all foreign. We would urge a deeper and more thorough cultivation at this place, for it can be made a little Paradise. We noticed with pleasure excellent plans for the Domestic Stock of all kinds. These grounds can be made very profitable, also.

Our next call was on S. W. Brockaway, Esq., who has a host of trees on a small Home-Garden, showing, certainly, that Fruit-Trees *will* grow in the Mountains. This place can be made very handsome, and produce more and better Fruit by removing half the trees, and giving a deep and thorough cultivation, to invigorate the trees before another year.

We called on Judge Thompson, who has a fine Orchard, and the trees bearing well. Also on the Messrs. Dudley, and at several places the owners of which were absent. And while we saw abundant evidence of the fruitfulness of the Orchards, the Fruit in many cases was small, owing to excessive crops and the want of deep and constant cultivation — two universal errors among the Fruit-Growers of our State.

Our visit to the residence of C. A. Clark, Esq., gave us one of the finest views we had of the place. The gigantic mining operations; the immense flumes that stride over the mountains like giant race-horses overcoming all obstacles, shows what man can and will do to get "gold." Some of the largest mining operations in the State can be seen here near and around "Table Mountain."

There are many other gardens, orchards, and vineyards that we had not time to examine. Those of Dr. Hoerschner, Dr. Hibard, Dr. Lober, A. C. and A. F. Adams, Mad. Catlay, French Gardens, the Italian Gardens, Mr. French, H. D. Nayman, and many others, who now satisfied that Fruit trees and Vines will do well even high up in the mountains, and upon "red land" or rock soil, even without irrigation," will now plant in earnest the coming Autumn. We rejoice to know this feeling is abroad. We found numerous instances where these people had listened to the *false doctrines* of the *Culturist*, and now had only regrets to offer for *lost time* and partially ruined vineyards.

It was from this point we started for the "Big Trees," of which we have given account in our late numbers, and would reiterate our counsel for all to go even now, and see these wonders of the world.

There are two excellent stables at Mokelumne Hill, where the best of teams can always be had,—that of W. P. Peek & Co., and H. W. Griffin. This is always fortunate for the traveler, especially those that desire to view this interesting section of country. We are under many obligations for favors and kindness received from all on whom we made calls, for their courtesy and readiness to coöperate in our work.

Frost in the Vineyards of France.

LETTER NO. 3 FROM OUR PARIS CORRESPONDENT.

WE invite careful attention to the Letter of our Paris correspondent; there is a volume of truth in this brief Letter.

The frost, as late as the 5th and 6th of May, is most unusual in "Sunny France;" the injury is extensive. The effect will be to call the attention of French vine-growers to our beautiful climate; the difficulties there; and the influence of such men as Col. Haraszthy and his Son, to herald California and her resources, we may look for quite a number of the most intelligent classes of growers to our land.

We would again urge upon our Vine-growers, the vast importance of establishing a Character of for the Wine of California; make them of good repute; make them pure; then they can be sent abroad with credit to the maker and to our State; but we regret to know that a vast amount of poor adulterated Wines have been made, that has done our State great injury; the present year we hope better things. The Letter of our intelligent and faithful friend, should be acted on in good earnest, and its suggestions heeded. We look for many letters, both from the Father and Son, that shall awaken a still greater enthusiasm in the cause of Vine-growing in California.

PARIS, May 16, 1861.

EDITOR FARMER: It was generally expected in France, that this year's Wine would redeem that of last year's, both in quality and quantity: but the proverb, "Man proposes and God disposes," has proved to be but too true.

The weather, which had been of the finest during the last days of April and first days of May, suddenly changed to a severe cold; and on the nights of the 5th and 6th of May, there fell an abundant white frost. From all points of France and even in Europe, we receive news of the great damage done to the Vine! To believe the Grape-growers (and they are the best judges), the quality of Wine is irreparably spoiled for this year. It will not be better than that made last year, and everyone knows what last year's Wine is! Certainly, if sourness is the principle of age, it can be kept forever!

The newspapers are full of advice, and do all in their power, to re-assure the Wine-makers: but it is a difficult task to make a person believe what you yourself do not believe! The newspapers find themselves in this predicament. We read the following in the Pays:

> "If no other scourges come, and if, above all, the Vintners take care to *sulphur*, according to rules, with which they are not ceased to be instructed, we doubt not that the *viticultural campaign* of 1861, as far as abundance goes, may be placed with the good ordinary years!"

It must be conceded that such an article is but a very poor consolation! Such accidents happen quite often lately, and it is for us, Californians, to make the most of them. Now is the time for the enterprising Wine merchants of California, to send their Wine to all the principal markets of America! Now is the time to dethrone foreign Wines, by putting your Wines beside the miserable stuff made last year, and what is also most likely to be made this year.

Take my word for it, send in your Wines; make them known; supply America with them during the time that foreign Wines are bad: and your point is gained. America, once accustomed to California Wines, will return to Europe no more.

In a few years, with enterprise and skillful management, we will show Europe that *we too* can make Wines, and they only need care and age to make them renowned.

It is just that Europe should supply Wine for her own use: but it is also just, and not only just but *our duty*, to supply Wine for the consumption of our Continent!

I am, sir, yours, truly, ARPAD HARASZTHY.

Advantageous offers to Shippers of Wheat to England.

WE call the attention of our Farming interest and our Grain-growers to the advertisement of Messrs. Ross, Dempster & Co., of our city.

This House have completed their arrangements and will have ships ready to receive consignments for England on more favorable terms than ever before offered.

Having called upon this House we are authorized to announce the following as their plan: They will advance to the shipper $1 25 per 100 pounds on good Wheat, charging interest at the rate of five per cent per annum. Where parties would prefer, this House would be willing to take half interest in shipments.

The present healthy state of the English market both for Wheat and Wool offers a good opening to our producers, and we take pleasure in calling their attention to this most favorable opportunity for them.

THE GREAT COMET OF 1861.—We have been favored by the American Scientific Association, with the advanced sheets of Silliman's Journal, containing a full description of the great Comet, from the various Observatories, made by scientific men all over our Union. These reports are full of interest, and we shall take pleasure in giving them to our readers at an early day.

The Sewing-Machine.

"ECONOMY IS WEALTH!" then every labor-saving Machine that economizes *time*, and *physical strength* also, is a double gain.

"TIME IS MONEY!" then every moment of time saved to the *Wife* and *Mother* brings money into the household, and adds to the wealth of the Husband and Father.

"AN OUNCE OF PREVENTION IS WORTH A POUND OF CURE." What man would not pay a large sum annually if he could secure the perfect health of his wife and daughters, more especially those who by their circumstances in life must depend on them as Managers of the Household; and yet there is no way in which a woman's health is more certainly undermined and destroyed than by close confinement with the needle in the performance of the family sewing, and this too after the other and more laborious duties of cooking, washing, ironing, baking, etc., and when instead of close application with the needle, relief from labor, exercise, recreation, or some pleasant duty should recuperate the overtasked powers.

Now, where can there be a more agreeable exercise, or a more pleasant recreation, than for a wife and mother to know she is still performing her duties to her family in the preparation of their clothing, and this too in a way which gives free exercise to all their physical energies without wearying them, and adds interest and pleasure even during that employment, for it brings the consciousness that *time*, and *labor*, and *strength*, are saved, thus enabling her to enjoy some *leisure time* with her family which otherwise she could not have.

These FACTS are fully established in every family upon the introduction into it of a SEWING MACHINE, and we were most forcibly reminded of this while looking upon the *illustrated picture* recently framed and on exhibition at the sales-rooms of WHEELER & WILSON'S Sewing Machines, corner of Sacramento and Montgomery street. It shows to the life the contrast between DRUDGERY and WISE LABOR. The one is a woman sewing with a needle by candlelight,—her bent form and sunken cheek show exhausted nature; the timepiece tells the hour of midnight; the room bespeaks poverty and toil; and Hood's song of the shirt: stitch! stitch! stitch! and sew! sew! sew! is given to the life;—while on the opposite side of the picture is seen a large, handsome room, a woman neatly dressed before a finished Sewing Machine (Wheeler & Wilson's of course), at work; her countenance indicates that her work is easy and pleasant; her graceful attitude at the machine shows that the *work* is not drudgery, while near by her is an open piano, also indicating that the economy of time and labor will give her ample opportunity for social pleasure. The whole picture is admirable, as it shows the march of improvement; and the most glorious part of it is, that the triumph is for *Woman*.

BUT TO THE SEWING MACHINE! and which is best? The numerous inventors of the day are all striving for the supremacy; the best test is the *popular will*. Now, like the recent decision of the people by an overwhelming majority, in selecting a piece of *mental machinery* to stand at the *head of the commonwealth*, so the people just in the same proportion are selecting WHEELER & WILSON'S *Sewing Machines*, with their NEW IMPROVEMENTS, and at their great *Reduction of Prices*.

The cause of the more recent largely increased demand arises from the now universally established facts, that these Machines have a *beauty and excellence of stitch unequaled*, and this too alike on both sides. There is great economy of thread, and a strength and elasticity of stitch unsurpassed; again, a vast variety and style of work can be done, from the most delicate material, to heavy bagging, cloth or leather; a machine for all work, all purposes, all materials,—and yet there is a simplicity in managing, a speed and ease in the operations, and a quiet way of doing the most beautiful work, that not only surprises but astonishes. These are not idle fancies but stubborn facts, attested by such witnesses as the purchasers of the machines daily. In two days lately, *twenty-nine* such witnesses testified to the above, and H. C. Hayden, the agent, has the *record* now of these two days' work.

Home-Made Provisions.

WE published two weeks since a statement received of the wrong done to our Home-Manufacturers of Provisions, which *we* feel is a wrong done to all the Stock-raisers who are engaged in rearing Swine, and therefore we felt called upon to do what we could to protect their interest; all that touches injuriously the character of Home-made Provisions hurts the Farmers of California.

We took pains to visit the large establishment of Wilson & Stevens, to see the progress made, and there we saw and learned enough to show that the best interests of California demand protection to Home-Manufactures.

We often hear of old imported Provisions being washed, cleaned, and then smoked and sold for the real "California Provisions." This injures the reputation of our Provisions, as they can never give that satisfaction which the genuine meats give.

Messrs. Wilson & Stevens have done nobly as Packers, and deserve all the support they can have. Their sales have been large; over 300 cases of Lard were sold in two weeks from the 21st of July, and never has a case been returned or complained of. Their Lard-Oil is the best, and they supply all the demand. Their Hams and Sides are now the best in the market. And shall such an enterprise or its good name be injured by the *spurious* meats palmed off upon the public as California meats? We hope all who value Home-interests will expose spurious meats everywhere.

ALL HONOR TO THE MINERS.—The announcement at Virginia City that there was a train of immigrants at Little Meadows in a starving condition, resulted in the immediate rallying of the miners, who collected means, and loaded pack-animals with food and clothing, and had the supplies ready on the way in an hour and a half. All honor to the Miners!

WHO NEEDS A NEW HAT?—Lamot & Collins, of Sacramento, stand at the *head* of Fashionable Hatters, and visitors to the State Fair should be sure to try one of their best.

STATE SUMMARY.

VERY fine quinces are being sent to market by Briggs & Haskell, of Marysville. Some of them weigh eighteen ounces each.

THE total amount of money in the State Treasury, at the close of the last month, was $237,710 14. Balance in the General Fund, $56,295 93.

DURING the State Fair at Sacramento, "Tom Rooney" proposes to ride 210 miles, to saddle, inside of ten hours, which is said to be a feat never yet performed.

THE total vote of San Joaquin county, at Wednesday's election, was 3966, of which Stanford got 1872; McConnell, 1687; and Conness, 407. The vote is about 550 greater than last year's.

A dispatch from Yreka, August 24th, says: "The first emigrant train of the season arrived here yesterday. It left Iowa, April 16th, and reports a large emigration *en route* for California."

A cavalry company, numbering 125 men, raised at Sacramento and Folsom, has come to this city, under charge of Captain Shirland, to be mustered in. Several printers from the Union Office are said to be among them. There can be but 101 taken in one company.

MANY emigrant horses just from the Plains, are being brought on the boats from Sacramento. There has not been for years such a number of fine horses and mules brought over from the States, and prices are somewhat affected by the unusual supply.

A dispatch from Carson city, N. T., says: Immigrants are pouring in from the plains every day. It is estimated the number coming across the plains this season will reach 25,000 or 30,000. Indiana, Illinois and Iowa send the largest number.

AN ancient skillet, made of lava, hard as iron, circular, with a spout and three legs, was washed out of a deep claim at Forest Hill, a few days since. It will be sent to the State Fair, as a specimen of crockery used in the mines, several thousand years ago.

COPPER mines have been discovered near Coulterville, Mariposa county, and there is a large amount of valuable ore upon the surface. Some great convulsion of nature seems to have saved the miners much labor. A large number of claims have been taken up in the vicinity.

A new road to Coso has been discovered which shortens the distance fifty miles between that place and Los Angeles, through an opening in the mountains. It is said to be a good road all the way, but with little sand and no rocks, and is very favorable for oxen. There is grass and water sufficient after leaving the settlements—the longest stretch without water, being twenty miles.

THE Merced river has been turned, flumed, etc., from near the Benton Mills to some distance below Red Banks, and its bed, now nearly dry, is thick with Chinamen. Whether Chinese are proprietors, or are merely employed, we don't know. More thorough and durable work has been done in this distance (about two miles) than ever before on the river.

A telegram from Yreka, dated, August 27th, says: "The report, yesterday, of the massacre by Indians at Goose Lake is confirmed by the arrival of one of the party, he being the only survivor. He reports that there were fourteen families, numbering over one hundred persons in the train, and the whole company, men, women, and children, inhumanly butchered. Our informant was here yesterday, but he has left town for the residence of relatives near here, in consequence of which no further particulars can be obtained. A cavalry company is being organized here."

THE run of salmon in the Sacramento is greater than ever before known. One hundred to each boat could be taken nightly, and those of the largest size and finest quality, but as the present demand does not warrant extensive packing, only a few boats are engaged and only one drift made by each, just sufficient to supply the demand for the fresh fish. There was a time when Sacramento was the great point for the capture and packing of salmon, which were sent to all points of the world; but the News says the trade has of late years steadily declined, being tapped at the mouth of the river by those irrepressible Rio Vistians who have now a virtual monopoly of the business.

THE State election on Wednesday passed off rather quietly, and the result, as indicated, creates some surprise as well as satisfaction, at the overwhelming Union sentiment of the State, as expressed by the vote. The friends of the Union seem to have ignored party lines, and united on Stanford, to make certain the success of a sound Union man for Governor, and the result is a splendid Union triumph. In this city, the number of votes polled is 15,711, of which Stanford receives over 10,000, Conness receiving the next highest number, and McConnell the lowest and a very small vote. All the city nominations of the Republican party are also elected, though some by small majorities. The whole Republican State ticket is thought to be elected. The Call of this morning says: Up to this writing we have accounts of 73,508 votes, nearly two-thirds of the entire vote of the State. Though these figures come to us confusedly, we deduce from them the following facts: Stanford's vote as far as heard from is 35,690; Conness' vote is 20,864; and McConnell's vote is 17,054. This does not include Tuolumne and Butte counties, which have gone for Stanford by handsome pluralities, though figures are not given. About 45,000 votes are yet to be heard from, and when in we feel confident the different candidates will stand in the following order: Stanford, Conness, McConnell. The total Union vote will be about 95,000.

From the East.

By the Pony Express, which arrived Tuesday, St. Louis dates to the 25th, were received.

No very important changes in the position of affairs have taken place. Several women who have been acting as spies for the rebels at Washington, furnishing them important information, have been placed under arrest. Among them is Mrs. W. M. Gwin, in whose trunk plans of Federal fortifications at Washington are said to have been found......Governor Gamble, of Missouri, has issued a proclamation, calling for 42,000 State military, to repel invasion from the seceded States......An Irish brigade is to be raised in New York 6000 strong, to be commanded by Gen. Shields......The following is a special dispatch from Washington to the New York Times: "Trustworthy intelligence from Northwestern Virginia states that Gen. Rosencrans was securely entrenched, and with sufficient force to remove any cause of apprehensions for his safety. The rebels are reported to be entrenching themselves at a distance of from 15 to 20 miles, with a force variously estimated at from 9,000 to 20,000......A collision occured recently at Norfolk, Va., between an Alabama and a Virginia regiment, in which 500 or 600 men were killed......In consequence of the President's proclamation, Adams & Co., have issued orders to all their officers to cease immediately receiving letters for the Confederate States......Russell, the London Times man, was refused a pass across the Potomac......The Government has reliable information that a quarrel, has broken out among the leading traitors in the Southern Confederacy, which promises disastrous results. The belligerents are Toombs, and the Virginians and North Carolinians on the one side, and Davis, Wigfall, and the extremists of South Carolina on the other. The complaint among the disaffected is, that Davis is fast taking to the legitimate result of treason—the abrogation of State and individual rights......Daniel S. Dowber, of New Orleans, was arrested on the west line of the Ohio, on the 23d of August, as bearer of dispatches from England to Jeff Davis......Letters from Richmond state that Beauregard's official returns of the killed and wounded is 1470......A spirited fight occured at Charleston, Mo., August 19, in which the Secessionists were routed with considerable loss by an inferior force of Federal troops. There were 300 Union troops against 1200 of the enemy, and the latter lost 40 killed and 17 prisoners. The Union loss was but one killed and six wounded......A very important proclamation has been issued by the President, interdicting all commercial intercourse by sea or land henceforth with the States in rebellion against the Government, with the exception of Western Virginia, and such portions of the other recusant States as may be loyal to the Government. The carriage of goods, chattels, wares, merchandise, or persons, is strictly forbidden, and the officials of the Government are ordered to forfeit all vessels and other conveyances that may be employed in transporting such proscribed articles from any of the States in arms against the Government, without permission from the President, through the Secretary of the Treasury.

THE SECESSION NEWSPAPERS.—The Grand Jury of the U. S. Circuit Court in the city of New York, presented on the 16th an important paper condemnatory of the treasonable course of the Journal of Commerce, Daily and Weekly News, the Day-Book, the Freeman's Journal, and the daily Eagle of Brooklyn, which express themselves opposed to what they call "the present unholy war" and for the utterance of language which, if expressed in the streets would be a crime against the Government.

NEW York correspondents write that though business is very dull in that city, times are not so hard as in 1857. Wealthy merchants are withdrawing from trade and improving their private dwellings and country seats.

FROM THE NEZ PERCES MINES.—The Portland Advertiser of 24th August says: "By the arrival of the steamer Carrie Ladd last evening, some $50,000 was received in gold dust from the Nez Perces mines. The news from these mines continues decidedly favorable. Capt. Van Voasts company of the 9th Infantry came down from the Cascades from the Dalles. This makes a force of about ninety men at that place, under command of Capt. Black. That post, without doubt, will be permanently kept up and garrisoned by Capt. Van Voast's company. There is no further news in reference to Indian troubles. In the mining section the Indians manifest no unfriendly feeling."

RUSSELL BEFORE THE BATTLE.—In a letter to the Times, Russell wrote:

The party of action are gaining ground, and Gen. Scott will be forced to move onward, though he will do as little as he can, till he is ready for decisive work. Still, these movements will amuse the public, and may possibly produce some actions of greater importance than it is intended. It does not appear to me that Beauregard will be directly attacked at Manassus. The real base of operations is from Fortress Monroe and Hampton on Richmond. Of this more by and by. Civilians and military are, of course, divided in council. The former are for immediate action; they want to walk without legs.

THE PROPOSED COTTON LOAN.—The proposition of Jeff Davis & Co. to raise a big cotton loan from the Southern planters does not seem to meet with the favor of the business men of New Orleans. The Delta steams off as follows: "What shade of politics will entitle, 'the common public' to an equal participation in the profitable drippings that will ooze in such a juicy current from this stupendous fountain of official patronage? The authors of the impracticable and stupid scheme were, we are willing to say, doubtless persuaded that it was one highly eligible, and unobjectionable; indeed, they were, in charity we believe, wholly incapable of perceiving any objection to it, it looked so fine on paper or from the stump to call upon planters to come forward and sell their cotton to the pure patriots, who, for large salaries, generally administer their affairs; and take in return its full value in Treasury paper which, again, they (the planter's creditors) must accept in payment of all claims, or otherwise risk being called mal-contents or Abolitionists."

THE BLOOMERS FOR WAR.—It is reported that there is a large train of immigrants nearing our line, in which there are forty women, all dressed in the "Bloomer" costume, and armed with revolvers and Bowie-knives. We have no doubt that they will *cut a dash* when they arrive, and be the subject of *cutting remarks*. We pray, however, they will, when they learn that our elections have resulted for order and quiet, that they will promptly go for "Union" also. We earnestly say, pray, ladies, "don't shoot."

FLAX GROWING.—Our neighbor of the Mercantile Gazette and Price Current reports the growing of ten acres of Flax, from which twenty-five bushels an acre was realized. This is only a small crop; but will be grown largely another year.

Pulu! The Wonderful!

ANOTHER cargo still, is just received
At SCHREIBER'S Depot! 't is believed
There is a charm about the PULU crop,
It comes, and goes,—the sale will never stop;
For everybody wants a PULU BED,
So EASY to the body, so COOLING to the head;
Another charm, too, in the PULU found—
Where PULU is, no INSECTS come around.

PULU! the famous PULU, now is known
As *BEST FOR BEDS*, and it has grown
So much in favor that the People go
Always to SCHREIBER'S great PULU Depot;
'Twas Schreiber had the first 'twas ever sold,
And then it almost cost its weight in gold;
But now, his ships, they come so thick and fast,
It sells so quick, a cargo does not last
A month or more, and then, it is so low
That all who want GOOD BEDS should surely go
Direct to SCHREIBER'S STORE on Sansome street,
There they will find a stock complete,
ALL KINDS OF BEDDING, everything that's wanted,
There too, the best accommodation granted.

Now don't forget the Number, 'tis 406;
Another fact upon your memory fix—
That Schreiber's is THE DEPOT OF PULU,
And HE the PIONEER IMPORTER TOO;
The man who first this luxury gave,
Then surely he *the best of trade should have.*

Now go and make your purchases complete,
At SCHREIBER'S, 406, on Sansome street. 1

East India Tea Store.
ESTABLISHED IN 1857.
631 Washington street,
Nearly opposite Maguire's Opera House.

GEO. M. SMITH AND COMPANY,
DEALERS EXCLUSIVELY IN
Choice Green and Black TEAS
Of Chinese and Japanese production;
COFFEE, SUGAR, AND CHOCOLATE.

Our TEAS are acknowledged to be the Best ever offered in this Market.

☞ Observe, this is the ONLY BONA FIDE TEA STORE in this State. 1

SECOND ANNUAL FAIR
—AND—
INDUSTRIAL EXHIBITION!
—OF THE—
SAN JOAQUIN VALLEY
Agricultural Society!
—WILL BE HELD IN THE—
City of Stockton,
—COMMENCING—
Tuesday, Sept. 10th, 1861,
To Continue Four Days.

Over $4,000!
ARE OFFERED IN PREMIUMS!

The Board of Managers will award SPECIAL PREMIUMS to any and all articles not enumerated in their Schedule of Premiums that may be placed on exhibition, if deemed worthy.
Cash Premiums can be had in place of Silver-Plate or Diplomas.

BOARD OF MANAGERS FOR 1861:
E. S. HOLDEN, President;
P. EDW. CONNOR, Secretary;
H. O. MATHEWS, Treasurer;
JNO. A. ANDERSON }
E. B. BATEMAN, } Directors.
1

Third Annual Fair
—OF THE—
SONOMA COUNTY
Agricultural & Mechanical Society
At Santa Rosa,
Sept. 24th, 25th, 26th, and 27th, 1861.

$2,239 AND 200 DIPLOMAS!
To be Distributed in Premiums!

GRAND BALL
On the Evening of the 27th,
IN THE PAVILION.

The Society have also procured the use of the excellent track of the Sonoma County Jockey Club.
JOHN HENDLEY, President.
J. A. WOODSON, Cor. Sec. 21

RACES!! RACES!!

THE FALL RACES OVER THE SAN JOSE COURSE, will commence MONDAY, October 14th, and continue SIX days.

First Day—Monday, Oct. 14.
SWEEPSTAKES
For all colts and fillies now three years old, except Miama. Subscription $150, half forfeit. The proprietor to add $150 if the race is run. One mile and repeat.
ENTRIES:
R. Jourdan's (John Trimball's) b c Jack Trimball by Belmont, dam by Limber John.
Jerome Fox,s br c Conflict by Belmont, dam by Red Bill.

The Third Annual Fair
Of this Society will be held at Marysville,
Commencing Monday, Sept. 9, 1861,
AND WILL CONTINUE DURING THE WEEK.
OPEN TO THE WHOLE PACIFIC COAST

THE PAVILION,
On Cortez Square, will be enlarged and BRILLIANTLY LIGHTED WITH GAS, and the grounds around it beautifully ornamented.
THE CATTLE-GROUND
Has been permanently located and conveniently arranged. It will contain
400 Stalls for Animals.
Feed For Animals Furnished Gratis.

Within the inclosure is a SPLENDID TRACK of half a mile, which will be in fine order; and
A Capacious Covered Amphitheater, which will Seat 5000 Persons.

Tuesday, Sept, 10th,
At 2 o'clock, P. M., opening of the Cattle-Grounds for Exhibition.
At 8 o'clock, P. M., opening of the Pavilion, and the Opening Exercises of the Exhibition, and Annual Address of the President.

Thursday Sept. 12th,
THE ANNUAL ORATION before the Society will be delivered by Rev. T. STARR KING.

Friday, Sept. 13th,
THE SOCIETY
GRAND BALL!
Two thousand persons can dance in the Pavilion.

Saturday, Sept. 14th,
Distribution of Premiums and Closing Exercises.

There will be INTERESTING AND EXCITING EXERCISES EACH DAY at the Cattle-Ground. Displays of Stock, Trials of Strength and Running, Trotting and Pacing Races, which will be duly announced.

GRAND
TROTTING and PACING RACES!
EACH DAY,
FOR SOCIETY'S PURSES!
—AT THE—
Marysville Park!

The Society offer the following additional Purses for the following races:

Monday, Sept. 9th,
GREAT PACING RACE—
Free to all Pacing Stallions, Mares, and Geldings; Purse $150; mile heats, best three in five, to harness; three entries required, and two to start to make a race; ten per cent entrance-fee.

Tuesday, Sept. 10th,
GREAT STALLION STAKE—
Free to all Trotting Stallions; Purse $500; mile heats, best three in five, to harness; three entries required, and two to start to make a race; ten per cent entrance-fee.

Thursday, Sept. 12th,
GREAT TROTTING STAKE—
Free to all Trotters except Stallions; Purse $250; mile heats, best three in five, to harness; three entries required, and two to start to make a race; ten per cent entrance-fee.

Saturday, Sept. 14th,
GREAT DOUBLE-TEAM RACE—
Free to all Trotters; Purse $150; two-mile heats, best two in three, to harness; three teams to enter, and two to start to make a race; ten per cent entrance-fee.

These races will come off at the MARYSVILLE PARK COURSE, kept by R. T. O'HANLAN. The Races will take place in the afternoon, after the adjournment at the Cattle-Grounds.
The entrance will be made for these Races with R. T. O'HANLAN, at the Park, and will close at 4 P. M., on the day preceding each Race.
The above Races will be conducted according to the rules of the Marysville Park, and under the supervision of its Judges.
The Stock competing for these Purses may enter for any other separate prize on the regular Premium List, and will be required to be within the Cattle-Grounds according to the Rules of the Society.
N. B. The admission to the Races at the Park will be fifty cents each. This admission will be required of all persons, whether Members of the Society or otherwise, as these Races are additional to the regular proceedings of the Society.
The Purses and Prizes of this Society are open to the whole Pacific Coast.

Send to the Secretary for Premium-Lists and Programmes.
The Executive Committee will spare no exertion to make this, the THIRD ANNUAL FAIR of the Society, an Exhibition fitly representing the rich and varied interests of the Pacific Coast, and invite the co-operation of all interested in the development of its resources.

LIZZIE WILEY WARREN, M D.....EDITRESS.

[For the California Farmer.]

THE HARVEST-FIELD OF 1861.

BY MRS. JAMES NEALL.

[We receive with much pleasure the following very beautiful lines from our new correspondent, and shall be happy to hear from the same gifted pen often. We are confident our readers will appreciate the spirit that breathes in them:]

Lo! the fields of Harvest whiten with the heavy bending grain:
Hither bring the patient oxen, yoke them to the empty wain;
Call the Reapers; for the Summer has put on her crown again.

And her minister of Plenty stands with overflowing horn,
While the serried ranks in waiting, of the fully ripened corn,
Gaily wave their golden tassels in the soft midsummer morn.

Fair Pomona, bendeth lowly 'neath the chrism of her hope,
Summer has fulfilled the promise of the Spring-times' horoscope,
For her fruit is ripe and mellow over many a sunny slope.

Rounded are the rich grape clusters, for the vintage time is near,
Let them fall in purple glory when the vintagers appear;
Press the juices warm and glowing from each perfect pulpy sphere.

Lo! the fields of Harvest whiten—and the plains are dry and hot,
And the golden fruit is mildewed, and the grain is garnered not,
And the maidens sit in silence, while the grapes are left to rot.

Listening to the tread of armies, and the clanging noise of War,
Plowshares into swords are beaten, and the scythe is wet with gore,
For the Harvesters are gathered, where the smoking cannons roar.

And the reapers reap together, spear on spear-top falling low,
And the serried ranks are parted, be it friend or be it foe
While the Summer days are waning and the Harvest-moon is low.

And the dust lies on the vintage. Ah! the tendrils torn away,
For the crimson wine is flowing, which no human hand may stay.
And the stain is darkly resting on the sad hearts far away.

Lo! the empty field of Harvest! tread the rank grain in the soil,
Cover all with "dust and ashes," let the gleaners take the spoil,
Call the Mowers and the Reapers, thus to rest them from their toil.

Listening to the glad evangel, "Freedom for the coming years!"
While the Nation shouts in triumph. And the broad world rings with cheers
That the Spring-time brings in gladness, what the Autumn sowed in tears.

THE FAMILY DRUDGE.

[Read the following true picture,—who has not seen the real picture:]

How very oft it is one sees—
This too, in genteel families,
Or what the world would call genteel—
That one amongst them "turns the wheel,"
Or "hews the wood and draws the water."
Sometimes it is the first-born daughter;
But far more oft it is the case,
That some defect in form or face
Has doomed that hapless one to be
The drudge of the whole family.
And whatsoever may befall,
She's ever at their beck and call;
The first to rise, the last to rest,
Compared to others, meanly dressed.
While some are taught, I know not what,
Her education is forgot;
She may have learned to read and write,
Know just enough to be polite;
She, uncomplaining, toils all day,
While others read, and sing, or play.
While they are schooled in all the arts,
She makes the puddings, pies, and tarts;
Superintends the roast and boiled,
And sees the dinner is not spoiled.
If aught should hap to fowl, or fish,
Or any other dainty dish,
'Tis she who should have seen the cook,
And suitable precaution took.
She marks the linen, counts the plate,
Sees every room in proper state;
She's here, and there, and everywhere,
And scarce of comforts gets her share.
Yet were I bound to choose a wife
From such a home, if I'm a judge,
The one to brave the cares of life,
The best would be the Family Drudge.

Man's Duty to Woman.

LET him learn to be grateful to woman for this undoubted achievement of her sex, that it is she—she far more than he; and she, too, often in spite of him, who has kept Christendom from lapsing back into barbarism—kept mercy and truth from being utterly overborne by those two greedy monsters, money and war. Let him be grateful for this, that almost every great soul that has led forward or lifted up the race has been furnished for each patriotic and holy aspiration, by the retiring fortitude of some Spartan, or more than Spartan—some Christian mother.

Moses, the deliverer of his people, drawn out of the Nile by the king's daughter, some one has hinted, is only a symbol of the way that woman's instincts always outwit the tyrannical diplomacy of man. Let him cheerfully remember that though the sinewy sex achieves enterprise on public theaters, it is the nerve and sensibility of the other sex that arm the mind and inflame the soul in secret. "A man discovered America, but a woman equipped the voyage." So everywhere—man executes the performance, but woman trains the man. Every effectual person, leaving his mark on the world, is but another Columbus, for whose furnishing some Isabella, in the form of his mother, lays down her jewelry, her vanities, her comfort.

Above all, let not man practice on woman the perpetual and shameless falsehood of pretending admiration and acting contempt. Let them not exhaust their kindness in adorning her person, and ask in return the humiliation of her soul. Let them not assent to her very high opinion, as if she were not strong enough to maintain it against opposition; nor yet manufacture opinions for her, and force it on her lips by dictation.

Let them not crucify her motions, nor ridicule her frailty, nor crush her individuality, nor insult her dependence, nor play mean jests upon her honor in convivial companies, nor bandy unclean doubts of her, as a wretched substitute for wit; nor whisper vulgar suspicions of her purity, which, as compared with their own, is like the immaculate whiteness of angels.

Let them multiply her social advantages, enhance her dignity, minister to her intelligence, and by manly gentleness, be the champions of her genius, the friends of her fortunes, and the equals, if they can, of her heart.—[Rev. F. D. Huntington.

CONTROLLING HER TEMPER.—The husband of a lady of a fiery temper says before marriage he was warned of her disposition. To test the accuracy of the information, one evening, as he sat next to her at dinner, he managed cleverly to jog the servant's elbow, as a plate of mock turtle soup was offered her, which, of course, was upset over the young lady's white dress of tulle lace. No complaint, not even a frown being evinced, the delighted suitor concluded that what he had heard was a mistake, and the marriage took place.

But soon the lady's real character displayed itself, as is always the case after marriage, but never before; and his wife, like a human Stromboli, was subject to fiery eruptions every ten minutes upon an average.

"How is it, my dear," said the happy husband, "that having such a bad temper, "you stood the ordeal by soup so well."

"Why," said the lady, "I may have appeared indifferent at the time; but, good heavens! you should only have gone into my room a little while afterward, and seen the marks of teeth on the bedpost!"

A strictly orthodox gentleman in Massachusetts returned home one afternoon from church, and began to extol to a friend the merits of the sermon.

"I have heard, Frank," said he, "one of the most delightful sermons ever delivered before a christian society. It carried me to the gates of heaven."

"Well, I think," said Frank, "you had better dodged in, for you'll never get such another chance."

RECIPE FOR A HAPPY HOME.—Six things are requisite to create a "happy home." Integrity must be the architect, and tidiness the upholsterer. It must be warmed with affection, lighted up with cheerfulness, and industry must be the ventilator, renewing the atmosphere and bringing in fresh salubrity, day by day; while over all, as a protecting canopy and glory, nothing will suffice except a blessing from above.

A correspondent of the New Hampshire Statesman says: "I saw a sight on Monday last—a young lady dressed in a riding costume, riding her father's horse fastened to a cultivator in a piece of corn; and I am told that with her own fair hands she planted the same field. Her brothers have all enlisted."

As we stand by the sea-shore and watch the huge tides come in, we retreat, thinking we will be overwhelmed; soon, however, they flow back. So with the waves of trouble in the world, they threaten us, but a firm resistance makes them break at our feet.

A Scotch paper tells the story of a Drury farmer, who, after the funeral of his wife, drove a hard bargain with the grave-digger. At last the indignant grave-digger, bringing his hand down on a gravestone, exclaims, "Down wi' another shillin', or up she comes."

GREAT calamities teach us many beautiful lessons, and reveal to us much we should never have seen from the common level of life.

Grapple ever with opportunity. And, as you don't know when opportunity will happen, keep your grappling-irons always ready.

IT is an evil thing needlessly to cause a human being pain; but it is a fearful thing to inflict it on a creature that cannot speak, for it must be that there is always somewhere a tongue to tell, a mysterious witness to bear testimony.

AFFECTION, like spring flowers, breaks through the most frozen ground at last; and the heart which seeks for another heart to make it happy, will never seek in vain.

A WIFE'S bosom should be the tomb of her husband's failings, and his character far more valuable in her estimation than his life.

CHICKEN AND PEA SOUP.—As young chickens and peas usually make their appearance at the same time, I will here give directions for making one of the most delicate soups that can be made. Take the trimmings of the chicken, which consist of the giblets, neck and feet; put them in a soup pot with a little salt; shell the peas, putting the youngest aside, and the oldest into the soup; boil the youngest alone, and when you put some chopped parsley, onion, a sprig of thyme, a piece of butter the size of a walnut, rubbed in flour, put the young peas in; toast some bread, cut in sippits, lay them in the tureen, pour half a pint of cream over it, dish the soup and send to the table. This is a delicious soup, within the reach of almost every one.

HOW TO CLEAN A TABLE-CLOTH.—I was sitting, says a correspondent, alone at breakfast, one morning, at the thirty feet length table at the dining-room in the Hotel-de-France, when I saw the principal waiter busily occupied in applying what I took to be salt to all the spots left on the table-cloth by the last parties that supped or dined there. At length he came so close to me that I could perceive he held in his hand a pound weight of whiting. Wherever his glance bespoke "Yet here's a spot!" he applied a grain or two, and rubbed it hard, and the mark of defilement instantly vanished—the most efficacious mode I ever saw adopted for superseding the work of the laundry. Who but a Frenchman would have brought body color to bear upon the bleaching of a table-cloth?

WATERMELON PICKLES.—Ten pounds of watermelon rinds boiled in pure water until they are tender; drain the water off, then make a sirup of two pounds of sugar, one quart of vinegar, half an ounce of cloves, one ounce of cinnamon. The sirup to be boiled and poured over the melon rinds boiling hot. Drain the sirup off, and let it come to a boil, and pour it over the melon three days in succession. The rinds prepared in this way far surpass any pickle I ever tasted. It will keep from one year to another.

PICKLED TOMATOES.—Pick them before ripe enough to be soft; wash and prick them; make a brine so strong it will not dissolve all of the salt; boil and skim, and when cold, pour it on the tomatoes. Let them stand eight days, pour off, and put on a weak vinegar, which let remain the same length of time, then remove, put on strong vinegar, and whatever spices suit your taste; tie up and put away. You will have nice pickles, and those that will keep.

GREEN TOMATOES.—Take tomatoes after they have grown to their full size, and slice them thin; scald them an instant in salted water; then lay them in a jar with vinegar, cloves and cinnamon.

PICKLED CUCUMBERS.—Wash and cover them with a cloth; turn them over a weak brine, boiling hot; cover closely. Let them remain a few days, then rinse the brine from them, and remove to cold vinegar, with horse radish and spices to taste; keep covered closely.

PRESERVED ORANGE SKINS.—Cut them in strips, the size of a straw, and boil them in a strong sirup till clear; keep them for Bird's Nest Pudding. In making sirup for any kind of preserves, one gill of water to each pound of sugar is enough.

VEAL STUFFING.—Chop half a pound of suet, put in a basin with three-quarters of a pound of bread crumbs, a teaspoonful of salt, a quarter of pepper, a little thyme, or lemon peel chopped, three whole eggs; mix well and use where directed. A pound of bread crumbs, and one more egg may be used: it will make it cut firmer.

MRS. LIZZIE W. WARREN, M. D.,
ELECTRICIAN AND HYDROPATHIST,
Corner Mason and Pacific streets.....San Francisco

MRS. WARREN proposes to teach her patrons the means of attaining and preserving health, rather than the usual practice of physicians, of *doctoring the sick*. Believing in the old adage: "An ounce of prevention is worth a pound of cure," and also that the remedies used to eradicate disease are more deleterious to the human organization than the diseases themselves; therefore she dispenses with the use of drugs, relying on the curative power within the living organism and the supplying such conditions as the natural remedial agents afford. The natural remedies: Air, Diet, Exercise, Water and Electricity. The beneficial effects of water, properly used, are now generally understood, but the remedial effects of electricity are comparatively unknown. By the knowledge and application of a certain law, which recognizes hitherto unknown relations of the positive and negative forces to the functions of life, electricians are enabled to make a beneficial application to disturbed physical equilibrium, thereby rendering electricity the most powerful therapeutic agent; the most potent and all-pervading element which can be used, as it approximates to the principle of life, apparently identical with vitality. Its therapeutic uses are *reasonable* and *wise*, and may be relied upon whenever a cure or improvement is possible.

MRS. WARREN will be pleased to make arrangements by the year, with families requiring a better knowledge of the laws of health and the means of its preservation, as well as medical attendance and advice.

Having devoted many years in study and preparation for this profession, and having received ample testimonials from the College where she graduated, feels confident she will be able to prove her ability to attend to the claims of WOMEN and CHILDREN. To this practice she will give her *Exclusive Attention*.

As an ACCOUCHEUSE she claims to be eminently successful, and can produce ample testimonials of success in many difficult cases.

Those wishing to avail themselves of Mrs. Warren's advice will find her at her residence, on the south-east corner of Mason and Pacific streets.

☞ Arrangements have been made by which a few Patients can be accommodated with Rooms and Board

DR. WEED'S
Hygeo-Medical Institution
M street, between 7th and 8th streets,
SACRAMENTO,
IS WITHOUT DOUBT THE MOST DESIRABLE PLACE in the State to which the Invalid seeking health can resort. Although it has been open but a short time, it has already become known throughout the State as a
First-class Water-Cure Establishment.

Here disease is treated upon strictly Hygenic, and truly scientific principles; principles founded in the very laws of our existence; and the great number of cases that have passed through our hands, here and elsewhere, prove to a demonstration the world-wide superiority of Hygenic treatment over Drug Medication. Ours are

NATURE'S OWN REMEDIES!

And when properly administered never fail to accomplish the desired result. At this Institution by the use of these simple but powerful remedies, the blood is purified, the bowels freed, the liver relieved, palsied limbs restored, stiff joints made supple, headaches removed, fluttering hearts made to beat in proper time, weak organs strengthened, displaced organs replaced, general debility overcome, the complexion made clear, the cheek made to bloom, the eye to sparkle, and the soul to rejoice in the full and complete enjoyment of perfect health. By the use of the

Genuine Electro-Chemical Bath,

and a SYSTEM OF INVIGORATING EXERCISES, many diseases that have been considered incurable are easily and speedily overcome. As a remedy for Fever and Ague, Rheumatism, Scrofula, Liver Diseases, Paralysis, Constipation, Suppressed or Deranged Menses and Sick Headache, the Electro-Chemical Bath PROPERLY GIVEN is invaluable and stands unrivaled. The location is BEAUTIFUL, HEALTHFUL, and retired; surroundings pleasant and cheerful; the rooms commodious and airy; the table excellent, nutritious, and wholesome; and so pleasantly arranged is every department, that the most desponding invalid cannot fail to be inspired with new life, hope, and cheerfulness. Invalids cannot find a place where they can spend a few weeks more profitably, or where they can have the attention of more accomplished and skillful physicians.

MRS. WEED, so well known as a lecturer, and teacher of the laws of life and rational education, will give her especial attention to THE LADIES.

☞ Circulars sent free of charge.

or MRS. ADALINE M. W. WEED, M. D.
15 SACRAMENTO CAL

HEALTHFUL SPECULATION!

IN A RECENT LETTER FROM FOWLER & WELLS of New York, I was solicited to send them one hundred subscribers for their journals. This I would gladly do for the cause of PHRENOLOGY, PHYSIOLOGY, and HEALTH, in California. As I cannot at present leave my care, I take this means to obtain the number. Friends of the cause! do not fail to have every town in the State represented!

To any responsible person who will distribute from 100 to 500 of my Circulars to each Family, Store, and Miner's Dwelling in the village where they reside, I will send them two copies of either of the following journals for one year, commencing July 1st, 1861: The Phrenological Journal, by Fowler & Wells; The Water Cure Journal, by R. T. Trall, M. D.; or The Laws of Life, by J. C. Jackson, M. D., and Miss Harriet N. Austin, M. D. If more than five hundred are required for a full distribution, two more journals will be sent, or any two books by Fowler & Wells or Dr. Trall that do not exceed $1 each. The first applicants will receive the circulars by express, free of charge, and the journals by return of mail from the East. In this way many families may be provided with three of the best journals in the world that treat upon the Laws of Mind, Health, and Home Treatment of Disease. Only one or two from each village can be supplied with the journals on these terms; but I will reward all who may apply for circulars to distribute with "Water Cure for the Million," by R. T. Trall, M. D., President of the Hydropathic College, free of charge.

BARLOW J. SMITH, M. D., Graduate of the Hydropathic or Hygeiotherapeutic College of New York, intends lecturing through the Winter months in the mountain and valley towns of this State, upon the subjects of Phrenology, Physiology, and the Laws of Health, the Nature of Disease, and the Hydropathic and Hygienic Remedies, as taught by the Professors of the New York College.

At the Beasley Water Cure we cure all curable Diseases, except those that are contagious and would endanger the health of the family and patients. This is the oldest establishment in the State based on the principles taught and practiced at the Hydropathic College of New York. Our house is large and pleasantly located—corner of Stockton and Pacific streets, San Francisco. Persons visiting the city desirous of improving their health can be pleasantly accommodated with us. We have the best Hygienic facilities in California, for the cure of all Diseases, especially those of the Lungs, Liver, and Stomach. For the cure of Rheumatism, Ague and Fever, and Poisoning from Lead, Oak, and Mercury, our Baths and Electrical Appliances are superior and different from any others in the State.

No one in the world examines Diseases of the Body through Phrenology or the Head, in the way Dr. Smith does.

If you desire an examination and to consult with Dr. Smith while in the city, you can do so free of charge. Circulars sent on application. 23

EDUCATIONAL.

STOCKTON
Female Seminary.

THE EIGHTH SESSION OF THIS INSTITUTION, UNDER the charge of Dr. CYRUS COLLINS and Lady, assisted by competent Teachers, will commence on
Wednesday, September 25, 1861,
And continue FIVE MONTHS.

—TERMS:—

For Board and Tuition, in common English Branches, per session	$12
For Tuition in Music, per session	2
For Tuition in Painting or Drawing	2
For Tuition in Ancient or Modern Languages, each	2
Washing per dozen	$1 2

Payable Quarterly in advance.

For Tuition and Board per annum, in advance	2

☞ Pupils received at any time, and charged until the end of the session.

COURSE OF STUDY:

The first aim of this Institution is thoroughness; and although any plan proposed can only be disciplinary, yet we have chosen that course which will be the most practical, involving those sciences most available in common life. Beginning with fundamental principles, the student is carried by natural and easy graduations, through a course of study, calculated to strengthen and invigorate the mind, and prepare it for healthful action.

Our course of study comprises Two Departments, a Preparatory of two, and an Academic of three years.

THE STUDIES OF THE PREPARATORY COURSE.
FIRST YEAR.
Reading, Writing, Orthography, Arithmetic (Thompson's Rudiments), Primary Geography, Grammar, and Composition.
SECOND YEAR.
Rhetorical Reading, Arithmetic, Book-Keeping, Geography, History, Grammar, Penmanship, and Composition.

THE STUDIES OF THE ACADEMIC COURSE.
FIRST YEAR.
Algebra, Geometry, Natural Philosophy, Physiology, Rhetoric, Physical Geography, and Composition.
SECOND YEAR.
Trigonometry, Astronomy, Natural History, Botany, Logic, Intellectual Philosophy, and Composition.
THIRD YEAR.
Political Economy, Moral Philosophy, Evidences of Christianity, Belles-Lettres, and Composition.

The Ancient and Modern Languages, Music (Instrumental and Vocal), Drawing, Painting, and Ornamental Needlework, optionary through the whole course.

Pupils can omit, with the consent of parents or guardians, any of the above studies, but none will be entitled to the Diploma of Graduation who have not completed the whole course.

All young Ladies from abroad will be expected to board with the Principal.

Classical School
FOR BOYS.

We have established a Department for Boys. The course of study the same as in the Female Department. Particular attention paid to those preparing for College.
☞ Terms the same as in the Female Department.
7 Dr. CYRUS COLLINS, A.B., Principal.

SANTA CLARA COLLEGE.

THE TENTH ANNUAL SESSION OF THIS INstitution will commence on MONDAY, August 26th. The plan of instruction embraces two regular Courses—the Classical and the Commercial, besides a Preparatory Department.

TERMS.

Entrance, to be paid but once	$15
Board and Tuition per session	135
Washing and mending of articles washed, per session	45
Stationery, per session	10
Medical attendance and medicines (unless it be preferred to pay the bill in case of sickness), per session	10
Vacations, if spent at the College	35

N. B.—When there are more than two brothers, each one over two pays only half price.

Use of Instruments in Chemistry and Natural Philosophy, Vocal Music, Piano, Violin, and Drawing, form extra charges. School Books are furnished at store prices. No extra charge for any of the languages. Payments to be made half a session in advance.

For further information apply to the President of Santa Clara College, Santa Clara, Cal., or to Rev. A. Maraschi, S. J., St. Ignatius' Church, Market street, between Fourth and Fifth, San Francisco. 2

Literary Shrubbery.

Rice Culture in the Sandwich Islands.—A Honolulu paper says: "On the 1st of March, Dr. Ford planted four pounds of Carolina Rice-seed in a taro-patch, containing a little less than a quarter of an acre (7-32ds). One Chinaman was two days in preparing and planting the seed. When of sufficient growth to transplant, the same man transplanted it in a quarter of a day. In four months and three days from the time of transplanting, the crop was gathered, and yielded 1163 pounds. The estimated expense of labor, rent of land, etc., is about $16 50. Dr. Ford has the seed for sale. At a fair valuation domestic Rice is worth six cents per pound, which would make the above yield worth $69 78. There is no good reason why 1000 tons cannot be raised as well as 1000 pounds, thus enabling us not only to supply all our large home consumption, but even export any surplus raised."

Crowing Hens.—A correspondent of the London Cottage Gardener receives the following answer to an inquiry about Crowing Hens:

Your hen has become a hen cock, and if you examine her narrowly, you will see an increase of size in her comb and gills, an inclination to fall over in the long tail feather, and unusual growth and alteration of hackle and saddle. All this is caused by derangement of the egg organs. She will always be useless, she will get worse instead of better, and will end by becoming a positive nuisance. We advise you to kill her. There is an old proverb,

> "A whistling woman and a crowing hen,
> Are worthless nuisances to men."

A Sign of Guilt.—A Cuban physician having been robbed to a serious extent in his tobacco-works, discovered the thief by the following ingenious artifice. Having called his negro slaves together, he addressed them thus: "My friends, the Great Spirit appeared to me during the night, and told me that the person who stole my money should, at this instant—*this very instant*—have a parrot's feather at the point of his nose." On this announcement, the thief, anxious to find out if his guilt had declared itself, put his finger to his nose. "Man," cried the master instantly, "'tis thou who hast robbed me. The Great Spirit has just told me so."

Mr. Gail Borden, Jr., has an establishment at Wassaic, Duchess county, for manufacturing "Condensed Milk," delivered daily to about 3000 customers in the city of New York. Mr. B. also puts up a condensed preparation of coffee, containing both the milk and sugar, a teaspoonful of which on being simply dissolved in a cup of hot water, produces as excellent a cup of coffee as the most fastidious would desire. We have received samples through Col. Johnson of this city.—[C. Gentleman.

Served 'em Right.—A party of rowdies in Vermont "charivarid" or "horned" a newly-married couple. The bride appeared to take it in good part, and, inviting them to the house, treated them to a bountiful supply of cider. The after result may be conceived when we state that she had mixed a liberal quantity of tartar emetic in the cider.

"Grandma," said a little urchin, "your specs are upside down; do you wear them thus to see to sew?" "No, my dear, I wear them so to see."

"Gripps. I understand you have a superior way of curing hams. I should like to learn it." "Well, yes, I know very well how to *cure* them; but the trouble with me just now is how to *procure* them."

A Belgian journal states that thirty-five glass furnaces have been stopped near Charleroi, in consequence of the crisis in America.

Four Hundred and Fifty Acres Rich Land.

A valuable tract of rich Land, of the extent named, in a beautiful location. Will be sold a bargain if applied for soon. Title perfect. Inquire of Editor of the Farmer. 14

A Grand Opportunity for a Home.

For sale in one of the interior Mountain Towns, a good House and Garden, with outbuildings, including a Smoke-House in successful use, being capable of realizing a good income.

The buildings are good. The Orchard is in full bearing, with Peaches, Plums, Apples, Grapes, etc., and small Fruits. There are also on the estate several small tenements, which bring in an income of about $50 a month. The Fruit sold from the Garden, together with the certain income, will pay in two years or less the price now required for the estate. It is offered low for an immediate Cash sale, as the owner desires to locate in a different part of the State, where he has other property which requires his attention.

For particulars inquire of Editor of Farmer. 24

WANTED, TO LEASE, ETC.

800 Acres Excellent Land
FOR SALE.

A SPLENDID TRACT OF LAND OF 800 acres, at the Mission San Jose.

This tract of Land is of the very best quality in all this section, suitable for Grain, Vineyards, Orchards, or grazing.

The Title is perfect. The Land will be sold at $25 an acre, one-half cash, balance one, two, and three years, at 1 per cent interest.

Whoever desires a splendid tract of Land, in a beautiful location, commanding in prospect, with everything desirable for a large Ranch or Homestead, will find this a rare opportunity. Inquire of

H. G. ELLSWORTH, on the premises,
11-3m Or of the Editor of this paper.

Saddle-Horse For Sale.

A FINE SADDLE-HORSE, FOUR YEARS old, got by Imp. Lawyer; is well broken, and can run a mile in 1:55, when in racing order. Is just fifteen hands high, bright bay, with a star and white hind foot; a perfect gentleman's horse. The owner wishes to sell him for want of use for him. Apply to

T. B. MERRY;
21 Farmer Office.

Breeding-Mares Wanted.

A PARTY WANTING A FEW MARES OF GOOD quality, would like to exchange Real Estate of improving value for the same. A band of twenty or thirty MARES is wanted. The Real Estate is in Sacramento. 18

Jebb's Patent Churn.

THIS NEW PATENT CHURN IS NOW READY TO be seen and tried. It is beyond question one of the best and simplest constructed Churns ever invented, and Dairymen should call and examine it.

By the action of the crank, three distinct currents are made, which moves the cream with such rapidity that Butter is made in from three to five minutes with ease.

This Churn can be seen at the Farmer Office.

Patent-Rights can be had for all the counties in the State, and any experienced carpenter can make a fortune easier by these Churns than by gold digging. They only need to be seen to be approved. 12

Electricity as a Remedial Agent.
DISEASES CURED
Without the Use of Medicines,
AT THE
Electropathic Institute,
525 Washington street,
Between Montgomery and Kearny streets,
SAN FRANCISCO.

When it was promulgated that disease could be entirely eradicated from the system without the use of poisonous drugs, the unthinking, or those who do not look deeply into cause and effect, scouted the assertion as chimerical, and adduced strong evidence of its utter impossibility. Long articles, replete with arguments, seemingly unanswerable, of the position that only through the digestive system could the blood be purged of the accumulation of the poisons which constitute the disease. A great cry went up from those interested in the continued supremacy of the old system of one poison to cure another; that electricity, as a curative agent, had been tried and proved to be of but little if any value—thinking, poor souls, that the world of science stood at the same point it occupied one hundred years ago. They were wrong, while those old fogies were content if they cured one in every five patients, there were those who were diving deep into the science of electricity, and finally it was discovered that the trouble was in the instruments used. From that time to the present, improvements have rapidly advanced, until every disease in the catalogue of human ills has been either cured altogether, or checked so as to enable the sufferer to seek those changes of climate which ultimately perform a perfect cure. Diseases hitherto considered incurable, have been cured, and those diseases which took months, and even years, to cure by medical process, are now cured in a few weeks: and all by the improved instruments of DR. J. H. JOSSELYN, Resident Physician at the Electropathic Institute, New No. 645 Washington street, between Kearny and Montgomery streets, San Francisco. It is astonishing to see the number of patients and diversity of diseases that have been relieved by the Electropathic system. From early morn till late at night his instrument is engaged, imparting health and strength to all who have the good fortune to obtain his services. The charges, too, are not as heavy as by the old system, besides there is no medicine to pay for, let alone the unpleasantness of swallowing the nauseous stuff. During the time that the Institute has been in operation, there has been more benefit to the human family derived from the system than from all other systems combined during the same period. Among the most troublesome diseases to which Californians have been exposed, is Rheumatism; none have given the honorable practitioner more trouble to relieve, and none have pretended to cure (if we except known empirics) permanently. But this subtle disease gives way before the Electropathic system in a very short time, enabling the sufferer to go about his business without pain or the fear and dread of relapse. And so with most other diseases, considered incurable. We mention Rheumatism because of its abundance, but we could enumerate many other diseases full as troublesome, and some far more fatal in their results.

To the nervous, the Directors would say, that you can be entirely relieved from those dreadful feelings of evil-foreboding, and your system strengthened so that nothing can disturb the current of your life. Several cases of insanity, arising from a disarrangement of the nervous system, have been permanently cured by this system. The Directors, in stating these things, do so in the hope that it may be the means of awakening the public who have not studied into such things, to a sense of their duties, and if possible, prevent those who have the care of the rising generation from poisoning their young charges with vile drugs, thereby entailing upon them troubles which in after life may cause them to curse their origin.

It is unnecessary to enumerate all the diseases in the catalogue, for that would be occupying space to no purpose. Every disease has been under treatment by this system, and there are none but have received benefit either in this State or at the East.

There are at present but few instruments in the world that can be depended upon. A good instrument costs very heavy, and must be manufactured to order, and there are very few who are able to manufacture them, for want of knowledge of the healing principle. The only instrument to be depended upon in this State is at the Electropathic Institute.

Connected with this system are the renowned Electro-Magnetic Baths. Here let us caution the public against the numerous impostors in the bathing line. The pure magnetic baths is one of the most effective aids in the removal of disease from the system, but if given at the wrong time, are likely to aggravate trouble, and cases have been known where the patient has been injured so badly as to require months to remove the injury. Persons in quest of this bath should be careful and not apply to a place where there is no physician to judge of the necessity of the remedy. In fact, the only place where they can be obtained in all their purity is at the Institute, where the Resident Physician will always be happy to examine and see that they are not unseasonably administered, and if not necessary, advise the requisite remedy.

Below will be found a list of the cases which have been successfully treated by the Electropathic system, at the Institute, during the first year of its establishment. The record is good, and challenges the admiration of the world:

Name of Disease.	*No.*
Rheumatism	421
Neuralgia	368
Dyspepsia	297
General and Sexual Debility	240
Asthma	220
Bronchial Affections	187
Fever and Ague	183
Female Irregularities	161
Mercurial Affections	130
Diseases of the Eye	85
Paralysis	78
Scrofula (long standing)	30
Catarrh of the Lungs	27
Catarrh of the Head	21
Liver Complaints	20
Deafness	18
Panama Fever	10
Consumption	7
All others, among which is almost every nameable disease	128
Total	2626

The above shows what can be accomplished by combined energy when it has truth and science upon its side. The Electropathic Institute was started amid the cry of interested charlatans, who used all the power their riches and the prejudices of the public gave them, to prevent its success. It has risen to a position that is beyond their baffled malice, and will be honored in the scientific world when they are forgotten, or only remembered for their crimes and impositions. A thinking public are fast consigning them to that oblivion their works merit.

Persons seeking remedial assistance may wish to know something of the system by which diseases are so rapidly removed from the body. Electricity is a fluid of so subtle a nature that it can only be studied by its results. We know by its action it forces everything of a foreign nature in the body from the center to the surface by its energy; while the vitality which it imparts fills up the vacuum, preventing thereby the subtle poisons from returning to the hitherto diseased parts; and here let it be understood that the Bath should never be administered until the disease has been forced to the surface, except, perhaps, in cases of cold where fever has not set in. Its action upon Mercurial Diseases is peculiar. The best authorities are of the opinion that it liquifies the mercury, which, when in a liquid state, by its own specific gravity, forces itself out of the body. This result has been arrived at by testing the water after an Electro-Magnetic Bath. After such tests have been found in the water, the patient is not troubled any more with those pains peculiar with the diseases. In all other cases it forces to the surface and is washed off by the Bath. The whole system, in its application, is a luxury, there being no pain or inconvenience attending upon it, but the reverse is the case, being one continued pleasure. Try it, you that are suffering either from disease or the injudicious use of poisonous drugs, and you will be made to rejoice that you have had the courage to strike out from the beaten path.

Below are a few certificates from patients that have been cured at the Institute:

CERTIFICATES OF CURES:

San Francisco, April 18th, 1861.

This is to certify that I have been under the treatment of Dr. Josselyn, at the Electropathic Institute, and that he has cured me. My disease was mercurial, accompanied by chills. I applied to him on the 11th day of this month. I recommend all afflicted to employ him. He has cured me without medicine, by the use of his Electropathic Instrument.

JOHN CALLAGHAN.

State of California, City and County of San Francisco, ss.
Subscribed and sworn to before me, this 18th day of April, A. D., 1860. P. BARRY, Notary Public.

Hornitos, Nov. 1st, 1860.

Well, Doctor, I am at home, and have been to work in the water for several days, and there is no return of the Rheumatism, as I call it, and mercurial pains, as you stated them to be. I feel as gay as a lark: no pain or bad feelings, no stiffness, but perfectly well, and all done by you in three weeks, without one drop of medicine. You had hard work to make me believe before you commenced that you could cure me, but now I find it very easy to believe. Although my friends look rather incredulous, but they cannot doubt my sober earnestness. Doctor, you have my thanks, and I will benefit you all I can by spreading your fame up in these parts.

Respectfully yours, GEO. PERKINSON, Jr.
To J. H. Josselyn, M. D., Resident Physician at the Electropathic Institute.

CAUTION.

The public are informed that I cannot be seen at any other place in the State except at the Electropathic Institute (179, old No.) 645 new No., Washington street, south side, a few doors below Kearny. The reason of this caution is, certain Quacks have placed my name upon their doors, and have deceived strangers who wished my services.

PHILIPS' SELF-REGULATING
Wind-Power.
BENICIA MILL.
FOR DRIVING GRIST-MILLS, TANNERIES, TURNING SHOPS, CIRCULAR SAWS, CHURNING, AND PUMPING;

And wherever introduced, it has been universally pronounced superior to anything of the kind yet invented. The durability, simplicity, and cheapness of it must recommend it to every observer.

These Mills revolve, whenever you wish them, with perfect steadiness whether there be a gentle breeze or a violent gale. The regulating power is simply the force of the wind acting on a wind lever, which adjusts the wings exactly to the force of the wind, so that the stronger the wind blows the safer and steadier the mill becomes, presenting to a sudden gust nothing but sharp edges to its force.

But its CROWNING EXCELLENCE over all other Wind-Power, is, that it not only regulates itself, but it can be set to regulate itself to any desired speed, and that by a process so simple that a child can manage.

Having the PATENT RIGHT for the States on the Pacific, we are now prepared to furnish them at prices according to the size and power required.

Persons making permanent improvements, and desiring Wind-Power, should put up no other, as we are satisfied they are the only ones that will give perfect and entire satisfaction.

The PRICES at the Shop, for those adapted to Agricultural and Mechanical purposes, are as follows:

12 feet diameter	with 40 feet of wind surface	$100 to $125
14 " "	" 60 " " "	150 to 175
16 " "	" 102 " " "	200 to 250
18 " "	will saw wood	350

☞ We are also prepared to Manufacture and Repair all kinds of Agricultural or other Machinery, near Steamboat wharf, Benicia.

BAILEY'S PATENT
COMBINED
Washing, Starching and Wringing
MACHINE.

Patented April 5th, 1859; and March 27th, 1860.

THIS MACHINE IS ADAPTED TO ALL KINDS OF clothes, from a pocket handkerchief to a bed-quilt. You can wring your clothes in less than one quarter of the time and so much dryer that they will dry in one half the time and not injure your clothes one half as much as when twisted by hand. This Machine is formed with

TWO SPRING ROLLS COVERED WITH RUBBER,

And so constructed as to run together with great pressure, and turn fast and easy. The springs in the rolls are so constructed as to yield the most in the center, where the bulk of the clothes are conducted as they pass between them. By this means the springs with the rubber close so tight around the clothes that they come through

NEARLY DRY ENOUGH TO IRON.

However uneven the garment may be, it receives an equal amount of pressure. It is also sufficiently strong and so arranged that it can be run by power for LAUNDRIES, FACTORIES, LARGE HOTELS, &c. Although it is a small and simple Machine, it is able to do a large amount of work in a short time.

This Machine has been thoroughly tested for sixteen months past, and found to do everything that it was designed to do. And after any one buys one of them, and finds it will not do what I claim for it, they can return it and have their money, as all my agents are authorized to do this. So there is no chance for you to get humbugged by giving them a fair trial, and it may be just the thing you want.

To wash with this Machine, put your clothes to soak for about twenty minutes in strong soap-suds and warm water, then run them through the rolls five or six times back and forth into the suds, when they will require no rubbing excepting the very dirtiest parts, such as collars and wristbands, which will require but a slight rub with the hands. By this process you will be able to do your washing in less than half the time you can by hand, or any other Machine in use, and much easier, and no wear or tear to your clothes, like the rubbing-board and twisting to get the water from them—as you can see the principle of my Machine is to squeeze instead of rub and twist, which evades all friction.

CHAS. T. DARROW, San Francisco.
General Agent for California and Oregon.

A Machine will be on exhibition at F. D. Cottle's Carpenter Shop, Pine street, below Sansome.

PRICE, 25 DOLLARS. [16-3m

THE METROPOLITAN
Washing Machine!
AND ATTACHMENT.
Rubbing and Wringing Done Away!

THIS
Wonderful Machine!
IS
REMARKABLE
FOR THE
Following Qualities,
WHICH
It Is Warranted
TO POSSESS:

It does not wear the clothes, and never breaks a button.
It cleanses thoroughly the most delicate as well as the roughest clothing, and rinses clear.
It is perfectly simple, very strong and durable, and can hardly get out of repair.
It is light and portable, and when not in use takes no more room than a common Wash-Tub.
A common hand can, with ease and perfect safety to the clothing, wash faster and better than four Washer-women can by hand.
Orders promptly filled, with Machines, having full directions for use, directly from the manufactory.
For sale, Wholesale and Retail, by

WM. FAULKNER & SON,
No. 526, Sansome st., near Washington, San Francisco.

This Machine weighs only about 65 pounds, and when not in use, takes no more room than the common wash-tub, and can be moved about by a child of 12 years.

Remarkable as this Machine is for saving of labor, time, etc., it is truly wonderful in saving of wear and tear of clothing. Gentlemen's shirts, which are generally rubbed to shreds in six to eight months by any rubbing process, will last eighteen to twenty-four months, if washed exclusively by this.

The Attachment, for removing water from the clothes, entirely dispenses with wringing, by passing the clothes between elastic rollers. It is done five times as fast as clothes can be wrung by hand, and removes the water so thoroughly that the clothes dry quickly on the line. It is easily operated, and does not injure the cloth.

The skill required to operate it is no more than is required to sweep well, to knead bread well, to make beds well, or to wash dishes well; nor one-fourth as much as is necessary to learn the use of the ax, scythe, auger, hoe, spade, and shovel. 11-3m

Wholesale Produce Report.

This represents the prices paid by the dealer to the producer.

[Corrected weekly, by TODD & RICHARDS, No. 45 Clay Street.] Sept. 7.

Arrivals of Grain upon our wharves since our last report have been large, but more particularly in the article of Wheat, still all receipts not applying on old contracts, or for storage, have been readily taken up both for export and milling purposes. We are unable to advance our quotations, however, except perhaps for large parcels of choice qualities, shipment of which being attended with less delay, and insuring greater dispatch for vessels, is worth more to export buyers, than small lots of different grades and varieties. Some such parcels have been placed at 5 cents above our quotations for shipping Wheat, during the past week, and such operations can doubtless be repeated at this time. Millers do not enter the market with the same anxiety to secure the lower grades of Wheat that they have done, but readily take up all parcels of red Australia and Chile at full rates, those varieties and particularly from some certain sections, carrying strength which places it for milling requirements above other varieties which with export buyers would command a preference. Our Wheat market, we think, is in a good healthy condition at present rates, which fact is fully demonstrated by the crowded condition of our wharves this day with Wheat, the great bulk of which is already sold. We note shipments of Grain and Breadstuffs, at this time to New York, England and Australia markets.

The "Fearless," now loading in Coleman & Co's. Line, at North Point Dock, has taken her complement of Wheat on board (four hundred tons), and will complete her cargo with Barley and general freight for New York.

A good demand has existed during the past week for Barley for exportation, and large sales have been made for this purpose at prices ranging from 85 to 90 cents, the latter figure for large parcels of extra choice qualities. But at this time we think our market would not bear the latter price, the demand which met that figure having been supplied. A strong disposition to hold Barley for an advance, in preference to Wheat, exists among our farmers, which fact accounts for the limited receipts of Barley at this time.

Oats have been freely purchased for some time past by our export buyers, for shipment to Australia at $1 05 to $1 07½, which fact we are pleased to notice, as it is, to say the least, a decided improvement upon the trade in this article for many months.

Hay is still dull, and prices rule low, as the receipts of the same continue to be large.

Receipts of Grain and Produce from around the Bay for the past week have been as follows: Flour, 11,416 qr-sacks; Wheat, 69,228 sacks; Barley, 24,720 sacks; Oats, 21,262 sacks; Corn, 930 sacks; Potatoes, 4581 sacks; Hay, 695 tons; Wool, 71 bales.

LADIES AT THE FAIR.—Ladies at the State Fair at Sacramento should be sure to visit the fashionable Dry Goods store of Connell, Ryan & Co., on J street. Their stock is one of the best in the Queen City of the Plains, and the most courteous attention is ever paid to the patrons of this house.

THE ELECTROPATHIC INSTITUTE.—We call the attention of our readers to this successful Institution, on Washington street, of Dr. Josselyn. It is worthy of notice; being free from the drugging method, cures are effected without poisoning the system.

Our Subscribers' Premium.

As we shall give as much time as is possible at the different Fairs; and as we have not the pleasure of a personal acquaintance with all our Subscribers, we ask of all who attend the Fairs, that they will do us the great kindness to make themselves known to us; from each and all, we hope to obtain some light; each and all can furnish us with some Results of their practical labors, some Idea, some kind of information, that will be of value to our Journal, and for which we shall be grateful.

There will be many of our Subscribers also from whom we hope to have the renewal of their names for our Sixteenth Volume: and this occasion will be a convenient as well as a pleasant and opportune time; and those who may be in arrears, we hope they will cheerfully and without asking, voluntarily aid us in our work; for all such deeds we shall be grateful. This will be our Premium.

Politicians at Work Everywhere.

WE have seen the deep interest that Politicians feel for the State and our country; many of our exchanges came to us with an Extra folded inside, being an appeal in behalf of the party to which it belonged.

Politicians have plunged our blessed country into a war, that has nearly ruined it. Our whole country is divided by them. Were it not for Politicians who fatten on the Ruin of States, our whole country would now be united and prosperous.

Our own State has been kept divided; its true interests neglected; and its vast resources drained to fatten the Vampires that have been fastened upon it.

We wish the Agriculturists of California would realize their true position and influence. Let them reflect, that while Merchants, Traders, Mechanics, and Miners, are often changing from place to place: here to-day and gone to-morrow: not really permanent citizens; the Agriculturists, the great mass of the Farmers, are a fixed Population, doing a vast amount of labor, and paying a goodly share of taxes: it is upon this class that the burden of the Government falls; and it is *to them*, the Government looks for support and aid in the hour of trial and danger.

Farmers, then, should see that only good and true men are elected to offices throughout the State. No Farmer should aid directly or indirectly in placing an Itinerant in any office whatever. Permanent citizens only should hold office, and only those who have families, or business guaranties of their characters, and ability to perform their duty; and no one can be safe, until True men, who are Loyal to the Government and Flag of our Country, are put forward to the exclusion of all others.

Farmers, look to it; you are the moving power: your votes have decided the Fate of California!

Our Election.

THE Election of this State has passed off in a very quiet manner; most remarkably so, when we consider the agitated condition of the people everywhere.

The results astonish all; both the parties are surprised; the triumphant party are surprised at the greatness of their success, and the minority are also as much taken back at their own defeat, with the prestige they supposed they had. But the Election is over; the Union party have gloriously triumphed; our State has been saved, we trust, from civil war and bloodshed: "Peace reigns in Warsaw." The victors will wear their honors proudly, and the vanquished seem ready to yield to the majority-principle, as good citizens. Thus we have passed the "Waters of Death," and are now on the shores of returning summer land of Peace and Plenty.

STANFORD BROTHERS — LIGHT HO!—The name of this well-known mercantile house has recently been brought out more into the *light* of the world around us. Our object in writing a few words was to say simply, that Stanford Brothers have been constantly doing their best to scatter Light all over the State. Stanford Brother's Oils, Stanford's Camphene, Stanford Brother's Coal-Oil, Kerosene, and all the other *phenes*, have so aroused the people, that having enjoyed the *light* of the firm in greater or lesser parcels for a considerable time, the people have taken the matter in hand, and have actually insisted upon taking one of this firm and placing him at the Capital, so that his light and influence shall be felt permanently over the entire State, and thus effectually dispel all the clouds and darkness that was gathering over us. And what *the people* determine to do, they generally do. Light Ho!

CAVALRY EQUIPMENTS.—Our Cavalry that are called on duty will be sure of having good and substantial equipments, so far as their saddlery is concerned. Any one interested can be sure of this, if they will only call at Main & Winchester's Saddlery Warehouse, and see the fine accoutrements now making by that eminent House. We gave a hasty glance at their place of business, this week, and for all hands was business enough to do. Those who want any article of this kind, should visit Messrs. M. & W.

NEW ADVERTISEMENTS.—We ask attention to our new advertisements. Travelers will find good stopping places and good homes in each of the hotels in our columns; all are No. 1—we advertise none others. Our new business cards from Sacramento are worthy of notice. Now is the time to advertise with us. The Fair Season is at hand and our circulation over every part of the State will give advertisers a rare chance to make their business known.

THE FAMOUS PULU TRADE.—The trade in this article is most truly astonishing. Schreiber first introduced this article here as an article for Bedding, in February 1856. The article was sold at retail as high as 50c and 75c a pound. The sale was very limited; but now the year of 1860, only four years, and the sale has been over 3000 bales, averaging 125 pounds each,* or nearly 400,000 pounds; price about 12½ cents a pound, or nearly $50,000 in value; mostly all sold by Mr. Schreiber.

GOOD STOCK.—A subscriber, in writing us, incidentally mentioned that he killed a yearling Calf of Spanish stock that was from the pasture (never otherwise fed), which weighed, when dressed, 400 pounds, including tallow. Will other Stock-men tell us if this was *not* a good Calf!

California Agricultural Fairs for 1861.

THE Annual Fairs of the State, District, and County, Agricultural Societies of this State, for the current year, will be held as follows:

State Agricultural Society—At Sacramento, Monday, Sept. 16th, to 21st.

San Joaquin Valley District Society—At Stockton, Tuesday, Sept. 10th, to 14th.

Northern District Society—At Marysville, Monday, Sept. 9th, to 14th.

Bay District Society—At San Jose, Tuesday, Sept. 24th, to 27th.

Eldorado County Society—At Eldorado, Tuesday, Sept. 10th, to 13th.

Tehama County Society—At Red Bluff, Wednesday, Sept. 11th.

Sonoma County Society—At Santa Rosa, Tuesday, Sept. 24th, to 27th.

Alameda County Society—At Oakland, Tuesday, Oct. 1st, to 5th.

Humboldt County Society—At Hydesville, Tuesday, Oct. 8th.

Contra Costa County Society—At Pacheco.

Fairs in Oregon for 1861.

State Society—At Oregon City, Oct. 1st, to 4th.

Umpqua Valley Society—At ——, Sept. 12th.

Yamhill County Society—At McMinnville, Sept. 24th and 25th.

Benton County Society—At Corvallis, Oct. 3d and 4th.

Lane County Society—Eugene City, Oct. 9th and 10th.

Marion County Society—Salem, Oct. 11th and 12th.

Washington County Society—Hillsboro', Oct. 16th.

Multnomah County Society—Oct. 23d and 24th.

Four Dollars in Year—In Advance.

ONLY Four Dollars a Year! This was our offer when we began our Fifteenth Volume; but then we meant Four Dollars *in advance*. At that time a goodly number of names were sent us by Friends and Agents, for which we were grateful. In looking over our list we find some, that from oversight, or other neglect, remain UNPAID, and six months have passed. It will be remembered, too, for it was in print, that we said all who did not pay promptly, would be charged the former price. Those who now owe, and to whom bills have been sent, will therefore bear in mind that their indebtedness is now *Four Dollars and a half*. This is just and right, and we ask such persons to remit or send us Five Dollars, and we will credit them with the extra, or if they will send Eight Dollars, we will receipt for Two Years; that would make it equal. A little reflection must convince every honest mind that these small sums should be promptly sent to us. We base our labors and plans upon the amount that we believe will be promptly paid, and although the sum is small in itself to each, the aggregate is thousands to us, and it is not right that the good we desire to do should be frustrated by those who can, by only a little effort, help us to do so much.

Will each one who is now indebted to us *feel* what we say, and act upon it? Our Records will show.

Ione Valley.

IN our sketch of this Valley, we omitted to speak of the Flouring Mill of James Cummings, Esq., which is a fine brick Mill doing a good business, and turning out some of the best samples of Flour in our State. The Mill runs day and night; has all the new improvements; and can be ranked as A No. 1 Mill.

We should have said of the Golden Star Mill, that the proprietors were Hall & Herron, instead of Hall, Capt. Herron of Sacramento city being a partner in the Mill.

We also made a mistake in the name of the person, where we tasted the wine of the Native Grape. It should have been R. K. Sexton, instead of Mr. Rickey. "Mistakes will happen in the best of families;" and we hope our friends will excuse omissions and errors of this kind—as, from a pocket well lined with "Items," we are sometimes apt to err.

The Great Wrestling Match.

THE Grand Wrestling Match for the Champion's Belt of the State of California, came off at Mr. Frank Carter's Half-Way House, between Nevada and Grass Valley, on Friday and Saturday, the 30th and 31st of August. The wrestling was free for all nations, on the following rules:

Each couple to shake hands when they begin to play; to play lovingly with each other.

Each man to throw his opponent a fair backfall, to the satisfaction of the umpires, and to shake hands with each other when thrown, on leaving the ring.

No one to take his opponent by a cross collar.

No one to take his opponent by the pants.

No one to throw his opponent, when said opponent is on his knees.

No one to get on his knees to prevent his being thrown.

No one to take his opponent by the skin of his body.

No one to take advantage of his opponent when he has his jacket off his body, and no one to wear his shoes or boots in the ring to wrestle with.

A more manly or satisfactory wrestling was never contended for than on Friday and Saturday last. The three prizes were awarded to residents of Grass Valley.

The first prize, the Champion's Belt, of the value of $275, was won by Thomas Eudy, of St. Austell, Cornwall, England.

The second prize, of $75, by John Mitchell, of Gurnear, Cornwall, England.

The third prize, of $50, by Richard Edwards, of Redruth, Cornwall, England.

Mr. Thomas Eudy was then called to the Committee-stand and was presented with the Champion's Belt of the State of California, by James Powning, Esq., of Grass Valley, who delivered the same in a very neat and appropriate speech. Mr. James B. Jeffery, of Nevada, one of the subscribers to the Wrestling-Match, put the belt on the winner, who was then conducted to the center of the ring, when three cheers and a tiger were given for the Champion. The Nevada Brass Band being in attendance, then gave forth some of their choicest music, which closed the festivities of the wrestling for the Champion's Belt of the State of California.—[Nevada Transcript.

FARM STOCK, &c.

THOROUGHBRED CATTLE, Sheep, and Swine.

HAVING ARRIVED BY THE last steamer from New York, with a choice lot of THOROUGHBRED STOCK, which, with that recently received by previous steamers, will enable me to supply the market with French Merino, Spanish Merino, Southdown, and Leicestershire SHEEP; Essex, Berkshire, Suffolk, and Leicestershire SWINE. Also, a few Short-Horn Durham CATTLE, including some superior YOUNG BULLS.

This Stock has never been surpassed by any previous importation of the kind, and it will be sold as low as the same quality can be purchased from any other RELIABLE source. The Stock can be seen at our Ranch directly across the Bay from San Francisco, a short distance below the Ferry Landing at San Antonio. I will also keep a few of the SHEEP at the Black Hawk Stables, on Pine street, San Francisco, where I will be happy to show them to any one wishing to see truly good Stock.

JAMES M. PATTERSON, Agent for
John D. Patterson, of Westfield, N. Y.

Alderney and Ayrshire Cattle.

R. AITCHESON ALEXANDER,
v13-21 Spring Station, Woodford County, Ky.

To Wool-Growers!

THE SUBSCRIBERS WOULD call the attention of the Wool-Growers of California to their flock of

Fine Full-Blood Merino Sheep,

Which is acknowledged by the best judges to be the finest flock of Sheep in this State.

Our flock originally consisted of nothing but Full-Blood Merino ewes, and the bucks were imported from the celebrated flocks of J. D. Patterson, Chataque Co., N. Y., consequently we have never had upon our ranch anything but the finest Full-Blood Stock. We now have

A Limited Number of Bucks For Sale,

Which we intend to offer at such prices as to place them within the reach of all who wish to improve their flocks of Sheep. There has never been finer Stock imported into this State, and the bucks we now offer for sale have the advantage of having been

REARED HERE,

And Fully Acclimated,

Therefore more desirable than imported Stock.

Persons wishing to see our Stock, will find a sample of our bucks at FISH'S STABLES, on Pine street, San Francisco.

For information concerning the Clip from our flocks for this year, and quality of the Wool, we refer to Mr. J. E. PERKINS, Agent of the Wool-Growers' Association, San Francisco, or to Col. WARREN, of the California Farmer, who will show the Bucks to purchasers.

Persons wishing to address us will send letters to care L. B. BENCHLEY, San Francisco, who will give any information required concerning our flock of Sheep.

GODCHEAUX & BLACKBURN,
16 Rancho Passo Robles, San Luis Obispo Co

Southdown Bucks For Sale.

THE SUBSCRIBER NOW OFFERS FOR SALE
200 Half-breeds;
100 Three-quarter Breeds;
20 Seven-eighth Breeds.

The above BUCKS are bred from American Ewes, crossed with full-blood Southdown, imported from the stock of J. C. TAYLOR, of New Jersey, and are of the "WEBB STOCK."

Among the sires are found the names of MASTER FORDHAM, MASTER FRANK, and WORLD'S PRIZE—the finest sheep ever sent to the States by Mr Webb.

I will guarantee them to be of the grade marked against them, and equal to any in the State.

Their hardiness of character, aptitude to fatten and maintain their flesh on short feed, render them a very desirable class of sheep for Breeders.

....ALSO....

30 Half-breed FRENCH MERINOS;
30 Half-breed LEICESTERS.

The above will be sold at prices to suit the times.

For further particulars, inquire of the subscriber, on the Ranch, "SAN JUAN GRANT," fourteen miles from Sacramento, where the Sheep can be seen: or of A. REDINGTON, Esq., Sacramento city.

JOB-WORK—Of every description, done with promptness, at fair rates; orders will be faithfully attended to.

Mountain Orchards and Vineyards.—No. 2.

WITH a desire to make some observations upon another route, we took the stage route from Marysville intending to view the same from the starting point on to Downieville, and to see if the whole line of country was not favorable for orchards and vineyards.

After leaving Marysville, the entire route along the Yuba and over the stage road is a constant succession of hills and mountains, gradually ascending, with the usual cañons and gulches, in all of which the work of the miner is visible; while on every hand, high up on the mountains, the water sluices and ditches stretch along like net-work, sometimes reared high overhead,—forty, fifty, and sixty feet and more; then again upon the side of the mountain, while the waters that have flowed in them have swept away hundreds of acres of the sides of the mountains, and carried the rocks and stones into the valleys below.

Along this entire route, at nearly all the mining spots, we found the evidence of a successful cultivation of fruit trees, vines, and garden vegetables. We regretted that we could not explore all this route, but our aim was to visit San Juan, Forest City, and Downieville, particularly, and therefore only made hurried notes; yet we saw sufficient to know that in all this section of country there is a great portion where vineyards can be established with perfect success. The soil, either the red land, or slate and granite foundation, or decomposed quartz or limestone, upon each and all a good degree of soil and of a quantity to insure success. We noticed with interest the beginning of vineyards at many places. Our first stop was at a stage house, the "Empire Ranch," quite a celebrated place, established in 1850, as a stage-house and postoffice, kept by Messrs. Mooney & Moody, a well known and popular place. This is a large and prosperous hay ranch, a few acres of vines, and an orchard, as well as a hotel and stage house.

Hotels, stage houses and ranches are scattered along this route, at each and all of which cultivation is rapidly advancing. We noticed the Union Ranch, the Hudson House, Mr. Williams; Deer Creek House, W. B. Oaque; the Key Stone Ranch, Mr. Brown; Anthony House, French & Smith, at Anthony Flat; Coles Ranch at Bridgport; Derby & Buchanan's Hotel at French Corral; from thence through Sweetland we came to North San Juan in Nevada county.

The visitor to this place receives a favorable impression at once; the main street is finely planked, and is clean and smooth. The place though small has good buildings, and a very lively appearance. We stopped at the Stage House (the Union Hotel), an excellent house and well managed. San Juan is truly a pretty place, the *beauty spot* of this county; for having visited many of the principal places of this mining section, we must give the palm to San Juan. San Juan is famed for its mighty hydraulic mining operations. But first we sought for the vineyards and gardens, for their brightness caught our vision miles before we entered the place.

It was our good fortune to have as an old subscriber Col. Abbee, well known as connected with the great water and mining companies, and he kindly offered to show us the prominent features of the place.

Our first call was at the garden of Mr. John Hill; here we found quite an orchard, and a good vineyard, and also a hop garden full of large sized hops; the fruit trees were loaded with fruit, and the vines doing remarkably well.

We then visited a row of gardens and beautiful residences on the slope of the hill, where our vision was made glad by some of the prettiest clover lawns we have seen in this State,—smooth, thick and fine as a Turkey carpet, and really beautiful. Of these we name that of Col. Abbee and his brother, W. H. Sears, Esq., Frank Smith, Esq., this garden terraced; these two last white clover. The gardens of Col. Abbee and his brother, have heavy crops of fruit—the trees generally overloaded. There are many excellent gardens all around San Juan—G. D. Downing, Esq., Judge Stidger, Mr. McCoy, Mr. Ready, Mr. Foley, Mr. Hartmann, and many in the vicinity which we regretted we could not examine thoroughly. We had the pleasure to meet an old friend in Judge Stidger, whose recovery from a terrible mangling by the upsetting of a stage, was the subject of great interest among his friends, having broken all his limbs, and yet he is now restored, as we are glad to say to perfect health. To the Judge and his son we were greatly indebted for very kind attentions in conveying us in a carriage to Sweetland, and a portion of the cultivated and business suburbs of San Juan.

At Sweetland we called at the store of Messrs. Wood Brothers, and was gratified to find in them old fellow passengers in our trip round the Horn in the gallant ship Sweden, in '49, though we had not met for many years. Messrs. Wood Brothers are doing a prosperous business we are glad to know.

We called at the residence of Judge Sweetland, for whom the place is named, and could not but realize at once why this town is called *Sweetland* (*sweet*-land). In the garden of Mr. S. we found quite an apiary, and these hives of *sweets* were under the entire charge of Mrs. S. whose genius taste and skill as an apiarian has given her great success. Her charge was six swarms of bees, and two of *Italian* bees, all doing well. We found quite a neat garden here, and learned that Mr. S. will plant quite a vineyard this Autumn.

Gen. Evans, near by, has a large and prosperous vineyard. On our way back we examined a very fine spot now in potatoes, where a large vineyard will be planted by Mr. Hartman. Another by Mr. Foley; the soil for a vineyard most excellent, and will prove highly successful.

Having examined thus far the Horticulture we were invited to look at the hydraulic mining by Col. Abbee; and such mining! No one can form any conception of the magnitude of the mining operations of San Juan, or indeed of any of our large mining places by report; they must be seen to be realized. Some idea, however, may be had when we say that hundreds of acres of mountain land is gradually and even rapidly swept away before the terrible power of the hydraulic forces that is brought to bear against the sides of the mountains. When once the opening is made "the hills and mountains are laid low," and the visitor can stand upon the edge of the mountain and look down into the chasm made by the miners; often into an area of acres, 60, 80, 100, and even 160 feet deep, the bowels of these mountains having all been swept away; earth, stones, and even large rocks carried before the force of the current, often a mile into the valleys below. Whoever will go and stand upon the banks of these fast receding mountains will then and there conceive how much and how great is the labor given in search of "gold," the Archimedean lever of all enterprise.

The principal Water Company that supplies the power is the Middle Yuba Canal and Water Company, the main trunk of whose works extends twenty-five miles long, and their distributing ditches extend about five miles broad for the supply of hydraulic mines. The hills whence this supply is furnished are from one-quarter to three-quarters of a mile in width, and from 60 to 150 feet deep, all of which contains gold. The amount of capital now invested in Water companies and ditches in Nevada county is estimated at two and-a-half millions of dollars.

The principal mining companies here are the Eureka Company of six owners, valued at upwards of $100,000; Knickerbocker Company, about the same number of owners—this and the last company expended each $30,000 to $50,000 in their works; Wyoming Company, also about six owners, valued at $50,000; the Golden Gate Company, some eight owners, valued at $30,000. To this we should add the rich lead of the Middle Yuba Canal and Water Company, who are doing a heavy mining business. There are also numerous other mines, a portion worked and some not yet worked.

The population of San Juan is about 1500. There is one church, two schools, one printing office—that of the Hydraulic Press, an excellent paper; Wm. Bausman, Esq., editor and proprietor. There is also a fine public library of 500 volumes, contributed generally by citizens, and by donations from abroad. We hope a hint at the present time that such contributions will be acceptable is all that is needed to add to the institution.

◆

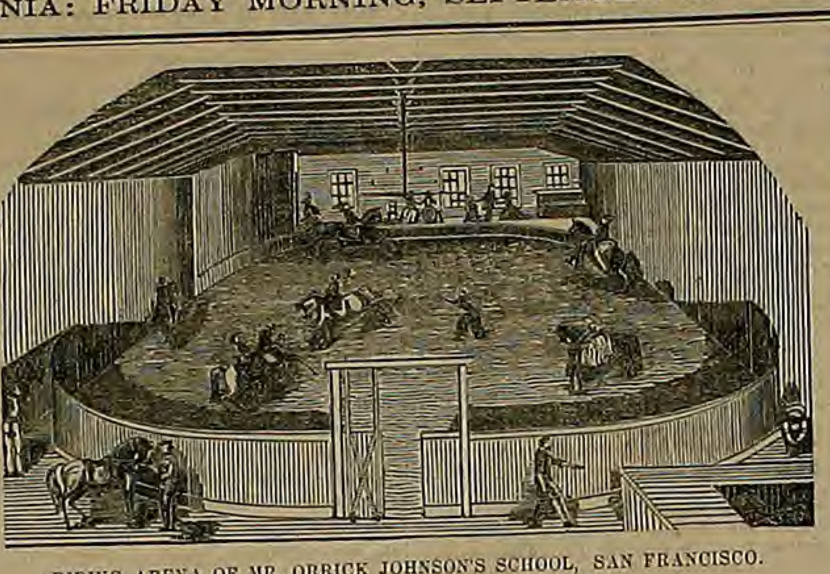
A New Seed-Sower.

BY reference to the New Advertisement of Messrs. Knapp, Burrell & Co., our readers will find a new Seed-Sower with a Harrow attached—working most admirably. The Advertisement gives a brief but clear description of what can be done. These Implements have been exhibited at the Stockton Fair, and were highly approved. They will be on Exhibition at the State Fair, and are worthy the especial notice of the Farmers of our State.

This Machine can be seen at the Warehouse of Messrs. Knapp, Burrell & Co. See their Card.

◆

HUNTER'S GRAIN-SEPARATOR.—We hope to see this excellent implement on exhibition at Sacramento. It is an excellent Machine, and should be shown in operation. The Machine was at the Stockton Fair, but it was laid down in pieces in one corner of the yard, utterly neglected; we should think a gross neglect of those who had it in charge, not the Directors of the Fair, but the agents, as we could not see the owner at the Fair.



RIDING ARENA OF MR. ORRICK JOHNSON'S SCHOOL, SAN FRANCISCO.

Riding.

MR. ORRICK JOHNSON'S RIDING SCHOOL.

To the preservation of health and life, it is absolutely necessary that the human frame should undergo such exertion as to keep up a continuous circulation of the blood and a healthy working of the vital functions. The sturdy carpenter, who launches his entire weight on his jackplane, or the sooty-visaged smith toiling at the forge, have no need of other exercise to ensure the steady enjoyment of bodily vigor to them, but at the end of their labors, find relief in repose and quietude. But with the merchant, the editor, the professional man of any sort, whose employment is a sedentary one, the relief must come from another source, and strong exercise must be resorted to, in order to draw to the utmost tension the unstrung sinews. Of course, when exercise for the system assumes the form of pleasure, the votaries thereof seek their amusement in channels as various as the Passes at the Delta of the Mississippi. Some prefer tenpins; others seek the billiard table as a means of recreation, while the predilections of others lead them to rowing. But of all the elegant amusements—elegant because it is everywhere practiced by the refined and genteel of both sexes—which are in vogue, none commends itself more earnestly to the attention of all parties interested than equitation—the art of riding on horseback.

The man who rides well is generally of commanding turn of mind, and well fitted to govern, not only his beast but his children, or those who are in any way subordinate to his authority. Among the great military heroes of this and past eras, ninety and nine out of each hundred are and have been good riders. And there is no better judge of a rider than a horse. How easy it is for a quick, spirited horse to determine the difference between the cool resolute voice of one who is his master, or the sharp, alarmed summons of one who has mounted him half in fear. If ever a horse finds out that he has the slightest advantage over his rider, he will lose no chance to avail himself of it.

In California, there is every natural inducement to render horsemanship an amusement within the reach of everybody, for good stout native animals can be bought at an average of $90 each, already well broken to the saddle, and fit for general use, and if one can afford it, a fine thoroughbred horse can be purchased (which is in our opinion, the only really valuable saddle horse) at any price imaginable. The Belmonts, Ashlands, Winnebagos, and Lawyers, are the best horses in the world for this use, and can be easily broken to harness and made ready for driving; but the merits of these horses for the saddle are so readily manifest that they recommend themselves at once to the equestrian, as the very best extant.

We can remember, two years ago, there were not a dozen really good saddle nags in all the San Francisco stables. Parents were anxious that their children should become good riders, but how were they to begin? By purchasing half-broken Spanish mustangs and mounting upon them children that had never rode before? Certainly not; the idea was not to be entertained a moment. And as there were no riding schools then in existence, children were compelled to sit cooped up in their close rooms, reading or following some other quiet diversion, but constantly sighing for the fresh breezes and warm sunshine of our delightful climate, which can be best appreciated by riding on horseback.

The void was not long in being filled, however, for, seeing how much a good riding school with a stable of saddlenags attached, was needed, Mr. ORRICK JOHNSON, as good a horseman and easy a rider as we ever met, commenced the erection of a suitable building for the purpose, on Montgomery street, near the corner of Jackson. Being fully aware that in riding, bad habits early acquired are difficult to overcome, and not willing to trust so important a business in the hands of hired men, he devoted his personal superintendence to the exercise of his pupils. He filled his stable with none but the stoutest and strongest of horses, all of which are admirably broken to all the exercises of the *manege*, being careful to avoid having any fretful, sulky, restive, or otherwise ill-tempered horses about him. The lower part of his building is mainly devoted to the stabling of horses, but the ladies reception rooms and toilet *chambres* are also on the street floor. The second story of the building is used as the arena, the floor being covered with deep mold, to prevent the horse getting lame or his rider being injured in case of a fall, which, with proper care, is easily avoided.

Mr. Johnson's pupils are mounted in ordinary American riding or English hunting saddles, discarding the semi-barbarous Californian *fuste*. His horses are mostly ridden with the plain snaffle bit, which is sufficient for ordinary horses, though a bit-and-bridoon is sometimes necessary. The trappings in use are all plain, stout, and of the most substantial sort, being selected expressly for service, although they admirably combine elegance with utility.

The proprietor of this establishment endeavors to observe the golden rule of business and give his customers a *quid pro quo*—a fair return for the money. He has expended much money and time in bringing his equestrian academy to its present standard of excellence, and richly deserves his reward—the patronage of the lady and gentleman equestrians of San Francisco.

◆

Letter from Wm. Lawton. Esq.

WE are pleased to receive the following Letter from our highly esteemed Correspondent, and more particularly for the information it contains, relative to the distinguished Society to which it alludes. This noble Society we hope may by this suggestion, be the means of stimulating some Noble Heart in our own State, to lay the foundation of a similar Institution here—and a glorious Monument would it be for some of our wealthy men. We ask all to read the enthusiastic words in behalf of our State. Would to God all Californians *felt this!*

We shall comply with the request of our Friend, and hope, by this means, to call the attention of those readers of the FARMER in the good old State of Massachusetts (God bless her) to the resources of this our Golden State, and induce them to come and dwell with us.

NEW ROCHELLE, Aug. 6, 1861.

EDITOR FARMER: In a correspondence with the "American Antiquarian Society," of Worcester, Mass., I inclosed, with other papers, a few numbers of the CALIFORNIA FARMER, with which they seemed so much pleased, that I was induced to look up all the numbers, you have sent to me, and presented to the Institution, forwarding my late papers by Mail after I have read them; your valuable Journal will thus be bound and placed upon the shelves of their Library.

I visited the Institution, in company with Gov. Washburn, a few years since. The Society is admirably organized, and they have a fine building for their Cabinet of Antiquities, and Library, which would be creditable to any of our larger cities; and I think there is nothing in New York to exc l, if there be to equal, them in the simplicity and neatness of the arrangements of the alcoves and shelves for their Library, were admirable. It is not too soon to lay the foundation of a similar Association in your city. This was commenced on private munificence; and some public spirited individual in your great and growing State should hasten to record his name as a benefactor, whose creditable work will confer a lasting benefit upon present and future generations. The united advantages, Agricultural, Mineral, and Commercial, were never possessed by any nation equal to California; and your position upon this beautiful Globe, will, in a few years, bring you out as *a great power in the World*; and willing, or unwilling, I can see plainly that you must go forward, as a young giant aroused in his strength; it is your destiny.

This great Civil War has prostrated our great cities and towns, exactly in proportion to their dependence upon Commerce and Manufactures—beyond those interests sustained by the Agricultural resources of their own States. Agriculture alone will make California populous and independent, and Commerce and Manufacture in addition, the richest State in the world; but with these riches, the seeds of destruction are sown broadcast. Advocate as a speciality the Agricultural interests of California: speculators and adventurers will introduce fast enough Manufactures and have so much trading tact, that Commerce is sure to become a prominent interest, as fast as an opportunity occurs. I am rejoiced that a large portion of my family are in California, for under the most favorable circumstances, the North and East cannot recover their former wealth and position in twenty years.

I had almost forgotten the principal object of writing at this time. At the request of S. F. Haven, Esq., Librarian of the American Antiquarian Society, Worcester, Mass., to forward the following Volumes and Numbers of your Journal; and for the Sixteenth Volume, you will please put the Institution down as Subscribers, and forward your bill there. I am truly, yours,

WM. LAWTON.

◆

Breaking Colts.

I suppose now, in the whirl and excitement of "Rarey's System," anything not in that line on the subject of "Breaking Colts," will be deemed impertinent, But for the sake of those who have not yet adopted that system, and still have colts to break, I have a few words to say. It is admitted by all, that the horse is one of the most tractable and intelligent of all the animals that have been created for the use of man. It is also well known, and indeed follows naturally from this, that if his temper is once soured and his anger roused till he becomes hostile to man, the horse is capable of the most provoking ugliness. This being the case, much of the character of a horse evidently depends on the manner in which he is broken, and the treatment which he receives from man. My experience and observation have demonstrated to me the efficiency of the following treatment: The colt should be broken to the halter, while following the mare. But whether this has been attended to, or not, the breaking should always be commenced in a spacious stable with soft floor and smooth sides. After gently handling his head, neck and shoulders, for a time, proportioned to the wildness and spiritedness of his nature, a soft but strong bridle is presented to him, and after he has smelled of it sufficiently, it is slipped gently over his head and the bit inserted. In the same quiet manner a bitting harness is placed securely upon him. The bridle should be furnished with gag runners and side straps, but martingals should never be used. After very gradually drawing in his head till it is in the right place, or he begins to show signs of anger, which point should never be passed, he should be encouraged to follow you about the stable by loosening the rein a little every time he comes to you. He soon discovers that he is in the power of a superior, and yields to his will. He should be taught to start and stop at the word, and to obey the slightest influence of the rein. This may be done by passing the finger through the bridle rein where it rests upon the shoulder, and directing his course to every part of the stable, by the slightest pressure in one direction or the other. He may now be driven about the stable with lines. During this time he should be caressed and handled kindly and fearlessly all over. He may now, if entirely submissive, be driven out doors, but should never be attached to a carriage or load until by such firm and patient tuition he has learned to submit fully and implicitly to the direction of his master. It is a good plan, if convenient, to hitch him beside a steady and kind horse and drive them with a light load. He should have been so well trained in the stable, however, before this, as to know better than to scare at any trifle. This course of conduct continued, will invariably procure a true and obedient disposition and amiable character, and an intelligent education for the horse. In those parts of Ohio which have been settled by Pennsylvanians, the manner of breaking colts is very different from this—a system, by the way, which has many good parts. They harness the entirely untamed colt beside the near wheel-horse in a team of four or six horses, and drive on without regard to the frantic evolutions which he will sometimes make. The strong chains, however, before and behind him, and the weight of the team and load prevent his doing any mischief. He discovers that his struggles are in vain, and a few slaps from the tongue, in a rough road, soon teach him to walk out contentedly in his place. A universal error among the Pennsylvanians here is working their colts while too young. It is not uncommon to see colts only two years old worked day after day in the team. The horse should be trained while young, but should never be worked until his form is developed and his muscles strenghtened by mature age. He should always be treated with kindness and consideration. He should be regarded as an intelligent and docile animal, with great powers and capabilities for being highly serviceable to man. He should be educated and instructed, not forced into subjection. His proud spirit should be curbed and directed, but not subdued. His master should be a man, not a tyrant, and should treat him not as a slave, but as a willing and obedient servant. —[Dollar Newspaper.

◆

SALT FOR CABBAGES.—Edward Carpenter, a correspondent of the Farmer and Gardener, last year tested the value of salt on cabbages, and with satisfactory results. After planting them out, he watered them some two or three times a week with salt water, containing about fifteen grains of salt to the pint. The cabbage grew beautifully, and headed up very finely; while those which had no salt water given them produced loose, open heads, which were unfit for any other purpose than boiling. Rain water was given at the same time, and in the same quantities, as the salt water. He does not know how strong a solution of salt the cabbage would bear without injury, but is fully satisfied that a solution not stronger than that he used is decidedly beneficial.

A word of kindness is seldom spoken in vain—it is a seed which even dropped by chance springs up a flower.

THE CHINIGCHINICH.

CHAPTER X.

Of Many of their Extravagances.

Superstitions of a ridiculous, and most extrava-ant nature, were found associated with these In-ians, and even now, in almost every town or amlet, the child's first education is in the belief f their authenticity; and they grow up from in-ancy familiar with all their fabulous traditions. The effect tends to enervate their physical facul-ies, and weaken their mental, so that they natur-ally become a pusillanimous race of people, liable o be deceived, imposed upon, and of course easily nfluenced by the Puplem, and old men, who are their sole instructors.

There are men, and also females, who are believed to possess the power of enchantment, to such a degree, that no one can withstand their powers: so that without resistance, all immediately acquiesce in their demands. The incantation is performed thus: Beneath the left arm, in a small leather bag, they carry a black ball, called by them "aguet," composed of a plaster of "mescal" and wild honey, or as they term it "quijotes" or "sejat." When they wish to make use of the same, to exercise its virtues upon any one, the right hand is placed upon the leather bag, and without any other ceremony, the sorcery is effected. Should the person appear indifferent to the presence of the enchanter, then a companion immediately announces the fact, that he bears the sacred charm, and their demands are complied with, without reply or opposition. The said "aguet" is a composition unknown to all but the sorcerers, and of course, only used by them. How it possesses so much virtue, I have never been able to discover. Nevertheless, they give up whatever is asked of them, under the impression that more calamities will attend them, if they do not.

They have an idea, that if the shadow of the "aura" in his flying through the air, should fall upon them with their heads uncovered, they would become afflicted with sores and diseases, and on this account, whenever it so happens that a bird of this class approaches, they immediately cover their persons.

They believed when the pelican visited the inland population, that it was an omen of death to some one, and consequently, they persecuted the bird until it left their neighborhood. Another ridiculous belief among them was, that the deer hunters could never partake of venison which they, themselves, procured, and only of such as was taken by others, for the reason, that if they did, they would not get any more. And the fishermen, also, possessed the same idea with regard to their fish. More singular, however, than this, was the custom among the young men, when starting for the woods in search of rabbits, squirrels, rats, or other animals. They were obliged to take a companion, for the reason, that he who killed the game, could not eat thereof—if he did, in a few days he complained of pains in his limbs and gradually became emaciated. On this account, two went together, in order to exchange with each other the result of their excursion. This infliction did not extend to every one who partook of the game of his own taking, but only to such who were guilty of consuming it secretly. Neither was it incurable, for they had among them certain sorcerers possessing the power of re-instating them in their former health and contentment.

When the sun, or moon, was eclipsed, they appeared much frightened; and the men, women, and children, were heard crying and shouting, whilst throwing sand into the air, and beating with sticks upon dry hides, or upon the ground. This was done, as they said, to scare away a large and ferocious monster, who would devour the sun and moon, and if he were permitted to accomplish the entire consumption of either, that is, if there should be a total eclipse, all would immediately die, and the world would come to an end.

At the time of new moon, and on the first day of its appearance, it was usual among them to call together all the young men for the purpose of its celebration. A "correr la luna!" shouted one of the old men. "Come, my boys, the moon, the moon!" Immediately, racing commenced, and without order, they ran about as if they were distracted, whilst the old men danced in a circle, saying the following words: "As the moon dieth, and cometh to life again, so we also having to die, will again live," and thus manifesting clearly the resurrection of the flesh. How this was understood by them, I did not ascertain, for they could not explain it, and they merely observed the ceremony, on account of its having been practiced by their ancestors.

Another belief, current with the younger part of the females of the community, was, that the meteoric appearances often beheld in the evening, were the Tacuich, or children of the moon, and whenever they beheld them, they fell upon the ground, and covered their heads, fearing if seen by them, that their faces would become ugly, and diseased. They had amongst them certain individuals who pretented to be descendants of the Coyote eaters of human flesh (not as the cannibals and Mexicans), but their manner of proceeding was after the following very disgusting custom: Whenever a Captain, or one of the Puplem, died, they sent for Eno, who was thus called before he officiated in his duties, and afterwards "Tacue," signifying "an eater." Having arrived at the place, where they had placed the dead body, he immediately cut off a large piece from the neck, and the back, near the shoulder, and consumed the flesh in its raw state, in presence of the multitude assembled to witness the performance. This was always done in commemoration of the feat performed by the "Coyote," upon the body of the great Captain Ouiot, as has been already recounted in a previous chapter. For this, Eno was well remunerated, and every one contributed for the purpose. The young of both sexes, were very much afraid of this Tacue, and looked upon him as a sorcerer.

These Indians were not entirely destitute of a knowledge of the universal deluge, but how, or from whence, they received the same, I could never understand. Some of their songs refer to it; and they have a tradition that, at a time very remote, the sea began to swell and roll in upon the plains and fill the valleys, until it had covered the mountains; and thus nearly all the human race and animals were destroyed, excepting a few, who had resorted to a very high mountain which the waters did not reach. But the songs give a more distinct relation of the same, and they state that the descendants of Captain Ouiot asked of Chinigchinich vengeance upon their chief—that he appeared unto them, and said to those endowed with the power, "Ye are the ones to achieve vengeance—ye who cause it to rain! Do this, and so inundate the earth, that every living being will be destroyed." The rains commenced, the sea was troubled, and swelled in upon the earth, covering the plains, and rising until it had overspread the highest land, excepting a high mountain, where, the few had gone with the one who had caused it to rain, and thus every other animal was destroyed upon the face of the earth. These songs were supplications to Chinigchinich to drown their enemies. If their opponents heard them, they sang others in opposition, which in substance ran thus: "We are not afraid, because Chinigchinich does not wish to, neither will he destroy the world by another inundation." Without doubt, this account has reference to the universal deluge, and the promise God made, that there should not be another.

CHAPTER XI.

Their Calendar.

We cannot but believe that the calendar is one of the most important and the most necessary of inventions. But theirs, if we call it such, differed but very little from the natural instinct of the brute creation, which possessed a knowledge of time, and the seasons, for their sustenance and procreation. We see that many animals change their places, and even climates, at a time prefixed; either on account of the temperature, or want of food; and at the proper time for their return, they visit again the same locations. The Indians had the same custom, as regards the changing from place to place; for the winter, they resided in one place; and summer in another. This was general amongst them, excepting with those located on the sea-coast, who seldom removed, because their maintenance was derived from the sea; unlike the others who subsisted entirely upon fruits and seeds of the fields. Their calendar contained merely the names of the months, directing the times or seasons for the collecting of their different seeds and produce of the earth. Not all of them possessed this knowledge: it being confined to the Puplem, who were the criers that informed them when to cultivate their fields, and observe other requisitions. In the first place, they were destitute of chronology, by which to calculate the period of time transpired; hence, the difficulty in giving any account of their antiquities, as they had neither figures nor signs to preserve them; and possessing no idea of the past, their thoughts were limited solely to the present. On this account their calendar was confined to the months of the year, but as they reckoned these by the number of moons, they differed from the "sun's reckoning," having almost every year a less number of days: for at the conclusion of the moon in December, that is, at the conjunction, they calculated the return of the sun from the Tropic of Capricorn; and another year commenced, the Indian saying, "the sun has arrived at his home." When the new year begun, no thought was given to the past; and on this account, even amongst the most intelligent, they could not tell the number of years which had transpired, when desirous of giving an idea of any remote event.

They observed with greater attention, and celebrated with more pomp, the sun's arrival at the tropic of Capricorn, than they did his reaching the tropic of Cancer, for the reason, that, as they were situated ten degrees from the latter, they were pleased at the sun's approach towards them; for it returned to ripen their fruits and seeds, to give warmth to the atmosphere, and enliven again the fields with beauty and increase.

The names of the months were as follows: Aapcomil, December and January; Peret, February; Yarmar, March; Alasoguil, April; Tocobonich, May; Sintecar, June and July; Cucuat, August; Lalavaich, September; Aguitscomel, October: Anguit, November.

In order to comprehend the manner in which they counted the months, it is necessary to know that their year commenced always on the 21st day of December, and upon the sun's arrival at the tropic: consequently, the days which transpired between the last conjunction and the 21st were not noticed; or, in their mode of explanation, "There was no day." The month Aapcomil always begun on the 21st, without any regard to the moon's age, and not only continued during the remainder of its term, but throughout the one following: thus including nearly two moons. Sometimes it so happened that the moon's conjunction occurred on the 21st or afterwards, in which case two entire moons were counted in the first month. Nearly the same occurrence took place in Sintecar, with this difference only, that if the sun's arrival at the tropic of Cancer fell upon the day of the moon's full, then the month began; but the days previous to this were made use of, and annexed to the antecedent Tocobonich: that is, the month did not expire with the conjunction, but at the full; when the other began and continued throughout the following moon. All the other months of the year commenced with the conjunction, therefore, they seldom agreed with ours.

Their calendar contained no more; and served, principally, to denote when to harvest the grain, celebrate their feasts, and commemorate the death of their friends. But of the number of days contained in their months, they had no knowledge whatever, and much less of those composing the year: so that the phases of the moon were their only guide, and these informed them when they were to observe their feastings, which never fell upon the same day in any other year. The way they ascertained when to celebrate them, was as follows: When the month arrived, one of the Puplem (to whom belonged the privilege of holding the feast) observed with attention the moon's aspect; and when its appearance denoted the time, he made known the fact to the public by sending a crier through the town.

In like manner they proceeded, in regard to the anniversaries of the dead, although they were never celebrated on the same day in any other year, as that on which the person died. At the time of the decease of a captain or one of the Puplem (for they paid no attention to others), a Pul observed the moon's aspect, also the month in which the death occurred; and in the following year, in the same month, when the moon's aspect was the same, they celebrated the anniversary.

[CONCLUDED.]

* * *

What will the Army Eat?—The Springfield (Ill.) Journal has taken the pains to make a calculation of the amount of provisions required to feed the proposed Federal army of half a million of men, and here is the result:

We have carefully examined the tables in the army regulations, in strict accordance with which the rations are dealt out, and find that for half a million men, one year, are required of staple products:

1st. 684,000 barrels of pork, of 200 pounds each.
2d. 1,140,625 barrels of beef, 200 pounds each.
3d. 5,239,563 bushels of wheat, computing five bushels of wheat to one barrel of flour.
4th. 456,250 bushels of beans.

There can scarcely be required a less number than 75,000 horses, for cavalry, teams, etc. For these, there must be furnished:

1st. 191,625 tuns of hay.
2d. 10,265,225 bushels of oats, or the equivalent in corn or barley.

Cultivation of Tobacco.—On Benson's ranch, at the lower ferry on the Mokelumne, is planted this year about half an acre of tobacco. It has grown splendidly, and is cultivated with greater success in every particular than tobacco can be grown either in Virginia, Kentucky, or Missouri. The gentleman who has attended to it, informs us that it is in all respect superior to any tobacco he ever saw raised in Kentucky, where, as a tobacco-planter, he had an experience of many years. The worm does not trouble the plant here. He found but one worm in the entire lot he is cultivating. We hope that in a few years, California will produce her own supply of the fragrant weed, and perhaps have a surplus for exportation.—[S. Ind.

[From the Atlantic Monthly for August.]

Fibrilia.

There are not a few timid souls who imagine that England is falling into decay. Our cousin John is apt to complain. He has been accustomed to enlarge upon his debts, his church-rates and poor-rates, his taxes on air, light, motion, "everything, from the ribbons of the bride to the brass nails of the coffin," upon the wages of his servants both on the land and the water, upon his Irish famine and exodus, and his vast expenses at home and abroad. And when we consider how small is his homestead, a few islands in a high latitude, inferior to those of Japan in size and climate, and how many of his family have left him to better their condition, one might easily conclude that he he had passed his meridian, and that his prospects were as cloudy as his atmosphere.

But our Cousin John, with a strong constitution, is in a green old age, and still knows how to manage his property.

Within the last two years he has quietly extinguished sixty millions of his debts in terminable annuities. He has improved his outlying lands of Scotland and Ireland, ransacked the battle-fields of Europe for bone-dust, and the isles of the Pacific for guano, and imported enough to fertilize four millions of acres, and, not content with the produce of his home-farm, imports the present year more than four millions of tuns of Grain and Corn to feed nineteen millions of his people.

He has carried his annual exports up to six hundred and thirty millions of dollars, and importing more than he exports, still leaves the world his debtor. He has a strong fancy for new possessions, and selects the most productive spots for his plantations. When he desired muslin, calico, and camel's-hair shawls for his family, he put his finger on India; and when he called for those great staples of commerce, indigo, saltpetre, jute, flax, and linseed, India sent them at his bidding. When he required coffee, he found Ceylon a Spice Island, and at his demand it furnished him with an annual supply of sixty millions of pounds. He required more sugar for his coffee, and by shipping a few coolies from Calcutta and Bombay to the Mauritius, once the Isle of France, it yields him annually two hundred and forty million pounds of sugar, more than St. Domingo ever yielded in the palmy days of slavery. He wanted wool, and his flocks soon overspread the plains of Australia, tendering him the finest fleeces, and his shepherds improved their leisure not in playing like Tityrus on the reed, but in opening for him mines of copper and gold. He had his eye on California, but Fremont was too quick for him, and he now contents himself with pocketing a large proportion of her gold, to say nothing of the silver of Mexico and Peru.

Wherever there is a canal to be excavated, a railway to be built, or a line of steamers to be established, our Cousin John is ready with a full purse to favor the enterprise. He turns even his sailors and soldiers to good account: the other day he subdued one hundred and fifty millions of rebels in the Indies, and then we find him dictating a treaty of peace and a tribute to the Emperor of China from the ruins of his summer-palace and the walls of Pekin. Although generally well disposed, especially towards his kith and kin this side of the water, he is choleric, and if his best customers treat him ill, he does not hesitate to knock them down. Although dependent on Russia for his hemp and naval-stores, and on China for his raw silk and teas, he suffers no such considerations to deter him from fighting, and usually gets some advantage when he comes to terms. He is belting the world with colonies, and forming agencies for his children wherever he can send the messengers of his commerce. At this very moment he is considering whether he shall transport coolies from China to Australia, Natal, or the Fegee Islands, to raise his cotton and help put down Secession and export-duties, or whether he shall give a new stimulus to India Cotton by railways and irrigation. He seems to prosper in all his business; for the Edinburgh Review reports him worth six thousand millions of pounds, at least—a very comfortable provision for his family.

The wealth and power of Great Britain are supposed to rest upon her mines of iron and coal. These undoubtedly help to sustain the fabric. With her iron and coal, she fashions and propels the winged Mercuries of her commerce; with these and the clay that underlies her soil, she erects her factories and workshops; these form the Briarean arms by which she fabricates her tissues. But it is by more minute columns than these, it is by the hollow tubes revealed by the microscope, the fibers of silk, wool, and flax, hemp, jute, and cotton, that she sustains the great structure of her wealth. These she spins, weaves, and prints into draperies which exact a tribute from the world. During the year 1860 Great Britain imported or produced a million tuns of such fibers, an amount equal to five million bales of cotton, more than one-half of which were in cotton alone. These fibers it is our purpose to examine.

The thread of the Silk-worm came early into use. The Chinese ascribe its introduction to the wife of one of their Emperors, to whom divine honors were subsequently paid. Until the Christian era Silk was little known in Europe or Western Asia. It is mentioned but three times in the common version of the Old Testament, and in each case the accuracy of the translation is questioned by German critics.. It is, however, distinctly alluded to by St. John, by Aristotle, and by the poets who flourished at the court of Augustus, Virgil, Horace, and Tibullus, and is referred to by the writers of the first four centuries. Tertullian, in his homily on Female Attire, tells the ladies—"Clothe yourselves with the silk of truth, with the fine linen of sanctity, and the purple of modesty." The golden-mouthed St. Chrisostom writes in his Homilies—"Does the rich man wear silken shawls? His soul is in tatters." "Silken shawls are beautiful, but they are the production of worms."

The silken thread was early introduced. Galen recommends it for tying blood-vessels in surgical operations, and remarks that the rich ladies in the cities of the Roman Empire generally possessed such thread; he alludes also to shawls interwoven with gold, the material of which is brought from a distance, and is called Sericum, or Silk. Down to the time of the Emperor Aurelian, Silk was of great value, and used only by the rich. His biographer informs us that Aurelian neither had himself in his wardrobe a garment composed wholly of Silk, nor presented any to others, and when his own wife begged him to allow her a single shawl of purple Silk, he replied—"Far be it from me to permit thread to be balanced with its weight in gold!"—for a pound of gold was then the price of a pound of Silk.

Silk is mentioned in some very ancient Arabic inscriptions; but down to the reign of the Emperor Justinian was imported into Europe from the country of the Seres, a people of Eastern Asia, supposed to be the Chinese, from whom it derived its name. During the reign of Justinian, two monks brought the eggs of the Silk-worm to Byzantium from Sirinda in India, and the manufacture of Silk became a royal monopoly of the Roman Empire.

From Greece the culture of Silk was gradually carried into Italy and Spain, and English abbots and bishops often returned from Rome with vestments of Silk and gold. Silken threads are attached to the covers of ancient English manuscripts. Silk in the form of velvet may be seen on some of the ancient armor in the Tower of London: and portions of Silk garments were found in 1827 in the Cathedral of Durham, on opening the tomb of St. Cuthbert. The use of Silk, however, was so rare in England down to the time of the Tudors, that a pair of Silk hose formed an acceptable present to Queen Elizabeth.

The principal supply of raw Silk is now derived from China, where Silks are much worn, and there Marco Polo several centuries since found Silk robes in very general use. Japan also abounds in Silk, and the late Japanese embassy and suite were arrayed in garments of that material.

The annual consumption of raw Silk in Great Britain now averages seven millions of pounds, and the value of the annual export of Silk fabrics is not far from ten millions of dollars.

The manufacture of Silk was introduced into England by the French Protestants who were driven into exile on the revocation of the Edict of Nantes. Their descendants are still found in London and Coventry, where the Silk-trade has been long established, and is now going through the ordeal to which it has been exposed by the new treaty with France.

The French undoubtedly take the lead in Silk fabrics, for which they are admirably qualified by exquisite taste and great artistic skill; but the Silk-manufacture in England is now so interwoven, in many of its branches, with the manufacture of Wool and Cotton, and aided by improved machinery, that it may be considered as firmly established.

Our own climate is well adapted to the Silk-worm, and we have had our Morus-Multicaulis fever; but so light is the freight on Silk compared with its value, that we must defer our hope of any extended growth until the price of labor in Europe approaches nearer to our own, or until the excess of production in other branches shall divert genius into this channel, in which it will eventually cheapen production by machinery as it has done in other enterprises.

We read in the classics of the Colchian and Milesian fleeces, of the soft Wools of Italy, and of the transfer of sheep from Italy to Bætica, in Spain. Italy and Spain were both adapted to sheep-husbandry. Virgil writes—

> "Hic gelidi fontes, hic mollia prata, Lycori;"

while Spain, with her alternations of hill and dale and her varying climate, was eminently fitted for the pasturage of sheep. Even in ancient times Spain furnished Wool of great fineness and of various colors, and cloths like the modern plaids were woven there from Wool of different shades. Sometimes the Spanish sheep were immersed alive in the Tyrian purple.

In modern times, the sheep of Spain have been introduced into France and Germany, and from them have sprung the French Merino and Saxony varieties. These again have been exported to Natal and Australia.

Before the American Revolution, the sheep of this country furnished a Wool so coarse that English travelers reported that America could never compete with England in broadcloth. But when the French armies overran Spain, the vast flocks of Merinos which annually traversed the country in search of fresh pasturage were driven into Portugal, and by the enterprise of Messrs. Jarvis, Derby, and Humphrey, large numbers of them were imported into our Northern States. These have improved our Wool, until now it surpasses the English in fineness.

The fine-wool sheep thrive most in a dry climate and elevated country. We learn from Strabo, Columella, and Martial, that the fine Wool of Italy was raised principally among the Apennines; and in Spain, Estremadura, a part of the ancient Bætica, is still famous for its Wool. There the Spanish flocks winter, and thence in spring are sent to pasture in the mountains of Leon and Asturias. Other flocks are led in the same season from great distances to the hights of the Sierra Moreno, where the vegetation is remarkably favorable to improvement of the Wool.

In this country, the elevated lands of Texas and New Mexico are admirably adapted to the fine-wool sheep; and upon the head-waters of the Missouri and Yellowstone is another district much resembling the Spanish sheep-walks, where the mountain sheep and the antelope still predominate.

When Cæsar invaded England he found there great numbers of flocks, and for many centuries Wool was the great staple of English exports; but during the reign of Queen Elizabeth numerous artisans were driven from Brabant and Flanders by the Duke of Alva, and the manufacture of Wool, which had enriched the Low Countries, was permanently established in England.

With the progress of agriculture, the turnip-culture enabled Great Britain to increase the number of her sheep; but they were raised more for the market than for their fleeces, which were rarely fine, and the demand for Wool soon exceeded the supply. England then opened her ports to the free importation of Wool from every region, and now annually manufactures two hundred millions of pounds, twice the amount manufactured in this country, of which two-thirds are drawn from distant lands, and her export of woolens for 1860 exceeded one hundred millions of dollars.

The same policy which has built up this vast manufacture, namely, the free importation of the raw material and of every article used in its manufacture, with a moderate duty on foreign cloths, will enable us to compete with England. Our farmers' wives prefer the sheep-husbandry to the care of the dairy; much of our land furnishes cheap pasturage, and the prices of mutton are remunerative; but many of the low grades of Wool come from abroad, and the mill-owner will not embark largely in the manufacture unless he can purchase his materials as cheaply as his foreign competitor.

[TO BE CONTINUED.]

* * *

What about the Fairs?

The Ohio Cultivator says: Up to the breaking out of this war, there was considerable activity among the various agricultural societies, in their preparations for the next autumn fairs. Since the call to arms, some societies seem to be in doubt whether to proceed with their arrangements, or postpone all action for a season. We hope this latter feeling will not prevail. If ever there is a time when the business of agriculture should be vigorously prosecuted, it is just now. The withdrawal of many of our young men from the field, thereby diminishing our number of producers, and to the same extent increasing the number of consumers, creates an imperative necessity that the remaining field force should be employed to the best advantage, and the cause of agriculture be kept as prominently before the people as possible. The wastefulness of war can not but beget a demand for all sorts of food and material for subsistence of armies. Already the demand for substantial woolen goods for soldiers' wear, has created an activity in the wool market, especially for the middle grades, which will also affect all grades. Next to the general circulation of agricultural reading, there is no better agency to stimulate the cause of field production than the active operations of the agricultural societies, giving both tone and spirit to the labors of the field, and the business of stock-growing.

By all means, keep the ball in motion, and do not give up the fairs. The arrangements may be of an economical sort, so that a partial failure, from any cause, would not embarrass the society or individuals; but keep on—do not harbor the idea that you cannot hold your field festivals to celebrate the triumphs of industry, and exchange the greetings of neighborly good fellowship.

This is the right spirit. We hope every State will sustain their organization.

* * *

Influence of First Impregnation.

In a late number, says the Eastern Farmer, in an article, "A Curious Theory in the Physiology of Breeding," we hinted a possible, indeed a probable, solution of the cause of many of the disappointments of which practical breeders complain.

A writer in the Southern Rural Gentleman says: "It has been asserted by some observers, that when a female breeds successively from several different males, the offspring often bears a strong resemblance to the first male, which is supposed to arise from certain impressions made on the imagination or nervous system of the female. Although this is sometimes or often the case, we doubt very much whether it is so frequent as to be considered a rule."

Secretary Goodale's Report for 1860 says: "There can be no doubt such an impression is made, and demands the special attention of all breeders." With the most celebrated breeders of England it is fast becoming a settled opinion that the "male first having fruitful intercourse with a female, exerts an influence on her subsequent offspring by *other* males," that it is not the result of chance or accident, but a fixed principle in the laws of reproduction.

Such a strange and mysterious theory—one of great importance—is borne out by a number of facts, a few of which we quote from Goodale's last Report.

In several foals in the Royal Stud at Hampton Course, got by the horse Actæon, there were unmistakable marks of the horse Colonel. The dams of these foals were bred from the Colonel the previous years.

Alexander Morrison, Esq., of Bognie, had a fine Clydesdale mare which in 1853 was served by a Spanish ass, and produced a mule. She afterwards had a colt by a horse, which bore a very marked likeness to a mule—seen at a distance, every one sets it down at once as a mule. The ears are nine and one-half inches long.

It appears to have been known among the Arabs for centuries, that a mare which has first borne a mule, is ever after unfit to breed pure horses.

A pure Aberdeenshire heifer, the property of a farmer in Fogue, was served with a pure Teeswater bull, to which she had a first-cross calf. The following season the same cow was served with a pure Aberdeenshire bull, the produce was in appearance a cross-bred calf, which at two years old, had long horns; the parents were both hornless.

Six very superior pure-bred black-faced horned ewes, belonging to Mr. H. Shaw, of Leochel-Cushnie, were served by a Leicester ram, white-faced and hornless. The lambs were crosses. The next year they were served by a ram of exactly the same breed as the ewes themselves. To Mr. Shaw's astonishment, the lambs were without exception hornless and brownish in the face, instead of being black and horned. The third year (1846), they were again served by a superior ram of their own breed, and again the lambs were mongrels.

A sow of the black and white breed became pregnant by a boar of the wild breed, of a deep chestnut color. The pigs produced were duly mixed, the color of the boar being in some very predominant. The sow being afterwards put to a boar of the same breed as herself, some of the produce was still stained or marked with the chestnut color which prevailed in the first litter, and the same occurred after a third impregnation, the boar being then of the same kind as herself. What adds to the force of this case is, that in the course of many years' observation, the breed in question was never known to produce progeny having the slightest tinge of chestnut color.

A young woman, residing in Edinburgh, and born of white parents, but whose mother, previous to her marriage, bore a mulatto child by a negro man-servant, exhibits distinct traces of the negro.

It is by no means an unfrequent occurrence for a widow who has married again to bear children resembling her first husband.

A very striking fact may be related in this connection, which, while it may or may not have a practical bearing on the breeding of domestic animals, shows forcibly how mysterious are some of the laws of reproduction. It is stated by the celebrated traveler Count de Strazelecki, in his Physical Description of New South Wales and Van Deiman's Land. "Whenever," he says, "a fruitful intercourse has taken place between an aboriginal woman and an European male, that aboriginal woman is forever after incapable of being impregnated by a male of her own nation, although she may again be fertile with an European."

A reliable farmer relates to us a remarkable instance within his own observation, in proof of the influence of a first impregnation. We repeat his language: "For many years my father was possessed of a breed of cattle which he called the *belly-stripe*—the cattle were black, with the exception of a stripe of white around the belly. When the first Durham bull was introduced into our town, one of our belly-stripe cows was put to him, with the expectation of obtaining a calf resembling the bull, but to our great disappointment, the calf, a heifer, was a *belly-stripe*.

"I raised the calf; when two years old she was served by a Durham bull, and produced a calf having the likeness of the bull. She was afterwards served by a belly-stripe, but the calf *was a Durham!*"

Such instances as those already given, which might be multiplied to an indefinite number, cannot be the result of impracticable vagaries or of whimsical imagination—but are of so marked a character as to deserve and demand a candid and thorough investigation.

* * *

Abundance of Silver.—Two correspondents writing to the London Times, state that the recent discovery of oxyd of silver in a natural state, a thing which, until recently, was believed not to exist, will produce a yield of silver absolutely enormous in relation to that which has hitherto been obtained from the ordinary metallic silver deposits. In a ton of ore, in its natural state, where the normal yield would be thirteen ounces, the new discovery will produce an average yield of 113 ounces, the 100 ounces being produced from what has hitherto been regarded as useless. The importance to our mines, where silver is often found near to copper and other metals, will be very great; and in some cases, where the deposit is great and unmixed with other metals, the returns will be almost fabulous, where the cost of working will be absolutely trifling.

A Very Pleasant Reminiscense.

While traveling in the mountains we met with an incident so pleasing in its nature that we cannot refrain from giving it a place in our journal.

In our travels we found ourselves one day upon that high mountain range near Monte Christo, estimated at 6500 feet above this Bay. There we found quite a garden spot. We had called at a sawmill upon the mountain—(for they have sawmills high up too) and being told there was a garden not far off, we had made this visit to see it. Coming to this garden we tied our pony and called at a neat "cottage home," and upon entering we stated our object was to see a garden thus high up in these mountains, as we were interested in such things; when quickly the gentleman said: Come in Colonel; glad to see you. Being a stranger, we said, Sir, you have the advantage of us. Never mind, Colonel, walk in; glad to see you; whereupon we felt at home and took a seat. After a little talk upon the subject of mountain-gardening, the gentleman said: Colonel, I think I have something to show you that will be interesting to you, and taking from a secretary a morocco case, he opened it and held up before us "*A Silver Medal,*" awarded to N. Parsons & Co., for the "Best Mountain Vegetables." The medal bore date September, 1852. Nine years ago! And here we found the spot where were grown the *first* mountain vegetables of California. And here the grower; and here too the Medal which we had bestowed with so much pleasure and satisfaction at *our First Agricultural Exhibition in* 1852,—the first in California; then an individual enterprise, planned and sustained both in labor and expense by individual cost. This was a pleasant incident for the day indeed, for it happened upon our "Birthday." There was one fact which we should not fail to mention, and that was, that our friend Mr. Parsons, when some years ago he dissolved partnership with his friend, they were at a loss how to divide their interest in the medal, as it was engraved *N. Parsons & Co.*, and this could not be obliterated very easily. Whereupon Mr. P. said, I think I had better keep it, and I will hand it down to my children and grand-children. The partner said, oh, if you will *do that* you keep it, as I am going to Fraser River. The joke of it was, they were both then—(not old Bachelors) but spruce young bachelors. But as "many a true word is spoken in jest," so it proved; for now we found Mr. P. happily settled in a pleasant cottage with his wife and children round him, and a happy home; while his former partner is a bachelor still. (We attribute this good fortune of wife, etc., to the silver medal; there's a charm about it.)

Mr. P. has been successful in raising potatoes, cabbages, and pears, even thus high up in the mountains, getting 10,000 pounds of potatoes to the acre; these bring four and five cents per pound at Monte Cristo. Other vegetables also pay well. The soil is deep and rich and amply moist. We are satisfied apple and pear as well as peach would do well. The grape will do well also, more especially the American varieties,—Isabella, Catawba, Concord, and Diana. The Autumn is the best time to plant them.

◆

Langton's Pioneer Express Company.

What would our mountain friends do for facilities were it not for the enterprise of the old and long established Express Company of Langton & Co. From Marysville upwards to the highest outlet of the mountains, even to the great Sierra Valley where the express bags are conveyed on a "mule" train about thirty miles, even there these enterprising old pioneers "Langton & Co," send on their letters and packages.

During our late mountain trip we met the train some twenty miles above Downieville, just under the towering "Sierra Buttes" on one of the rocky passes; there was the rider and his mule, and the other pack-mules with packs, wending their way down from the valley with letters and orders from the valleys above, from Washoe and Virginia City and all that section, and at that moment we felt we could appreciate the value of this enterprise, for we wrote a letter (the rider kindly waiting while we did so) using the saddle upon our pony's back for a desk, and sent the letter forward, thinking all the while what a blessing in these wilds was Langton & Co's. Express.

We do not wonder that throughout all this region "Sam Langton," the pioneer, is so well known, or that Langton Brothers, the pioneer Express Company of the mountains are so much in favor, for with the very little facilities afforded by Uncle Sam's Postoffices, they would be all out of the world but for "Langton & Co."

As an evidence of the favor in which this pioneer is held, we saw a magnificent pair of *gold spurs*,—fine, solid gold, of large and ample dimensions, with the chains and pointers all solid gold, and the leathern bands richly wrought with silk; these were all in a fine morocco case. Upon the spurs was engraved, "Presented to Sam Langton, Pioneer Expressman of California, by the Miners of Sierra, in token of regard." The value of the gift was hundreds of dollars, and the deed was just like the generous miners, and most worthily bestowed, for Langton's Express has done much to build up all the interests of this section of country, and we stand ready to testify to the readiness of this express to render favors and facilities to all their patrons and friends. Their courtesy and kindness we shall ever duly appreciate.

Langton & Co's. Express now extends from Marysville to Sierra Valley; is regular, prompt, and reliable, and ever attentive and obliging. We hope it may be extended to Beckwith's Pass, and thus benefit hundreds in that upper portion and outlet of our State.

Langton Brothers were among the earliest to plant trees, vines, and flowers in Downieville, as early as '54 and '55, and by their influence much has been done of which we shall speak.

◆

Fruit-Pits and Skins on Sidewalks.—Would it not be well if all persons would refrain from throwing peach or plum-pits or fruit-skins on the sidewalks. How often do we notice persons slip and fall by treading on them, and oftentimes the injury is serious. We wish the Press in general would notice this subject. Limbs have been broken by falls caused by these things, and a little care would prevent it.

About Cranberries.

1st. What soil is best adapted to the culture of the cranberry? and how should it be prepared?

2d. Is a cranberry meadow likely to prove durable after the vines are regularly rooted?

3d. Can cranberries be successfully transplanted?

4th. Does the soil need enriching, as in the case of other vegetables?

The answers to these questions will, perhaps, meet the points of inquiry so often repeated in the course of a few weeks. To the first I reply: That low, wet land is the best. It must not, however, be too wet—the surface water, if any there be, should be removed by drains; and where the water has not been so deep as to prevent the formation of a tough sod, it will be necessary to pare off the sod to a sufficient depth to remove all grass roots. A sufficient number of drains should be cut to dispose of all redundant water, and not more—for the ground should be moist. I think it well to close up the drains in the fall, and let the water spread over the meadow during the winter. It will do the plants no injury, but will be likely to prevent weeds and grass from taking root, and growing, which would soon prove too much for the plants in question. The sod if snugly piled, will soon furnish an excellent compost for fruit trees.

The ground thus divested of its sod and surface water, is prepared for the plant. The first thing in the labor of transplanting, is to open shallow, parallel trenches, one and one-half or two feet apart; into these trenches I plant my vines—varying from one to eight feet in length. These I cover slightly every six or eight inches, when the labor of transplanting is done. The plant, now left to the secret operation of natural laws, will leave its ligaments into the yielding soil, and send its slender tendrils outward, until, in the course of two or three years, it covers the entire surface—and from the first year of its setting, it will reward the labor and time given to it in a greatly increasing ratio. April and May I consider the best time for setting plants—as those set in the fall are more liable to be raised out by the freezing of winter. —[Cor. Rural New Yorker.

It will be borne in mind that our mild climate gives us great advantage. We can plant in the Fall safely, and this is the best time to prepare for the cranberry.

◆

Equipments of the Pony Express Rider.—The Grass Valley National learned the following from one of the swift couriers of the Plains:

Each rider is provided with a complete buckskin suit of clothes, with the hair on, and forming the outside of the same, so that in the event of a storm, the rain or snow will not penetrate or make the clothes heavy, and thus retard the horse; but it runs off down the hair, which is more or less oily. The pockets for the conveyance of the letters, etc., are four in number, and are placed immediately under the saddle-horn, next to the horse. Four eight-inch, six-shooting Colts are so arranged as to be half-cocked, and ready for their deadly work. These, and a knife of some eighteen inches in length, with mercury in a tube formed in the back of the same, so that when used the mercury rushes to the point of the blade. About one hundred miles is the distance traveled by each rider. He is only allowed eleven hours to do it in.

Business Matters in Business Hours.—How much more would be accomplished in this world if all would adopt the above motto, and live up to it! Business matters *only* in business hours. The merchants in England act up to this rule; they allow themselves time to eat and sleep, without the interference of business. But we Americans, bring trade and traffic to our tables, evening entertainments, and almost into the Church, and crowding business into all our thoughts; we neither have time to eat, sleep, or worship God.

Post Office Improvements—Sacramento.—The Post Office at Sacramento, has been greatly improved; it now has an opening on K for the reception and delivery of the Mails received either by Stage or Steam. The delivery for the business men and the people generally is on Fourth street. The whole interior has been re-modeled, and much improved, under the New Administration, and is now most efficiently conducted.

◆

CIRCULATION OF THE FARMER ABROAD.

We have often urged the friends of our State, to aid us in the Circulation of our Journal in the Old States, and Europe, so that we might be more instrumental of good, and help to increase the population of California, and thus make the State more prosperous.

We have often published strong Letters, from various States, proving the good our Journal is doing in making our State truly known in all her vast resources. We now ask of all who feel a desire to have our State double her population, to this work.

We append a Proposition, and hope the Friends of this Journal and the cause it pleads, and all who wish to carry out the desires expressed by our excellent Citizen, in Paris, will coöperate with us. We will make liberal terms to all Societies for Emigration, or Clubs, and Commercial Houses.

With a desire to make the Resources of California known abroad as widely as possible, we feel confident that if we could Circulate the California Farmer in all the Older States, it would be the means of showing the great Masses of the People, that California is the place for them to settle in; and we believe we could greatly benefit all the interests of our State, by Circulating our Journal extensively abroad,

With such views, we ask the coöperation of our Merchants, and Business Men, and all who desire to make California truly and widely known, to aid us in the Circulation of the Farmer.

Wishing to place the Farmer at so low a price, as to enable all to send it to their friends, we offer the following Terms for all Clubs to send to the Old States, and in Europe:

For eight Copies	$25
" ten "	30
(Each Copy to be mailed separately, if so desired).	
For three Copies	10
" six "	20
" single Copy	4

TO THE WOOL-GROWERS OF CALIFORNIA.

The undersigned, agent of the California Wool-Growers' Association, is now prepared to receive and forward WOOL to the East on the most favorable terms.

This Agency is wholly an instrument of the *WOOL-GROWERS THEMSELVES*, and designed to protect them from all speculative combinations, by enabling them to realize the **Full Eastern Value** of their Wool.

Satisfactory advances will be made on Wool consigned to us, at the rate of 7 per cent per year.

Any information or reference will be promptly given.

JAMES E. PERKINS,
321 Front street, Room No. 2, up stairs,
San Francisco.

HOBBS, GILMORE & CO.,
17 Market street, opposite the Railroad Depot.

HUNTER'S GRAIN SEPARATOR!

THE GRAIN-GROWERS OF THE PACIFIC COAST have now an opportunity never before offered them of cleaning their Wheat in the most perfect manner.

The undersigned would offer them his

NEW GRAIN SEPARATOR, Patented April 9th, 1861,

As one of the best Implements ever invented. Mustard, Radish, Chess, Barley, and all other impurities, are separated entirely, leaving the Wheat in a pure and clean condition.

The importance of this Implement can be seen at once, as the INCREASED VALUE OF Well-Cleaned Wheat Will be more than sufficient to every Grain-Grower of any amount TO PAY FOR A MACHINE.

The Patentee will visit all the principal cities and Farming districts to appoint agents at each place, and exhibit one of his Machines.

He feels confident that every Grain-Grower WILL BE CONVINCED OF THEIR VALUE The moment an opportunity is presented to see them work.

A. HUNTER, Inventor and Patentee.

Agents—J. D. ARTHUR & SON, San Francisco.
J. BONNER & CO., San Jose Foundry, San Jose.
HENRY PAGE, Napa.

Warm Springs Hotel!

Near the Mission San Jose, 28 MILES FROM OAKLAND.

THIS BEAUTIFUL PLACE OF RESORT is now open for the season for the reception of private families, tourists, invalids, and general visitors.

The Warm Springs are so widely and generally celebrated throughout California, that it is unnecessary here to recapitulate their various qualities. To invalids, they offer the greatest advantages; their medicinal virtues being unsurpassed even by those of the Rhine, so extensively patronized from all parts of Europe and America.

The buildings are new and extensive, affording accommodation for a great number of guests, and containing every requisite usually appertaining to a fashionable Watering-place.

The assistants are the best that can be procured in the State, and being under the immediate supervision of the proprietor, visitors may rely that every attention will be paid to their comforts.

The Table is supplied with every delicacy which can be procured in the State.

Fine hunting grounds and trout-fishing within a short drive of the Springs.

14 6m LEWIS BRADY, Proprietor.

Union Hotel, Sonoma.

EBENHARDT & GLASSEN, HAVING purchased the UNION HOTEL, of the late proprietor, Mr. A. G. Oakes, are prepared to give the best accommodations to the traveling public. 15-3m

SPERRY'S HOTEL. Murphy's Camp.

THE COMMODIOUS FIRE-PROOF BUILDING, lately erected by the subscribers, at Murphy's, has been elegantly furnished throughout, after the most approved style, and is now ready for the reception of guests. Parlors and suites of rooms for the use of ladies exclusively, and parties visiting the "BIG TREES," or other natural curiosities in the vicinity.

The management of the Domestic Department is confided to Mrs Perry, a lady of experience.

The Bar is stocked with fine WINES, and the larder daily supplied with seasonable delicacies.

Stages arrive and depart daily for Mokelumne Hill, Sacramento, Stockton, Sonora, and Columbia.

Parties of pleasure and transient guests will find every accommodation for their comfort.

20-3m SPERRY & PERRY.

PRESTON'S PLACE Tomales Bay, Marin Co.

I WISH TO INFORM MY FRIENDS AND the public, that the demand for a house of entertainment at this place has been such as to induce me to fit up my house for that purpose. To parties wishing to pass a few days pleasantly in the country, this locality has few equals. Boat-Sailing, Fishing, Hunting, and gathering Shells on the Bay and Ocean-Beach, are among the pastimes; and then all have "a claim" in the Clam-Beds free of charge. The place is situated 18 miles westward from Petaluma, and is a nice drive, over a good road, through a fine farming country. It will be a pleasure to endeavor to make your visits agreeable.

21 R. J. PRESTON.

UNION HOUSE!

Corner of Main and Center streets, MOKELUMNE HILL,

Henry Atwood, Proprietor.

THIS SPLENDID THREE-STORY STONE Building, long acknowledged equal, if not superior, to the best Hotels in the Mountains, has been thoroughly renovated and greatly improved, and a

SPLENDID BILLIARD TABLE ADDED.

The Dining-room has been divided into a Family Dining-room and Restaurant, both hard-finished, and newly and elegantly furnished. The former will be for regular boarders who may prefer it; the Restaurant will be open at all hours, and be supplied with the best products of the market.

The parlors and chambers have all been thoroughly renovated and elegantly furnished, and will accommodate seventy-five persons.

The Stages all arrive and depart from the "UNION," and for the accommodation of travelers the House is kept open all night.

The proprietor avails himself of this occasion to say to travelers *en route* to the various places of recreation in the Eastern portions of Calaveras county, that no pains will be spared to make their sojourn at the Union pleasant and agreeable.

HENRY ATWOOD.
Mokelumne Hill, May 11th, 1860. 20-3m

DOWNIE HOTEL,

South End of Durgan Bridge, Nevada street, Downieville.

W. M. DOWNEY, Proprietor.

WITH INCREASED BUSINESS, I HAVE enlarged facilities for accommodating my guests.

The Hotel has just been painted, papered, and carpeted, from top to bottom; and a large number of sleeping apartments, well furnished and ventilated, added to the usual number.

REDUCTION OF PRICES:

Board, per week	$7 00
Single meals	50
Board and Lodging, per week	$8 50 and 10 00
Lodging, per night	25 and 50 cents
Liquors and Cigars	12 cents

123-3m

A. K. DUDLEY. T. S. COFFIN.

THE VERANDA HOTEL,

Corner Main and Church sts., IONE CITY, AMADOR COUNTY.

THE UNDERSIGNED, PROPRIETORS, desire to invite Travelers to their Hotel, confident that they will make their stay pleasant and agreeable.

Stages from Sacramento to all the Mining regions, and to the "BIG TREES," stop at this Hotel.

DUDLEY & COFFIN,
20-3m Proprietors.

REMOVED TO THE MARKET-HOUSE ON MARKET STREET, BELOW DAVIS.

I AM NOW PREPARED TO TAKE charge of MEATS of all descriptions, and to put the same in good order, under the supervision of EXPERIENCED AND COMPETENT PACKERS, and STORE the same at the usual rates.

From and after Tuesday next, 24th inst., the Office of the Inspector of Beef, Pork and Salt Provisions will be at the above place.

13 N. L. BROUGHTON, Inspector.

The California Farmer.

SAN FRANCISCO:
FRIDAY...............................SEPT. 13, 1861.

☞ See List of Fairs on Last Page.

The "Ladies' Department" of this Journal, under the charge of Mrs. Lizzie Wiley Warren, M. D., will be found on the sixth page, and to which we call especial attention.

Look to Our Special Advertisemts.

Our readers will always find important advertisements in our Special Advertising columns. We have at this time Stock-Farms, Orchards, Saw-Mills, and Property to Exchange or for Sale, all worthy Special notice.

Jebb's New Patent Churn.

This famous Churn can now be had at our Office. We have had some made to answer the demand. They are a grand Churn. Persons at a distance can be supplied by sending an order with reference for the amount, $12 50. Patent-Rights for sale.

A Chance for a Saw-Mill.

An experienced man at the Saw-milling business, one who has a cash capital of $5000, can hear of a chance by which he can secure a half-interest in a Saw-Mill, a Farm, and a Stock-Ranch, where his money can be doubled every year. The present advertiser wishes to go to the Atlantic States to be absent some months on important business, and he desires to find a partner in whom he can confide. None need apply without they have the means, and can make the references all right. The Right Man can secure a grand chance.

Inquire of the Editor of the Farmer, who will give all particulars.

TO CORRESPONDENTS AND READERS.

We know that, during our Fairs, while we are crowded, our correspondents will be very indulgent. We will reply and attend to their kind favors at an early day.

"Silent Griefs," from Lillia de Montana, will appear next week.

Our notes, "Mountain Vineyards and Orchards, No. 3," including Forest City and Downieville, will appear next week.

"Mountain Vineyards and Orchards, No. 4," including Sierra City, Reis & Co.'s Quartz-Mill, etc., will appear soon. Also, Beckwith Pass, Beckwith Peak, etc. Sierra Valley, and its Mountains and snow-capped summits, will also appear. Our readers will be kindly indulgent.

Our Notes on Fairs, and the several Addresses, will all appear.

We ask attention to the article on "Fibrilia;" it is of moment. We can grow Flax triumphantly here.

We hope our friends will remember that they can send a world of information to their friends in the Old States by sending the Farmer, with all our Fair Reports. It costs but *Four Dollars* a year, and will do the State good service, and show what California can do.

Our Full Reports will appear when the hurry of the Fairs is over, and more time can be given to reading than during the hurry and bustle of the Fair-weeks, our journal being a record of the most important parts of the Exhibitions.

To Our Subscribers to the Unions.

Those of our Subscribers to the Unions, who have not received their Unions for several weeks, the following Letter, from St. Louis, from the Editors and Proprietors of that paper, will explain the cause:

St. Louis, (Mo.), July 6, 1861.

Editor Farmer: We have to advise you now, of the temporary suspension of our issue. The broken health of the writer renders this step necessary, until assistance can be procured, probably a month or two, in the interim. Such is the distraction of our country, that we are satisfied nothing can be done, and suggests a discontinuance of exchanges for the present. We hope to see the day when peace, and good order, may again prevail. The condition of this State, is at present most unhappy. You have our hearty thanks for past efforts, and trust they may be mutually renewed under more favorable auspices. In haste,

Yours, very truly, Schenck & Co.

The lamentable distraction caused by the war, has ruined many newspapers of the highest standing. We deeply regret to lose the Unions, but hope, as our friends say, it will only be for a season. We, however, do not mean that our Subscribers shall lose, for those who have paid, will be furnished with the Farmer *Extra Time*, to make their *time and money* good. This, we trust, will be satisfactorily. Whatever loss may occur, *we will bear.*

Our Subscribers in Sacramento County.—We hope our patrons in this county will do us the favor to meet us at the State Fair. We wish to obtain from them all the items they can give us concerning their crops, stock, etc.; and we shall be ready to take the small items of dues also, for all of which we shall be grateful.

Our Subscribers in San Joaquin County.—Those of our subscribers whom we did not have the pleasure of meeting when at the late Fair, will find their Bills at the bookstore of Van Allen & Co., and we shall be obliged to them if they will call there and adjust the same.

Our Subscribers in Sonoma County.—These we hope to meet at the Fair of Santa Rosa, where may be expected a grand Fair, creditable to that county.

Agricultural Address.—We shall publish each and all as early as possible, and shall be glad of all items of importance touching these interests.

The Stock at the San Joaquin Fair.—Some of the finest Stock ever shown at any Fair in this State. Of all these we shall speak in our next. Coburn & Bro., J. D. Patterson, Dr Holden, J. Sarles, R. S. Bates, all had Dairy-Stock of high character. Many of the Horses were splendid, as we shall show. Sheep, all fine, principally by J. D. Patterson. Swine very fine. We shall speak of all in our next.

Success of the San Joaquin Agricultural Fair.—We give the evidence of the success of this Fair by the following facts: The sales of members' tickets have been $4000; sales of season tickets, $200; sale of tickets at door, probably, $2500. Total, $6700. This is the largest amount ever given since the State Society held its Fair in Stockton. We rejoice to record this success.

The Coming State Fair.

There is a grand time coming for Sacramento; so say all the newspapers, and of course who dare dispute such authority. There is one thing certain, the people of Sacramento deserve a grand time, for they have done grandly in contributing most liberally for the Hall and the grounds to have a place for the shows.

The Hall, as has been illustrated by us, is the largest and best show-room in the State, and the Fair grounds when fully completed will be the very best, and will equal any in the United States. The whole cost of Hall and ground when completed, will approximate to $75,000.

It is to be hoped that there will be a grand turn out, and that the present exhibition may be free from many of the objections of the former Fairs. It is truly to be hoped that the aim of exhibitors will be to advance the cause of Agriculture and Mechanical Science, together with Manufactures and the Arts, in preference to sectional or personal interests.

The Steam Navigation Company, the Express Company of Wells, Fargo & Co., and other public conveyances have made liberal offers to carry materials free, and to aid all in their power. Ample provisions has been made to provide for guests and strangers so that personal inconveniences shall be avoided. The hotels and restaurants have made extra arrangements, so that all can be well cared for, and the experience of past years will be sufficient to deter all from the imposition of excessive prices. We learn that moderate charges will be the order of the day.

The Agricultural Hall where the productions of the earth, manufactures and works of art can be seen, is on the corner of Sixth and M streets. The stars and stripes that float from its lofty staff will guide all to it.

The Fair Grounds about one mile out can be reached by the new railroad track prepared for this purpose. We believe everything has been made ready for a happy time. The fare to and from Sacramento from this city is cheap enough; so that ten, twenty, or thirty thousand can go and enjoy themselves. Let the word be, we'll all go.

Places to Visit During the State Fair at Sacramento.

First, the Agricultural Hall, and carefully examine all the contributions, and decide on the amount of improvement made since last year.

Second, the Fair-Grounds, and look carefully to the fine Horses and Colts, and see how rapidly we are taking high rank as Breeders of Blood-Horses. There will be on exhibition some of the finest Horses ever shown in California.

Look also at the Dairy-Stock; for even the European Shows cannot excel some that will be at this Fair.

Sheep, Swine, and Domestic Animals of all kinds will be found worthy several days' examination.

The Races will exhibit the power of endurance, as well as of the speed, of the best racers in California.

The Railroad cars, will take all who desire to Folsom, a very pleasant trip, on a fine route, and under the charge of gentlemanly conductors.

Visitors must be sure and go out to Smith's Garden, one of the best Gardens and finest Orchards and Nurseries in all this section.

Hubbard's Garden, also, is worthy a ride of a few miles. Here will be found pleasant scenery, Fruits, etc.

The Old Capitol Building, and the new site, should be visited; the first has been the theater of many a hard fought political battle, and the second will be that of greater scenes than the old.

The Hall of the Pioneers, the Hall of the Odd-Fellows, the Library, and the several Engine Houses, some truly elegant; these will all show what the City of the Plains can do.

We hope visitors will also take a look at Harbison's Apiary, on the banks of the Sacramento, and buy some of his Bees. He deserves well for his zeal as a working-Bee. His Book should have a wide circulation.

A. J. Bigelow's Apiary of Italian Bees should be visited; they are a wonder. Though both the above will be seen at the Fair, we advise a visit to each.

Visitors should rise early, and enjoy the sunrise and cool of the morning, then spend the heat of the day indoors, and again the moonlight in a pleasant promenade. Go with the resolution to spend the Fair-week happily.

New Town of Lockford.

We learn with pleasure that a new town is fast building up near Staples' Ranch, some sixteen miles from Stockton, at the Junction of the River and Stage Roads from Stockton to the Mines.

There is a good Public-House, Post-Office, Hall of Sons of Temperance, two Blacksmith and Wheelwright Shops, and about a dozen buildings, and a social circle of neighbors all interested in building up a good and permanent place, where the best influences shall be exerted.

There are good locations for settlers on lands, from $5 an acre for highlands, and thence to $10, $20, and $30, an acre for bottom-land.

There is a good opening for a merchant with capital. We say, success to Lockford!

Lockford is named from Dr. Lock, one of the early settlers, with whom we had the pleasure of a trip round the Horn to this State in '49.

A Grand Plan—Good Invention.—We noticed in the large store of Messrs. Jones & Hewlett at Stockton—they deal largely in Bale Rope for hay-makers and miners—that they place their coils of rope in their cellar where it is kept in order, and pass the ends up through the floor, showing their varied sizes, so that all can see. When any quantity is wanted they draw up and cut off, thus keeping the stock clean and in order below, and save room above. This house also keep sewing machines to make bags for grain-growers, using up about 400 bales of cloth the last three months. We call especial attention to their large advertisement in our columns this week. They are the largest dealers in all this section of country.

The San Joaquin District Fair.

This Society opened their Second Annual Fair and Cattle Show, under very favorable auspices: but such has been the working spirit of the Board of Managers and the coöperation of its friends, that by a really effective and liberal contribution of materials, they will have made a grand success.

When we consider that this Society had just been laboring to erect a New Hall, at an expense of many thousand dollars, and that, too, when the District has been unusually engaged in political affairs, we wonder they found themselves so ready for an Agricultural Exhibition such as they have shown.

Finding it impossible to give proper attention to more than one District Exhibition in one week, when so widely apart, we made our visit to this Section, and were pleased to be able to notice the steady onward progress being made in systematizing and getting into regular order, the working machinery of Agricultural Exhibitions and Cattle Shows, although it will take many years yet before they are brought up to the perfection of the old States.

The New Hall at Stockton, is truly a fine structure, and when the Society shall be able to add another story, so as to give them command of more room which coming years will demand, it will be indeed a beautiful Hall—thanks to the spirit and liberality of the Citizens of this growing and wealthy District.

The Hall was liberally and gayly festooned with brilliant-colored banners and flags representing all Nations, together with many signal flags, all arranged under the following Design: On the right center of the ceiling, was a large American Flag, to represent the North; the same on the left, to represent the South; between these two, was the American Eagle resting upon a Portrait of the "Father of his Country," and these two American Flags, each with their Thirty-Four Stars, are firmly bound together with a chain of bunting festooned around both Flags, the Eagle, and Portrait, and over the whole a collection of banners and flags, thus showing that the Design is that the memory of the "Father of his Country," by his counsels, will yet preserve our Whole Union, and that the American Eagle shall still float over the the Whole Union as one unbroken Nation. Heaven grant it may be so! This Design was a grand one; and the number of Flags composing this brilliant group were more than 300, all (save two American flags) were made at the Asylum by the inmates.

The Hall on its opening, presented a very handsome appearance: two long wide tables through the entire Hall, with raised centers, well covered with Fruit, Vegetables, Flowers, and the numerous Contributions from the people, evinced the interest they felt in such Enterprises.

The Rooms on the right, were occupied as a Natural History Society's, well filled with very fine Specimens, in all departments, neatly arranged upon shelves, Dr. Robert K. Reed, and Dr. E. S. Holden, being the President and Directors—the Heads and Hearts of the entire Society; these Rooms were thrown open to the public. The Rooms on the left, were for the Executive Board and the Committee; the Basement of the Hall was as a room for refreshment in part, and for Agricultural Implements. The large Hall was well filled, and we are pleased to record that in our careful examination, this Exhibition was free from ordinary, and common, or worthless, articles. There seemed to be a desire to have what was shown, excellent. We wish this might be the case everywhere; at the same time, we cannot but regret that our Halls of Exhibition are too much filled up with Dry Goods, Hardware, and numerous Articles of Imported and Foreign-make—when they, in fact, are intended, or should be, only for Examples of our Own Home-Make—the real Industry of our own Citizens here on the spot.

Our Agricultural and Mechanical Exhibitions should show the Industry of our own People, first and mainly. We do not object to Specimens of any work as Models; but to have our Halls filled with "Goods for Sale," or as Advertising Cards, has ever hindered the progress of our own Enterprise and industry.

We found much to approve in the Exhibition at the Hall, and commend the energy and public spirit of the Managers of this District.

The Exhibition at the Fair grounds was most creditable; good order and quiet was a marked feature, and we are really glad to record the absence of that rowdyism, drunkenness, and gambling that have disgraced so many of our Fairs. We attribute this in this district to the excellent management of the worthy President and Board of Managers.

We give the Report in part of the Hall and grounds, and shall note the most worthy articles from time to time, from our notes taken on the spot.

Stockton has done nobly. The Exhibition was a noble and triumphant example of what energy and perseverance can do. Dr. Holden's Address was to the point—practical throughout; Mr. Higbee's Address, a grand one; and the Poem of Mrs. E. D. Hale (which we publish), most admirable. The Ball, which made the finale of the Fair, we mention elsewhere.

The "Useful" and the "Beautiful."

At the Stockton Fair, among the large collection of goods all kinds, we have selected the following as worthy of special notice:

Dried Fruits.

Mrs. Dr. Bateman, Stockton, exhibits Dried Apples, delicate and of extra quality, Dried Nectarines, Peaches, Pears, and Plums; all of superior quality; also Raisins from the Grape. This collection was in neat boxes, the whole a most creditable and honorable exhibition.

Mrs. E. J. Harris: Raisins from the Grape, Dried Apples, Pears, Plums, Peaches, Figs, and Nectarines. These were all very excellent, indeed.

Mrs. E. Benson: A sample of Dried Peaches of a lot of 2000 pounds; a sample of Apples of 1000 pounds, and another sample of 2000 pounds, This was a most excellent lot.

Mrs. J. D. Woodbury: A Basket of Bur-work, a Box of same, and three Picture-Frames of same. These were as beautiful as could be conceived, made from little burs like the bur-clover, and from other burs, from acorns, and leaves of the pine-burs. This collection was an honor to the maker.

Mrs. B. F. Kendall: a gem of Wax-work, a Statuette Vase, and in this a superb white camellia, a group of English violets, a sprig of mignonette, and a rose; forming a choice bouquet, arranged in exquisite taste.

Miss Maggie Jerneau: A Stand of Wax Flowers; very choice and delicately formed—Flowers to the life.

There were also many other beautiful articles, which we shall notice in our next.

The First ever Exhibited.

At every Fair—District or State—we can always find evidences of the steady onward progress of our State which we are proud to herald; and at each and all we find some new product, some new invention, some new proof of genius and taste.

At the San Joaquin District Fair we noticed with pleasure the following new products. A magnificent *Feather Duster* made most elegantly of peacock feathers, by Mrs. Andrew Wolf, Stockton, the feathers being from birds reared by herself also—thus truly "home-made" and "home-grown." A branch of a chestnut tree, with a handsome *bur* upon it. This is the first we believe ever shown.

The Marysville Fair.

The Northern District Fair, at Marysville, may be classed among the successes, although it did not appear very bright at its opening; its final triumph was complete, and this was owing to the extra exertions of its energetic President and his co-laborers.

The Fair opened on Monday, and by the second or third day the Show was highly creditable. There was an enthusiasm about it that created success.

A goodly display of the Produce of the Farm, the Orchard, and the Vineyard, loaded the tables. Works of Art and Genius had their share. The Ladies did well, as they always do.

The Show at the Stock-Grounds was grand. The noble Horse had some grand representatives there; and the Dairy-Stock showed the "cream" of the State.

A generous feeling prevailed. A "King" addressed them in strains of eloquence, enthusiasm, poetry, and beauty. Both Fruits and Flowers sent an aroma of gladness everywhere. But of these we shall speak more fully hereafter. The Northern District has done well.

Eldorado County Fair.

The Third Annual Fair of the Eldorado County Agricultural Society was opened, on Tuesday, the 10th, at Eldorado. We copy from the Union's correspondenc the following account: Heretofore the Fair has been held at Coloma. But for the advancement of the Agricultural interests the Society thought best to remove yearly; which, in my opinion, will accomplish the desired object.

The Pavilion is one of the finest ever constructed in the county, and best adapted for the purpose which the Society has ever had in view. It is 72 feet in length, by 55 in width, built of brick and stone, and thoroughly fire-proof. To the contractor, G. G. Blanchard, great credit is due for his prompt and efficient services, and in a great measure to him the people of Eldorado county are indebted thus far for their success. This is thought to be the best Fair ever held in the county. Entries have been made more than were anticipated.

The display of Fruit is very large.

W. H. Pavey exhibits five varieties of Pears, and ten of Apples, which are considered to be very fine. His Pears are not of the large variety, but are of fine flavor.

J. J. Dean exhibits twelve varieties of Apples, and eleven of Pears. The latter excel anthing exhibited in the county, the largest weighing two pounds and six ounces, and four weighing eight pounds and six ounces. He has also a fine sample of soft-shell Almonds, Nectarines, and Plums, and one Japanese Squash, one year plucked from the vine, sound, and looking as well as though it had just been pulled.

C. Pavey has fifteen varieties of Apples, very fine, and sixteen varieties of Pears, also good.

E. Willow exhibits twelve varieties of Apples, and two of Pears, also very good.

Thomas J. Orgon exhibits ten varieties of Grapes, two of Pears, one of Plums, and two baskets of Dried Peaches and Dried Plums, the latter of which is a credit to any one.

Bronson of Placerville, exhibits nine varieties of Pears, two of Apples, and five of Plums, all of which are very creditable to the county. The Plums are the largest and best flavored ever exhibited in the county.

D. Thornton exhibits two varieties of Apples, two of Pears, and three of Peaches.

C. G. Carpenter, of Diamond Springs, exhibits a splendid variety of Fruit—six varieties of Apples, four of Pears, one of Quince, and four of Peaches. He has a splendid selection.

J. McCormick has on exhibition four Squashes, weighing in the aggregate 340 pounds, the largest weighing 100 pounds. He also exhibits a fine assortment of Hops, the roots of which are from the yard of J. R. Ray & Co., of Sacramento, and transplanted on the 7th of May last.

The departments of Manufactures, Home Productions, Needle-work, etc., were well represented, and very creditable to the county and to the Exhibition. We have not room this week for further particulars.

The Ball at Stockton.

This very happy affair came off at Stockton on Friday evening. A few brief lines will express our views of that most joyful event.

The Hall had been stripped of all save the gay flags and festooning and pictures upon the walls; and instead, living, breathing pictures of beauty and happiness were there. The Hall looked grand, with intelligent men and beautiful women, with a universal glow of happiness on every face. Like to fragrant and beautiful flowers in a golden vase, or diamond in rich setting, so appeared lovely women that evening. We have never seen a finer assemblage, or an entire assembly of the fair sex where all were so fair, and where all exhibited such an admirable, in many cases exquisite, taste in dress. Well may Stocktonians be proud; their social circle is an honor, despite the storm-cloud of war.

Sewing Machines.

Cannot Farmers make their own Grain Bags? When we hear Farmers say that Farming don't pay; or that the *Expenses* of Farming take away all the *Profits*, we feel like entering into a careful examination of these *Expenses*, and find out where the shoe pinches: for it is a self-evident fact, that where there has been a judicious management of the means within the power of the Farmer, Grain-growing must be profitable, even at *seventy-five cents* a bushel; and yet we hear of *hard times*, low prices, etc.

We wish to show how easy it is to save a large expense to the Grain-grower, each year: Our plan is for every Farmer to

"Buy a Sewing-Machine."

And with this Implement have his own Grain Bags made in his family. This would save the Farmers of this State, thousands and tens of thousands of dollars annually, as they could be made during the season at the leisure hours of the members of the Family; and, besides the Grain Bags, a large amount of Family Clothing could be made, and the Family relieved from the *hard* work of needle-sewing.

Wheeler & Wilson's Improved Sewing-Machines, now offered at greatly reduced prices, should induce every Farmer to have one of these labor-saving Machines in his Home. Let the Farmers of our State consult the *Health* and the comfort of the *Wife* and *Daughters*, and they will at once buy one of these valuable money and labor-saving Machines.

As a proof of what we write, we wish to give the substance of a debate we recently heard between a Farmer and his wife, upon the contrast between the plan of sewing with a *needle* and a Sewing-Machine, and mowing with a *Scythe* and a *Patent Reaper*. Here are their arguments:

"Come, tell me, Husband, is it best,
To toil and labor without rest?
Of what avail to us is wealth,
If we, at last, have lost our Health?
Would you go out on yonder plain,
And with a *Scythe*, mow down the grain?
Oh, no! you say 'tis better, cheaper,
To cut it with a *Patent Reaper*.
So I, like you, throw *needle* by;
Give up *old ways*, and *new ones* try.
I'll be as happy as a Queen,
With Wheeler & Wilson's New Machine."
"I think you are right, Wife; now we'll try,
You to *your* work, and so will *I*.
We both will work much *better*, *cheaper*:
You with your Sewing Machine: I with my *Reaper*."

Refreshing.

Like to copious and refreshing showers they come.

The present week was a refreshing one to the Editors of this Journal, for on the opening day of the week we received at our office from our kind neighbor L. Lane, Esq., across the Bay at Brooklyn, a box of fine strawberries, and a beautiful bouquet. We placed these on the table of the Editress, who gratefully acknowledges the kindness to us. The same morning we received *such* a box of fruit from "Smith's Gardens," Sacramento, as made the mouth water to open it. Those large black Hamburg Grapes, the golden colored Egg Plums, the splendid Bartlett Pears, and the fragrant Quinces, made a collection that even the "goddess Pomona" would have delighted to look upon. May our friend Smith have a bounteous crop forever, and his garner always be full. May his *wife* (when he gets one) make him happy for a thousand years, and his *children* rise up and call him blessed.

We have also to acknowledge a splendid box of superb apples, pears, quinces, and peaches, from the orchard of Briggs & Haskell, Marysville. We hardly know how to return suitable thanks to Messrs. B. & H., for their liberality, for the box was truly grand; but such generosity carries its own reward; the giver is enriched in the enjoyment of his own generous emotions, which the receiver can also appreciate. Our most grateful thanks we would tender to all our generous friends for such remembrances.

Thanks.—We return thanks to West Brothers, for some fine samples of apples and grapes; also to Dr. Harris for fruits, and to Mr. Perley for fine apples. To Mrs. Col. Huggins for a dish of splendid Isabella grapes; for this we return thanks in the name of the Editress, to whom they were most kindly sent. We received also samples of rice corn, the most beautiful we ever saw, raised in the garden of Col. Huggins. We are also indebted to C. T. Meader, Esq., for fine samples of copper ore from their several mines; the above were from the Stockton Fair. We received from W. M. A. Townsend, Esq., of Sonoma, a splendid Gloria Mundi apple, measuring fifteen inches in circumference, and weighing twenty-six ounces; many thanks for this bouncing apple. To Lawrence Lane, Esq., thanks for a basket of fine tomatoes, cucumbers, etc.

Furniture of Rare Beauty and Merit.—Messrs. Selling, Marx & Co., have now for sale an entire new style of elegant furniture, rare and unique in design, such as has never before been offered. They have also adopted a grand plan to show the true beauty and style of the furniture, by a splendid sett of sterescopic views, thus showing every pattern they have for sale. By this means purchasers can in a few minutes see all the new patterns made, and can order by pattern, and have them shipped at any time, each article being numbered. It is a grand plan.

Buy a Pretty Bird and Cage.—J. R. Ray, on J street, has a splendid lot of Bird-Cages of his own "Home Manufacture," and sweet singing birds. Go and buy one. We notice also that he has had a precious Bird of Paradise just added to his "Home." May it ever have a heavenly plumage, and sing songs of love and obedience that shall send rays of joy to its parents' hearts.

Ladies Dress Materials.—Connell, Ryan & Co. will be very happy to have the ladies that visit Sacramento call at their store on J street, and see the new and beautiful goods just received by them, all for the present season and present occasion.

Cotton Culture.

The "Cotton" question is one of great moment now, and it must inevitably lead to mighty actions and mighty results. England must have Cotton for the weavers, or a revolution will be the result. And as the action of England must affect this country very greatly, whether war or peace result from it, everything that tends to show where this great Staple can be had, will afford relief.

Liberia is reported to be a Cotton-growing country; and all the light that can be thrown on this subject, must be beneficial.

We present a part of the Message of President Benson, delivered to the Legislature of Liberia, Dec. 10, 1857, nearly four years ago. The extract we give, relates only to "Cotton Culture." There are important facts, relating to Coffee, Sugar, and other articles; but our present aim is to speak only of Cotton now: and to show that Liberia must inevitably become a great Cotton-growing country; and to this section, all colored people that escape the desolating scourge of war, will resort, and thus build up an immense Cotton-growing country that will supply England largely.

We commend the following plan of the President of Liberia, to induce the Cultivation of Cotton, as worthy of imitation among more intelligent countries; and we ask, if such a country as Liberia can, through her Legislature, give Bounties upon Agricultural crops, why should not enlightened States follow her example; why should not California offer Bounties for Cotton, Rice, Sugar, Coffee, Tea, Hemp, Flax, etc.

The plan proposed by President Benson is one that will always make a State prosperous: for it encourages the Industry of the people: and we wish our State would try it.

We have not the Statistics of Liberia, for the last four years, at hand; but their success has been great, and it is certain that ere long, the Cotton grown will be enormous.

It is however to the Bounties to which we refer, as showing how far we are behind other countries. The following is the extract of the Message referred to:

COTTON CULTURE.

So very certain am I, that this can be demonstrated to be one of the most advantageous cotton growing countries in the world, as that I feel impatient that its capacity in that respect be properly tested: and though we are amidst a severe pecuniary pressure, yet I cannot forego the idea of recommending that this government offer and pay a premium of one hundred dollars annually, for the next four years, to the person who will in Liberia produce from one acre of land, in each successive year, the largest quantity of the best quality of cotton; the sum of sixty dollars for the largest quantity of second quality cotton; and forty dollars for the largest quantity of third quality cotton, each quality the produce of a single acre. The extending of the time to four successive years of annual competition, will be a great inducement for competitors to plant the first year, from the fact that the cotton plant being perennial with us, multiplies and extends its branches so rapidly, as that in a well-cultivated field, each plant will increase not much less than a hundred per cent, in its annual yield, at least for the first four years; which fact will evidently give the advantage in the fourth year to those who will have diligence to plant in the first year.

It affords me much pleasure to be able to say that H. B. M. Consul residing here, will, from the very lively interest he feels in this matter, engage to furnish seed of the best quality to as many as may wish to try the experiment with "foreign" cotton-seed. He has received from the Manchester Cotton Supply Association, within the past few weeks, a series of pertinent questions relative to the mode of cotton cultivation in Liberia, and the capacity of the country to produce that article on an extensive scale, which questions, for aught we know, may lead to the most happy results in the future, mutually beneficial to both countries.

I deny that a fair trial has ever been made at cotton growing, to any extent in Liberia, by the Americo-Liberians. Those who have tried it on a small scale in their yards and gardens, well know that it so far exceeded their highest expectations in yield and quality, as to have astonished them. In like manner, if a fair trial was given to it on a large scale, properly cultivated in suitable soil which abounds with us, it would far transcend any idea we had formed of its profitableness.

* * *

OUR EXCHANGES.—Our Exchange list has become so bulky, that we have more papers than we can peruse or examine. We shall therefore be obliged to curtail our list; and if any of those journals that have been accustomed to receive our Journal in exchange should miss it, they will then understand that our reason for doing so, is the impossibily to make use of the exchange. This, however, refers more particularly to a great number abroad, from which we receive no compensation whatever. We exchanged at their request, hoping they would be inclined to do some good to California, by making our resources known. When our exchanges fail to do our State justice, or fail to speak of her, we drop them like a hot brick. We expect if they ask us to exchange, they do so in order to find something to speak about California; and if they don't speak, we care not to lose our labor. We hold it to be the duty of all the journals in the old States, to speak of California, as every State has some of her citizens here, and they would thus benefit their own patrons by doing so.

A NEW BROOM SWEEPS CLEAN.—Publishers have so many troubles about the irregularities of the Mails, that when a change comes into the Post-Office, they always hope it will be for the better. The recent change over our State, we hope, will prove this old adage true, for, Heaven knows, when Postmasters *cannot read nor write*, there must be confusion. We send our papers to each Post-Office, in wrappers to each patron, and then inclose all to the address of the Office. We have frequently heard of whole bundles of three, five, and ten papers, being sent to the name that appears on the outer side, while the whole was directed to the Office. The Postmaster either did not know enough to understand that the papers, being directed to the Office, they were for numerous subscribers, or *he could not read*. Such blunders are wholly inexcusable.

ST. GEORGE HOTEL—During the State Fair, the St. George Hotel will be prepared with all needed extra accommodations, and it will be the aim of the Proprietors to do their best to give satisfaction, and thus prove that good and wise regulations will carry the day and win the Premium as the Best Hotel.

The World's Fair of 1862.

We have seen the Circular of the persons nominated to look after the interests of this very truly important Exhibition, in California. We have thus far taken no active part in the work, from the fact that we labored hard on a previous occasion, and the entire lot of goods were lost or unnoticed; this was also the case with what was sent to the Crystal Palace at New York.

In so important a work, the object should be to enlist the practical men of our State—the farmers, mechanics and manufacturers—those who are the *workers*, for it is a Fair of the *Industrials*, and we always regret to see a good thing spoiled by making it an occasion of personal aggrandizement, a placing a host of names to do a work of importance, when the fact is apparent that one-twentieth of those who are requested and expected to act are so engaged or disinclined that the whole thing becomes a failure.

We would pray success to so noble an enterprise, but, as we said on a former occasion, California had better not be represented at all, unless the specimens of her soil and manufactures shall do her honor. The intelligence of the world expects great things of California; for our State has vast resources, and when Nature has been so lavish, the word will go forth, "Where much is given, much is required."

We therefore feel that unless our State can rally and make such a show as shall do her justice, better that she remain unrepresented a little longer before she stands amid the crowds from thrones and courts; for it should be remembered that all specimens of an ordinary character will be thrown out.

In looking over the names of those who are nominated to act, we regretted to notice the almost entire absence of those who are the real workingmen, who, by their contributions could advance this cause. While we recognize a host of names known in our political history, and some of them honored among scientific men, and almost every name as a public man, energetic, honorably allied, yet we do not see the men who can give that time and attention to the work that it demands. We opine (for we have not been wholly neglectful of this matter) that many of the names thus appearing are like the long list often seen on public occasions; they are for the benefit of *somebody* perhaps, who, like some of our Ministers at foreign courts, *prefer themselves* to their country or its interests.

We have some information in this matter, and we love California too well to have any mistake made when she is to have her great interests presented to the world. We hope these remarks will awaken a true interest in the matter, and that the workingmen of our State will devote more attention to this important subject.

* * *

Cause of the Irregularities of the Mails.

We publish the following Card from the Postmaster of Stockton, which speaks for itself. When such an act is committed by a Postmaster, there is no wonder that complaints are made of the irregularities there, or that letters and papers are not delivered. We have *facts* to prove why our subscribers do not get *their* papers regularly.

When such acts are committed by officers of our public institutions, let their names be placed in the same catalogue with Austin E. Smith, the runaway, traitorous Navy-Agent; and we learn with regret that the head of the Insane Asylum, on leaving that post for a new incumbent, also carried away the books andpapers. Such outrages should be publicly condemned:

POST-OFFICE CARD.—All holders of Lock and Glass-Boxes at the Stockton Post-Office, are requested to call at the office and give in their names and numbers of their boxes. The above request is made in consequence of the late Postmaster haven taken with him the Box Book, and torn off the names from all the boxes.

C. O. BURTON, Postmaster.

* * *

DEFEND THE STARS AND STRIPES.—We have "A Patriotic Chorus," composed by one of "The Twelve," and dedicated to Brigadier-General E. V. Sumner. This admirable chorus was composed for "The Twelve," and is intended to arouse patriotism by its stirring strains. It has been most admirably set to music by Gustave Scott, Esq., the composer, to whose politeness we are indebted for complimentary copies.

THAT NEW HAT.—Don't forget that Lamott & Collins have prepared all those nice light Hats for the hot days at Sacramento, and their new Beavers for Full Dress. Don't forget their store on J street.

Third Annual Fair
—OF THE—
SONOMA COUNTY
Agricultural & Mechanical Society
At Santa Rosa,
Sept. 24th, 25th, 26th, and 27th, 1861

$2,239 AND 200 DIPLOMAS!
To be Distributed in Premiums!

GRAND BALL
On the Evening of the 27th,
IN THE PAVILION.

The Society have also procured the use of the excellent track of the Sonoma County Jockey Club.

TO THE FARMING INTEREST!

E. F. JONES, 51 Wall street, New York. | HENRY H. HEWLETT, Stockton.
JONES & HEWLETT,
IMPORTERS AND WHOLESALE AND RETAIL DEALERS IN
GROCERIES,
LIQUORS,
Provisions,
AND
HARDWARE, MINING, AND
AGRICULTURAL
IMPLEMENTS.
Plows,
Harrows,
Reapers,
Mowers,
Thrashers,
Grain and Flour Sacks, Baling-Rope,
Powder, Oakum,
Shot, Tar,
Fuse, Pitch,
Cordage, Rosin,
Marline, Blocks, Oars.

The undersigned would respectfully call your attention to their large and well assorted stock of Merchandise, just received per recent arrivals from New York, Boston, and San Francisco, part of which are enumerated above, and which they are prepared to sell at the lowest San Francisco prices. Articles of our own importation are made expressly for our trade, and are of the best material and manufacture, under direct supervision of Mr. Jones.
All kinds of Country Produce taken in exchange for Goods at regular rates.
43m JONES & HEWLETT.

Attention, Hay-Balers!
BALING-ROPE.
JUST RECEIVED, EX SHIP "FEARLESS," and other late arrivals,
500 COILS SUPERIOR EASTERN BALE-ROPE,
Which we offer in lots to suit, at San Francisco prices.
23m JONES & HEWLETT.

Sportsmen!
Powder
AND
SHOT.
Having perfected our arrangements with the manufacturers of Powder and Shot, we are enabled to offer purchasers the very best at the very lowest rates. We are receiving supplies by almost every clipper-ship.
Parties purchasing will please give us a call. Our stock consists, in part, of
500 kegs Blasting and Mining.
500 qr. kegs Sporting.
100 qr. kegs Eagle Sporting.
100 cases in 1 lb cans.
25 cases in ½ lb cans.
Hazard, Dupont, and Oriental.
1000 bags Tatham Bro.'s Shot. For sale by
23m JONES & HEWLETT.

Manila Cordage.
250 COILS, OF ALL SIZES, OF EASTERN MANUFACTURE. For sale in lots to suit.
23m JONES & HEWLETT.

Well Cleaned Grain!
FAN MILLS! FAN MILLS!
J. T. GRANT'S PATENT, IMPROVED BY JONES & HEWLETT, for taking out Barley and Oats; 25 just received.
23m JONES & HEWLETT.

Plant Early!
Seed! Seed! Seed! Seed!
A LARGE AND NEW ASSORTMENT soon to arrive, consisting of
FIELD, GRASS, HERB, AND VEGETABLE SEEDS,
All carefully packed in tin cases. For sale very low by
23m JONES & HEWLETT.

To the Seed Trade!

THE VERMONT

SEED-SOWER AND REVOLVING HARROW!
FARMERS, ATTENTION!
With this machine, any person that can manage a pair of horses, can perform the operation of
Seeding and Harrowing at the same Time.
It is adapted to the sowing of ALL KINDS OF GRAIN, and is regulated by the guage to DISTRIBUTE EVENLY OVER THE SURFACE, any desired number of pounds of Grain per acre, covering the Seed immediately, so that NONE OF IT IS LEFT IN SIGHT FOR THE BIRDS TO DESTROY.
IT IS SIMPLE IN CONSTRUCTION, STRONG, AND DURABLE,
Just the implement the Farmer needs at the present time, to enable him to raise Grain profitably at the prevailing low prices.
It now makes its first appearance on the Pacific Coast. For sale by
KNAPP, BURRELL & CO.,
310 Washington street.
San Francisco, Sept. 10, 1861. 2

Jebb's Patent Churn.
THIS NEW PATENT CHURN IS NOW READY TO be seen and tried. It is beyond question one of the best and simplest constructed Churns ever invented, and Dairymen should call and examine it.
By the action of the crank, three distinct currents are made, which moves the cream with such rapidity that Butter is made in from three to five minutes with ease.
This Churn can be seen at the Farmer Office.
Patent-Rights can be had for all the counties in the State, and any experienced carpenter can make a fortune easier by these Churns than by gold digging. They only need to be seen to be approved. 12

LIZZIE WILEY WARREN, M. D.....EDITRESS.

ODE TO THE SAN JOAQUIN DISTRICT FAIR.

BY MRS. E. D. HALE.

We come with earnest, hopeful hearts,
And spread our offerings here to-day;
As products of those priceless arts,
Which grow along our rugged way.

We come, a firm, united band,
And ask the meed of praise to share;
Contented, each to fall or stand—
According to the works we bear.

'Tis but a few, brief, fleeting years,
Since the "Eureka shores" were sought;
That led us to thy rose-bound bowers,
A rude and wild, yet sylvan spot—

Unknown, the apple's red and gold—
The blushing tint of peach and pear:
The mirror of the Native, told
No tales of orchards ripe and rare.

But now, we boast of gardens fair—
Of orchards fine, and vineyards wide;
Of luscious fruits of beauty rare,
Which all behold with grateful pride.

O, Painter of the fruits and flowers!
We thank Thee for Thy wise design,
Whereby these *human hands* of ours
In Nature's garden work with Thine!

The waving fields of golden grain—
A source of wealth unbounded deep!
For those who toil, ne'er toil in vain,
And those who sow, shall fully reap.

And, soon or late, to all who sow,
The time of harvest shall be given;
The flower shall bloom, the fruit shall grow,
If not on earth, at least in Heaven!

Our mountains yield the precious ores,
Which many seek from every land;
Our plains, the grain—the fruits—the flowers—
The gifts of an Almighty hand!

We thank Thee, Father! for this home—
This bounteous garden of the free;
Where wanderers from afar may come,
And breathe the air of Liberty!

Still, may our flowers untrampled spring,
Our harvests wave, our cities rise;
And this, till Time shall fold his wing,
Remain, Earth's loveliest paradise.

STOCKTON, Sept. 5th, 1861.

◆

EYES.

BY JOHN R. RIDGE.

I sing of eyes, of woman's eyes,
A theme from earliest ages sung,
But which, till all of Nature dies,
Shall ever bid the harp be strung.

There is the eye of sober gray,
Which seems to shadow forth regret,
As if the spirit mourned alway
Its starry hope for ever set.

There is the eye of hazel bright,
Which wins and dazzles where it falls,
Reviving with its showers of light
The happy bosoms it enthralls.

There is the eye of tender blue,
Soft as the Heaven at set of sun,
Which many deem is ever true,
And smiles on all, but *speaks* to one.

There is the eye of darker hue,
Which rivals Midnight on her throne;
Now softly bright, as streams that through
The shady forests wander lone;

Now like a cloud that hides from sight
The beauty of the rolling spheres,
And flashes far with angry light,
Or sinking downward, melts to tears.

As sages loved in ancient days
To read the Heavens when darkness fell:
So on those orbs of black we gaze,
And feel our inmost bosom swell.

As lovely as the worlds that lie,
Reposing in the Night's embrace,
Is the soft meaning of that eye,
And deeper than the depths of space!

I cease—for all description's vain:
Let each one choose the eye he likes:
That melts the heart or soothes the brain:
Or, like the dreaded lightning strikes:

But as for me, I love those eyes—
No matter what their hue may be—
To which the heart's warm feelings rise
In overflowing love to me.

Alternate fount of light and tears,
Their smiles are sweet, their sadness, too;
And I could joy or grieve for years,
As those fond eyes might bid me do!

◆

COFFEE AS A REMEDY FOR WHOOPING COUGH.—In Dr. George D. Gibb's work on whooping cough, published in London, in 1854, he recommended strong coffee as a specific for the cure of this disease. It has been tried in several instances with marked effect. In one case, the patient was a little girl six years of age. There was not a single "whoop" after she began to take it. She took a table-spoonful and a-half of very strong coffee, sweetened, but without milk, three times daily. A young child in the same family was well of the disease in three weeks; no other remedy was used in either case. In another instance, in which we have recently tried it, the same happy result followed, the "whooping" symptom being at once arrested, and the complaint coming to a speedy termination. It is difficult to fix the dose definitely, and this may account for the unsatisfactory result in one or two instances we have heard of, in which a small dose was given. Another important consideration which should not be lost sight of is, that three-quarters, probably, of what is drank for coffee, is made from nothing but peas or beans. The only sure method is to get the coffee berry itself, and have it burnt and ground under one's own eye. The decoction should be given as strong as possible, and in a quantity only strong enough to cause the unpleasant stimulating effects of this beverage. Children take it very readily. The last patient refered to above was only eighteen months old, and took once a day half a cup of coffee thus prepared without the least noticeable injurious effect. Try it.

◆

CURE FOR RHEUMATISM.—Bathe the part affected in water in which potatoes with their skins on have been boiled, as hot as can be borne, just before going to bed. By the next morning the pain will be much relieved, if not removed. One application of this simple remedy has cured the most obstinate rheumatic pains.—[Eng. Paper.

TO REMOVE DISCOLORATION OCCASIONED BY BRUISES.—Should the eye or any other part be blackened by a fall or blow, apply a cloth wrung out of very warm water, and renew it until the pain ceases. The moisture and heat liquify the blood, and send it back to its proper channel.

WORDS are little things, but they strike hard. We wield them so easily that we are apt to forget their hidden power. Fitly spoken, they fall like the sunshine, the dew, and drizzling rain—but when unfitly, like the frost, the hail, and the desolate tempest.

NOT to honor old age, is like tearing down in the morning, the house in which we wish to take refuge for the night.

Mignonette as a Tree.

BUY a pot of ordinary mignonette. This pot will probably contain a tuft composed of many plants, produced from seeds. Pull up all but one; and, as the mignonette is one of the most rustic of plants, which may be treated without any delicacy, the single plant that is left in the middle of the pot may be rigorously trimmed, leaving only one shoot. This shoot you must attach to a slender stick of white osier. The extremity of this shoot will put forth a bunch of flower buds, that must be cut off entirely, leaving not a single bud. The stalk, in consequence of this treatment, will put out a multitude of young shoots, that must be allowed to develop freely until they are about three inches and a-half long. Then select out of these, four, six, or eight, according to the strength of the plant, with equal spaces between them. Now, with a slender rod of white osier, or better, with a piece of whalebone, make a hoop, and attach your shoots to it, supported at the proper hight. When they have grown two or three inches longer, and are going to bloom, support them by a second hoop like the first. Let them bloom; but take off the seed pods before they have time to form, or the plant may perish. It will not be long before new shoots will appear just below the places where the flowers were. From among these new shoots, choose the one on each branch which is in the best situation to replace what you have nipped off. Little by little, the principal stalk, and also the branches will become woody, and your mignonette will no longer be an herbaceous plant, except at its upper extremities, which will bloom all the year without interruption. It will be truly a tree mignonette, living for an indefinite period; for, with proper treatment a tree mignonette will live from twelve to fifteen years. I have seen them in Holland double this age.—[Parlor Gardener.

We would urge upon our gardeners in California to see what they can do.

◆

THE DOCTOR'S FEE.—Another illustration of the adage of "Never look a gift-horse in the mouth," occurred in Paris a few months ago. A Physician attended a wealthy banker's very sick child, which recovered, to the great joy of the parents. The physician, on making his last call, was asked for his bill, and expecting a large fee, he proposed to leave it to the good-will of the parents. The mother left the room, and soon returned with a fine knit purse, and, handing it to the Physician, said: "We are grateful to you, indeed, Doctor; money cannot fully repay your kindness and skill, allow me to present this purse, which I have knit with my own hands, as a token of my gratitude." The Physician spurned the gift, and said: "Madam, such gifts are nothing to me; time is money, and I must be recompensed for my time." The lady felt hurt at this rude reply, and answered: "Sir, as you despise this gift, which I have spent many pleasant hours in making for you, as a token of my gratitude, say how much money will satisfy you?" "My bill," said he, "is two thousand francs." The lady immediately opened the purse, took out five notes of a thousand francs each, unrolled them, handed *two* of them to the Doctor, rolled up the other three, replaced them in the purse, put it in her own pocket, bade the Doctor good morning, and left the room. He went home, feeling that he had "looked a gift-horse in the mouth." The next time any of our young readers receive a present they do not quite like, let them remember the Doctor's Fee.

A correspondent "down East," in a "matterfull" note to the editor, relates the subjoined incident. Perhaps he didn't desire to have it printed; but we run the risk; for "it's too good to keep." He says he was taking a sleigh-ride with a very pretty girl, when he encountered a Methodist minister, a favorite gospel itinerant in all the region round about. He stopped him, and asked hurriedly: "Can you tie a knot for me?" "Yes," said brother B——, "I guess so; when do you want it done?" "Well, right away," was the reply. "Is it lawful, though, here in the highway?" asked "the brother"; "I never thought of that." "I don't know," was the response, made just as a young briefless lawyer drove up, to whom the case was submitted. "It depends on the sort of knot which he wishes tied," was the decision. "I want a knot tied in my horse's tail, to keep it out of the snow!" shouted the wicked wag, as he drove rapidly away, fearing lest the minister in his profound wrath, should "fall from grace." At a safe distance he "slowed" and heard the lawyer demanding a fee of five dollars from the minister for "professional advice!" Rather "sharp practice"; but it was his "first case," and probably a knotty one!"

LAVENDER FARMING.—Our readers will be interested in the following account of the cultivation of the lavender in England, for distillation into perfumery. The writer says: "In this little island, no less than about 270 acres of its precious land is devoted to lavender farming. Every acre yields about 200 pounds of flowers, every hundred pounds of flowers giving up by distillation, about one pound of the otto of lavender, and thus we learn that there is an average production of about 7000 pounds of lavender otto annually. It requires six ounces of this to make a gallon of lavender water, so that Brittania and her children—you know their names—Jamaica, Canada, Australia, together with a few visitors, America, Germany and Russia, use and take home with them the enormous sum of 17,000 gallons of this favorite spirit. These lavender farms are situated in Surry and Herefordshire. The lavender when in blossom, is resorted to by all the bees for miles around. The sound of their hum in such vast numbers is quite enchanting; nor do the butterflies neglect to visit so luxurious a feast, the taste of which appears to be particularly grateful to them. The bees' love for the lavender is so excessive, that at the harvest time they will follow it even at a sacrifice of life into the still!"

Let our apiarians plant the Lavender for their bees, it will thus be doubly profitable.

A "SPUNKY" WOMAN.—Some of the Secession patrons of the Hesperian have threatened to stop the Magazine on account of its patriotic sentiments. The Editress says:

But we would not change our course, nor hesitate one moment to avow our Union sentiments, *if we knew* that we should suffer such a discontinuance of patronage as would render us unable ever to publish another number of the Hesperian. We are soul and body for the Union our fathers fought for; and if the Hesperian cannot live avowing such sentiments, it is time it died.

WHAT strange things girls are. Offer one of them good wages to work for you, and ten chances to one if the old woman can spare any of her girls; but just propose matrimony, and see if they don't jump at the very chance of working a life-time for board and clothes.

NOTHING more quickly betrays character than the laugh. "Let me hear a man laugh," said Democritus, "and I will tell you his history."

IRISH LOYALTY.—The following from the San Francisco Monitor, speaks volumes for the valor and loyalty of Irish Americans: "There are now in the field the following purely Irish American regiments in the service of the United States: Three from New York, two from Massachusetts, two from Pennsylvania, two from Illinois, and one from Wisconsin. It is estimated that at least one-third of the soldiers in the army at present are of Irish birth.

MRS. LIZZIE W. WARREN, M. D.,

ELECTRICIAN AND HYDROPATHIST,
Corner Mason and Pacific streets.....San Francisco.

MRS. WARREN proposes to teach her patrons the means of attaining and preserving health, rather than the usual practice of physicians, of *doctoring the sick*. Believing in the old adage: "An ounce of prevention is worth a pound of cure," and also that the remedies used to eradicate disease are more deleterious to the human organization than the diseases themselves; therefore she dispenses with the use of drugs, relying on the curative power within the living organism and the supplying such conditions as the natural remedial agents afford. The natural remedies: Air, Diet, Exercise, Water and Electricity. The beneficial effects of water, properly used, are now generally understood, but the remedial effects of electricity are comparatively unknown. By the knowledge and application of a certain law, which recognizes hitherto unknown relations of the positive and negative forces to the functions of life, electricians are enabled to make a beneficial application to disturbed physical equilibrium, thereby rendering electricity the most powerful therapeutic agent; the most potent and all-pervading element which can be used, as it approximates to the principle of life, apparently identical with vitality. Its therapeutic uses are *reasonable and wise*, and may be relied upon whenever a cure or improvement is possible.

MRS. WARREN will be pleased to make arrangements by the year, with families requiring a better knowledge of the laws of health and the means of its preservation, as well as medical attendance and advice.

Having devoted many years in study and preparation for this profession, and having received ample testimonials from the College where she graduated, feels confident she will be able to prove her ability to attend to the claims of WOMEN and CHILDREN. To this practice she will give her *Exclusive Attention*.

As an ACCOUCHEUSE she claims to be eminently successful, and can produce ample testimonials of success in many difficult cases.

Those wishing to avail themselves of Mrs. Warren's advice will find her at her residence, on the south-east corner of Mason and Pacific streets.

☞ Arrangements have been made by which a few Patients can be accommodated with Rooms and Board

DR. WEED'S
Hygeo-Medical Institution

M street, between 7th and 8th streets,
SACRAMENTO,

IS WITHOUT DOUBT THE MOST DESIRABLE PLACE in the State to which the Invalid seeking health can resort. Although it has been open but a short time, it has already become known throughout the State as a

First-class Water-Cure Establishment.

Here disease is treated upon strictly Hygenic, and truly scientific principles; principles founded in the very laws of our existence; and the great number of cases that have passed through our hands, here and elsewhere, prove to a demonstration the world-wide superiority of Hygenic treatment over Drug Medication. ours are

NATURE'S OWN REMEDIES!

And when properly administered never fail to accomplish the desired result. At this Institution by the use of these simple but powerful remedies, the blood is purified, the bowels freed, the liver relieved, palsied limbs restored, stiff joints made supple, headaches removed, fluttering hearts made to beat in proper time, weak organs strengthened, displaced organs replaced, general debility overcome, the complexion made clear, the cheek made to bloom, the eye to sparkle, and the soul to rejoice in the full and complete enjoyment of perfect health. By the use of the

Genuine Electro-Chemical Bath,

and a SYSTEM OF INVIGORATING EXERCISES, many diseases that have been considered incurable are easily and speedily overcome. As a remedy for Fever and Ague, Rheumatism, Scrofula, Liver Diseases, Paralysis, Constipation, Suppressed or Deranged Menses and Sick Headache, the Electro-Chemical Bath PROPERLY GIVEN is invaluable and stands unrivaled. The location is BEAUTIFUL, HEALTHFUL, and retired; surroundings pleasant and cheerful; the rooms commodious and airy; the table excellent, nutritious, and wholesome; and so pleasantly arranged is every department, that the most desponding invalid cannot fail to be inspired with new life, hope, and cheerfulness. Invalids cannot find a place where they can spend a few weeks more profitably, or where they can have the attention of more accomplished and skillful physicians.

MRS. WEED, so well known as a lecturer, and teacher of the laws of life and rational education, will give her especial attention to THE LADIES.

☞ Circulars sent free of charge.

Address: G. A. WEED, M. D.

15 SACRAMENTO, CAL

HEALTHFUL SPECULATION!

IN A RECENT LETTER FROM FOWLER & WELLS of New York, I was solicited to send them one hundred subscribers for their journals. This I would gladly do for the cause of PHRENOLOGY, PHYSIOLOGY, and HEALTH, in California. As I cannot at present leave my care, I take this means to obtain the number. Friends of the cause! do not fail to have every town in the State represented!

To any responsible person who will distribute from 100 to 500 of my Circulars to each Family, Store, and Miner's Dwelling in the village where they reside, I will send them two copies of either of the following journals for one year, commencing July 1st, 1861: The Phrenological Journal, by Fowler & Wells; The Water Cure Journal, by R. T. Trall, M. D.; or The Laws of Life, by J. C. Jackson, M. D., and Miss Harriet N. Austin, M. D. If more than five hundred are required for a full distribution, two more journals will be sent, or any two books by Fowler & Wells or Dr. Trall that do not exceed $1 each. The first applicants will receive the circulars by express, free of charge, and the journals by return of mail from the East. In this way many families may be provided with three of the best journals in the world that treat upon the Laws of Mind, Health, and Home Treatment of Disease. Only one or two from each village can be supplied with the journals on these terms; but I will reward all who may apply for circulars to distribute with "Water Cure for the Million," by R. T. Trall, M. D., President of the Hydropathic College, free of charge.

BARLOW J. SMITH, M. D., Graduate of the Hydropathic or Hygeiotherapeutic College of New York, intends lecturing through the Winter months in the mountain and valley towns of this State, upon the subjects of Phrenology, Physiology, and the Laws of Health, the Nature of Disease, and the Hydropathic and Hygienic Remedies, as taught by the Professors of the New York College.

At the Bensley Water Cure we cure all curable Diseases, except those that are contagious and would endanger the health of the family and patients. This is the oldest establishment in the State based on the principles taught and practiced at the Hydropathic College of New York. Our house is large and pleasantly located—corner of Stockton and Pacific streets, San Francisco. Persons visiting the city desirous of improving their health can be pleasantly accommodated with us. We have the best Hygienic facilities in California, for the cure of all Diseases, especially those of the Lungs, Liver, and Stomach. For the cure of Rheumatism, Ague and Fever, and Poisoning from Lead, Oak, and Mercury, our Baths and Electrical Appliances are superior and different from any others in the State.

No one in the world examines Diseases of the Body through Phrenology or the Head, in the way Dr. Smith does.

If you desire an examination and to consult with Dr. Smith while in the city, you can do so free of charge. Circulars sent on application. 23

STOCKTON Female Seminary.

THE EIGHTH SESSION OF THIS INSTITUTION UNDER the charge of Dr. CYRUS COLLINS and Lady, assisted by competent Teachers, will commence on
Wednesday, September 25, 1861,
And continue FIVE MONTHS.

—TERMS:—
For Board and Tuition, in common English Branches, per session
For Tuition in Music, per session
For Tuition in Painting or Drawing
For Tuition in Ancient or Modern Languages, each
Washing per dozen
Payable Quarterly in advance.
For Tuition and Board per annum, in advance

☞ Pupils received at any time, and charged until the end of the session.

COURSE OF STUDY:

The first aim of this Institution is thoroughness; and though any plan proposed can only be disciplinary, yet we have chosen that course which will be the most practical, having those sciences most available in common life. Beginning with fundamental principles, the student is carried by natural and easy graduations, through a course of study, calculated to strengthen and invigorate the mind, and prepare it for healthful action.

Our course of study comprises Two Departments, a Preparatory of two, and an Academic of three years.

THE STUDIES OF THE PREPARATORY COURSE.
FIRST YEAR.
Reading, Writing, Orthography, Arithmetic (Thompson's Rudiments), Primary Geography, Grammar, and Composition.
SECOND YEAR.
Rhetorical Reading, Arithmetic, Book-Keeping, Geography, History, Grammar, Penmanship, and Composition.

THE STUDIES OF THE ACADEMIC COURSE.
FIRST YEAR.
Algebra, Geometry, Natural Philosophy, Physiology, Rhetoric, Physical Geography, and Composition.
SECOND YEAR.

CORAL GROVE.

BY JAMES G. PERCIVAL.

Deep in the wave is a coral grove,
Where the purple mullet and the gold-fish rove;
Where the sea-flower spreads its leaves of blue,
That never are wet with the falling dew,
But in bright and changeful beauty shine,
Far down in the green and glassy brine.
The floor is of sand, like the mountain drift,
And the pearl-shells spangle the flinty snow;
From coral rocks the sea-plants lift
Their boughs, where the tides and billows flow:
The water is calm and still below,
For the winds and waves are absent there,
And the sands are bright as the stars that glow
In the motionless fields of upper-air:
There, with its waving blade of green,
The sea-flag streams through the silent water,
And the crimson leaf of the dulse is seen
To blush like a banner bathed in slaughter:
There, with a light and easy motion,
The fan-coral sweeps through the clear, deep sea;
And the yellow and scarlet tufts of ocean
Are bending like corn on the upland lea:
And life, in rare and beautiful forms,
Is sporting amid those bowers of stone,
And is safe, when the wrathful spirit of storms
Has made the top of the wave his own;
And when the ship from his fury flies;
Where the myriad voices of oceans roar,
When the wind-god frowns in the murky skies,
And demons are waiting the wreck on shore:
Then, far below, in the peaceful sea,
The purple mullet and gold-fish rove,
Where the waters murmur tranquilly,
Through the bending twigs of the coral grove.

"OLD IRONSIDES."

[The following lines were written by Oliver Wendell Holmes, in 1830, when it was seriously contemplated to tear the Old Ship to pieces. We cannot but think that there was far greater respect to the "flag of the country," in that day, than in the present]:

Aye, tear her tattered ensign down!
Long has it waved on high:
And many an eye has danced to see
That banner in the sky.
Beneath it rung the battle shout,
And burst the cannon's roar.
The meteor of the ocean air
Shall sweep the clouds no more!

Her deck, once red with hero's blood,
Where knelt the vanquished foe,
When winds were hurrying o'er the flood,
And waves were white below:
No more shall feel the victor's tread,
Or know the conquered knee;
The harpies of the shore shall pluck
The eagle of the sea!

Oh, better that her shattered hulk
Should sink beneath the wave;
Her thunders shook the mighty deep,
And there should be her grave.
Nail to the mast her holy flag;
Set every threadbare sail;
And give her to the God of storms—
The lightning and the gale!

A Sharp Savannah Merchant.

A merchant of Savannah, Southern born, at the time when the rebellion first broke out, wrote to his correspondents at New York in a calm, dispassionate manner, expressing regret that the troubles existed, and hoping that everything would be adjusted to the satisfaction of both North and South. He received no answers to these letters—much to his surprise. In the meantime a New York vessel of which he was part owner, arrived at Savannah, and reported to his house for business. A few days afterwards he was waited upon by the Vigilance Committee, who presented him with a pile of letters, and very coolly informed him that if he could not write in a different tone, he must leave the State. Comprehending the case at once, he sat down and re-wrote to his correspondents, detailing abuse of Northern men after the most approved style; he then sent for his captain, and told him he must take a cargo for Liverpool, as he would not give him one for New York. The cute Jerseyman caught at the dodge immediately, and spread the report that he was bound for Liverpool. A half hour before his sailing, the merchant took him in his private room: locked the door, and explained his position; he gave him a list of all his correspondents in New York, and charged him to call upon every one of them and assure them that his letters meant nothing. "You see," he said, "the character I have been obliged to assume; you must not think me the fool I have made myself appear—you will be overhauled at the fort; show the Liverpool papers, and when you get to sea destroy them and put for New York."

The captain was as shrewd as the merchant; he was overhauled at the fort; he showed his Liverpool papers, whereupon the officer in command expressed a strong desire to charter the vessel to bring a cargo of provisions from Liverpool, and actually offered him $15,000. The captain at once assented to the offer, and the charter paper was made out. The parties even went so far as to arrange how to land the cargo by signals, in case the blockade interfered with the vessel in the harbor. It is needless to say that the bogus papers were all destroyed, and the vessel landed $50,000 worth of cotton at New York.

The above is vouched for by a member of one of the principal merchant houses in this city.—[Boston Commercial Bulletin.

◆

For the Curious.—The greyhound runs by eyesight alone, and this we assert as a fact. The carrier pigeon flies on his two hundred and fifty miles journey homeward by eyesight, viz: from point to point of object which he has marked; but this is only our conjecture. The fierce dragon-fly, with twelve thousand lenses in his eye, darts from angle to angle with the rapidity of a flashing sword, and as rapidly darts back—not turning in the air, but with a clash reversing the action of his wings, and instantaneously calculating the distance of the objects, or he would dash himself to pieces. But in what conformation of his does this consist? No one can answer. A cloud of ten thousand gnats dance up and down in the sun—the minutest interval between them—yet no one knocks another headlong upon the grass, or breaks a leg or wing long and delicate as these are. Suddenly—amidst your admiration of this matchless dance—a peculiarly high-shouldered vicious gnat, with long pendant nose, and settling on your cheeks, inserts a poisonous sting. What possessed the little wretch to do this? No one knows. A four-horse coach comes suddenly upon a flock of geese on a narrow road, and drives straight through the middle of them. A goose was never yet fairly run over, nor a duck. They are under the very wheels and hoofs, and yet somehow they contrive to flap and wabble off. Habitually stupid, heavy and indolent, they are, nevertheless, equal to any emergency. Why does the lonely wood-pecker, when he descends from his tree and goes to drink, stop several times on the way, listen and look around, before he takes his draught? No one knows.

A Poor Hand to Stop Balls.—Sipples, one of the jolliest members of the craft, on being asked if he intended to enlist, replied that he was the poorest hand in the world to stop balls; he never touched even a fish ball but it went through him. His determination to stay at home is fixed.

Electricity as a Remedial Agent.
DISEASES CURED
Without the Use of Medicines,
AT THE
Electropathic Institute,
625 Washington street,
Between Montgomery and Kearny streets,
SAN FRANCISCO.

When it was promulgated that disease could be entirely eradicated from the system without the use of poisonous drugs, the unthinking, or those who do not look deeply into cause and effect, scouted the assertion as chimerical, and adduced strong evidence of its utter impossibility. Long articles, replete with arguments, seemingly unanswerable, of the position that only through the digestive system could the blood be purged of the accumulation of the poisons which constitute the disease. A great cry went up from those interested in the continued supremacy of the old system of one poison to cure another; that electricity, as a curative agent, had been tried and proved to be of but little if any value—thinking, poor souls, that the world of science stood at the same point it occupied one hundred years ago. They were wrong, while those old fogies were content if they cured one in every five patients, there were those who were diving deep into the science of electricity, and finally it was discovered that the trouble was in the instruments used. From that time to the present, improvements have rapidly advanced, until every disease in the catalogue of human ills has been either cured altogether, or checked so as to enable the sufferer to seek those changes of climate which ultimately perform a perfect cure. Diseases hitherto considered incurable, have been cured, and those diseases which took months, and even years, to cure by medical process, are now cured in a few weeks: and all by the improved instruments of DR. J. H. JOSSELYN, Resident Physician at the Electropathic Institute, New No. 645 Washington street, between Kearny and Montgomery streets, San Francisco. It is astonishing to see the number of patients and diversity of diseases that have been relieved by the Electropathic system. From early morn till late at night his instrument in engaged, imparting health and strength to all who have the good fortune to obtain his services. The charges, too, are not as heavy as by the old system, besides there is no medicine to pay for, let alone the unpleasantness of swallowing the nauseous stuff. During the time that the Institute has been in operation, there has been more benefit to the human family derived from the system than from all other systems combined during the same period. Among the most troublesome diseases to which Californians have been exposed, is Rheumatism; none have given the honorable practitioner more trouble to relieve, and none have pretended to cure (if we except known empirics) permanently. But this subtile disease gives way before the Electropathic system in a very short time, enabling the sufferer to go about his business without pain or the fear and dread of relapse. And so with most other diseases, considered incurable. We mention Rheumatism because of its abundance, but we could enumerate many other diseases full as troublesome, and some far more fatal in their results.

To the nervous, the Directors would say, that you can be entirely relieved from those dreadful feelings of evil-foreboding, and your system strengthened so that nothing can disturb the current of your life. Several cases of insanity, arising from a disarrangement of the nervous system, have been permanently cured by this system. The Directors, in stating these things, do so in the hope that it may be the means of awakening the public who have not studied into such things, to a sense of their duties, and if possible, prevent those who have the care of the rising generation from poisoning their young charges with vile drugs, thereby entailing upon them troubles which in after life may cause them to curse their origin.

It is unnecessary to enumerate all the diseases in the catalogue, for that would be occupying space to no purpose. Every disease has been under treatment by this system, and there are none but have received benefit either in this State or at the East.

There are at present but few instruments in the world that can be depended upon. A good instrument costs very heavy, and must be manufactured to order, and there are very few who are able to manufacture them, for want of knowledge of the healing principle. The only instrument to be depended upon in this State is at the Electropathic Institute.

Connected with this system are the renowned Electro-Magnetic Baths. Here let us caution the public against the numerous impostors in the bathing line. The pure magnetic baths is one of the most effective aids in the removal of disease from the system, but if given at the wrong time, are likely to aggravate trouble, and cases have been known where the patient has been injured so badly as to require months to remove the injury. Persons in quest of this bath should be careful and not apply to a place where there is no physician to judge of the necessity of the remedy. In fact, the only place where they can be obtained in all their purity is at the Institute, where the Resident Physician will always be happy to examine and see that they are not unseasonably administered, and if not necessary, advise the requisite remedy.

Below will be found a list of the cases which have been successfully treated by the Electropathic system, at the Institute, during the first year of its establishment. The record is good, and challenges the admiration of the world:

Name of Disease.	*No.*
Rheumatism	421
Neuralgia	368
Dyspepsia	297
General and Sexual Debility	240
Asthma	220
Bronchial Affections	187
Fever and Ague	183
Female Irregularities	161
Mercurial Affections	130
Diseases of the Eye	85
Paralysis	78
Scrofula (long standing)	30
Catarrh of the Lungs	27
Catarrh of the Head	21
Liver Complaints	20
Deafness	18
Panama Fever	10
Consumption	7
All others, among which is almost every nameable disease	128
Total	2626

The above shows what can be accomplished by combined energy when it has truth and science upon its side. The Electropathic Institute was started amid the cry of interested charlatans, who used all the power their riches and the prejudices of the public gave them, to prevent its success. It has risen to a position that is beyond their baffled malice, and will be honored in the scientific world when they are forgotten, or only remembered for their crimes and impositions. A thinking public are fast consigning them to that oblivion their works merit.

Persons seeking remedial assistance may wish to know something of the system by which diseases are so rapidly removed from the body. Electricity is a fluid of so subtle a nature that it can only be studied by its results. We know by its action it forces everything of a foreign nature in the body from the center to the surface by its energy; while the vitality which it imparts fills up the vacuum, preventing thereby the subtle poisons from returning to the hitherto diseased parts; and here let it be understood that the Bath should never be administered until the disease has been forced to the surface, except, perhaps, in cases of cold where fever has not set in. Its action upon Mercurial Diseases is peculiar. The best authorities are of the opinion that it liquifies the mercury, which, when in a liquid state, by its own specific gravity, forces itself out of the body. This result has been arrived at by testing the water after an Electro-Magnetic Bath. After such tests have been found in the water, the patient is not troubled any more with those pains peculiar with the diseases. In all other cases it forces to the surface and is washed off by the Bath. The whole system, in its application, is a LUXURY, there being no pain or inconvenience attending upon it, but the reverse is the case, being one continued pleasure. Try it, you that are suffering either from disease or the injudicious use of poisonous drugs, and you will be made to rejoice that you have had the courage to strike out from the beaten path.

Below are a few certificates from patients that have been cured at the Institute:

CERTIFICATES OF CURES:

San Francisco, April 18th, 1861.

This is to certify that I have been under the treatment of Dr. Josselyn, at the Electropathic Institute, and that he has cured me. My disease was mercurial, accompanied by chills. I applied to him on the 11th day of this month. I recommend all afflicted to employ him. He has cured me without medicine, by the use of his Electropathic Instrument.

JOHN CALLAGHAN.

State of California, City and County of San Francisco, ss.
Subscribed and sworn to before me, this 18th day of April, A. D., 1860. P. BARRY, Notary Public.

Hornitos, Nov. 1st, 1860.

Well, Doctor, I am at home, and have been to work in the water for several days, and there is no return of the Rheumatism, as I call it, and mercurial pains, as you stated them to be. I feel as gay as a lark, no pain or bad feelings, no stiffness, but perfectly well, and all done by you in three weeks, without one drop of medicine. You had hard work to make me believe before you commenced that you could cure me, but now I find it very easy to believe. Although my friends look rather incredulous, but they cannot doubt my sober earnestness. Doctor, you have my thanks, and I will benefit you all I can by spreading your fame up in these parts.

Respectfully yours, GEO. PERKINSON, Jr.
To J. H. Josselyn, M. D., Resident Physician at the Electropathic Institute.

CAUTION.

The public are informed that I cannot be seen at any other place in the State except at the Electropathic Institute (179, old No.) 645 new No., Washington street, south side, a few doors below Kearny. The reason of this caution is, certain Quacks have placed my name upon their doors, and have deceived strangers who wished my services.

19 J. H. JOSSELYN, M. D.

O Main. E. H. Winchester.
MAIN & WINCHESTER,

Near corner of Mason and Pacific streets.

Pure Italian Bees!
Imported by S. B. Parsons.
A. J. BIGLOW,
Sole Agent for California and Oregon.

Flushing, Oct. 30, 1860.

I have this day furnished to A. J. BIGLOW one hundred and thirteen ITALIAN QUEEN BEES, which he is to take to California to propagate and sell on our joint account. Besides these, I have sold no Bees to go to California. My sales here have been to two classes—Agents, and non-Agents. The latter have been supplied only on their written agreement neither to sell, loan, or give away, prior to the first of June, 1862. The former are allowed to propagate and sell for me, making the same conditions to those to whom they sell.

S. B. PARSONS.

These Bees have been pretty generally distributed throughout the State, and as far as heard from, are coming up fully to the anticipations of the purchasers as to their superiority over the common black Bee. "Their beautiful color and graceful form render them an object of interest to every person of Taste." A Circular, containing the terms and conditions of sales, will be sent to all who send me their Post-office address.

The following-named persons have some of this lot of Bees, and are acting as Agents for me;

Rev. Hiram Hamilton, of Stockton;
J. S. & A. Harrison, of Clear Lake, Napa county;
J. V. Hoag, Yolo county;
Geo. W. Ramsdell, Marysville;
Frederick Neidholdt, Illinoistown;
Dr. D. G. Perry, Auburn, Placer county;
M. Hardy, } San Jose;
Jackson Lewis, }
B. H. Hoag, Napa county;
O. W. Childs, Los Angeles;
Ferd. Woodward, Yolo county;
Benj. N. Bugbey, Folsom
Isaac Hoag, Yolo;
P. V. Veeder, Knight's Landing, Yolo county;
Dr. W. S. Livingston, Pilot Hill.

A. J. BIGLOW.
Sacramento, March 20, 1861. 5-3m

PATENT RIGHTS FOR SALE.

The following Patent Rights of very new and valuable inventions (of which we have models to show their value, are now offered for sale. We hold the rights for the States of California and Oregon, and Utah and Washington Territories.

A Fortune for a Mechanic.

We have the PATENT RIGHT for the whole Pacific Coast for the best and most celebrated HORSE HAY-RAKE known.

ALSO—A CIDER-MILL and PRESS of the most approved construction.

A fortune can be made with either of these machines, by an energetic mechanic. The models may be seen at our office.

No. 1. A New Rotary Subsoil Plow.
Patented April 6, 1858.

This invention completely pulverizes the soil after lifting it. a very valuable implement, and one which will receive universal commendation.

No. 2. A Corn Cultivator.
Patent now pending; papers expected.

With this implement the soil is first thoroughly plowed and deeply pulverized, and upon the return it smoothly and perfectly hills up and harrows the ground between the rows A very new and valuable implement.

No. 3. An Improved Clothes Reel and Bar.
Patented January 3, 1860.

This valuable domestic piece of furniture can be used in the Laundery, the Kitchen, the Nursery or Chamber, and can be made plain or ornamental; standing in the same relation as a piece of important furniture as does Wheeler & Wilson's Sewing Machines; neat when used and ornamental when so in use.

No. 4. The Mechanic's Spirit Level.
Patented September 13, 1859.

This implement will be of great value to Contractor and Builders, being one of the most valuable inventions yet out. 2000 were ordered for the New York market just before the sailing of the steamer. Builders will do well to examine this model.

No. 5. A Musketo Bar.

This will be much wanted in California. It is simple in its contrivance, perfect in its working, and can be affixed very cheap to all styles of bedsteads. Hotels, public houses and private families will find it a useful invention.

Also, Hyde's Patent Post-Driver,

A most excellent labor and money-saving machine, for which we offer rights, as will be seen by a card in our columns.

Holding the rights to all these new inventions, we invite the public to call and see the models. All persons who may be desirous to purchase either County, City, Town, or Individual Rights, can do so on application to
2 COL. WARREN, Editor Farmer

Wholesale Produce Report.

This represents the prices paid by the dealer to the producer.

[Corrected weekly, by Todd & Richards, No. 45 Clay Street.] Sept. 13.

We note advance in prices of Wheat for exportation of 5c℘100lbs, which took place early in the week, since which time, all parcels arriving, for sale, have been freely taken up for shipment at $1 45@1 50. This advance has not been occasioned by late advices from England, for such have not been as favorable to shippers as heretofore, and we can only attribute it either to anticipated favorable news from the East, or to the low rates at which shippers are chartering tunnage at this time. Arrivals still continue large, and there is greater willingness on part of holders to realize at these prices, than at any that have ruled since very early in the season. We annex the list of vessels which have loaded and sailed for Australia since the season opened. For Sidney, the Curlew, H. W. Almy, Chrishnas, Druid, Iconium, Summer Cloud, Edmond Walfreu, Isle Maria, and Achilles, aggregate tunnage of which amounts to but 3830 tuns, being mostly small class vessels; for Melbourne, the Alcyone, Eureka, Harkaway, Nor'Wester, Flying Dragon, and Asa T. Eldridge, entire tunnage of which foots up 5883 tuns; for Geelong, the Kathleen, and Louise, 439 tuns. The Abbott Lawrence, for Melbourne, will take about 1100 tuns, and the Evangeline, loaded for Sidney, about, say 700 tuns. The bulk of their cargoes has been Wheat and Flour, the balance principally Oats. Probably the bulk of 100,000 bbls of Flour has been already shipped from the new crop, which might induce the belief that our surplus will be needed before the season closed; but it must be borne in mind, that these shipments have been made upon orders for Australia, and much of it at prices far above present rates, which would account for willingness of Farmers to meet the early demand for their Breadstuffs. At the present time but two vessels are up for England, and but a few only have loaded and sailed for that point, thus far; and late advices do not warrant the belief that shipments will be prosecuted to those points as freely as they have been to Australia. Still it is beyond our ability, or that of others, to foresee the course which Grain shipments may take, and we can only hope that the present season will close with but a small stock on hand to make way for the next large (we hope) crop. We have made many inquiries in regard to the extent of the Wheat crop this season, and from sources not calculated at all to mislead, and feel confident that it will not prove as large as that of last year: but, doubtless, as large in proportion to the Foreign demand. We quote prices of Wheat for export, at $1 45@1 50, and for Milling at $1 30@1 50; $1 52½ has been paid in a few instances, by our Millers, for extra choice parcels of strong "Bakers" Wheat; but we quote $1 50 as the outside figure for good milling and export Wheat.

Barley is not as firm as it has been, and we quote 87½c as the outside figure for exportation.

Oats are dull again at $1 05@1 07½.

Hay also continues dull at $8@10℘tun, with large arrivals.

Corn is better, and demand good for same.

Arrivals of Bay Produce, for the past week, have been as follows: Flour, 19,714 qr sks; Wheat, 78,907 sks; Barley, 18,554 sks; Oats, 15,322 sks. Corn, 181 sks. Potatoes, 5457 sks. Wool, 240 bales. Hay, 925 ts.

John L. Bowes & Bro's Monthly Wool-Circular for the United States.

Liverpool, July 13th, 1861.

For some weeks past the Wool-Market has been in a depressed state, owing to a diminished consumption, consequent upon the cessation of exports of manufactured goods to the United States, and to a flatness in our Home-trade. During the last ten days the favorable prospect for our harvest has induced a better demand, and the tone of business is stronger, but until the American market is reöpened a decided and general recovery is unlikely. Prices of most imported kinds, excepting Australian and Cape, have declined 10 to 15 per cent. In Domestic Combing fleeces the fall was at one time 4d to 5d ℘ lb (equal to 20 per cent), but of this fully 1d ℘ lb has been regained. Clothing kinds are firm at 2d reduction. Lustrous long-stapled fleeces are now selling at 17d to 19d, and Southdowns at 16d to 17½d.

Public Sales commenced here 2d instant, and concluded yesterday: 24,465 bales offered, and 17,800 bales sold. There has been a fair attendance; but only a moderate competition, French and German buyers operating sparingly. Prices of a few descriptions of which stocks are light have not materially changed, but as a rule the decline on medium and common kinds of Foreign Wool since May is 1d to 1½ ℘ lb. Compared with May sales, the decline in value is as follows: East India, Persian, Lima, Peru, Turkey, and greasy Buenos Ayres, 1d ℘ lb; washed fine Buenos Ayres, 1d to 2d; Oporto white fleece, 2d; Oporto Lambs and Cotts 0d to 1½d; Cordova and Donskoi, ½d; Mogadore, ½d to 1d ℘ lb.

* * *

The Tax-Payers' Union.—We have received the Report of the Ex. Committee of Tax-payers' Protective Union, of which we shall speak hereafter. The great object of this Union is to thwart monopolies and overthrow fraudulent schemers, who would fasten upon the great body of willing honest Tax-payers a load of taxes, unjust, unequal, and oppressive—taxes inflicted for the sustenance of vampires, land-sharks and office-seekers.

Sugar-Cane Sirup.—G. C. Holman, Esq., of Mokelumne Hill, informs us he has raised the Sugar-cane (Chinese) the present year successfully, and will make Sirup. We hear of many other persons who have also been successful in this culture. We shall be glad to hear from all of the weight of their crops per acre, the amount of Sirup to the 100lbs or tun, and all other items of interest.

Farms for Sale.

A valuable Farm of about 400 acres of excellent land, well fenced, situated near Petaluma, can be had at a bargain if applied for soon.

ALSO—A valuable Farm with good buildings, an orchard and vineyard, and pleasantly located in the immediate vicinity of Sonoma. Will be exchanged for real estate in the city of San Francisco. 9

A Grand Chance for a Homestead

A valuable tract of very rich land, comprising 300 acres, situated in one of the most delightful valleys in our State, upon which there are 2000 Fruit-trees, in bearing, a neat House and small buildings, and a Young Nursery, to continue the Orchards and Vineyard. A fine large stream of water runs through the grounds continually. The whole is under fence of the best kind. The Fruit the present year will bring $2000.

This Ranch will be sold a great bargain for Cash. Title Perfect. Inquire of Editor of the Farmer. 14

Valuable Blood-Stock For Sale.

We would invite all who desire Dairy-Stock of the very highest character, to call on us, or write to us, as we have for sale about twenty-five head of as choice Durham Stock as there is for sale in the State, as follows:

One Full-Blood Durham Bull, 2 years old, of the highest pedigree, and as handsome an animal as has ever been offered in this or any other country.

One young Full-Blood Calf, 8 months, a perfect picture.

Several younger Blood Calves.

About twenty Cows and Calves, Durham, Devon, and Ayrshire, with Calves by their sides.

Among the Cows are some of the very best milkers in the State. Inquire at the Farmer Office. 18

Four Hundred and Fifty Acres Rich Land.

A valuable tract of rich Land, of the extent named, in a beautiful location. Will be sold a bargain if applied for soon. Title perfect. Inquire of Editor of the Farmer. 14

Very Superior Sheep.

Several lots of Sheep of various kinds:

ONE LOT OF 900 EWES,
ONE LOT OF 350 EWES, } All superior.
ONE LOT OF 650 EWES,
SPANISH MERINO BUCKS, } Both very extra
SOUTHDOWN BUCKS,

Inquire of Editor of Farmer. 23

A Grand Opportunity for a Home.

For sale in one of the interior Mountain Towns, a good House and Garden, with outbuildings, including a Smoke-House in successful use, being capable of realizing a good income.

The buildings are good. The Orchard is in full bearing, with Peaches, Plums, Apples, Grapes, etc., and small Fruits. There are also on the estate several small tenements, which bring in an income of about $50 a month. The Fruit sold from the Garden, together with the certain income, will pay in two years or less the price now required for the estate. It is offered low for an immediate Cash sale, as the owner desires to locate in a different part of the State, where he has other property which requires his attention.

For particulars inquire of Editor of Farmer. 24

FAMILY MARKETING.

Marion County Society—Salem, Oct. 11th and 12th.

Washington County Society—Hillsboro', Oct. 16th.

Multnomah County Society—Oct. 23d and 24th.

* * *

Four Dollars in Year—In Advance.

Only Four Dollars a Year! This was our offer when we began our Fifteenth Volume; but then we meant Four Dollars *in advance*. At that time a goodly number of names were sent us by Friends and Agents, for which we were grateful. In looking over our list we find some, that from oversight, or other neglect, remain UNPAID, and six months have passed. It will be remembered, too, for it was in print, that we said all who did not pay promptly, would be charged the former price. Those who now owe, and to whom bills have been sent, will therefore bear in mind that their indebtedness is now *Four Dollars and a half*. This is just and right, and we ask such persons to remit or send us Five Dollars, and we will credit them with the extra, or if they will send Eight Dollars, we will receipt for Two Years; that would make it equal. A little reflection *must* convince every honest mind that these small sums should be promptly sent to us. We base our labors and plans upon the amount that we believe will be promptly paid, and although the sum is small indeed to each, the aggregate is thousands to us, and it is not right that the good we desire to do should be frustrated by those who can, by only a little effort, help us to do so much.

Will each one who is now indebted to us *feel* what we say, and act upon it? Our Records will show.

Pulu! The Wonderful!

Another cargo still, is just received
At SCHREIBER'S Depot! 't is believed
There is a charm about the Pulu crop,
It comes, and goes,—the sale will never stop;
For everybody wants a PULU BED,
So easy to the body, so cooling to the head;
Another charm, too, in the PULU found—
Where PULU is, no Insects come around.

PULU! the famous PULU, now is known
As *BEST FOR BEDS*, and it has grown
So much in favor that the People go
Always to SCHREIBER'S great PULU Depot;
'Twas Schreiber had the first 'twas ever sold,
And then it almost cost its weight in gold;
But now, his ships, they come so thick and fast,
It sells so quick, a cargo does not last
A month or more, and then, it is so low
That all who want good Beds should surely go
Direct to SCHREIBER'S STORE on Sansome street,
There they will find a stock complete,
ALL KINDS OF BEDDING, everything that's wanted,
There too, the best accommodation granted.

Now don't forget the Number, 'tis 406;
Another fact upon your memory fix—
That Schreiber's is THE DEPOT OF PULU,
And HE the PIONEER IMPORTER TOO;
The man who first this luxury gave,
Then surely be *the best of trade should have*.

Now go and make your purchases complete,
At SCHREIBER'S, 406, on Sansome street. 1

"WOODBURN FARM,"

Those, desirous of purchasing, can be supplied at any time.

Also—A few

Alderney and Ayrshire Cattle.

R. AITCHESON ALEXANDER,
v13-21 Spring Station, Woodford County, Ky.

To Wool-Growers!

THE SUBSCRIBERS WOULD call the attention of the Wool-Growers of California to their flock of

Fine Full-Blood Merino Sheep,

Which is acknowledged by the best judges to be the finest flock of Sheep in this State.

Our flock originally consisted of nothing but Full-Blood Merino ewes, and the bucks were imported from the celebrated flocks of J. D. Patterson, Chataque Co., N. Y., consequently we have never had upon our ranch anything but the finest Full-Blood Stock. We now have

A Limited Number of Bucks For Sale,

Which we intend to offer at such prices as to place them within the reach of all who wish to improve their flocks of Sheep. There has never been finer Stock imported into this State, and the bucks we now offer for sale have the advantage of having been

REARED HERE,
And Fully Acclimated,

Therefore more desirable than imported Stock.

Persons wishing to see our Stock, will find a sample of our bucks at FISH'S STABLES, on Pine street, San Francisco.

For information concerning the Clip from our flocks for this year, and quality of the Wool, we refer to Mr. J. E. PERKINS, Agent of the Wool-Growers' Association, San Francisco, or to Col. WARREN, of the California Farmer, who will show the Bucks to purchasers.

Persons wishing to address us will send letters to care L. B. BENCHLEY, San Francisco, who will give any information required concerning our flock of Sheep.

GODCHEAUX & BLACKBURN,
16 Rancho Paso Robles. San Luis Obispo Co

Southdown Bucks

For Sale.

THE SUBSCRIBER NOW OFFERS FOR SALE
200 Half-breeds;
100 Three-quarter Breeds;
20 Seven-eighth Breeds.

The above BUCKS are bred from American Ewes, crossed with full-blood Southdown, imported from the stock of J. C. Taylor, of New Jersey, and are of the "Webb Stock."

Among the sires are found the names of Master Fordham, Master Frank, and World's Prize—the finest sheep ever sent to the States by Mr. Webb.

I will guarantee them to be of the grade marked against them, and equal to any in the State.

Their hardiness of character, aptitude to fatten and maintain their flesh on short feed, render them a very desirable class of sheep for Breeders.

....ALSO....
30 Half-breed FRENCH MERINOS;
30 Half-breed LEICESTERS.

The above will be sold at prices to suit the times.

For further particulars, inquire of the subscriber, on the Ranch, "San Juan Grant," fourteen miles from Sacramento, where the Sheep can be seen: or of A. REDINGTON, Esq., Sacramento city.

15 N. D STANWOOD.

RAMS!

FOR SALE
PURE AND THOROUGHBRED
SAXON RAMS!
From specially imported Stock.

Reference at San Francisco—HY. GERSTUNG, Esq
Country Address—Natividad Post-Office, Montery Co.
EUGENE SHERWOOD,
23-2m San Lorenzo Ranch.

THOROUGHBRED CATTLE, Sheep, and Swine.

HAVING ARRIVED BY THE last steamer from New York, with a choice lot of THOROUGHBRED STOCK, which, with that recently received by previous steamers, will enable me to supply the market with French Merino, Spanish Merino, Southdown, and Leicestershire SHEEP; Essex, Berkshire, Suffolk, and Leicestershire SWINE. Also, a few Short-Horn Durham CATTLE, including some superior YOUNG BULLS.

This Stock has never been surpassed by any previous importation of the kind, and it will be sold as low as the same quality can be purchased from any other RELIABLE source. The Stock can be seen at our Ranch directly across the Bay from San Francisco, a short distance below the Ferry Landing at San Antonio. I will also keep a few of the SHEEP at the Black Hawk Stables, on Pine street, San Francisco, where I will be happy to show them to any one wishing to see truly good Stock.

SONOMA AND SANTA ROSA PACKET.

The steamer

PRINCESS,

GEORGE J. CLARK..............................Master

Having just been thoroughly repaired, is now placed on this route as a

Regular Packet!

Leaving the Embarcadero of Sonoma (for the Summer months) at 9 o'clock, A. M., MONDAYS, WEDNESDAYS, and FRIDAYS; and Pacific Wharf, San Francisco, TUESDAYS, THURSDAYS, and SATURDAYS, at 1 o'clock, P. M., connecting with Stages leaving immediately for Santa Rosa, Healdsburg, etc.

This is the only route by which passengers can leave San Francisco and arrive at Santa Rosa and Healdsburg the same afternoon.

Passengers can leave Healdsburg and Santa Rosa in the morning, and arrive in San Francisco in time to connect with the Sacramento steamer of the same day.

For Freight or Passage, apply on board; to

WM. GREEN, Agent,
At Embarcadero; or
E. K. DODGE, Agent,

The Turf.

San Jose Fall Races.

Our longitudinal friend, Smith, of the San José Course, is engaged in altering and repairing the Ladies'-stand of the track, so as to face the stretch obliquely, so that all may see up the stretch at the close of a heat, without leaving their seats. This is a great improvement, certainly, and there will be no use to cry "down in front!" for the future.

The horses on the ground are all doing well, save Rifleman, who is *hors de combat*, as will be seen elsewhere. Mr. Louer's stable never was better off, and Jerome Fox is getting along finely with his youngsters. From the Gilroy stables we hear nothing, but suppose they are all right. Wooding, at Emerson's, is in poor health, but his horses never were better.

Yolo Grove Fall Races.

FIRST DAY.

The Fall Races over the Yolo Grove Course opened on Wednesday with a race at mile-heats, between Mr. Kerby's Jack Hawkins colt and Mr. Coombs' Ashland filly. The latter won with ease, and we are glad to see the name of the little bay horse entered upon the racing calendar as a winning sire, for we know the time will come when Ashland will be rightly appreciated as a stock-horse. The race was so easy that a description of heats is useless, so we append a

SUMMARY:

YOLO GROVE COURSE. Sept. 17, 1861—Purse $300, for three-year-olds, weights of course, 3 yrs., 86—4 100—5, 110—6, 118—7 and upwards, 124, allowing 3 lbs to fillies and geldings.

N. Coombs' ch f Oneita, by Ashland dam by Jim Brown	1	1
C. Kerby's ch c by Jack Hawkins	2	2

Time 1:55—1:57.

We (the Junior) greatly regret our absence from the race, which would have greatly pleased us. But we should have enjoyed it most to have seen the irrepressible Briggs throw up his hat and hurrah for Ashland. The next time Briggs wins a race, "may we be there to see."

Trotting at Sacramento.

On Tuesday the Trotting-Races over O'Hanlon & Lathrop's Centreville Course commenced with a spin between California Damsel and Red Bird, the latter horse said to be the identical Honest Ance that trotted against Flora Temple at Kalamazoo. From all we can learn, the two horses are owned by one man, although they are kept in different stables, and trained by different drivers. So that as long as things are managed on that principle, it is useless to look for "up-and-up" trotting. We are indebted to the Union for a report:

Yesterday was truly one of the most delightful days that we have experienced in this region for a long while; and a large crowd of ladies and gentlemen availed themselves of the opportunity to repair to the Centreville Course, under the management of Messrs. O'Hanlon & Lathrop, and witness the race between the two fastest trotters in the State—the California Damsel and Red Bird. Numerous buggies and carriages conveyed a goodly number to the track, and the cars of the Sacramento Valley Railroad, running on a branch road, conveyed passengers to the gate of the Course. The race was for proprietors' purse of $500, free for all, mile-heats, best three in five, to harness. The entries were John Crook's s. m. California Damsel and J. L. Eoff's s. g. Red Bird. The Judges of the race were A. J. Gambill, A. J. Ellis, and John M. Daniels. The horses being tapped off for the first heat, the Damsel took the lead, and kept Red Bird varying from a length to three lengths in the rear, coming in ahead, and winning the heat in 2:41. On the second heat, the mare kept ahead until getting into the home-stretch, when Red Bird gathered on her, and as they dashed down the stretch from the distance-staff Eoff pushed his horse, and the Damsel breaking slightly a short distance from the score, Red Bird came in about a throat-latch ahead in 2:44. On the third heat, the mare broke badly in going around the turn, and allowed Red Bird to get a considerable distance in advance, but going along the back-stretch she recovered herself, and as they neared the half-mile pole she sailed ahead like a clipper-ship passing a lugger, and came in ahead in 2:35. The fourth heat was by no means an interesting one. They went side and side until making the turn, and Red Bird broke up, and the mare got so far ahead that he could not catch her, and she came in ahead in 2:58.

Greatest Team-trotting on Record.

Had the visitor to the Yolo-Grove Course, on Wednesday, been informed previous to his visiting the track, that the best time ever made in double-harness (we don't call the Ethan Allen abortion "trotting") would be made that day, he would have been very apt to dispute it with his money in hand; and we even think that 2 to 1 would have been laid against the time made by Glencoe Chief & Jim Barton last Fall, when they turned the Pioneer Course in 2:40½. The fastest performances in double-teams heretofore, were, at

MILE HEATS.

1860, Sam McLaughlin's Jim & mate beat Horace Jones' Putnam & mate, on Long Island, Oct..2:40½—2:40—2:39½
1856, Lantern & Don 2:41¼

TWO-MILE HEATS.

1844, Lady Suffolk & Rifle, Hunting Park, Pa 5:19
1861, Miller's Damsel & John Watts, Paducah, Ky 5:30¼—5:19¾

The race of the day was a purse of $1000 for all double-teams, to skeleton wagons, mile heats, best 3 in 5. For this race Mr. J. M. Daniels entered Capt. Card's gr. g. Glencoe Chief and Mr. W. Chapman's b. g. Jim Barton, a team whose capital performance, a year ago, greatly enhanced Mr. Daniels' reputation as a driver. The team entered by Mr. John Crooks consisted of Porter & Collins' ch. g. Shot and S. B. Whipple's b. g. Rainbow. The Daniels team having won the track, and being largely the favorites, up they came for the

FIRST HEAT.

They went off at a cracking pace, but Barton floundered on rounding the turn and bothered Glencoe a trifle, which gave Crooks a slight advantage, for, calling on his team, they responded splendidly and dashed ahead, taking the pole, and trotting off at least sixty yards in advance of the other team, which gap was increased to about a hundred yards at the half-mile. Coming home, Daniels roused his horses and dropped them cleverly inside, Crooks' team winning the heat gallantly in 2:36½!

SECOND HEAT.

There were some terribly long paces in the quarter stretch, as the horses came up for this heat, none of the four, however, showing much distress from their previous unparalleled exertion. Crooks, by virtue of winning the previous heat was entitled to lie next to the rails, and Daniels brought his team up beside him at the top of their speed and away they went like two brace of chain-shot. Crooks' team were not a length ahead and the other team pressed them nobly to the half-mile in 1:15¼. It seemed as if no horse could keep his feet in such a terrific flight as this, for as they swung in the homestretch it was plain they were going all that horses ever went. Glencoe Chief pegged away hard and fast, while Barton whisked his inevitable fly-brush and strode out like a giant; on the other hand old Shot thrashed away like a trip-hammer, and Rainbow, with stretched neck and lowered head, was going with the speed of an arrow and the precision of a chronometer. Up they came in gallant style, Shot & Rianbow winning by a scant length in 2:36¼!!! Such trotting and such repeating made the oldest heads look wild.

THIRD HEAT.

The hitherto unsuccessful team of Daniels rather outscored the small team, this heat, and got off a length in advance, by which means they got the track from Crooks and then Daniels sent them to open an interminable gap on his rivals. Down the backstretch they went a long way in advance and the little team bid fair to face "the auctioneer" at one time. Here some tall running, it is said, took place, and Crooks managed to get his team inside the flag, while Glencoe Chief & Jim Barton won the heat in 2:39¼. Some of the backers of the big team now began to breathe free again, and some who had backed "the Whipple team" began to hedge. It was now quite dark, although the moon came up slowly. The judges, Messrs. Hyatt, Ellis, and Skeggs, called the horses up for the

FOURTH HEAT.

There had been some complaint made about the start for the previous heat, so the judges sent them off nose and nose this time, which position they maintained to the quarter, when Glencoe and Barton drew away and opened a gap of three lengths on the small team, which, it is said made a kind of turf race of it, Shot doing the running, while his mate did an honest trot. Glencoe Chief & Barton won the heat however in 2:41. It now became so dark that the deciding heat was postponed till the next day, when the

LAST HEAT

And the race was decided in favor of Crooks' team by their walking over the course, their antagonists not wishing to put in an appearance.

RECAPITULATION.

YOLO-GROVE COURSE, Sept. 18, 1861.—Purse $1000 for double teams to skeleton wagons. Mile heats, best 3 in 5:

John Crooks' ch g Shot & b g Rainbow	1	1	2	2	1
J. M. Daniels' b g Jim Barton & g g Glencoe Chief	2	2	1	1	dr

Time: 2:36½—2:36¼—2:39¼—2:41—n't.

Thus ended one of the greatest contests that ever graced the American trottoir, and one which will long stand isolated and alone on the records of the Turf.

◆

WHO RAISED NONPAREIL WHEAT?—We sent out last spring many hundred parcels of this New Wheat to our subscribers, with the request that we might have from them a report of its result, and sample heads, to show its beauty and quality. We hope to hear from those to whom it was sent, in order that we may speak of its value.

The Paddock.

Black Hawk Prince.

This horse, the property of E. S. Holden, Esq., of Stockton, was the object of admiration of all the lovers of the American roadster, at the late Stockton Fair. He was got by Black Prince (now owned by Charles Simple, Esq., of St. Louis, Mo.), dam by Vermont Black Hawk, grand dam by Sir Walter, and he by Moscow (imported), and he by Imp. Sir Charles. His sire, Black Prince, was bred by Mr. McKinny, of Addison county, Vermont, and got by Old Black Hawk, dam by Young Sir Walter, he by Moscow, and he by Imp. Sir Walter.

This colt of Dr. Holden's is decidedly a pet of a roadster, and is, in our opinion, destined to become a valuable sire.

[Up to 1851, there is no record of any blood-horse by the name of Sir Walter or Sir Charles having been imported into the United States. There were two celebrated thoroughbred horses named Sir Charles in the American Stud. The first was the horse that ran against Eclipse at Washington; he was by Sir Archy, dam by Imp. Citizen. The other was bred in New Jersey, and was got by Duroc, out of Maggy Slamerkin, the dam of Lady Relief. This horse was afterwards taken to Vermont by James Cocks, of Long Island. The horse Moscow, referred to above, must be either the thoroughbred horse Moscow, foaled at Yonkers, N. Y., in 1826, or a son of his. He was an own-brother to Cadmus, who got the celebrated pacing mare Pocahontas, being by Eclipse out of Di Vernon by Florizel. There is no other Moscow in the records of the Stud.—ED.]

[Communicated.]

"A Pretty Well Bred Horse."

SAN JOSE, Sept. 18, 1861.

Such was the title bestowed, Mr. FARMER, upon the thoroughbred horse, Cosmo, by a correspondent of yours, a month or so ago, in a letter from Santa Rosa. Had he placed the little word "and" or a comma, after the word "pretty," there would have been no harm done. But as it was, it would lead your readers into a belief that he was "pretty well bred," which a horse might be, without being actually thoroughbred. Now, sir, a Virginia pedigree is, when properly certified, not to be beaten for purity of blood. Sir Archy, the "Father Abraham" of the best American racers, was bred in Virginia. Boston, Lexington, Fashion, Lecomte, Tally-Ho, Nina, Red Eye, Planet, Sherrod, and our own Langford and Ashland, all trace directly into Virginia stock, which is yet untrammeled either for stoutness or speed. Now, if any of your readers admire a Virginia pedigree, look at that of Cosmo; and then say, can a horse be better bred?

Cosmo is by Imp Skylark, dam by Imp Priam, g d Sophia by Redgauntlet, g g d Clara Fisher by Kosciusko, g g g d by Hephestian, g g g g d Roxana by Sir Harry, g g g g g d the dam of Timoleon by Imp Saltram, g g g g g g d by Wildair—Fearnought—Driver—Fallower, etc.

Skylark, the sire of Cosmo, was bred by Mr. W. Disney, in 1826, and got by Waxy Pope, out of Lark by Musician—sister to Pirouette by Young Eagle—Parisot by Sir Peter, etc.

Priam, the sire of Cosmo's dam, was foaled in 1827, and won the Derby of 1830 (he ought never to have lost his Leger) with ease. He was got by Emilius, out of Cressida by Whiskey—Young Giantess by Diomede—Giantess by Matchem—Molly Longlegs by Babraham, a son of the Godolphin Arabian.

Redgauntlet was by Sir Archy, dam by Citizen; the balance of his pedigree I have forgotten.

Kosciusko was by Sir Archy, out of Lottery by Imp Bedford, out of Imp Anvelina by Anvil. Her dam was O'Kelly's renowned mare, Augusta, by English Eclipse.

Hephestian was by Buzzard, out of Imp Castianira (dam of Sir Archy) by Rockingham—Tabitha by Trentham, etc.

Sir Harry (imported) was by Sir Peter Teazle out of Matron by Alfred—Pilot's dam by Marske—Regulus—Steady—Palmer—Croft's Greyhound.

Saltram was got by English Eclipse, out of Virago by Snap—Regulus—own-sister to Black and All Black.

I do not consider it necessary to pursue the geneological table of Cosmo any further, to show him second to no horse in California, in aristocracy of lineage. He is a beautiful chestnut, fifteen hands one inch high, being a big horse on short legs. And when you want to find a horse to measure other points with him, you must get after Jack Hawkins, Cheatham, and our "bully" horse, Owen Dale. There is some talk of Cosmo standing here next year, and I, for one, should be glad to see him cross the Belmont fillies. The horse should be shown here at the Bay District Fair, next week, and let the people of Santa Clara see what they think of this "pretty, well bred horse." He will do well enough for

Yours, W.

Accident.

We acknowledge the receipt of a most unwelcome letter from Mr. J. P. Welsh, owner of the celebrated Rifleman, who informs us that his horse, while galloping in company with Gil Patrick, on Monday morning last, broke through a squirrel-hole, and wrenched his nigh fore-pastern so badly that he was with difficulty assisted to the stables. How serious the injury to the horse will prove, no one can tell. His owner has our sincere sympathy in his misfortune.

Address of the Rev. Thos. Starr King.

The Annual Address for the Northern District Fair at Marysville, was delivered by Rev. Thos. Starr King, on Thursday evening, September 12. We copy the following synopsis of the Address from the Appeal, with its introductory remarks:

The attendance at the Pavilion was even more crowded than on the occasion of Gov. Nye's address, and the scene as brilliant and attractive, despite the uncomfortable pressure and warmth. The Brass Band played its best to fill up the time before the speaking, but all were glad when Rev. Thos. Starr King, the strong Union lover and eloquent orator, was introduced and proceeded to exercise his usual magnetism over the vast audience. He began with a congratulation at the Success of the Fair, followed by a beautiful compliment to Marysville, and a poetical glance at its surrounding scenery. Around it stretches the immense and fertile plain, vaster than that of Lombardy, and in whose climate no man can hold up his hand and solemnly swear to a lack of sunshine or excess of cold. On the west runs the long line of the Coast Range, beyond which we hear in imagination the constant squadrons of Pacific surf. At the east the stupendous bulwark of the Sierra heaves, its lower slopes as rich in gold as its crests at evening with the gold of sunset. Near by, between two rivers, spring the Yuba Buttes, of which we may truly say, "The eye is not satisfied with seeing," but turn ever hungry for the fascinations of their lines and shadows. If the assessors do not tax highest those houses which command the best view of the Buttes, it proves how some of the highest privileges of real estate are held without cost in money. The Creator has sculptured no equal piece of California mountain substance into such vigor of form and energy of expression as are exhibited on this enchanted billow from the plain. And at the North, a hundred and fifty miles by air line, visible from the tower of the most beautiful church in the State, peers the apex of the pyramid of Sovereign Shasta, refreshing the eye that runs along the hot horizon, with the crystaline gleam of perpetual frost. One of the citizens of Marysville recently stood at sunrise on the icy level, a few feet square, of its summit, 14,000 feet above the sea, and if there had been no smoke over the plains could have swept with a glass the whole area of the District Agricultural Society. A superficial view of this lovely valley in the hot season, when the earth is brown and powdery, and seems to have written on it, in common with man—"Dust thou art, and unto dust thou shalt return," would not afford a knowledge of the fertility and varied productive capacity which surpass and surprise other lands, and which this Fair presents in epitome. Mr. King then spoke of the Sacramento and San Joaquin Valleys as two horns of plenty, crammed with the riches of granaries and orchards, and overflowing all upon the metropolis in the center of the Coast-line by the Golden Gate.

He told his hearers not to expect a scientific talk upon farming, about which he knew as little, practically, as some of our Colonels, in service at the East, knew of war. But he would talk about certain general features, facts and laws, which a literary man may learn though not knowing the difference between a gooseberry bush and an artichoke. He spoke finely of the nobility of agriculture. If money carried an aroma with it that proclaimed how it was gained, the farmer's coin would not shame him, for it would sprinkle the wholesomeness of winds, the perfume of blossoms, the strengthening smell of the soil, the fragrance of noble uses. There can be no miserly accumulation of grains and fruits, and the farmer cannot get rich dishonestly if he pays his debts. The two noblest classes of labor are the extremes—the cultivators of the soil and of mind—those who produce crops, and those who evolve ideas. Land is God's best gift to man, and a history of how it has been employed for man's uses would be a history of human society from Eden to the staking out of the last "claim" in Iowa or Oregon. Mr. King illustrated this idea with much felicity, and also how it is that agriculture is ennobling by making those who follow it the media of natural, or Divine, influences. But man does not own the soil absolutely—it is a trust to him, and must be managed intelligently, or else it becomes a curse, as nations and individuals have learned often. Too much land in one man's possession, or the attempted cultivation of too much by one, is an abuse of the trust, and poverty is the penalty, sooner or later; and neglect of fertilizing expedients is another abuse. Agriculture is one of the earth's finishing processes, in common with the climatic influences which aid it, and elaborate, universal cultivation is its destiny. Agriculture has the reclamation of much submerged land as part of its mission in aid of the Divine idea, and every acre of swamp made dry and productive promotes the reclaimer to the honor of being an implement of Providence in completing the task of creation. Acting thus as agents of a higher power, nations have always cultivated the poorer lands first, and the energetic races, the creators and diffusers of civilization, gained thus their vigor and longevity, while the indolent citizens of rich lowlands have decayed to barbarism or inanity. Agriculture, to be successful requires morality as well as intelligence, and thus linking itself with the purposes and attributes of Deity in all respects, no wonder that it ennobles and that it has inspired some of the world's best poetry, as witness the classics. Mr. King here dilated upon the beauty and the bounty that God endows the earth with constantly—not in response to our prayers, at stated times, but ever as the seasons roll in all their fascinating and useful phenomena. All the loveliness and benefit of the earth and its products are achieved for us by such gradual, subtile, unseen processes, that we accept ever-recurring results with common-place satisfaction, instead of with the eager joy and astonishment that would possess us could we see the same results accomplished for us suddenly, and comprehend the gorgeous poetry of them by sudden inspiration. The orator here quoted "Hiawatha," giving the charming tradition concerning the gift of corn to the Red man by a good spirit, and expressed the belief that the new Virgil will yet come who shall instruct and delight the race with the poetry of agriculture.

Mr. K. next mentioned how happily different lands supply each other with their agricultural lacks, how one State or section of our own country ministers to another, and how we are thus taught again the lesson of unity, and that we must be one people. He next spoke of some of the grand staple products of agriculture—of cotton, concerning which he said that the machinery employed in its manufacture would soon suffice to fill an order for webs of double belting, sufficiently long to connect the sun with each of the planets, in the way motion is communicated from the large drum of a factory to a number of smaller ones; and he hoped no subject of King Cotton would therefore conclude that the solar system, as well as our planet, does already move by cotton bands, and that the force of gravitation is only another form of *long staple!* Think of the harvest, too, in the light of a calculation which has been made, that, if the whole human race were seated at once at a table spread with the bounties of the Creator, it would reach five times around the widest circumference of the globe! And yet, twice a day, at least, the year throughout, such a table is virtually spread—125,000 miles long, and a thousand millions of human beings are fed on the influence of sunshine. Massing the products of California for a single year, the speaker said, the last crop of wheat, sprinkling a bushel to every three feet of water, would make a track from the harbor of San Francisco to Panama. Yet California agriculture is merely in its infancy. While the San Joaquin Valley contains eleven millions of acres of arable land, only two hundred thousand are cultivated. The eloquent speaker returned again, with evident delight, to the wonderful capacity of our State, dwelt enthusiastically upon our fruits, said there were four peach trees to every soul in the State, and an aggregate of eight millions of grape-vines, or twenty to each human being enumerated in our last census, with a tenth part of a fig tree beside: thus nearly realizing the biblical picture of every man sitting under his own vine and fig-tree. The increase of cattle and poultry has been equally startling in the few years since California was a wilderness. Mr. King here presented some humorous calculations as to how far a procession of the stock would reach, and after summing up the results of our agricultural and cattle-raising exertions for eight years, thought we had a right to crow, but still must not forget that constant industry continues to be the price of success, and that we must be generous to the land which has been so to us, returning to it in crude forms the fertilizing principles which it moulds for us into peaches, grapes and grains. The man who crops without fertilizing, is bankrupting posterity. Agriculture demands, as another condition of success, diversity of employment, which is a great lack thus far, in California. Until the attainment of this diversity increases largely the consuming classes, farmers must crop less lavishly, and the Agricultural Societies must preach, as the indispensable gospel of economy—*smaller farms, more labor on them, and reverence for manure.* This rule is not only essential to pecuniary success, but to the bringing up of all productions on a farm to a level with their type. California farmers more nearly do this latter than others, because the soil is so generous; and they must keep it so in the mode indicated. The Creator meant we should have perfect fruits, grains and vegetables; but he also meant we should work to secure them. Mr. King thought California apples not so successful in flavor and fullness, as in size, and said the apple that enables us to understand the temptation of Eve has not yet been offered for sale here. The grapes are a little too sweet, and that excess of sugar puts too much alcohol in our wines. He who will transfer this excess of sugar in the wine-grape to the strawberries that are so big and sour, will be a benefactor. The Creator calls on the farmer to help him perfect animals and vegetables, just as he employs him to finish the earth; and if we honor the painters and sculptors who fashion mimic shapes, what greater honor is due those who heighten the beauty of living forms in both kingdoms! Better than painting imperfect pictures or writing imperfect rhymes, is it to raise a perfect strawberry, and beautify the living landscape by intelligent cultivation, becoming thus a co-worker with Deity. Mr. King regretted that mining, necessary as it is to be done, has the effect to oppose the farmer's exertions, to destroy beautiful landscapes and rich spots of land, and to make on the face of our planet blotches that must look ugly to the moon; and he thought it miserable economy to utterly destroy for $50,000 worth of gold an acre of land that would yield to tillage forever $5000 a year. Thousands are frittering away their lives in unprofitable mining who had better be raising grapes or potatoes in the same soil they tumble into our streams, to their pollution and obstruction. Mr. King concluded his able address, which was frequently and loudly applauded, and which we have so imperfectly epitomized, by telling farmers to rejoice in the dignity, trust and delights of their noble vocation, which God uses as an instrument to finish creation, enlarge his bounty, and add to the beauty of the world. He also gave a glowing picture from a brother clergyman, of what California may be like a century hence, and said it should make our hearts swell with sacred pride to know that this generation can contribute to make the gorgeous picture he had presented the plain prose of 1961, and insure to our posterity a land in which the snow of the Sierra and Shasta shall emboss and crown such magnificence as is predicted, so that the millions who shall live here can sing the old passover song of Palestine:

> Thou crownest the year with thy goodness;
> Thy footsteps drop fruitfulness;
> They drop it upon the pastures of the wilderness,
> And the hills are girded with gladness.
> The pastures are clothed with flocks,
> And the valleys are covered with corn;
> They shout, yea, they sing or joy.

◆

A SPLENDID QUINCE.—We have received samples of Quinces, raised from seed at San Pablo Ranch, by L. E. Morgan, Esq. From the memorandum on our table we learn that the seed was sold by us five years since. The trees are large and flourishing, about 400; and from ten or twelve trees, the samples were the average. One of them would weigh about one-and-a-half pounds, and measured fifteen-and-a-half inches in circumference, and was one of the finest Quinces we ever saw.

Northern District Fair.

In our last issue we briefly referred to the Fair of the Northern District Agricultural and Mechanical Society, which concluded on the 21st, at Marysville. As we were at the District Fair at Stockton during this time, we were unable to attend the former, and, therefore, as matter of record, make up a report of its prominent features from a paper of its locality, the Marysville Appeal. (We may remark that the Appeal deserves credit for the enterprise and ability it has shown in its full reports of the Exhibition, and the Society is fortunate in having so valuable a co-worker.)

The Fair was formally opened on Tuesday evening, by a sensible and practical address from President Swezy, in the Pavilion on Cortes Square. This address we intend to publish in full, therefore it requires no further notice here. The Society, with great liberality, invited competition from the whole Pacific coast; but, from various causes, there were probably but few contributions outside of its own district. The attendance was good, and though the receipts are thought to be rather less than last year, the success was satisfactory.

On Wednesday evening, Gov. Nye, of Nevada Territory, was present in the Pavilion, and, by invitation, made a brief address, which was much applauded. On Thursday evening, in the same place, the Annual Oration was given by the able and popular orator, Rev. T. Starr King. We copy elsewhere the only report published of the oration. In the daytime, various races and other exercises came off on the stock grounds.

On Friday, the prize animals were paraded and decorated by the judges; and in the evening, at the Pavilion (which had been cleared for the occasion), the grand ball of the Society came off.

The exhibition of lady equestrians came off on Saturday at the Show Grounds. There were but two contestants for the premiums for most graceful riding—Miss Celestia Collins and Miss Mary Pierce, of Yuba county. Both showed skill and grace. In the evening, the proceedings of the Fair closed with the reading of the premiums awarded.

But to resume. On Wednesday, the Fair was well under way. At the Cattle Grounds, despite the dust and heat, the attendance was large, including many ladies. The chief feature of the day, aside from the races, was the grand parade of horses and cattle, which came off at half-past two o'clock, in which all of the entries were paraded around the course and then through the inner circle of the amphitheatre. And we venture to say that no better show of horses was ever made in this State. Over one hundred fine horses, many of them celebrities, were led around the ring in single file, their glossy coats shining in the sun, and the animals making music to the eye by their graceful, nervous and spirited movements. The parade was led off by the celebrated stallion Belmont, with his famous family, Langford, Musidora, Bussorah, Ben Lippincott (two-year-old) and Lady Belle (three-year-old). In the group, among the magnificent stallions, was Wynkoop's Black Hawk, Boston and Signal, together with some splendid animals whose names we could not ascertain. It was glorious to look upon such a sight, and any lover of the beautiful, whether a horseman or not, could not fail to have the pulses stirred to witness so much of combined strength and beauty as was to be seen in the cavalcade that filed through the amphitheatre.

The show of thorough-bred stallions, four years old and upwards, was of surpassing interest, as the best racing stock of the country was represented, the following notables being entered:

W. W. Williamson's Belmont, 14 years old, Alameda county.

E. S. Lathrop's Langford, 6 years old, Contra Costa county.

G. S. Brittain's Boston, 12 years old, Sutter county.

Holloway's Jem Brown, 12 years old, Yuba county.

Thos. Seaward's Jack Hays, 12 years old, Yuba county.

In thoroughbred mares, there were but few entries, Williamson's famous Musidora being the star of the exhibit.

The blood stock was succeeded by horses of all work, roadsters, draft animals and mules, among which latter a pair of fine mules, by J. W. Boyles, Yuba county, attracted great attention, and a black jack of imported Castilian stock, the property of Chinn & Hershey, Colusa, were specially noticed; the animal's head reminded one of the bewitched Titania's transformed lover, to whom she said: "And let me toy with thy fair, long ears, my gentle joy."

The rear of the cavalcade was brought up by a fine display of cattle, both graded and thorough-bred. In thoroughbred cattle the display was grand, of which we only notice the most prominent. Of course, the famous stock of R. J. Walsh, Colusa county, took the lead of all the Durhams, his cows Adelaide and Ione, thorough-bred short horns, having the precedence of the cavalcade. His twin bulls of the same stock, Sheldon and Colusa, are splendid specimens of cattle, and were the bully part of the show. Walsh's year old Durham bull, Eclipse, is another sample of his fine stock, which commands a premium everywhere. Dale, of Yolo county, had some fine stock in the show, and C. L. Lowe of Yuba county, had a pair of Devon bulls, Charlie and Fred, the only exhibit of that stock on the ground, fine animals, pure blood, and perfectly marked with the breed characteristics. With these bulls were a cow and calf of the same stock, very handsome. Smith, of Sutter county, had his 2200 weight bull, Banquo, on the ground, a six-year-old animal, with as handsome a pair of eyes as ever shone in the head of the kine genus. Chinn & Hershey, of Yolo county, had a fine exhibit of thoroughbred Durham stock, among which a pair of lovely white heifers were generally admired, and a year old bull, Henry Clay, was undoubtedly as handsome an animal of his age as ever shone on the parade. Wiseheart, Yuba county, has a stout but well-proportioned cow, Lily, nine years old, a cross between Durham and Devonshire, whose substantial and neat appearance excited the admiration of all beholders. This part of the show was certainly very superior, and in whatever other department the exhibition may have come short in, we can congratulate the managers of the Fair upon the excellent and unimpeachable character of the stock exhibit.

After noticing the grand parade of all the horses and stock on Friday, the Appeal says: Such a display never was before seen in this State, and cannot be equaled anywhere, and we may well be proud of a country that can exhibit such a noble array of life and beauty.

At the Pavilion, on Wednesday, the visitors were quite numerous, and the show was fully up to the expectations of all reasonable people. The report of the Appeal, in the present tense, which, for convenience, we adopt, says: In point of useful and home-made articles, the exhibition is superior to that of any previous one, and in fruits, no former exhibition has been equal to this one.

HOME PRODUCTS.

Some tobacco and cigars of native growth and manufacture, from S. Simon, Marysville, attract the eye and gratify the sense of competent judges. Mr. Simon deserves great credit for the care and attention which he has paid to the growth of tobacco, and his products in the Fair are well worth a careful examination. Lavy & Co. have a fine case of native cigars. Chase & Co., Marysville, exhibit a remarkably fine lot of Pickles, Vinegar, Catchup, etc., these articles being of the very best quality and of the most appetizing appearance. Some extra family and self-rising Flour and Corn-meal, from the Feather River Mills, of Thomas J. Belknap, looks as though its manufacturers were bred to the business, if the business is also bread to them. E. & J. C. Ransom, Queen City Mills, have also a lot of superfine flour, which looks well. John Gelzhauser, Sutter county, has a fine display of home-cured Hams and Lard, nice and fresh looking. Several other lots of Bacon and Hams and Lard, we could not ascertain the names of the exhibitors of. Hard and soft Soap, in plentiful profusion, show that the useful art of soap-boiling is not yet forgotten by the housekeepers of California; and a display of Jellies, Preserves, Pickles, etc., preserves the character of our woman from the reputation of unthriftiness. Some Jellies by Mrs. Bolinger, are worthy of especial mention for clearness and purity. Mrs. G. N. Swezy has a drum of dry California Figs, well kept and nice looking. Mrs. M. C. Ellis has a lot of Preserves, which, for uniform excellence, cannot be beat. Mrs. A. D. Starr has a display of Pickles, Preserves and Jellies, superior in appearance, and some wild Gooseberries, by Mrs. A. H. Mason, are noticeable for their skillful preservation in alcohol. Mrs. Teegarden has some Dried Fruits, which are noticeably neat and free from discoloration; they look like wax-work. Mrs. Campbell also makes a display of Preserves, and of Pickles, Catchup, etc. Mrs. A. W. Sewell has a fine lot. This part of the show is tempting indeed, and where the different lots are so rich, it is difficult to select the best. The show of Domestic bread is firstrate, and speaks well for the housekeepers. Mrs. Bolinger has a lovely show of Flowers, Roses, Verbenas, Dahlias, etc., and in the basin of the fountain an elegant garland of great length, and very beautiful. (See notice of Needle-work elsewhere.)

FRUITS.

The display of fruits this year is not equal, in extent and variety, to that of last year, as the season has been so much more forward that nearly the entire peach crop is exhausted, as well as several varieties of other fruits. But in two or three particulars the exhibit is remarkably fine, especially in the articles of grapes, pears and quinces. There are six tables, about thirty feet long each, appropriated to fruit. The first table to the left, on entering the Pavilion, is partly occupied by Charles Covillaud, of Marysville, who exhibits twenty varieties of grapes, of superior average quality as to thrifty and cleanly appearance, thickness of cluster and fineness of flavor. A very striking variety is the "Bishop" grape, which are as large as blue plums, very rich and juicy, large bunches, and the product of vines one year and-a-half old. Besides these are the Black Portugal, a superior table grape, several kinds of white Muscat, distinguished for plumpness and their musky odor, the Grizzly Frontignac, White Buel, Prince Albert, Black Hamburg, White Nice, as large as the Malaga, and a choice display of Los Angeles grapes. One rare variety, which we have not before seen in our fairs, Mr. Covillaud labels "Zinfindal." It is a Rhine grape, small, round berry, black, with a heavy bloom, being so thickly crowded together that the shape of each grape is distorted and the bunches are stiffly compacted. Besides these are the Catawba, which does not afford so good a juice in this valley as along its native Ohio, nor so large bunches. Mr. Covillaud also exhibits nine varieties of seedling peaches, twelve of pears, eleven of apples—all superior fruit. His vineyard near town consists of 30,000 bearing vines, which will be increased by next summer to 100,000. The soil is Yuba bottom land. He will make this fall 6000 gallons of wine, red and white, and 2000 gallons of brandy. His liquors already enjoy considerable repute in this market.

On the same table Mr. Ramirez, of Marysville, displays several huge bunches of grapes raised from Chile seed, imported and cultivated by himself. The vines from which they were taken are all young, but have attained a remarkable growth and evince a peculiar adaptedness to this climate. There are three varieties of these Chile grapes—Chile Rose, Chile Red, and Chile Black. The last does not make such large bunches, but is a finer-flavored table grape, so growers say, than the Black Hamburg, and yields prolifically, as do all of these new importations. The Chile Red is a round plump juicy fruit, with a less decided flavor. But the Rose is a wonderful and lovely variety. The fruit is long and slender, as thick as the Malaga White, of a bright ruby color, the most elegant looking grape on exhibition. The bunches are very large, weighing from two to six pounds, pyramidal and compact, maintaining their shape on the plate with waxen stiffness, partly transparent. Mr. Ramirez may justly claim the credit of originating this remarkably handsome variety in California, the flavor of which does justice to its looks. He has experimented a great deal in a small way with foreign grapes, and this single result is ample reward. The Chile Rose will eventually become popular in this State, especially for garden culture.

Adjoining the exhibit of Mr. Ramirez, P. S. Russell, of the Dry Creek Vineyard, Long Bar, Yuba county, displays ten varieties of grapes, grown in the red soil of the foothills. His bunches of Los Angeles, from vines three years old, weigh two and three pounds, are very plump clusters, and present a fair average of what Mr. Russell's vines can do. L. Burnett, also of Long Bar—a dusty mining locality that is growing famous for its fruits—also makes a good showing of grapes. Two interlocked bunches of white grapes, dashed with purple, are very handsome and anomalous. The mixture of color Mr. Burnett accounts for in this wise: he says he has observed it is commonly produced when white grape loads the vine heavily, which gives the fruit a tendency to hybridity by preventing equal distribution of the sap. Vines lightly laden hold their proper color. Mr. Burnett shows some good seedling peaches. One tree, three years old, yielded this year 150 pounds, of a well flavored freestone variety. He also shows some handsome, good sized plums. One Imperial Gage tree, three and-a-half years old from time of transplanting, bore this year 200 pounds of fruit. Stems from it only eighteen inches long contain as many as thirty plums as large as Guinea eggs.

The proprietors of Brigg's famous mammoth orchard make a noble exhibit of apples—forty or fifty varieties. Last year they had a table full of monster peaches; this year the fine peaches are all consumed but a few late varieties, including the delicious white skinned, blushing "Heath cling." But the apples! "Timothy Titcomb" would write a new poem if he could see them. Scores of great green, golden, russet and scarlet fellows crowding one another off the plates and suggesting felonious thoughts to ladies with big pockets and watering mouths. Here are Golden Pippins weighing a pound, a pound and-a-half—two pounds mayhap! and measuring as much around as the waists of some of those same ladies in tight-lacing stays—say eighteen or twenty inches. Here is the Pound Sweeting; the smooth-cheeked White Pearmain, such a yellow oval beauty as it is; the large and toothsome Yellow Bellflower; the Greening; the rough Russets, that are so much better than they look, like the faded creature you turn your no scup at, youngster, and finally the Cayuga Red Streak. Briggs' apples are just beginning to come forward. The trees bearing them are scattered among his thirty thousand peach trees, and will displace them in a few years. The largest orange quinces ever exhibited at our Fairs are on this table—chaps that have a girth of eighteen or twenty inches, lengthwise, and that would disgrace themselves if they weighed less than a pound and-a-half. Here also are pomegranates and figs, looking very ripe and tropical. Next are six varieties of plums, the Yellow Egg looking like that golden hen fruit which the fable tells of. Then come 34 varieties of pears, the most extensive exhibit in the Pavilion, the Bartletts, Flemish Beauties, Maria Louises, Beurre Diels, Madam Dix and Queen of the Low Countries being particularly large, handsome and well flavored. It is not yet so late but what Briggs shows 34 varieties of the peach. His table tapers off with figs, nectarines, and four kinds of almonds—hard shell, paper shell, ladies' and bitter.

The two tables to the right of the front entrance are occupied exclusively by a remarkable exhibition of fruits raised by J. R. Nickerson in the foothills of Placer county, at Doty's Ravine—the same gentleman who showed 171 varieties of fruit last year, besides specimens of cotton, tobacco and big vegetables. He has a farm of 45 acres, raises 64 varieties of grapes on hillside land, besides apples, peaches, pears, plums, nectarines, apricots, pomegranates, figs, quinces, almonds, etc. His fruit is not so large as that grown in the valley, but equally prolific and well flavored. The bunches of grapes are thinner, and the fruit smaller, but of excellent quality for wine-making and eating. He shows 50 kinds of apples, 30 of peaches, and 30 of grapes, as near as we could determine in the absence of labels. Mr. Nickerson is one of the Vice Presidents of the Northern District Agricultural Society, in whose prosperity he takes a great interest. He began his foothill farming experiment four or five years ago a poor man, and is now independent. He finds a good market for his products in the contiguous mining communities.

The handsomest Bartlett pears on exhibition come from the place of W. E. Cameron, of Yuba. They are few in number, but monsters in size, and blush as though ashamed of the attention they attract.

Mrs. Chandler, of Marysville, exhibits some good sized prickly pears—a delicious fruit that ought to be more cultivated.

We noticed some fine sweet almonds, grown on upland without irrigation—by whom does not appear.

Hutchinson, of the New England Nursery, a few miles from Marysville, makes altogether the most magnificent display of grapes, equally in regard to size of fruit and cluster, and choiceness of varieties. He shows 60 varieties, grown in a vineyard of six or eight acres, which will be much enlarged next year. A bunch of the "Bishop" grape is the largest in the Fair, covering a big dinner plate, and the grapes are the largest we ever saw anywhere. Their flavor is peculiarly delicious, and the juice cool and soft. The bunches of which grapes—of Queen of Nice, Portugal Muscat, Cannon Hall and Tottenham Hall Muscat, are remarkably large, plump and heavy. Then there are five clusters of Wortley Hall, Uridelho, White Tokay—the only specimen on exhibition, the fruit as large as quail eggs—Victoria Hamburg, Prince Albert, Palestine, Colored Tokay, Black Hamburg, and Los Angeles. Mr. Hutchinson displays beside 12 varieties of pears, some of them one pounders, and rare kinds. He also exhibits some first-rate dried and candied peaches and plums. He has dried about 4000 pounds of peaches, and thinks they will pay him a handsome profit.

Dr. Teegarden, of Marysville, has a long table full of apples—thirty or more varieties, including some splendid Pippins and Greenings; a fine showing of pears; twelve sorts of late peaches, mostly clings, and very fine for the season; and a beautiful lot of prickly pears.

We noticed only two lots of strawberries—one from Nickerson's Placer county farm, another from the garden of our fellow-citizen, J. H. Krause. The latter lot is a peculiar French variety, seedlings, sweet, odorous, and red, though small. With their fragrance still in our nostrils we will leave the fruit department till such time as it may be increased by the eleventh hour contributors that always come along.

SPIRITUOUS AND MALT LIQUORS.

The exhibit in this department does not comprise so many articles as we had occasion to observe last year, nor are they of such good quality. There are no Wines from Los Angeles and Sonoma counties, the only competitors being from Yuba and Butte. H. G. Hutchinson, of the New England Nursery (formerly Beach's), whose splendid exhibit of Grapes is noticed, contributes the most numerous samples of Wine, mostly experimental, and labeled as follows: Los Angeles, 1859; Catawba, 1860; Isabella White, 1860; Sparkling White, from "Bishop" Grapes, 1860; Isabella Red, 1860; Grape Cordial, 1860; Isabella, 1859. By the courtesy of the Committee having them under consideration, we were able to test the above Wines by the palate, but cannot praise any except the last. This is a light and pleasant table-wine, pale Sherry in color, and partaking of the sweet and lively character of Angelica. The White Wines were a little turned, more acetous than vinous, and had a slightly musty odor. The Sparkling White from Bishop Grapes was tolerable. These Grapes would make an excellent Wine and plenty of it—for they are the largest in the world, evidently—if they were rightly treated.

Edwin A. Hendee & Bro., of Oroville, exhibit Champagne and White Wine of last year's vintage, neither of which will bear commendation. The Champagne had a sodaish effervesence and flat taste, and would never tempt one to intemperance.

Charles Covillaud, whose superior Wines and Brandies we had occasion to praise last year, had only two modest samples on exhibition in the present Fair—Brandy of 1859 and 1860, and Wine of 1859. The Brandy is far better than the average of imported, according to the judgment of experienced tasters and dealers on the Committee, and only needs a few years of age to give it body and repute. The Wine is a pale Sherry, very brilliant-looking, spirited and pleasant, and by far the best on exhibition.

The exhibit of Ale, Porter, and Beer, of 1860 and 1859, does not deserve special mention. Giesses' bottled Ale of 1859 was pronounced tolerably good.

Chase & Co., of Marysville, show samples of remarkably good Wine-Vinegar—a really elegant article, and some excellent old Cider, Oregon make.

AGRICULTURAL PRODUCTS.

The show of Hops is especially fine, and is well worth the special attention of farmers, and of brewers, the culture of the Hop being now a prominent feature of agriculture. Mr. J. D. Blanchard, who has a ranch up the Feather River, about ten miles from Marysville, has a good show. He tells us that the plants will average about one-and-a-half pounds to the pole, and he has one thousand poles to the acre. He raises from his four acres of two-year-old roots, four thousand pounds of Hops, which are selling at five and six cents a pound, brewers considering three pounds of California Hops equal to five of imported Hops. John Gelzhauser has some fine Hops, and Mr. A. Christian has a good display of fine large Hops, pulled and partly dried. In this department are some good displays of Broom Corn, H. Burget and J. Gelzhauser having some excellent samples; the latter has also some firstrate Peanuts, grown in sandy soil, without irrigation. E. Budds, of Sacramento river country, has some big Sweet Potatoes, some weighing eight and ten pounds, the Carolinas being the handsomest possible. W. H. Drum has some mammoth Squashes, weight 150 pounds, big as a giant's head, and heavy enough to squash whoever they might fall upon. Mr. E. Simpson has a fine display of Wild-Goose Rye, Millet, Hungarian Grass and Potatoes, the latter being very fine looking. E. A. Shepard exhibits some native-grown Tobacco, green, immense in size, and thrifty. W. F. Gray has some mammoth Squashes in the machinery department. In the department which we have been noticing, A. L. Bingham has a fine fleece of undressed French Merino Wool of the finest quality. Thomas Allment has some fine specimens of Rock and Table Salt of remarkable clearness and fineness. W. Bradley has some big Watermelons and quantities of Tomatoes, Corn and other vegetables attract the eye, but give no information to our cross-questioning of the unlabeled articles. Exhibitors who have a natural pride in seeing their articles favorably noticed, will be likely to fail of it so long as they studiously omit labeling their goods, and giving such information as is worth noting, either on their labels or by personal attendance.

See notice of Manufactures, etc, elsewhere.

Fibrilla.

[CONTINUED.]

COTTON is mentioned by Herodotus five centuries before the Christian era. He alludes to the Cotton-trees of India, and describes a cuirass sent from Egypt to the King of Sparta embellished with gold and with fleeces from trees. Theophrastus, the disciple of Aristotle, notices the growth of Cotton both in India and Arabia, and observes that the Cotton-plants of India have a leaf like the black mulberry, and are set on the plains in rows, resembling Vines in the distance. On the Persian Gulf he noticed that they bore no fruit, but a capsule about the size of a quince, which, when ripe, expanded so as to set free the wool, which was woven into cloth of various kinds, both very cheap and of great value.

The Cotton-plant was observed by the Greeks who accompanied Alexander in his march to India; and his officers have left a description of the Cotton dress and turban which formed the costume of the natives at that remote period.

Cotton early found its way into Egypt, then the seat of arts and of commerce; for Pliny in his "Natural History" informs us that "in Upper Egypt, towards Arabia, there grows a shrub which some call Gossypion and others Xylon. It is small, and bears a fruit resembling the filbert, within which is a downy wool that is spun into thread. There is nothing to be preferred to these stuffs for whiteness or softness. Beautiful garments are made from them for the priests of Egypt."

The troops of Anthony wore Cotton when he visited Cleopatra, and she was arrayed in vestments of fine muslin. It was soon after used for the sails of vessels, and the Romans employed it for awnings in the Forum and the Amphitheater.

It was cultivated at an early period in the Levant, whence it was gradually introduced into Sicily, France, and England.

Arabian travelers who reached China in the ninth century did not observe the Cotton-plant in that country, but found the natives clad in Silk.

The Cotton-plant, although indigenous in India, has also been found growing spontaneously in many parts of Africa. It was discovered by Columbus in Hispaniola, and among the presents sent by Cortés to Charles V. were Cotton mantles, vests, and carpets of various figures, and in the conquest of Mexico the Indian allies wore armor of quilted Cotton, impervious to arrows.

The plant of India resembles that of America in most particulars. It is there often placed in alternate rows with rice, and after the rice-harvest is over puts forth a beautiful yellow flower with a crimson eye in each petal; this is succeeded by a green pod filled with a white pulp, which as it ripens turns brown, and then separates into several divisions containing the Cotton. "A luxuriant field," says Forbes, in his Oriental Memoirs, "exhibits at the same time the expanding blossom, the bursting capsule, and the snowy fleeces of pure Cotton, and is one of the most beautiful objects in the agriculture of Hindostan."

The manufacture of Cotton in India, with very simple machinery, was early brought to high perfection. Travelers in the ninth century describe muslins in India which were of such fineness that they might be drawn through a ring of moderate size; and Taverníer speaks of turbans, composed of thirty-five ells of the cloth, which would weigh but four ounces. Muslin has been sold in India for five hundred rupees the piece, so fine, that, when laid upon the grass after the dew had fallen, it was no longer visible. The patience, the nice sense of touch, and the flexible fingers of the Hindoos, have with the simplest means achieved results in this branch of manufacture which have not been surpassed by any people.

But this manufacture is now breathing its last; the Cotton-gin, the spinning-frame, the mule with its countless spindles, and the power-loom, are fearful competitors; and although British India still produces quite as much Cotton as our Southern States, and while she exports at least eight hundred thousand bales annually to England and China, continues at the same time to make the larger part of her own clothing; flourishing cities, like Dacca and Delhi, once the seat of manufactures, are going to decay, and a large proportion of her people, willing to toil at six cents per day in occupations that have been transmitted for centuries in the same families, are either driven to the culture of the fields, or compelled to spin and weave for a pittance the Jute which is converted into gunny-cloth.

When India muslins and calicoes were first imported into England, they met with a formidable opposition. They had suddenly become fashionable, and threatened to supersede the long-established woolens; and the nation, in its wisdom, first prohibited the importation of these fabrics, and then subjected them to a duty of sixpence per yard. In France, Amiens, Rouen, and Paris, protested against Cotton as ruinous to the country. But it has surmounted all these obstacles, is firmly established in both nations, and now its manufacture gives support to one-seventh part of the population of Great Britain, employs there thirty-four millions of spindles, consumes annually two and a half million bales of the raw material, and sends abroad, in addition to thread and yarn, twenty-eight hundred million yards of fabrics, of the aggregate value of two hundred and thirty millions of dollars.

In 1856, Great Britain derived her supply of Cotton from the following countries, namely:

From the United States	71	per cent.
" the East Indies	19	"
" Brazil	5	"
" Egypt	4½	"
" the West Indies	½	"

But while her supply from India in the twelve years from 1845 to 1857 increased nearly two hundred per cent, namely, from two hundred thousand to six hundred thousand bales, she has increased her exports of Cotton fabrics to that country to such an extent, that, for every pound she imports, she returns a pound of thread and cloth enhanced at least fourfold in value, while she returns to the United States in Cotton fabrics less than three per cent of the Cotton she receives from them. And since 1857 such improvements have been made in the Cotton-mills of New England, that we now consume more than a million of bales annually, and our production and export are rapidly increasing.

Some curious alternations have attended the growth and manufacture of Cotton. As machinery has improved and the cost of goods diminished, the price of Cotton has advanced and a strong stimulus been given to its production.

New States have consequently been opened to its culture, and the alluvial lands of Alabama, Mississippi, Arkansas, Louisiana, and Texas, have been devoted to the plant. Slaves have thus been attracted from the Middle States, and diverted from the less profitable culture of Wheat and Tobacco to the Cotton-fields. Half a century since, the Middle States contained two-thirds of the negroes of the Union; but under the census of 1860 two millions and a half of slaves are now found south of North Carolina, and but a million and a half north of the Cotton States. In the Cotton States the negroes nearly equal the white population; in the Border States the whites are at least four to one. In the Cotton States the slaves and the culture of Cotton are increasing at the rate of at least five per cent; in the Border States the slave population is either stationary or retrograde, and the future of those States is clearly indicated. Down to a recent period the march of the planter and his forces across the Cotton States has been like that of an invading army. Vast forests of heavy timber have been felled, land rapidly exhausted and abandoned, and new fields opened and soon deserted for a virgin soil.

But with the increased demand of the last seven years for Cotton, and with the enhanced price of the slave, which rises at least one hundred dollars with each advance of a cent per pound on Cotton, more permanent improvements have been made, railways have been opened, and at least fifty thousand tuns of guano and Cotton-seed have been annually applied to the exhausted Cotton-fields of the Carolinas and Georgia. Under these appliances the crops of the United States have kept pace with the manufacture, and in 1859 rose to the amount of twenty-one hundred millions of pounds, thus replenishing the markets that had been recently exhausted, and actually exceeding the entire consumption for the same year of both Europe and America.

But the crops fluctuate from year to year, and a less favorable season for 1860, accompanied by an increase of at least ten per cent in spindles, leaves the supply barely equal to the demand, while the diminished crop, and the cry of Secession at the South, with the introduction of an export-duty, have alarmed the spinners of England and led them to consider the effects of a deficiency and to seek new sources of supply.

With the progress of trade the price of the middling Cotton of America for the last fifteen years has varied at Liverpool from fourpence to ninepence per pound, and now stands at seven and a half pence by the last quotations. As the stock accumulates or the sale of goods is checked, the price naturally declines, and a check is given to production. As the stock declines or goods advance, an impetus is given to prices, the culture is extended, and Cotton flows in from Egypt and India. When the Cotton of Bombay commands more than fivepence a pound at Liverpool, it flows in a strong current from India to Manchester. Should the export-duty be levied in the Cotton States, it may well be presumed that the burden will fall principally upon the planter, and give an additional stimulus to the growth of India, and a new incentive to the British Government to start the culture in other colonies.

The gentlemen of the South sometimes imagine that Old England, as well as New England, is entirely dependent upon Cotton, and that society there would be disintegrated if the crop in the Cotton-States should be withheld for a single year. But the Northern mills have usually six months' supply; and Great Britain holds upon an average enough for three months in her ports, for two months at her mills, and as much more upon the ocean. The English spinner, too, can not only reduce his time one-fourth without stopping, but can reduce his consumption another fourth by raising his numbers and increasing the fineness of his cloth; and as he draws one-fourth of his supply from other countries, it is obvious that he might hold out for nearly two years without a bale from America.

Could the Cotton-planter hold out any longer? Let it not be forgotten that the Embargo was voted to bring England to terms by withholding Rice, Cotton, Wheat, and Naval-stores, but proved a signal failure. We reaped from it no harvests, and were put back by it at least six years in our National progress; while England enjoyed the carrying-trade of the world, which we had abandoned, and drew her supplies from Russia and India, while our crops perished in our own warehouses.

The vast export of Cotton goods from Great Britain to India has now liberated at least half a million bales of Cotton for the supply of England in addition to what India previously furnished; and as the export of goods to India and China continues to increase, the surplus of Cotton must rise with it. But India is able to treble her production. It is true that the staple of her Cotton suffers from the dry summers, that her land is but half tilled by plows consisting of a simple beam of wood with two prongs and a single handle, that she has been destitute of roads and facilities for transportation, that her lands are held at oppressive rents, that American planters there have failed to make good Cotton, and that the annual yield of her soil is as small as that of the exhausted fields of South Carolina. But still she produces at least four million bales of Cotton, and great changes are now in progress; railways are pervading the country; canals are being dug for irrigating, and irrigation quadruples the crop, while it improves the staple; and the diversion of a few districts from the ordinary crops, with improved tillage, will increase the production to an indefinite extent.

The latest intelligence from India apprises us that in one large Cotton district, the American planters have at length succeeded, and American Cotton is now growing there on one hundred and forty-six thousand acres.

IN DARWAR.

	In American Cotton.	*In Native Kupas.*	*Total.*
1851	31,688 acres	223,314 acres	255,002
1860	146,326 "	230,677 "	377,003

In Africa, also, the export of Cotton is on the increase; and Egypt is erecting new works to retain and direct the overflow of the Nile, which will augment her exports.

There is a belt around the earth's surface of at least sixty degrees in width, adapted in great part to the culture of Cotton. Great Britain now commands capital, while China and India overflow with labor. Let Great Britain divert a few millions of this capital and but half a million of coolies to any fertile area of five thousand square-miles within this belt, and she can in a few years double her supply of Cotton, and command the residue of her importation at reasonable prices.

Among these spots none is more promising than Central America, where the Cotton-plant is perennial, and a single acre, as we are assured by Mr. Squier, yields semi-annually a bale of superior Cotton. But let us hope that the South may abandon her dream of a Southern Empire, and the chimera which now haunts her, that the Northerner is hostile to the Southerner, when in reality he has no such feeling, but merely recoils from institutions which he believes to be at variance with moral and material progress.

[TO BE CONTINUED.]

WE'LL NEVER GIVE UP DIXIE!

EDITOR FARMER: We have long wanted the right kind of words for *Dixie*; and to please the boys I have written these. My only aim has been to adapt Union words to the queerest kind of a tune, and if they are not to be measured by poetical rules, the feat I have performed will apologise for the feet.

M. A. SABLES.

A SONG FOR THE VOLUNTEERS.

We will fight for the Union now and ever,
'Gainst the traitors who would sever
The ties that bind us to Dixie land.
We'll help the Whigs to put down Tories,
Worse than those who live in stories
Of the early days of Dixie land.
Oh, I wish I was in Dixie!
Hooray! Hooray!
In Dixie land I'll take my stand—
We'll never give up Dixie!
Away! Away!
We're bound down South to Dixie!
Away! Away!
We're bound down South to Dixie!

Down, down with the rebels who would fire—
Turn into a funeral pyre
The Temple of Freedom in Dixie land.
And when they speak of a King, we'll glory
In a sergeant Jasper's story
Who was true to the Union in Dixie land.
Oh, I wish I was in Dixie!
Hooray! Hooray!
In Dixie land I'll take my stand—
We'll never give up Dixie!
Away! Away!
We're bound down South to Dixie!

That dear old flag we'll carry proudly,
Singing as we march on loudly
Hooray for the Union in Dixie Land!
And now three cheers for our Southern brothers,
Andy Johnson, and all the others
Who are true to the Union in Dixie land!
Oh, I wish I was in Dixie!
Hooray! Hooray!
In Dixie land I'll take my stand—
We'll never give up Dixie!
Away! Away!
We're bound down South to Dixie!

COLLEGIATE INSTITUTE, Benicia, Sept. 21, 1861.

ARMY HYMN.

BY OLIVER WENDELL HOLMES.

O Lord of Hosts! Almighty King!
Behold the sacrifice we bring!
To every arm Thy strength impart,
Thy Spirit shed through every heart!

Wake in our breasts the living fires,
The holy faith that warmed our sires;
Thy hand hath made our Nation free;
To die for her is serving Thee!

Be thou a pillared flame to show
The midnight snare, the silent foe;
And when the battle thunders loud,
Will guide us in its moving cloud!

God of all Nations! Sovereign Lord!
In Thy dread name we draw the sword,
We lift the starry flag on high
That fills with light our stormy sky!

From treason's rent, from murder's stain,
Guard Thou its folds till Peace shall reign—
Till fort and field, till shore and sea,
Join our loud anthem, Praise to Thee!

THE CHINIGCHINICH.

CHAPTER XII.

The Indian Wars.

WAR was invented by men, and for the purpose of taking from each other, their estates and other property, or for carrying into effect their revengeful dispositions. Thus it was with these Indians, whose battles were frequent, and often declared from the most trivial causes. A consultation was not necessary to decide if the war were just or unjust, but to ascertain if their force were sufficient, and to provide measures whereby they might take advantage of, and surprise their adversaries. War was never waged by them for conquest, but for revenge; and in many cases for some affront given to their ancestors, which had remained unavenged. Their quarrels and disputes arose from trivial motives, for their wealth was trifling, and consisted merely of seeds, skins, or beads, which were universally esteemed amongst them as money. Also, when a chief neglected to return the customary present at their festivities, of which I have before treated, war was declared, and without even giving him notice. Again, if an Indian of one place stole anything from one of another place, although it might be so trifling a thing as a rabbit, a squirrel, or, ornament of some kind, it was sufficient among them to cause a war.

Whenever a captain determined to make war upon another chief, he called together the puplem, and revealed to them his desire to make war upon such a town, for reasons which he explained, and it was discussed by the body, whether they were sufficient of themselves to conquer. If sensible of their inferiority, some other friendly tribes were invited to join with them, to whom they sent presents of as costly a kind as their treasury would admit; and if *they* acquiesced, then the day was fixed upon to assemble for battle. All this was conducted secretly, but, nevertheless, the parties to be attacked were generally warned of their danger, and of course prepared for the conflict. The war being determined upon, a crier was sent around during the evening, exhorting all the people to repair on the following day, at an early hour, to the residence of the chief, and when there congregated, he ordered them to prepare their arms of bows and arrows; and to the females, he delivered grain, for them to grind into flour, which they called *pinole*. But the reason for such measures was not revealed. However, when the day was decided upon for the marching of the expedition, then the crier went around a second time, and commanded them to repair as before, to the residence of the chief; and all went—the men with their bows and arrows, and the women with their *pinoles*. Having assembled before the vanquech, where the captain and puplem had resorted, according to the custom, the crier explained to the people why such preparations were made—why war was declared, and the young men were urged to combat and revenge. Immediately commenced the necessary preparations—each put on his dress, and uniform, corresponding to his rank. The women, in like manner, adorned themselves for the occasion, and thus they started off for the battle ground, old and young—the females carrying the provisions, and upon their backs their infant children. Their order of march was as follows:—The captain, or one appointed by him, took the lead at the head of the young men—in succession followed the older ones, and the women closed up the rear, it being their duty to gather up the arrows of the opposing force which were scattered around them, and distribute the same among their own warriors. Should one of their own party be killed or wounded, they were obliged to remove him to a place of security, so that the enemy could not get at him. No quarter was ever given, and consequently, no prisoners were ever made among the men, excepting of such as were killed or mortally wounded. These were immediately decapitated by some old men appointed for the purpose, and the hair taken from the heads, together with the scalps, which were dried and cured, after the manner of dressing their skins, and preserved as trophies of victory. The women and children taken prisoners, were either disposed of, by sale, or detained by the captain as slaves.

When celebrating their grand feasts, it was customary to expose in public the scalps taken in war; and for this purpose they were suspended from a high pole, erected near the vanquech. Sometimes scalps were redeemed by paying largely; but the women and children were never released,—ever remaining as slaves to their enemies, unless fortunate enough to escape to the protection of their own nation.

CHAPTER XIII.

Their Funeral Ceremonies.

Before treating upon the subject of their manner of interment, I will just refer to the remedies used for their diseases. They possessed some knowledge of the virtues of certain medicinal herbs, and the external application of them to cutaneous disorders; but for internal diseases, such as fevers, etc., they always resorted to cold baths. For pains in the head, immediate application of cold water was the remedy. For external diseases, such as tumors, swellings, sores and rheumatic pains, they made use of various herbs, known to us, and called sage, rosemary, and nettle-plant—which were applied in a plaster. They made use of a kind of black rosin also, which was very oily, and manufactured from certain seeds. When attacked with pain in the stomach they inhaled the smoke of these plants, and if afflicted with any ordinary pain, a whipping with nettles was applied to the part affected, and frequently large ants.

For disease of the liver, fevers, and all malignant complaints, I have not discovered that they made use of any remedies but the cold water baths, before mentioned. Sometimes the patient, entirely exposed, was laid upon a quantity of dry ashes or sand, and at his feet blazed a scorching fire, without regard to the season. At his head stood a small vessel of water, and sometimes gruel, that he might partake of them, if he chose, but no persuasions were ever used on the part of his friends to induce him to do so, if he did not feel inclined. He was never left alone, being attended by many of his friends, both day and night; and thus he remained until either nature, or the disease, conquered.

As soon as any one fell ill, they immediately sent for the physician, who was one of the *puplem*, or soothsayers before spoken of. It must be understood that not all of the *puplem* possessed the necessary qualifications, but only those who received them by succession. When they appeared before the patient, it was always with an air of great mystery. A strict examination into the state of the patient, was the commencement of their performances, and divers infirmities were explained, and their causes—all originating from the introduction of certain particles into the body of the patient, such as the hairs of various animals, bones, stones, briers, sticks, etc., which produced the pain or infirmity. Before prescribing anything, they made use of many superstitious ceremonies. In the first place, the patient was examined from head to foot, and no part of his body remained untouched. Then the painful parts became the topic of discussion, and were represented as having within them something of a hard substance, such as a stone, splinter, or bone, and of course, their success in removing the disease was ever a matter of great uncertainty; but still they would use all their skill, and endeavor to restore him to health. They placed feathers upon his head, and encircled him entirely with these, and other articles, such as horse-hair, grass, beads, and hairs of the head; blowing at the same time with their mouths towards the four cardinal points, and muttering to themselves certain low sounds—certain mysterious words—accompanied with antic gesticulations, of which no one knew the meaning. After this, one of them applied his lips to the part affected, and pretended to draw from it, by suction, the particles, which they had stated as being within, and exposed them to all present. The spectators, as well as the patient, placed strict confidence in the fact, and were satisfied, whether he recovered or died. When the patient did not recover from his disease, the *puplem* would say, it was because Chinigchinich had sent him the infirmity, as a chastisement for some act of disobedience, and that he must reconcile himself to death.

There were many of these imposters spread about the country, who, after being well fed and paid for their *services*, made all manner of ridicule of their too credulous companions. Wonderful as it may appear, oftentimes they performed cures, when the patients were apparently fast verging into eternity, and in the space of twenty-four hours, by their extravagances and witchcraft, they have enabled them to rise from a bed of sickness, and unite with their companions in their domestic employments. I will relate a case which happened in the mission of "La Purissima," A. D. 1809, which will serve to confirm the truth of the preceding statement. A young woman of eighteen years of age, had been sick for nearly a year, suffering from the effects of dysentery and fever, so that she had wasted away almost to a skeleton, and was to all appearances dying; having received the holy sacrament preparatory to her supposed departure. One morning, whilst walking in the garden of the mission, I saw her sitting with other females performing the task of clearing the grass; surprised at beholding her there, when I supposed her dying, I asked her how she felt? Her mother, who was at her side, replied to the question, and said that she was well, because such a one (naming one of the sorcerers) had taken from her some bear's hairs, which were the cause of her illness, and, immediately, she was restored. I inquired how they were introduced into her stomach, and how long she had had them? She replied, that when in childhood, and about eight or nine years old, one night, whilst asleep with other children in a room by themselves, a bear came and placed some of his hairs on her stomach. How he came there, or how the hairs got into her stomach, she could not explain; for all that she knew about it, had been stated to her by the sorcerer. This was all deception, of course, but still it happened from that day, that the girl improved in health, and, in a short time was as robust and hearty as any one!

When the patient died under the attendance of these physicians, then preparations were made for his sepulture, or the burning of his body, according to a custom observed here, in commemoration of the last ceremonies rendered to the remains of their grand chieftain *Ouiot*. They did not put into immediate execution the solemn duties and funeral performances, but suffered several hours to elapse, that they might be assured of his death. In the meantime the pile was prepared, and the person summoned, who officiated on such occasions in applying the torch; for it was usual, in this neighborhood, to employ certain characters, who made their livelihood by it, and who, generally, were confined to particular families. As soon as everything was prepared, and the time had arrived for the ceremony, they bore the corpse to the place of sacrifice, where it was laid upon the faggots. Then the friends of the deceased retired, and the burner (so called) set fire to the pile, and remained near the spot until all was consumed to ashes. The ceremony being concluded on his part, he was paid for his services, and withdrew. Everything of use belonging to the deceased, such as his bow and arrows, feathers, beads, skins, etc., were consumed with him, whilst his relatives and friends added, also, other articles of value to the sacrifice, but during the scene of burning they did not observe any particular ceremony, nor had they any; for as soon as the burner gave notice that he had performed his task, they all retired outside of the town to mourn the decease of their friend. The *puplem* sang songs, while the relatives wept; and the substance of their canticles was merely a relation of the cause of the infirmity—the location of the disease—when it first commenced, and its course throughout the body, until it attacked the heart, when he died, thus naming over all the parts of the human frame. These songs were generally repeated over and over for three days and nights, and then they returned to their homes.

The mode of testifying their grief by outward appearance, was by shortening the hair of their heads; and in conformity to the kin of the deceased, so they regulated the custom. For the loss of a parent, wife or child, the head was completely shorn; for a distant relative, they cut off merely one-half of the length, and for a friend, only the extremity; but in all cases, however, they were governed entirely by the love and attachment for the deceased. The same custom is now in use, and not only applied to deaths, but to their disappointments and adversities in life, thus making public demonstration of their sorrow.

[TO BE CONTINUED.]

ERROR IN THE TABLES.—"Oh, dear!" blubbered an urchin who had just had an application of the birch; "oh, my! they tell me forty rods make a furlong, but I've just found out that one rod makes an acher (*acre*)."

THE
UNION FARM
AND PLANTATION
MILLS.

TO FARMERS,
Stock-Raisers,
—AND—
STABLE KEEPERS,
YOU ARE
PARTICULARLY INVITED TO
EXAMINE THE MILL
WE ADVERTISE ABOVE.

THIS MILL IS OF NO ORDINARY CHARACTER. IT IS WHAT WE CLAIM FOR IT,
THE BEST MILL
EVER OFFERED TO THE PUBLIC.

These Mills Were Awarded the
FIRST PREMIUM!
—AT THE—
State Fair at Sacramento, Bay District and Mechanics' Fair, in San Francisco, and at the Santa Clara Fair.

TUCKER!

HOTELS.

Warm Springs Hotel!
Near the Mission San Jose,
28 MILES FROM OAKLAND.

THIS BEAUTIFUL PLACE OF REsort is now open for the season for the reception of private families, tourists, invalids, and general visitors.
The Warm Springs are so widely and generally celebrated throughout California, that it is unnecessary here to recapitulate their various qualities. To invalids, they offer the greatest advantages; their medicinal virtues being unsurpassed even by those of the Rhine, so extensively patronized from all parts of Europe and America.
The buildings are new and extensive, affording accommodation for a great number of guests, and containing every requisite usually appertaining to a fashionable Watering-place.
The assistants are the best that can be procured in the State, and being under the immediate supervision of the proprietor, visitors may rely that every attention will be paid to their comforts.
The Table is supplied with every delicacy which can be procured in the State.
Fine hunting-grounds and trout-fishing within a short drive of the Springs.
14-6m LEWIS BRADY, Proprietor.

Union Hotel, Sonoma.

EBENHARDT & GLASSEN, HAVING purchased the UNION HOTEL, of the late proprietor, Mr. A. G. Oakes, are prepared to give the best accommodations to the traveling public. 15-3m

SPERRY'S HOTEL.
Murphy's Camp.

THE COMMODIOUS FIRE-PROOF BUILDING, lately erected by the subscribers, at Murphy's, has been elegantly furnished throughout, after the most approved style, and is now ready for the reception of guests. Parlors and suites of rooms for the use of ladies exclusively, and parties visiting the "BIG TREES," or other natural curiosities in the vicinity.
The management of the Domestic Department is confided to Mrs Perry, a lady of experience.
The Bar is stocked with fine WINES, and the larder daily supplied with seasonable delicacies.
Stages arrive and depart daily for Mokelumne Hill, Sacramento, Stockton, Sonora, and Columbia.
Parties of pleasure and transient guests will find every accommodation for their comfort.
20-3m SPERRY & PERRY.

PRESTON'S PLACE
Tomales Bay, Marin Co.

I WISH TO INFORM MY FRIENDS AND the public, that the demand for a house of entertainment at this place has been such as to induce me to fit up my house for that purpose. To parties wishing to pass a few days pleasantly in the country, this locality has few equals. Boat-Sailing, Fishing, Hunting, and gathering Shells on the Bay and Ocean-Beach, are among the pastimes; and then all have "a claim" in the Clam-Beds free of charge. The place is situated 18 miles westward from Petaluma, and is a nice drive, over a good road, through a fine farming country. It will be a pleasure to endeavor to make your visits agreeable.
21 R. J. PRESTON.

UNION HOUSE!
Corner of Main and Center streets,
MOKELUMNE HILL,
Henry Atwood, Proprietor.

THIS SPLENDID THREE-STORY STONE Building, long acknowledged equal, if not superior, to the best Hotels in the Mountains, has been thoroughly renovated and greatly improved, and a
SPLENDID BILLIARD TABLE ADDED.
The Dining-room has been divided into a Family Dining-room and Restaurant, both hard-finished, and newly and elegantly furnished. The former will be for regular boarders who may prefer it; the Restaurant will be open at all hours, and be supplied with the best products of the market.
The parlors and chambers have all been thoroughly renovated and elegantly furnished, and will accommodate seventy-five persons.
The Stages all arrive and depart from the "UNION," and for the accommodation of travelers the House is kept open all night.
The proprietor avails himself of this occasion to say to travelers *en route* to the various places of recreation in the Eastern portions of Calaveras county, that no pains will be spared to make their sojourn at the Union pleasant and agreeable.
HENRY ATWOOD.
Mokelumne Hill, May 11th, 1860. 20-3m

DOWNIE HOTEL,
South End of Durgan Bridge,
Nevada street, Downieville.
W. M. DOWNEY, Proprietor.

WITH INCREASED BUSINESS, I HAVE enlarged facilities for accommodating my guests.
The Hotel has just been painted, papered, and carpeted, from top to bottom; and a large number of sleeping apartments, well furnished and ventilated, added to the usual number.

REDUCTION OF PRICES:

Board, per week	$7 00
Single meals	50
Board and Lodging, per week	$8 50 and 10 00
Lodging, per night	25 and 50 cents
Liquors and Cigars	12 cents

23-3m

A. K. DUDLEY. T. S. COFFIN.
THE VERANDA HOTEL,
Corner Main and Church sts,,
IONE CITY,
AMADOR COUNTY.

THE UNDERSIGNED, PROPRIETORS, desire to invite Travelers to their Hotel, confident that they will make their stay pleasant and agreeable.
Stages from Sacramento to all the Mining regions, and to the "BIG TREES," stop at this Hotel.
DUDLEY & COFFIN,
20-3m Proprietors.

Multnomah County Society—Oct. 23d and 24th.

TO CORRESPONDENTS AND READERS.

We ask the attention of our readers to various matters of interest which appear, as presented by our correspondents, and to our Special and New Advertisements. They are worthy their notice.

When the hurry and toil of the Fairs are over, we shall be able to give more time to our correspondents.

Our *rest* during Fair-week was, as usual, one of excessive labor; but we have gathered many valuable facts for future use, of which our readers will be the gainers.

The State Fair at Sacramento.

What will the people say of the *State Agricultural Fair of* 1861? What the newspapers say is one thing, and what the people say is another. Newspapers must have their reports to fill their columns, but the people will have their say in spite of the newspapers.

We venture the assertion without fear of contradiction, that the *people* are very much disappointed at the *results* of the present *State Fair*. It has shown clearly that the people do not feel an interest, and therefore did not contribute. It is deeply to be regretted that after so very liberal and generous an expenditure of money and labor by the citizens of Sacramento, that the whole result should be a heavy loss, and yet such must be the result, for the people have not come forward as expected, as contributors. The Hall, both above and below showed plainly this want of interest in the prosperity of the Society.

We were surprised to meet so many persons of Sacramento county,—Farmers, Gardeners, and Mechanics, who *could*, but *would not* contribute, and their Annual Fair was an evidence of their neglect.

We were in hopes that if there was not a *general* contribution from abroad, the citizens of the county would see that the Hall was filled; but such was not the fact, and on the fourth day, goods were sent in to nominally *fill up*. We are satisfied from what we heard as we go over the State, that the people will not come up to the work, unless there are vital changes in the management of the Society.

The *people* say "we want an *Agricultural Exhibition* blended with the *Mechanical*, and with new invention, the product of our own State,—but we do not wish to see our Hall filled with Foreign productions, dry goods, etc., and unless the plan can be changed, and the whole managing arrangements made in accordance with the progress of the times, we cannot give it our aid;" and this is the reason of the little interest shown abroad for the State Society.

The Fair at Oakland.

Next week, Oct. 1st, begins the Agricultural Fair at Oakland, and we hope Alameda District will unite and make a grand show, and San Francisco can aid materially and help their neighbors

There are many Gardeners, Orchardists, and Farmers, in the San Francisco District, that can help the cause at Oakland, and the Contra Costa side *must* see what they can do.

It will be a pleasant trip for our citizens to go across the Bay, and we hope they will manifest a good spirit, and do their best to aid.

Bay District Fair.—The Bay District Fair opened on Tuesday, 24th September. This District comprises San Francisco, Alameda, San Mateo, and Santa Clara counties It is one of the best Stock Districts, having some of the very finest animals in the State; it is also one of the best Grain-growing Districts, and contains within its limits some of the finest Orchards, Vineyards and Nurseries in California; in this District one of the first Agricultural Societies was formed. With these advantages, it is to be hoped that the Bay District will accomplish something fine to overcome the loss of the first exhibition of the Bay District Society.

An Editor's Time.—We often have people call to see us relative to the sale or purchase of Stock, Real Estate, and other branches of business, and we are happy to see them. Some make appointments at certain hours, but as often think an editor's time is of no account, supposing if they are within fifteen or twenty minutes of the appointed time, it is all well; and by that loose plan they compel the editor to waste his time, or risk infringing upon some of his own appointments, and thus jeopardize himself. The public are too apt to think an editor's time, labor, feelings and prosperity, are public property, to be used and abused with impunity.

Exhibition of State Agricultural Society.

The State Agricultural Society held their Annual Fair, as proposed, at Sacramento, commencing on the 16th. After the usual delays in receiving and in registering articles, the Fair opened on Tuesday evening, with a brief address by Mr. Banks. The Hall was crowded with spectators, all anxious to see what the whole State could do, as many present had seen Fairs in the Districts.

The Hall was not as well filled as was expected with articles for exhibition, nor had any attention been given to decorate it for the occasion; and while a large and fashionable assembly was present, it did not appear as if the *hearts of the people* were in the work. There was not that genial feeling, that earnest social glow which should predominate in so great and important an enterprise.

The address was a good one, and we shall speak of it hereafter; yet we cannot but hope that hereafter at all our Fairs addresses and discussions will be kept out of Exhibition Halls, for they cannot be heard or enjoyed by one-fourth of an audience. It is no place for public speaking, save to issue the orders of the day.

The Hall contained some very notable exhibitions; among them and most prominent was the truly grand Fruit display from "Smith's Gardens," comprising over 200 varieties of pears, 28 varieties of apples, and 50 of Foreign grapes,—the exhibition of grapes being all choice kinds, save two, Isabella and Catawba. Some of the bunches weighed three and four pounds each. We have a complete list of each, and shall note hereafter. The entire collection was a grand one.

Brigg's Orchard, Marysville, exhibited 20 varieties of Pears, 35 of Apples, 12 of Peaches, 2 of Quinces, and 3 of Almonds. This collection was a fine one.

A. Delmas, of San Jose, had 42 varieties of Grapes, as usual a very fine show; also, 12 bottles of Wine of '59 and '60, and 44 varieties of Pears, all very fine.

Dr. Crandall, of Auburn, made an honorable exhibit of 24 varieties of superior Apples, and 11 of Pears; some very superb samples, of which we have notes for future remarks.

White & Hollister showed 30 dishes of Pears, and 17 of Apples; a superb collection of which we shall note hereafter full collections.

The work of the Ladies was an honor; of which we shall also speak. There were other contributors of noble samples, all of which we have prepared lists for publication. Among these contributors are Mons. Grofferesch, Sacramento City; J. P. Martin, Ione; S. Rich, Sacramento County; J. G. Almond, R. Keechevel, J. Runyon, H. Davis, and others.

S. Rich, exhibited a fine lot of Fruit grown on high dry land on the Stockton road from Sacramento, and without much irrigation. We noticed one bunch Grapes of the *White Nice*, weighing four pounds. There were 13 varieties of Grapes, 17 of Apples, and 9 of Pears.

Gen. A. Redington made a good display of Apples and Pears.

D. McGowan, of Yolo, made a good show of Fruit.

Dan'l Flint exhibited 15 varieties of Pears.

Thomas Milgate a fine show of Peaches.

D. T. Lufkin had a fine show of apples.

L. F. Sanderson & Co., of the River Bank Nurseries, San Jose, made a very fine display of 125 dishes.

Mrs. Benson, of Benson's Ferry, exhibited 28 dishes Apples; all very fine. Mrs. J. S. Friend, extra Pears. Mrs. B. F. Hastings, Apples, fine. Mrs. A. S. I., 3 dishes Figs.

We think the Ladies rather beat the gentlemen by their display in the upper Hall; and in the lower Hall, their display of which we shall report, their Preserves, Pickles, Jams, Jellies, and other nice preparations, were highly honorable to them.

The Hall below contained notable specimens of Industry, and the Yard, Implements, and Inventions new and valuable.

The Stock grounds were the best part of the Show, and here we can boast of specimens worthy of California; our lists are complete.

We shall keep up the interest for such products by giving them to the public continuously.

The *Cashmere Goats* attracted great attention, and will be a new era in our enthusiastic desire for their growth and extension.

We are obliged to defer the further reports till another week.

New Crops.

It is gratifying to see the evidence of our progress as a State, in the new crops that are being grown in California; the present year will show many new crops in all the different parts of our State.

The present year there will have been sown Hemp, Flax, Rice, Sugar-Cane, Tobacco, English Walnuts, Chestnuts, Oranges and Lemons. Some of these have been produced previously, but never so excellent samples. Hemp and Flax has been grown to some extent; Rice only as a trial; Sugar-Cane largely; Tobacco in many counties with excellent success, proving that this will be a good paying crop; Walnuts and Chestnuts, as well as the Almond, are certain to grow well and make a paying business.

We hope, from what we have seen of the beginnings, a greater success will mark each year of trial. We shall be glad if all Growers will favor us with particulars of all new crops.

Display of Premiums.—Two specimens of Premium Plate were exhibited at the State Fair. One was the splendid California-made Ware of Vanderbilt & Co., of San Francisco, made to the order of J. W. Tucker, for the State Agricultural Society's Premiums; the other was the Plate *already won* by the proprietor of Smith's Gardens, Sacramento, and most truly and deservedly won. Mr. A. P. Smith has always taken a pride in exhibiting only such articles are were a credit to the exhibition as well as himself, and while he he won many of the First Premiums, he has always contributed largely and generously to all good enterprises.

Sonoma County Fair.—This county opened their present year's exhibition at Santa Rosa, under very favorable auspices. We intend to give a report of it, in our next, from personal observation.

Triumphs of Labor-Saving Machines.

The invention of the Sewing-Machine is beyond all question one of the greatest inventions of the age, and no invention has accomplished so much for Humanity as the Sewing-Machine.

When this invention shall be considered in its true light—not only as economizing Time, but in that greater and nobler accomplishment, that of saving Human Strength, and that strength, too, that of the Wives, Mothers, and Daughters of our country—when this *one grand feature* shall be, as it should be, considered in all its bearings, then will the Sewing-Machine stand as one of the proudest models of human invention.

The universal voice has gone forth in a sad moan, bewailing the pallid faces, injured forms, and the sickly condition of the Women of America, and they have been held up in contrast with the Women of England, of Germany, and of many other nations, and the contrast has always been against our countrywomen. The reason is clear and conclusive: American Women have always been *Working Women*, but *without* exercise, while the women of other countries have blended *exercise* with all their labors and duties.

The laboring women of America have taken the time that should have been given to *outdoor* exercise to *indoor sewing*, and the labor with the Needle has caused the *curved spines*, the *round shoulders*, the *pallid cheeks*, and that *consumptive look* which has destroyed the Vitality, and robbed our fair countrywomen of their *Beauty and Health*, and has done more to produce Consumption and Death than any other cause.

The Sewing-Machine comes to save Woman's Labor, and thus her Life-Power.

The Sewing-Machine comes to save the Life, Strength, Health, Beauty, and Power, of Woman, and when this *great truth* is fully realized, as it should be, in all its Physiological bearings, then will this invention be duly appreciated, for it will aid in restoring to the American people a race of men and women of greater physical power and beauty, and of greater moral and intellectual power, by preserving the Health and Strength of the Mothers of our land. A grand Picture, which shows this to the very life, and gives a clearer view of the *triumphs* of the Sewing-Machine over that of the cruel drudgery of hand-sewing, is exhibited at the Rooms of *Wheeler & Wilson's Machine*, corner of Sacramento and Montgomery streets, in this city.

Arrival of Blood Stock from Victoria, A.

There has just arrived the following valuable Stock from Victoria, which we esteem a great acquisition to California:

Six head of young Durham Stock, of very superior character, from the herds of Robert M'Dougall, Esq., of Glenroy, near Melbourne. They consist of four Durham bull-calves, from 8 to 12 months old, of fine form, and of great promise, two white and two mottled (the pedigrees will be found below); and two heifers, two years old, of remarkable beauty—they are perfect pictures; these are with calf by the "Regal Koodoo." This Stock was imported at great cost by Thomas Seale, Esq., of Mayfield, and are intended to improve his herds.

The herds of R. M'Dougall, of Glenroy, a distinguished Stock-breeder, stand high. His famous bull, "Regal Koodoo," was imported from England at a cost of $7500. Mr. Seale may well be proud of such stock; it will do him great credit, and be of much value to our State.

In addition to this there came, "Young Wallace," a large and powerful black stallion of the Clyde stock, of high pedigree, and valued very highly, being in fact one of the best and most promising stallions known in that section, and only 3 years old.

Also, fifty Merino Sheep of very superior quality, said to be of the finest Wool in the country. The above were brought here by A. C. Cushing, Esq. Part of the Stock can be seen at the "Ben Fish" Stables, corner of Sansome and Pine streets, and part at the Black Hawk Stable, on Pine street.

We herewith give the pedigrees of the Durham Stock mentioned above:

Glenroy, Near Melbourne, Australia,
May 21st, 1861.

The following bull-calves and yearling heifers, of my pure Short-Horn Blood, I have sold to Mr. Thomas Seale, for shipment to California:

BULL CALVES.

1. *Rothschild*, rich roan, calved August 27th, 1860; got by Dundas (20); dam (Red Rose) bred by the Circular Head Company, from their English Stock.

2. *Don Pedro*, rich roan, calved August 26th, 1860; got by Gabrielli (29); dam (Donna Bella) by Northampton (57); grand dam (Bella) by Van Amburgh (97); great grand dam, bred by the Circular Head Company, from their English Stock.

3. *Callum Bawn*, white, calved October 25th, 1860; got by Gabrielli (29); dam (Kate Dundas) by Dundas (20); grand dam (Kate Brunswick) by Brunswick (11); great grand dam (Kate Mollison) by Mollison's Bull (53); great great grand dam (Ketty) bred by the late Gideon Stewart.

4. *Moss Royal*, white, calved November 24th, 1860; got by Royal Hope (16,868); dam (Moss Rose) by Northampton (57); grand dam (Phœbe) by Van Amburgh (97); great grand dam, Cow bred by the Circular Head Company, from their English Stock.

HEIFERS.

1. *Wildeyes the Second*, rich roan, calved July 14th, 1859; got by Dundas (20); dam (Wildeyes) bred by the Circular Head Company, from English Stock. This Heifer took the 1st prize for best yearling Heifer at the Exhibition of the "Victoria Agricultural Society," on April 4th, 1861. She has been served by my English Bull, "The Regal Koodoo," on May 27th, 1861.

2. *Cowslip the Sixth*, red roan, calved September 3d, 1859; got by Fusileer (28); dam (Cowslip 2d) by Northampton (57); grand dam (Cowslip) bred by Mr. Manifold, from Messrs. Bolden's pure Stock. This Heifer took the 2d prize in the yearling Heifer class, at the show of the "Victoria Agricultural Society," on the 4th of April, 1861. She has been served by my English Bull, "The Regal Koodoo," on June 3d, 1861.

Robert M'Dougall.

N. B.—Royal Hope (16,868 in C. H. B.), I imported from England in 1859, at great cost. Dundas (12,790 in C. H. B.), I imported from England in 1856. Fusileer (12,912), Northampton (10,574), Brunswick (11 in A. H. B.), Van Amburgh (97), and Mollison's Bull (53), were all expensive, high-bred English Bulls.

R. M'D.

Address of President E. S. Holden,

At the Fair of the San Joaquin Valley District Agricultural Society, Sept. 18, 1861.

Another year has passed away since the last exhibition of this Society. Since its inauguration, another season has passed for agriculturists and horticulturists to exhibit the results of their labor and experience, and offer upon the altar of Ceres and Pomona sacrifices of vegetables and fruital productions. We welcome the ingenious artisan, with his samples of artistical skill; the stock-raiser, with his rare specimens of domestic animals; the ladies, with their beautiful handiwork—all meeting in this temple, recently erected for their use, and dedicated, as similar temples of more remote periods were, to the God of Agriculture.

You meet here from all sections of this rich and extensive District, representing all occupations, to contend for prizes won by the yield of the soil and industrial arts; instead, as of old, by a gladiator's power. You meet here to excite a spirit of emulation and generous rivalry, to compare your skill and mode of producing with that of your neighbor, and to profit by the results.

The great and primary objects of agricultural societies are, to elevate the standard of quantities and qualities of the productions of the soil, stock, and the industrial arts, and to extend to the world that information which would be, in a great measure, lost, without their influence to elevate that noble calling which gives independence and strength to our nation. These meetings have, heretofore, formed our great national jubilees—days of recreation to the toiling thousands of our once happy, prosperous and unsurpassed country. But now, to our shame be it said, reason and friendship are exchanged for madness, hate and civil war. Mars rules, whilst Ceres and Pomona weep.

Agriculture, or the cultivation of the earth, is by far the most important occupation of man. History informs us that it is contemporaneous with the commencement of civilization; for where tillage begins, other arts follow. Farmers, then, are the founders of civilization. Agriculture is a primeval occupation, and was associated by the Egyptians, Grecians, Romans, and the Israelites, with solemn religious ceremonials. Their temples were dedicated to Ceres, Pan, Pomona and Flora. There is no greater proof of its importance to the world and to civilization, than the fact, that in the dark ages all arts and sciences languished with the neglect of this pursuit; refined and highly civilized nations gradually retrograded to semi-barbarism, and not till the sixteenth century did agriculture begin to assume its real dignity, giving new life, energy and wealth to all Europe; Education, the Arts and the Sciences began to flourish; the sails of thousands of ships whitened every sea; rich and profitable exchanges, trade and traffic built up Nations, rich and populous cities—in Europe, a London and a Paris, and hundreds of other similar places; and within a century, in our own country, a New York, with a population of 800,000.

The great West, which, seventy years ago, was but a vast uncultivated wilderness, is now rich from her agricultural productions. Ohio has a population of 2,000,000, and taxable property of $600,000,000. Cincinnati, sixty years since, had only a population of 400, now 160,000, exporting annually $70,000,000, principally of products, by means of a river coasting trade of 30,000 miles. St. Louis, too, a city yet in its infancy, has a population of 150,000, exporting immense quantities of agricultural products. The magic city, Chicago, which, thirty years ago, had but a dozen families for her population, now numbers 130,000, exporting last year $34,000,000 of the products of the soil and labor. The Western Lakes—the American Mediterranean—less than a century ago, were without navigators; no sails whitened their green waters; no ports dotted their forest shores; no beacon lights guided the mariner; but now, scores of rich and populous towns and cities (with immense fleets of ships and steamers, annually freighting $600,000 worth of property, the production of Western soil and labor) enliven their shores.

In the Southern States, the annual agricultural productions are enormous. Cotton, Rice, Tobacco and Sugar realize near $1,000,000,000 annually.

Look at the results of Agriculture in this State since 1850—a time when the resources, other than gold, were but imperfectly understood; a time when it would have cost us our reputation for common sense to prophesy that this would ever become an agricultural country. The soil, then supposed to be so barren, now produces not only various productions, amply sufficient for our own consumption, but a surplus of $12,000,000 for annual exportation. In 1850, the land cultivated was less than 5,000 acres. In 1856 it amounted to over half a million acres. In 1850, the wheat crop amounted to 17,000 bushels; in 1856, it had increased to over 4,000,000 bushels. In 1850, the crop of barley was about 9,000 bushels; in 1856, it had amounted to over four and a half millions, and other crops in proportion, thus saving to the State over $10,000,000, when received at the prices which then prevailed. The number of live stock, which, in 1850, was estimated at 300,000, had, in 1856, increased to over one million. Fruits, vegetables, butter and cheese, up to 1856, saved another $10,000,000, thus stopping importations of agricultural productions to the amount of $20,000,000, up to 1856, and the amount saved since then to this time, has largely increased.

Look for a moment at our city and county. What condition would we be in to-day, as to population and wealth, had our farmers been miners? The 8,000,000 feet of lumber annually sold would be reduced to as many thousands. A dozen or two of stores, instead of the hundreds, would be all sufficient; our splendid churches, unbuilt; our numerous and beautiful suburban cottages, useless; this Society only anticipated in some distant future, and this Hall, and this beautiful exhibition of fruits and flowers, cereals and vegetable productions, only existing in imagination.

Who produces the largest amount of products that freight our thousands of ships to all climes and marts, and the traffic on the 30,000 miles of railroads, and causes these rich and populous States and cities to rise, magic-like, from the wilderness? The 4,000,000 of American farmers. In view of these facts, this immense wealth, a wealth of your producing, a wealth no nation or people can exist and prosper without, you should be convinced of the dignity and importance of your calling. Yours is a profession more valuable to mankind than all other professions combined, yet less understood and less respected. Stay your labors but two or three years, and what would be the consequences? Commerce would cease; the iron horse, for the want of traffic, would stop his lightning speed; the Arts and the Sciences would languish; the world would relapse into semi-barbarism. The bar-room, saddle-bags, button-hole politician—the bane and curse of all communities—would beg of you his bread and butter, instead of your votes. And the Northern Abolitionist and the ultra Secessionist, would have good cause to cry, Peace, Peace! Bread and butter are potent negotiators.

Agriculture was the great and first employment of man from all time and by all nations. It is most grateful to his nature, most worthy of freemen, and an occupation which puts us in communion with nature, and best fits us to be the "noblest work of God."

There is no profession that needs more varied intelligence, more nice and close observation, more study and perseverance, than that of the farmer. He should be a laborious reading and thinking man, as well as a laborious working man. It is a lamentable fact, that the agricultural profession is less understood, and is far behind, in useful and practical knowledge, all other professions. They prosper and assume a higher dignity, by constant study and application, in order to keep up with the progress of the times. Not so with the farmer, particularly those of California, who work seven months in the year, and remain idle the balance. Did the husbandman understand his calling as he should? did he devote his evenings to study, to reading agricultural books, papers and periodicals, works on vegetable phisiology, the nature of soils and stock-raising, he would soon create a taste for such information that would become a habit, not easily parted with—a habit instructive and a profitable amusement. A few dollars' worth of these books, well perused, will give more profitable information in one month, than can be gained by experience and observation in a life-time. Purchase, for instance, Leibig's Agricultural Chemistry. It will teach you the nature of the various soils and their analyses, the art of cultivation, and the kinds and value of fertilizers. Purchase Youatt on the Horse; this book will give you a perfect history of the origin and kinds of this noble animal; the different breeds, their various diseases; the art of treatment, and how to render their health, comfort and services more permanent. Read Dadd on Cattle, and you will soon become acquainted with all kinds of domestic animals, and their diseases, and thus become your own cattle doctors.

There is no branch of husbandry so profitable and amusing as that of raising domestic animals, and during no period, either in the States or in Europe, have thoroughbred animals been more sought after or sold for higher prices than at present. Yet, how few know the best and most judicious mode of crossing, and thus improving domestic animals! Mark the difference: We are importing at an extravagant expense high bred animals, which sell from five hundred to ten and twelve thousand dollars each, and the outlay is considered a good speculation; yet thousands of native cattle are selling for their hides and tallow! Keep only good stock; breed up, and with care, and in a few years you will have cows that will make from twelve to sixteen pounds of butter per week, instead of from four to six pounds; horses that will become Ethan Allens or Flora Temples; sheep and swine worth quadruple the present prices.

In the United States there are at least 6,000,000 of horses and mules, estimated worth $300,000,000; also, 20,000,000 neat cattle, worth $500,000,000; sheep, 20,000,000, worth $60,000,000; swine, 24,000,000, worth $72,000,000—amounting in value to $932,000,000! By care and judicious breeding 25 per cent, or $233,000,000 can be added to this—a snug sum to swell the nation's wealth and your pockets.

This district contains 300,000 head of stock; estimate the value at $10 per head, and you have a total of $3,000,000. Increase this value 25 per cent, which can be easily and cheaply accomplished, and you will add $750,000 to the wealth of this district. Is not this item worth your care and trouble to produce?

The present ruinous prices of native stock in this State should stimulate farmers and stock-raisers to adopt a new and better system of stock-raising. Instead of having a thousand head of cattle on a thousand hills, keep their value in superior, high-bred animals. The time and cost of keeping good animals is but a trifle more than that of a mustang or the wild native.

If farmers would exercise the same perseverance and energy in acquiring intelligence that members of other professions do, they would soon elevate themselves to position, and fill places of high and honorable trust that are now denied them. Mark the difference: From the mechanical professions hundreds and thousands of the most notable and conspicuous men have risen; yet, how few similar characters have come from rural life—from agricultural occupation!

I would recommend to the farmers of this District, the adoption of a new system, one that will benefit the farming and the agricultural interest; a system that will impart facts, as well as theories; a system of practical experiments. Instead of filling up the pages of Agricultural Reports with descriptions of beautiful gardens, splendid houses and their surroundings, good dinners and champagne; eulogiums upon the entertainer and notable characters; descriptions of romantic mountain and valley scenery, unsurpassed climate, inexhaustible soil, mammoth squashes of 260 pounds weight, apples and pears of 3, and beets of 80 pounds, wheat 120 bushels to the acre, barley 100 bushels; monstrous colts and calves, which are all now well known facts, a system well enough heretofore, as the reports have circulated amongst our Eastern brethren, and over Europe, as reliable advertisements and persuaders to entice to our rich and beauteous State what we need most, emigrants, but the tale has been sufficiently published—instead of continuing in this system, I would suggest to the farmers of this District, and to the incoming Board of Managers, the following system:

Let every farmer keep a record of every fact which will be of any importance to himself, his neighbor, and to those living in other sections of the State; the kind of soil and how cultivated; the kind and quantity of seed used, and how cultivated; the time and mode of sowing; the number of bushels to the acre; the kinds and qualities of fruital productions, and mode of growing and irrigation; the kinds and number of domestic animals, and the mode of breeding, feeding and treatment; the largest amount of milk, butter and cheese produced from one cow, and her breed; in short, a complete record of the mode and manner of conducting the farm and its resources, that the Board of Managers, or their appointed visiting committees, which should travel over the district, may collect these facts and embody them in the reports. Then, and not until then, will agricultural reports be of any practical use to the farmer and the public interest.

It is a mournful fact, that many farms in all sections of our State are deteriorating, although farming is yet in its infancy, the soil just disturbed. This is radically wrong. It should be the study of the farmer to obliterate all evidences of poor tillage. Farmers cultivate, or, rather, scratch over too much land. Small crops are the results, generally, of poor cultivation—a very expensive operation in California. Creditors and the Sheriff will be your first customers. By good cultivation, from 25 to 50 per cent can be added to your pockets; from four to eight million dollars of wealth to the State. An item well worth your careful attention.

In no part of the States is farming carried on with more science or expense than in New England; yet, by negligence in cultivating and fertilizing, the soil has so deteriorated that it is estimated, by high authority, that it would require the enormous outlay of one thousand million of dollars to repair the effects of a wasteful and exhausting system of cultivation. Five hundred million more than President Lincoln calls for to protect that good old companion of our country, the emblem of our liberty, the glorious *Stars and Stripes*.

Rascally Business.—According to the Yreka Journal, the story of the Goose Lake Massacre was raised by mischievous persons in that town, who wished to torment a young man whose sweetheart was coming across the Plains.

STATE SUMMARY.

The Ellsworth Guard, composed of those not quite "arrived at man's estate," paraded on Tuesday, making a fine appearance in their blue and red, and gave a Ball in the evening.

The papers in Portland, Oregon, brag that their city is improving faster than any other on this coast, except San Francisco.

The Forest Theatre, at Sacramento, was destroyed by fire yesterday morning, 26th. supposed the work of an incendiary. The Theater was built in 1855, at a cost of $98,000, was owned by H. Heatseb, and was not insured.

The Sunday Law has been declared to be Constitutional by the Supreme Court. A decision was given on Tuesday, in a case from this city, in which the Judges were unanimous in favor of the Constitutionality of the law. The law must therefore be observed.

A correspondent from the north writes to the Oregon Sentinel that a train of three hundred wagons, of this year's emigration, had reached the Grande Ronde, in the Blue Mountains, and intend settling there. They are all for the Union.

A train of fourteen wagons passed through Stockton, September 24th, from Iowa. The Republican says 135 American horses accompanied the train, which was in charge of and owned by Capt. Moss. They left St. Joseph May 23d, and came in by the Honey Lake route.

Stephen Broadhurst informs the Napa Reporter that he has discovered a well indicated vein of coal in Capella Valley. The outcropping of the lead is in slate, and perhaps a foot wide; and it has been explored to the length of fourteen feet.

The Surveyor of Placer county reports that he has surveyed in that county, during the past year, 9280 acres of Swamp and Overflowed Land, located in the basin between Bear river on the north, Feather and Sacramento rivers on the west, the American river on the south, and extending to the foot-hills on the east.

The Auburn Herald says the excavation on the Sacramento, Placer, and Nevada Railroad, between Folsom and Auburn, is being pushed with remarkable energy by the contractor, Myers. He has now between ninety and one hundred laborers at work, and the number will be increased as fast as men can be obtained. Nearly two miles of the road is already graded at the Folsom end, and the deep cut at the head of Big Gulch is about half completed.

Thursday, the 26th being the day appointed by the President for fasting, humiliation, and prayer, for the safety of these States, for a blessing on our arms, and a speedy restoration of peace, was generally observed here. The Banking-houses and principal places of business were closed. Services were held in nearly all the churches, and they were well attended. May the heart of the people be strengthened to a speedy triumph of the Union cause.

The benefit of cheap traveling is thus presented by the Evening Journal: At least 2000, and perhaps as many as 3000, people from this city, visited the State Fair at Sacramento last week, and as each person left $10, on an average, the gain to Sacramento from this source was from $20,000 to $30,000. So much for low prices. Also it may be added that the river steamers go loaded with freight on every up trip, while the passenger-lists grow larger every day. The Nevada brought down between 300 and 400 passengers Tuesday evening, and the Chrysopolis nearly or quite as many.

The Steam Fire-Engine "California," built by Peter Donahue, of this city, was put on trial at Sacramento on Monday. Her first stream was thrown through a 1¼-inch nozzle and 40 feet of hose. She threw water in this experiment along Fourth street 248 feet, measuring from the nozzle. On the second trial she threw two streams through 1¼-inch nozzles vertically over the roof of the St. George Hotel, 140 feet. On the third trial, she threw four streams, through 1 inch nozzles, over the St. George. On the fourth experiment, with 120 feet of hose, and 1⅞ nozzle, she threw a stream 225 feet. Through the open butt, 2½ inches in diameter, a stream of 30 feet was thrown. The engine was under the management of J. M. Scott as engineer.

The Rev. Dr. Scott has been the subject of considerable comment in the community during some days past. In consequence of some sentiments, anything but loyal, uttered by him in a Convention of Ministers, an effigy, labeled "Scott, the Traitor," was hung near his church on Bush street, Sunday morning, and a large crowd gathered during the forenoon, and some disturbance was feared. The "Doctor" preached as usual, however, and left the church in a carriage guarded by the police. No service was held at the church in the evening, and Dr. Scott has since given deference to public sentiment by resigning his pastorship. It is said he has sold his property, and is about to travel in Europe for his health.

Military movements have been active since the Election. The destination of the regiment of infantry and half-regiment of cavalry, intended for service on the Plains, has been changed to the Southern portion of this State, and all but three companies have departed from their camps across the Bay for Los Angeles. The five additional regiments called for are rapidly filling up, recruiting camps having been established in Stockton, Marysville, and other places over the State. The cavalry regiment at the Race Course near the city is now reported to be full, and the ranks of the infantry companies at Hunter's Point are rapidly augmenting. The destination of these troops was first announced to be Arizona and Texas, but now their field of operation seems to be uncertain.

Received.

We have received the usual Complimentary Cards from the Directors of the Oakland Fair, which we expect to attend, and trust to find everything prosperous.

From Gen. A. Warner, of the Board of Swamp Land Commissioners, the laws of the State of California for the disposal of Swamp Lands.

We have received a splendid box of Peaches from Briggs & Haskell, of Marysville, for which they have our sincere thanks; they were very superb clingstones.

That basket of Vegetables from our friend Lane, across the Bay, came very opportune. Our dinner was relished the better for his kindness.

To our friends at the State Fair, we return thanks for their generosity.

To Dr. J. Strentzel for samples of his Red and White Wine, which the Committee declare A No. 1. We will give our decision by-and-bye. For his jar of preserved Peaches, gathered with the effects of the curled leaf and other diseased effects, we are truly obliged. We shall examine his samples, and with his aid shall try to gain information for the benefit of all.

To J. S. Harbison and A. J. Bigelow, of Sacramento City, we are much indebted for their liberality in generous samples of their Honey, which cannot be beaten either for purity or beauty.

To J. W. Ward, of San Francisco, for a sample of his Premium Brooms.

To M. S. King, of Sacramento, for a variety of his fine Preserved Fruits in Cans, which, for style and excellence truly surpass the imported articles. We shall speak of their value to our State elsewhere.

The San Joaquin Fair.

In referring to the exhibition of Fruit at the late Agricultural Fair at Stockton, the Independent remarks on its quality, and the capabilities of the San Joaquin District as follows:

The unusual superiority of several of the different kinds of fruit on exhibition, attracts the attention of every one who sees it, and the only remark which one hears in regard to some of it—the pears, for instance—is, "I never saw their like." *We* never did, either in this State or anywhere else. It was evidently something more than mere accident which made the *Padres* of the Catholic Church—who came from other lands to teach the Gospel of salvation to the simple natives of California—plant orchards of pear and grape vineyards around their respective mission stations. Of all the fruits exhibitied, the pear of California growth, and so far as we have seen, of the San Joaquin District, ranks as king. The apples appear as good as the apples of any country. But the pears are not only larger, but altogether better than those of any other place which we know of—whether in the United States or in Europe. The large size of some of the bunches of grapes on exhibition, also shows the practical suitableness of the soils of this valley for the growth of the grape-vine. But we have not yet begun to cultivate it properly. It requires less water and more working and manuring of the soil, to bring it to perfection as a wine-grape, and generally speaking our grapes, although they display an unusual size in the bunches, are defective in flavor, when compared with the grapes of Europe; and so they will continue to be, although we may have the best European varieties, unless we devote more attention to their cultivation. But for all this, the size and shape of the bunches exhibited, of whatever variety, plainly show that our soils in this county are about the best adapted for grape-culture in California, and when we take into account the little attention which has been paid to the grape, if we except drenching it with water, that of all the States in the Union—the land of Dixie included—there is none of them equal as a grape-growing country to California. This is saying a good deal for San Joaquin, but we believe it deserves it. The grapes on exhibition, both last year and this, altogether excel those exhibited last year at the State Fair at Sacramento. Next after pears and grapes, the fruit most likely to attain excellence in California is the peach. Every one knows its qualities, and every one sees in the Hall what kind of peaches our valley produces; and we know likewise what kind of peaches, of the early varieties, this and last year have produced, of which specimens, owing to the season of the year at which they ripen, could not be exhibited. It is an excellent fruit, and admirably suited to our soils and climate; and so, as appears from the specimens on exhibition, are all the usual kinds of fruit grown in the United States. But neither they nor it, nor any other fruit grown, so far as we have yet seen, are so likely to attain such unusual superiority as the pear and grape. We back the pears of San Joaquin county against the world.

We make further record of some of the notable exhibits at the Pavilion: Clingstone Peaches, over a pound in weight, came from Tuolumne county, raised by Wm. Horsell. A Pear weighing thirty ounces, raised on a tree planted last February by S. C. Adams. West & Bro. had forty varieties of Pears, including Flemish Beauty and Dunmore, raised on their farm, three miles from Stockton, with five varieties of Figs, large Quinces, and seven varieties of Grapes, some very fine, and all raised without irrigation. From Fox's Nursery, San José, were exhibited seventy-eight varieties of Apples, six of them of Southern origin, and this the first year any of them had been exhibited at a Fair in this State. Dr. Harris showed magnificent clusters of the California Grape, some of them weighing four pounds; also Peaches, Apples and Figs, all raised in his garden in Stockton. A lot of twenty-four varieties of superior Foreign Grapes were exhibited by "an unknown person. A Duchesse d'Angouleme Pear, weighing two pounds, and the largest but one of any variety on exhibition, shown by S. Scott, of the Merced River. A Pound Pear, *the* largest, came from L. Fisher, of Stockton, and weighed two pounds and two ounces. E. L. Jarvis, of Columbia, brought twenty varieties of Apples from his orchard; also fine specimens of Preserved Fruits and California Wine. The Helvetia Garden sent twelve varieties of Grapes and specimens of Figs. D. K. Woodbridge exhibited twenty varieties of Apples; also, Figs, Peaches and Grapes.

Then there were several specimens of Tobacco: Havana Seed, by W. H. Stearns, grown on his farm at Mokelumne City, San Joaquin county; Tobacco from Trapp's, on the San Joaquin river, from half an acre planted; and Tobacco from Benson's on the Mokelumne river. Three large Squashes, raised by W. H. Stearns, of Mokelumne City, and weighing respectively 156, 176 and 196 pounds; also, by him, specimens of Carolina Sweet Potatoes (splendid of their kind) and stalks of Indian Corn, eighteen feet high, with ear ten feet from root. Model of a Hay-Press, invented by J. H. Cleveland, of San Joaquin county. Specimens of Calfskin Leather, tanned by a new process in four days, entered by L. D. Loomis; also, a variety of Leather, by Jacob Wagner. Case of Silverware and Jewelry, manufactured by Chas. Haas, Stockton. By W. J. Barrett specimens of pure Gypsum from the Coast Range. A box of Rice-Corn in the ear, by Mrs. H. T. Huggins, Stockton. The above are but a small portion of what was worthy of notice, and to which we intend to make future reference from our notes.

A Heavy Committee.

The Committee on Thoroughbred Stallions, at the Marysville Fair, awarded the first premium to Col. Lathrop's horse, Langford, and the second to Mr. Williamson's horse, Belmont, the sire of Langford. We must confess our inability to see the cause of such an award, for Belmont is the sire of winners at all distances (save three-mile heats), and has about three hundred colts and fillies, while Langford has not as many dozen of them. If an untried horse is better and safer to breed from than one that is tried, then this award is a just one; otherwise it smacks of local prejudice, and we believe the owner of Langford was as much surprised at the award as "any other man." When Langford's colts outrun the get of Belmont, then it will be time for such preference to be shown. Such a premium might, with equal propriety, be given, over Belmont, to Dashaway or Gladiator, and we hope that in future horses shown at Fairs will be judged more by their merits in the Stud than on the Turf, although a good racing reputation is a capital inducement to breeders.

Receipts of the State Fair.—The total receipts of the State Fair in Sacramento are stated, in round numbers, at $20,000. The receipts of the Ball on Monday night amounted to $1200.

Farms for Sale.

A valuable Farm of about 400 acres of excellent land, well fenced, situated near Petaluma, can be had at a bargain if applied for soon.

ALSO—A valuable Farm with good buildings, an orchard and vineyard, and pleasantly located in the immediate vicinity of Sonoma. Will be exchanged for real estate in the city of San Francisco. 9

PRICE REDUCED!

PATENT
HYDRAULIC HOSE
MANUFACTORY.

HOSE
SEWED WITH FOUR SEAMS,
For 15 Cents per Yard,
GUARANTEED TO STAND THE PRESSURE OF ONE HUNDRED FEET FALL AND LAST AS LONG AS THE DUCK, WITHOUT RIPPING.

I am also prepared to sell PATENT-RIGHTS for States, Counties, or Townships, as I hold the documents from the Patent Office at Washington City, with the Seal stamped upon them.

Miners and others interested will please address BOX No. 353 AT THE MARYSVILLE POST OFFICE, or through Wells, Fargo & Co.'s Express. All orders thankfully received and promptly executed.

For those having a disposition to invest a small sum in a safe and profitable business, now is the time. I have made sales to Mr. John Carbold, of North San Juan Township, and to Mr. John T. Allment, of Marysville. From these I have the highest recommendations, and numerous other recommendations relative to the value of this Machine.

S. HOWARD,
Pioneer Hose-Maker.
3-3m

Colby's Patent Improved
CLOTHES WRINGER

This machine is attached to a tub when in operation. It consists of a pair of India Rubber Rollers, hung in a framework of galvanized malleable iron of peculiar form, held together by a single rod, or tie, which forms a joint in the frame, by means of which the rollers are held in their proper place, and the Machine clamps itself firmly to the tub or box.

I give seven good reasons why every family should have a Machine of some kind for this purpose; and if we allow each reason given to make a saving or be worth but two cents per week, you will have the price of the Machine in one year, and it will last a lifetime.

1st—It will save time, which is money.
2d—It will save strength, which cannot be bought.
3d—It will save the clothes, which cost money.
4th—Any man, boy, or girl, can use it, who could not wring clothes by hand.
5th—It helps to wash the clothes, and by running them a few times through the Machine, out of hot suds, it will clean them as well as half the Washing-Machines in use.
6th—It leaves the clothes in a better condition to dry.
7th—It helps to make Washing-Day more pleasant.

It will be seen by the above that no family can afford to be without such a Machine.

I can give many excellent recommendations, if necessary.

[For the California Farmer.]

Silent Griefs.

Were all the sorrows and sufferings of earth to find utterance, which now are only expressed by sighs and tears, there would be heard a wail that would move the world to pity. Could the dumb brutes speak the agonies they are often made to suffer because they refuse to yield up their lives meekly to the hand of man—instinctively resisting the breaking of the commandment, "Thou shalt not kill"—the sound would be enough to make the earth to tremble; but in silence the patient ox toils along with his weary load, though smarting with the pain of the dreaded lash; and I have been moved to tears by the cruelty inflicted upon these humble servants of man.

Behold the child chastised by an angry parent; in vain it tries to make some explanation that may avert or mitigate the dreaded punishment; but no, its voice is forced by pain to only a cry of agony, and if it suffers wrongfully, the finer feelings of its nature receive a withering blight, and when repeated, the tender germs of kindness and love will die out from the heart forever. Go to the prisons, look at the sad and silent workmen there, and you may trace in every eye and feature the corrosion of the heart's best impulses—a rust of the refining social feelings of man, and when some kindly voice breaks through this debris of of the mind, the heart's buried fountains gush forth in stifled sobs and tears.

I once read of a benevolent lady who was visiting a prison, and seeing an old woman there, she tried to draw her into conversation by offering her some flowers. At first the old woman refused to even look at them, or to make any reply to the lady's question, "Do you like flowers?" But, as their fragrance diffused itself through the little dark cell, bringing back to her mind, no doubt, thoughts of her innocent happy childhood, when she was free to roam upon the green hills and among the birds and flowers, she finally said, while the tears coursed down her furrowed cheeks: "I used to love flowers, but take them away, or they will now break my heart!" Those flowers had to her a voice of other days, which she could not then bear to hear; and sad indeed must be the heart that cannot hold communion with the silent but loving language of these angel messengers of earth.

How many suffer on in silence the pangs of hunger, and every privation, because they are too proud to make their destitution known, or not knowing to whom they may apply for help. But there is a brotherhood—long may they exist and prosper—who have taught to thousands of dependent humanity a silent language, whose sign of distress reaches the heart of his brother man with a meaning more potent than if uttered by a trumpet tongue.

Witness the guilt-laden, sin-sick Magdalen, debarred from every sympathy, as she weeps her tears alone, with none to point her the way to him who said to one of old, "Thy sins, though many, are all forgiven thee." She finds no place for repentance, no friendly ear to listen to her tale of woe, until, despair paralyzing her better feelings, she seeks to drown her sorrows in the intoxicating bowl; or, rendered more desperate still, the poisoned cup! O, what unheard and unheeded agonies will eternity reveal!

The severest trials of life are such as are borne alone and in silence; those unwritten struggles of the heart, that unseen warfare of the soul, wherein the victories over self and errors are not recorded on earth—these are the secret workings of the power of truth which "tries the heart and reins of the children of men."

When we walk among the tombs of the voiceless dead, how we long to hear once more those loved and familiar tones now hushed forever, no more to be heard in time; but may their sweet accents fall gently upon our ear in a triumphant song, when the cold waters of death are congealing our life-blood around the heart, and we, too, be numbered with the silent dead.

Lilla de Montana.

September 5th, 2861.

[For the California Farmer.]

Literature—No. 4.

Edmund Spenser was one of the "bright particular stars" of the reign of Queen Elizabeth. He was born, according to some authorities, in 1553, the first year of the short reign of Mary; as she died in 1558, Spenser was but five years of age when Elizabeth began to reign. He was entered as sizer in Pembroke College, Cambridge, in 1569, taking his degree in 1576. While there he formed the acquaintance of one Gabriel Harvey, who subsequently induced him, after residing with friends or relatives in the north of England, to return to London, his birthplace. Harvey here introduced him to Sir Philip Sidney, one of the noblest men in Queen Elizabeth's court. In 1579 he published "The Shepherd's Calendar," dedicated to Sidney, in which his shepherds talk of learning and morality, as well as love. Sidney and Harvey seemed to impress Spenser favorably with the idea that it would add to the excellence of English literature to banish rhyme and introduce the hexameter of the Latins into our verse; but he at last gave up the idea, and resumed the "Faerie Queene," which he had before commenced. At this time, Spenser, who had been employed on some ordinary State missions, received a more important appointment (Secretary to Lord Grey, who had been chosen Lord Deputy to Ireland). After living there two years, Lord Grey was recalled, and Spenser returned: but shortly after receiving a grant of land in the county of Cork, went to reside upon it, agreeably to conditions, and took up his abode in Kilcolman Castle, the river Mulla running through his grounds. Here, in this romantic retreat, Raleigh visited him; he wrote most of his Faerie Queene, and he married the lady whom he had already celebrated in his sonnets, under the name of Elizabeth, and whom he welcomed with one of the most magnificent spousal hymns in the language.

The Faerie Queene is an allegory, of which six books remain: some say of the other six, that they were lost in crossing the Irish Sea; some, that their loss is to be attributed to the carelessness of a servant to whom they were intrusted; while others, which seems most probable, say, that owing to misfortune and distress, the poet never completed the volume. The Queen was, in some measure, to represent Queen Elizabeth, while the hero, who was to be a true and noble gentlemen, was Prince Arthur—the character being as much exaggerated as was the Queen's. The Queen was to hold her annual feast for twelve days, a different adventure occurring each day, undertaken by so many different knights, each adventure representing some virtue, as holiness, temperance, chastity, etc. The poem abounds in the religious and the chivalric, and was therefore admirably suited to the time; it is highly imaginative, enchanting and passionate; one writer says that in it are to be found a loftiness, sweetness and richness of fancy and invention, that are scarcely equaled elsewhere in the language.

During the latter part of his life, the English settlers having been harsh and oppressive to the natives of Ireland, even as their descendants in both England and America are, the country was convulsed with rebellion. In 1598, the insurgents attacked Kilcolman Castle, plundered it, and then burned it; an infant child perished in the flames, and he died, poor and broken-hearted in London in January, 1599. The insurgents had cause for treating him thus ill, for he had not been just to them. Were he described as free from faults, it would be useless to claim him as mortal; we honor him for all that was great and good in his character, and rejoice that 262 years have not passed since his death without bringing us a higher type of manhood than was then known to the world.

Mary Merrill.

◆

Needle-work at the Marysville Fair.

The Appeal says in its report: The ladies are out in all the glory of Embroidery, Worsted-work, and Plain-sewing. Mrs. Bolinger, Marysville, a lady whose varied contributions to the exhibition evince a great deal of taste and skill, has a rich Silk Dress, exhibited as a specimen of amateur mantuamaking; of course the ladies never long to own it, nor that Lady's Robe, embroidered by Mrs. Lewis, who has a Cashmere Dress embroidered in colored silks, a Baby's Shawl, and other beautiful things on the same table. Miss Juliana Bayer, Sacramento, has some wonderful work in Worsted, Crotchet, Knitting, Beads, etc., which quite astound the ignorant masculines, who wonder how such things are made. Little Mary Ellen Covillaud has some pretty Tapestry Embroidery hanging on the east wall of the Pavilion, and some Bead and Worsted-work lying below it. Here, too, are some intricate and matchless Tidies—we believe they call them—fabricated by the young fingers of Amelia Swezey, who can crotchet equal to people of larger growth. On the same table is some Chenille Embroidery by Mrs. John Hoesch, very beautiful. The north-wall of the east wing is covered with beautiful work in Crotchet, Knitting, and Netting. A pair of Shawls, by Mrs. C. G. Bockius, and some of the same kind of goods by Mrs. Fowler, Mrs. Chittle, Mrs. S. W. Churchill, and Mrs. Reed, are worthy of particular notice, being useful, and rich in appearance. The Misses Reardon exhibit a very delicately embroidered Child's Suit, Dress, Cap, etc. Mrs. Allenwood, Timbuctoo, has a fine case of baby-wearing appareling, ravishing to behold, and delicate as fairy-work. Flora McCormick has a pair of pretty Book-marks on this table, and near by is an ancient Bible, printed in 1729, exhibited as a curiosity. On the embroidery table we also observed a set of baby-rigging, a marvel of embroidery, by Mrs. Decker, and in the same case an Embroidered Kerchief by Mrs. Alphonse Sutter, having the appearance of frost-work. The same lady has a piece of Fancy-work near by in the shape of a Comb-case, much admired for its unique and ingenious ornamentation. There are acres of Quilts and Bed-spreads suspended from the rafters, some of them too beautiful to go to sleep under, unless one were a virtuous angel or a darling first-born cherub, just three weeks old. Mrs. McCrary has a "love" of a Crib quilt, and Mrs. Dale, of Yolo county, has a worsted patch-work Quilt, which is comfortable, useful, and pretty. We have not noticed many things under this head which we would like to see full justice done to, for the reason that space forbids, and in many instances it was not convenient to find out who were the fair exhibitors of the articles noticed. In one of the Needle-work show-cases is a child's out-door gear, the work of a lady 60 years of age; and a remarkable piece of work it is, too, and well worth an examination.

◆

No Use.—A doctor's wife attempted to move him by her tears. "Ah!" said he, "tears are useless. I have analyzed them. They contain a little phosphate of lime, some chlorate of sodium, and water."

The Bad Man.—Little Irwin is about four, and is well instructed in the doctrine of total depravity for a boy of his age.

For some external manifestation of the old Adam within, his mother undertook to exorcise him by the use of the rod. Little Irwin argued the case in this wise:

"Ma, you ought not to whip me, for it's the 'bad man' makes me so bad."

"Yes, my son, but I am going to whip the bad man out of you."

"No, ma, that will hurt me a heap worse than it will the old bad man."

The boy was sent to play.

Smart Boys.—The greatest objection to smart children is that when they commence having whiskers, they leave off having brains. Boys that are philosophers at six years of age are generally blockheads at twenty-one. By forcing children along, you get so much into their heads, they become cracked in order to hold it.

CIRCULATION OF THE FARMER ABROAD.

We have often urged the friends of our State, to aid us in the Circulation of our Journal in the Old States, and Europe, so that we might be more instrumental of good, and help to increase the population of California, and thus make the State more prosperous.

We have often published strong Letters, from various States, proving the good our Journal is doing in making our State truly known in all her vast resources. We now ask of all who feel a desire to have our State double her population, to this work.

We append a Proposition, and hope the Friends of this Journal and the cause it pleads, and all who wish to carry out the desires expressed by our excellent Citizen, in Paris, will coöperate with us. We will make liberal terms to all Societies for Emigration, or Clubs, and Commercial Houses.

With a desire to make the Resources of California known abroad as widely as possible, we feel confident that if we could Circulate the California Farmer in all the Older States, it would be the means of showing the great Masses of the People, that California is the place for them to settle in; and we believe we could greatly benefit all the interests of our State, by Circulating our Journal extensively abroad.

With such views, we ask the coöperation of our Merchants, and Business Men, and all who desire to make California truly and widely known, to aid us in the Circulation of the Farmer.

Wishing to place the Farmer at so low a price, as to enable all to send it to their friends, we offer the following Terms for all Clubs to send to the Old States, and in Europe:

For eight Copies	$25
" ten "	30
(Each Copy to be mailed separately, if so desired).	
For three Copies	10
" six "	20
" single Copy	4

MRS. LIZZIE W. WARREN, M.D.,
ELECTRICIAN AND HYDROPATHIST,
Corner Mason and Pacific streets.....San Francisco.

Mrs. Warren proposes to teach her patrons the means of attaining and preserving health, rather than the usual practice of physicians, of *doctoring the sick*. Believing in the old adage: "An ounce of prevention is worth a pound of cure," and also that the remedies used to eradicate disease are more deleterious to the human organization than the diseases themselves; therefore she dispenses with the use of drugs, relying on the curative power within the living organism and the supplying such conditions as the natural remedial agents afford. The natural remedies: Air, Diet, Exercise, Water and Electricity. The beneficial effects of water, properly used, are now generally understood, but the remedial effects of electricity are comparatively unknown. By the knowledge and application of a certain law, which recognizes hitherto unknown relations of the positive and negative forces to the functions of life, electricians are enabled to make a beneficial application to disturbed physical equilibrium, thereby rendering electricity the most powerful therapeutic agent; the most potent and all-pervading element which can be used, as it approximates to the principle of life, apparently identical with vitality. Its therapeutic uses are *reasonable* and *wise*, and may be relied upon whenever a cure or improvement is possible.

Mrs. Warren will be pleased to make arrangements by the year, with families requiring a better knowledge of the laws of health and the means of its preservation, as well as medical attendance and advice.

Having devoted many years in study and preparation for this profession, and having received ample testimonials from the College where she graduated, feels confident she will be able to prove her ability to attend to the claims of WOMEN and CHILDREN. To this practice she will give her *Exclusive Attention*.

As an ACCOUCHEUSE she claims to be eminently successful, and can produce ample testimonials of success in many difficult cases.

Those wishing to avail themselves of Mrs. Warren's advice will find her at her residence, on the south-east corner of Mason and Pacific streets.

☞ Arrangements have been made by which a few Patienst can be accommodated with Rooms and Board

HEALTHFUL SPECULATION!

IN A RECENT LETTER FROM FOWLER & WELLS of New York, I was solicited to send them one hundred subscribers for their journals. This I would gladly do for the cause of PHRENOLOGY, PHYSIOLOGY, and HEALTH, in California. As I cannot at present leave my care, I take this means to obtain the number. Friends of the cause! do not fail to have every town in the State represented!

To any responsible person who will distribute from 100 to 500 of my Circulars to each Family, Store, and Miner's Dwelling in the village where they reside, I will send them two copies of either of the following journals for one year, commencing July 1st, 1861: The Phrenological Journal, by Fowler & Wells; The Water Cure Journal, by R. T. Trall, M. D; or The Laws of Life, by J. C. Jackson, M. D., and Miss Harriet N. Austin, M. D. If more than five hundred are required for a full distribution, two more journals will be sent, or any two books by Fowler & Wells or Dr. Trall that do not exceed $1 each. The first applicants will receive the circulars by express, free of charge, and the journals by return of mail from the East. In this way many families may be provided with three of the best journals in the world that treat upon the Laws of Mind, Health, and Home Treatment of Disease. Only one or two from each village can be supplied with the journals on these terms; but I will reward all who may apply for circulars to distribute with "Water Cure for the Million," by R. T. Trall, M. D., President of the Hydropathic College, free of charge.

BARLOW J. SMITH, M. D., Graduate of the Hydropathic or Hygeiotherapeutic College of New York, intends lecturing through the Winter months in the mountain and valley towns of this State, upon the subjects of Phrenology, Physiology, and the Laws of Health, the Nature of Disease, and the Hydropathic and Hygienic Remedies, as taught by the Professors of the New York College.

At the Bensley Water Cure we cure all curable Diseases, except those that are contagious and would endanger the health of the family and patients. This is the oldest establishment in the State based on the principles taught and practiced at the Hydropathic College of New York. Our house is large and pleasantly located—corner of Stockton and Pacific streets, San Francisco. Persons visiting the city desirous of improving their health can be pleasantly accommodated with us. We have the best Hygienic facilities in California, for the cure of all Diseases, especially those of the Lungs, Liver, and Stomach. For the cure of Rheumatism, Ague and Fever, and Poisoning from Lead, Oak, and Mercury, our Baths and Electrical Appliances are superior and different from any others in the State.

No one in the world examines Diseases of the Body through Phrenology or the Head, in the way Dr. Smith does.

If you desire an examination and to consult with Dr. Smith while in the city, you can do so free of charge. Circulars sent on application. 23

DR. WEED'S
Hygeo-Medical Institution
M street, between 7th and 8th streets,
SACRAMENTO,
IS WITHOUT DOUBT THE MOST DESIRABLE PLACE in the State to which the Invalid seeking health can resort. Although it has been open but a short time, it has already become known throughout the State as a
First-class Water-Cure Establishment.

Here disease is treated upon strictly Hygenic, and truly scientific principles; principles founded in the very laws of our existence; and the great number of cases that have passed through our hands, here and elsewhere, prove to a demonstration the world-wide superiority of Hygenic treatment over Drug Medication. ours are

NATURE'S OWN REMEDIES!

And when properly administered never fail to accomplish the desired result. At this Institution by the use of these simple but powerful remedies, the blood is purified, the bowels freed, the liver relieved, palsied limbs restored, stiff joints made supple, headaches removed, fluttering hearts made to beat in proper time, weak organs strengthened, displaced organs replaced, general debility overcome, the complexion made clear, the cheek made to bloom, the eye to sparkle, and the soul to rejoice in the full and complete enjoyment of perfect health. By the use of the

Genuine Electro-Chemical Bath,

and a System of Invigorating Exercises, many diseases that have been considered incurable are easily and speedily overcome. As a remedy for Fever and Ague, Rheumatism, Scrofula, Liver Diseases, Paralysis, Constipation, Suppressed or Deranged Menses and Sick Headache, the Electro-Chemical Bath properly given is invaluable and stands unrivaled. The location is Beautiful, Healthful, and retired; surroundings pleasant and cheerful; the rooms commodious and airy; the table excellent, nutritious, and wholesome; and so pleasantly arranged is every department, that the most desponding invalid cannot fail to be inspired with new life, hope, and cheerfulness. Invalids cannot find a place where they can spend a few weeks more profitably, or where they can have the attention of more accomplished and skillful physicians.

MRS. WEED, so well known as a lecturer, and teacher of the laws of life and rational education, will give her especial attention to the Ladies.

☞ Circulars sent free of charge.

EDUCATIONAL.

STOCKTON
Female Seminary.

THE EIGHTH SESSION OF THIS INSTITUTION, UNDER the charge of Dr. CYRUS COLLINS and Lady, assisted by competent Teachers, will commence on
Wednesday, September 25, 1861,
And continue FIVE MONTHS.

—TERMS:—

For Board and Tuition, in common English Branches, per session	$150
For Tuition in Music, per session	50
For Tuition in Painting or Drawing	25
For Tuition in Ancient or Modern Languages, each	25
Washing per dozen	$1 50
Payable Quarterly in advance.	
For Tuition and Board per annum, in advance	250

☞ Pupils received at any time, and charged until the end of the session.

COURSE OF STUDY:

The first aim of this Institution is thoroughness; and although any plan proposed can only be disciplinary, yet we have chosen that course which will be the most practical, involving those sciences most available in common life. Beginning with fundamental principles, the student is carried by natural and easy graduations, through a course of study, calculated to strengthen and invigorate the mind, and prepare it for healthful action.

Our course of study comprises Two Departments, a Preparatory of two, and an Academic of three years.

THE STUDIES OF THE PREPARATORY COURSE.

FIRST YEAR.

Reading, Writing, Orthography, Arithmetic (Thompson's Rudiments), Primary Geography, Grammar, and Composition.

SECOND YEAR.

Rhetorical Reading, Arithmetic, Book-Keeping, Geography, History, Grammar, Penmanship, and Composition.

THE STUDIES OF THE ACADEMIC COURSE.

FIRST YEAR.

Algebra, Geometry, Natural Philosophy, Physiology, Rhetoric, Physical Geography, and Composition.

SECOND YEAR.

Trigonometry, Astronomy, Natural History, Botany, Logic, Intellectual Philosophy, and Composition.

THIRD YEAR.

Political Economy, Moral Philosophy, Evidences of Christianity, Belles-Lettres, and Composition.

The Ancient and Modern Languages, Music (Instrumental and Vocal), Drawing, Painting, and Ornamental Needlework, optionary through the whole course.

Pupils can omit, with the consent of parents or guardians, any of the above studies, but none will be entitled to the Diploma of Graduation who have not completed the whole course.

All young Ladies from abroad will be expected to board with the Principal.

Classical School
FOR BOYS.

We have established a Department for Boys. The course of study the same as in the Female Department. Particular attention paid to those preparing for College.

☞ Terms the same as in the Female Department.
7 Dr. CYRUS COLLINS, A.B., Principal.

SANTA CLARA COLLEGE.

THE TENTH ANNUAL SESSION OF THIS INstitution will commence on MONDAY, August 20th. The plan of instruction embraces two regular Courses—the Classical and the Commercial, besides a Preparatory Department.

TERMS.

Entrance, to be paid but once	$ 15
Board and Tuition per session	335
Washing and mending of articles washed, per session	45
Stationery, per session	10
Medical attendance and medicines (unless it be preferred to pay the bill in case of sickness), per session	10
Vacations, if spent at the College	35

N. B.—When there are more than two brothers, each one over two pays only half price.

Use of Instruments in Chemistry and Natural Philosophy, Vocal Music, Piano, Violin, and Drawing, form extra charges. School Books are furnished at store prices. No extra charge for any of the languages. Payments to be made half a session in advance.

For further information apply to the President of Santa Clara College, Santa Clara, Cal., or to Rev. A. Maraschi, S. J., St. Ignatius' Church, Market street, between Fourth and Fifth, San Francisco. 2

HUNTER'S
GRAIN SEPARATOR!

THE GRAIN-GROWERS OF THE PACIFIC COAST have now an opportunity never before offered them of cleaning their Wheat in the most perfect manner.

The undersigned would offer them his

NEW GRAIN SEPARATOR,
Patented April 9th, 1861,

As one of the best Implements ever invented. Mustard, Radish, Chess, Barley, and all other impurities, are separated entirely, leaving the Wheat in a pure and clean condition.

The importance of this Implement can be seen at once, as the
INCREASED VALUE
OF
Well-Cleaned Wheat
Will be more than sufficient to every Grain-Grower of any amount
TO PAY FOR A MACHINE.

The Patentee will visit all the principal cities and Farming districts to appoint agents at each place, and exhibit one of his Machines

He feels confident that every Grain-Grower
WILL BE CONVINCED OF THEIR VALUE
The moment an opportunity is presented to see them work.

MANUFACTURES AT MARYSVILLE.

Our mechanics and manufacturers have made a good display of various wares. McCready & Bros. have a fine display of Marble Work. An Italian Marble Mantel, very beautifully finished and of perfect workmanship, is universally admired, and some Monumental and Statuary Work of native marble, reflect great credit upon the skillful workmen. In this exhibit is a beautifully polished slab of Marble from the Suisun Quarry, rivaling in richness of color the famous Sienna Marble. Zech & Co., of San Francisco, have a fine Piano. McCready & Bro. have a pair of finely carved Pipes of Washoe Meerschaum. The Patent Hydraulic Hose Sewing Machine of Howard, is an ingenious and valuable invention, worth more attention than it gets, as its work is bound to supersede all others, eventually. E. M. Wright's Patent Nose Nozzle is carefully inspected by the curious.

Two monstrous wagons were exhibited. One, which was built by Collins & Phillips, of Marysville, weighs 4,000 pounds, costs $650, and is splendidly made and finished, painted and varnished equal to a railway car. The other wagon, also for heavy freighting, was made by Myers & Packham of Marysville, and is equally strong and handsome. Finer "mountain schooners" were never turned out anywhere. There is some light Wagon Work exhibited by J. P. Hayes & Co., who show three strong and handsome Express and Jobbing Wagons, and the wood-work of two Buggies, looking both strong and graceful. Charles Raish has a light Job Wagon and Buggy. The latter is a very elegant, highly-finished vehicle, not surpassed for strength and beauty, for perfect finish of woodwork, painting and upholstering, by any imported wagons in the State.

A most important invention is called French's Rock-Drilling Machine. It is another contribution of Nevada county genius, and we think is certain to effect a vast economy in the running of bed-rock tunnels. As it has heretofore been described in the Appeal at length, we will only say of it now that it is an application of the hand-drill principle to machinery; dispenses with the labor of a second man, and enables one man to do as much drilling in four hours as two men can in six by the old plan. The machine is a cast-iron frame, weighing about 250 pounds, and holding a common hand-drill, behind which is a swinging hammer. At every blow the hammer gives the drill it turns slightly, and never binds. The frame can be run in the tunnel as it progresses on a track, and the drill can be moved up or down to either side. If desirable, steam or water power can be applied to it. The machine has been tested by its inventor, Mr. French, at North San Juan, where tunneling is extensively done and well understood, and the miners there pronounce it a success. If it shall prove so, it will save the miners of the State many thousand dollars per annum, and much increase the profits of their arduous pursuit.

The chief feature of the show in the forenoon of Thursday, at the Cattle Grounds, was the trial of strength by draft-teams. D. L. Woods and Daniel Marks each entered six-mule teams, and a big wagon, weighing about 3,800, was provided with both hindwheels locked and the wagon loaded up with freight to the amount of 7,300, and forty men, making a weight of 6,570, climbed on, and the whole, 17,670 pounds, was pulled by each team, and so a tie was declared.

The display of Poultry this year was exceedingly meager, on which the Appeal remarks: It is a shame that numerous fine lots, which we recollect having noticed in different parts of the district, should not have been sent in here for exhibition. There has been a lack of interest shown in the minor branches of stock-raising, which, we hope, will be reformed by another year. Fowls, swine, sheep for mutton, and other smaller matters, should receive more attention at the hands of stock-raisers, and a good exhibit of such things is encouraged by the Society, which offers liberal premiums for the best Poultry, fat Sheep, etc.; and we are certain that there are some lots of domestic Poultry and animals in our own immediate neighborhood, which might have done credit to the show and to the Exhibition. Whether any disappointment at the disposal of last year's awards has anything to do with the plentiful lack in this year's show in the department above referred to, or not, we cannot say. A big Cow is shown by Richard Lisk, of Sutter county. The animal is of Durham and Devon stock, weighs 1964 pounds, and is five years old. She is a handsome animal, dark red and well built.

Visitors have not failed to note the beautiful appearance which the Pavilion presents, when compared with the same grounds last year. This is the work of Mr. Cass, who has shown great taste in the arrangement of the Square. Mr. Cass has some fine plants on the Pavilion and a garland of flowers, thirty yards long, is noticed by every one.

◆

MORALS OF ANIMALS.—It is a common saying of moralists that the lower order of animals have not the vices of man, yet it is certain that some of the insects are *back-biters*, and all of the quadrupeds *tale-bearers*.

WHAT IS A BLOW?—Hearing a physician remark that a small blow will break the nose, a rustic exclaimed, "Well, I dunno 'bout that. I've blowed my nose a great many times, and I've never broke it."

BLACKING HARNESS.—The following is a recipe for blacking harness: Melt two ounces of mutton suet with six ounces of beeswax, and six ounces of sugar-candy, two ounces of soft soap, and one ounce of powdered indigo; melt and mix well, and add a gill of turpentine. Lay it on with a pegoan and polish it with a brush.

FIRST PREMIUM AGAIN.
BEING THE
SEVENTH TIME RECEIVED
Against All Competitors.
R. H. VANCE,
Corner of Montgomery and Sacramento Sts.,
SAN FRANCISCO.

Having again received the FIRST PREMIUM awarded at the State Fair for the BEST AMBROTYPES and PHOTOGRAPHS, it is guaranteed that all who favor me with a call are sure to obtain better work than can be produced at any other rooms in the State. I would say to my patrons that I am now producing better work than ever, at much REDUCED PRICES, to conform to the times.
Having reduced my prices more than 30 per cent, no one need hereafter go to second-rate establishments on account of price.
Instructions given in the art, and stock furnished. Having over $20,000 worth of Cameras, Glass, Plates, Cases, and Chemicals, on hand and on the way, I shall hereafter dispose of them at about New York prices.

Pure Italian Bees!
Imported by S. B. Parsons.
A. J. BIGLOW,
Sole Agent for California and Oregon.

FLUSHING, Oct. 30, 1860.
I have this day furnished to A. J. BIGLOW one hundred and thirteen ITALIAN QUEEN BEES, which he is to take to California to propagate and sell on our joint account. Besides these, I have sold no Bees to go to California. My sales here have been to two classes—Agents, and non-Agents. The latter have been supplied only on their written agreement neither to sell, loan, or give away, prior to the first of June, 1862. The former are allowed to propagate and sell for me, making the same conditions to those to whom they sell.
S. B. PARSONS.
These Bees have been pretty generally distributed throughout the State, and as far as heard from, are coming up fully to the anticipations of the purchasers as to their superiority over the common black Bee. "Their beautiful color and graceful form render them an object of interest to every person of Taste." A Circular, containing the terms and conditions of sales, will be sent to all who send me their Post-office address.
The following-named persons have some of this lot of Bees, and are acting as Agents for me;
Rev. HIRAM HAMILTON, of Stockton;
J. S. & A. HARRISON, of Clear Lake, Napa county;
J. V. HOAG, Yolo county;
GEO. W. RAMSDELL, Marysville;
FREDERICK NEIDHOLDT, Illinoistown;
Dr. D. G. PERRY, Auburn, Placer county;

Between Montgomery and Kearny streets,
SAN FRANCISCO.

When it was promulgated that disease could be entirely eradicated from the system without the use of poisonous drugs, the unthinking, or those who do not look deeply into cause and effect, scouted the assertion as chimerical, and adduced strong evidence of its utter impossibility. Long articles, replete with arguments, seemingly unanswerable, of the position that only through the digestive system could the blood be purged of the accumulation of the poisons which constitute the disease. A great cry went up from those interested in the continued supremacy of the old system of one poison to cure another; that electricity, as a curative agent, had been tried and proved to be of but little if any value—thinking, poor souls, that the world of science stood at the same point it occupied one hundred years ago. They were wrong, while those old fogies were content if they cured one in every five patients, there were those who were diving deep into the science of electricity, and finally it was discovered that the trouble was in the instruments used. From that time to the present, improvements have rapidly advanced, until every disease in the catalogue of human ills has been either cured altogether, or checked so as to enable the sufferer to seek those changes of climate which ultimately perform a perfect cure. Diseases hitherto considered incurable, have been cured, and those diseases which took months, and even years, to cure by medical process, are now cured in a few weeks: and all by the improved instruments of DR. J. H. JOSSELYN, Resident Physician at the Electropathic Institute, New No. 645 Washington street, between Kearny and Montgomery streets, San Francisco. It is astonishing to see the number of patients and diversity of diseases that have been relieved by the Electropathic system. From early morn till late at night his instrument is engaged, imparting health and strength to all who have the good fortune to obtain his services. The charges, too, are not as heavy as by the old system, besides there is no medicine to pay for, let alone the unpleasantness of swallowing the nauseous stuff. During the time that the Institute has been in operation, there has been more benefit to the human family derived from the system than from all other systems combined during the same period. Among the most troublesome diseases to which Californians have been exposed, is Rheumatism; none have given the honorable practitioner more trouble to relieve, and none have pretended to cure (if we except known empirics) permanently. But this subtle disease gives way before the Electropathic system in a very short time, enabling the sufferer to go about his business without pain or the fear and dread of relapse. And so with most other diseases, considered incurable. We mention Rheumatism because of its abundance, but we could enumerate many other diseases full as troublesome, and some far more fatal in their results.
To the nervous, the Directors would say, that you can be entirely relieved from those dreadful feelings of evil-foreboding, and your system strengthened so that nothing can disturb the current of your life. Several cases of insanity, arising from a disarrangement of the nervous system, have been permanently cured by this system. The Directors, in stating these things, do so in the hope that it may be the means of awakening the public who have not studied into such things, to a sense of their duties, and if possible, prevent those who have the care of the rising generation from poisoning their young charges with vile drugs, thereby entailing upon them troubles which in after life may cause them to curse their origin.
It is unnecessary to enumerate all the diseases in the catalogue, for that would be occupying space to no purpose. Every disease has been under treatment by this system, and there are none but have received benefit either in this State or at the East.
There are at present but few instruments in the world that can be depended upon. A good instrument costs very heavy, and must be manufactured to order, and there are very few who are able to manufacture them, for want of knowledge of the healing principle. The only instrument to be depended upon in this State is at the Electropathic Institute.
Connected with this system are the renowned Electro-Magnetic Baths. Here let us caution the public against the numerous impostors in the bathing line. The pure magnetic baths is one of the most effective aids in the removal of disease from the system, but if given at the wrong time, are likely to aggravate trouble, and cases have been known where the patient has been injured so badly as to require months to remove the injury. Persons in quest of this bath should be careful and not apply to a place where there is no physician to judge of the necessity of the remedy. In fact, the only place where they can be obtained in all their purity is at the Institute, where the Resident Physician will always be happy to examine and see that they are not unseasonably administered, and if not necessary, advise the requisite remedy.
Below will be found a list of the cases which have been successfully treated by the Electropathic system, at the Institute, during the first year of its establishment. The record is good, and challenges the admiration of the world:

Name of Disease.	*No.*
Rheumatism	421
Neuralgia	368
Dyspepsia	297
General and Sexual Debility	240
Asthma	220
Bronchial Affections	187
Fever and Ague	183
Female Irregularities	161
Mercurial Affections	130
Diseases of the Eye	85
Paralysis	78
Scrofula (long standing)	30
Catarrh of the Lungs	27
Catarrh of the Head	21
Liver Complaints	20
Deafness	18
Panama Fever	10
Consumption	7
All others, among which is almost every nameable disease	128
Total	2626

The above shows what can be accomplished by combined energy when it has truth and science upon its side. The Electropathic Institute was started amid the cry of interested charlatans, who used all the power their riches and the prejudices of the public gave them, to prevent its success. It has risen to a position that is beyond their baffled malice, and will be honored in the scientific world when they are forgotten, or only remembered for their crimes and impositions. A thinking public are fast consigning them to that oblivion their works merit.
Persons seeking remedial assistance may wish to know something of the system by which diseases are so rapidly removed from the body. Electricity is a fluid of so subtle a nature that it can only be studied by its results. We know by its action it forces everything of a foreign nature in the body from the center to the surface by its energy; while the vitality which it imparts fills up the vacuum, preventing thereby the subtle poisons from returning to the hitherto diseased parts; and here let it be understood that the Bath should never be administered until the disease has been forced to the surface, except, perhaps, in cases of cold where fever has not set in. Its action upon Mercurial Diseases is peculiar. The best authorities are of the opinion that it liquifies the mercury, which, when in a liquid state, by its own specific gravity, forces itself out of the body. This result has been arrived at by testing the water after an Electro-Magnetic Bath. After such tests have been found in the water, the patient is not troubled any more with those pains peculiar with the diseases. In all other cases it forces to the surface and is washed off by the Bath. The whole system, in its application, is a LUXURY, there being no pain or inconvenience attending upon it, but the reverse is the case, being one continued pleasure. Try it, you that are suffering either from disease or the injudicious use of poisonous drugs, and you will be made to rejoice that you have had the courage to strike out from the beaten path.
Below are a few certificates from patients that have been cured at the Institute:

CERTIFICATES OF CURES:
SAN FRANCISCO, April 18th, 1861.
This is to certify that I have been under the treatment of Dr. Josselyn, at the Electropathic Institute, and that he has cured me. My disease was mercurial, accompanied by chills. I applied to him on the 11th day of this month. I recommend all afflicted to employ him. He has cured me without medicine, by the use of his Electropathic Instrument.
JOHN CALLAGHAN.
State of California, City and County of San Francisco, ss.
Subscribed and sworn to before me, this 18th day of April, A. D., 1860. P. BARRY, Notary Public.

HORNITOS, Nov. 1st, 1860.
Well, Doctor, I am at home, and have been to work in the water for several days, and there is no return of the Rheumatism, as I call it, and mercurial pains, as you stated them to be. I feel as gay as a lark, no pain or bad feelings, no stiffness, but perfectly well, and all done by you in three weeks, without one drop of medicine. You had hard work to make me believe before you commenced that you could cure me, but now I find it very easy to believe. Although my friends look rather incredulous, but they cannot doubt my sober earnestness. Doctor, you have my thanks, and I will benefit you all I can by spreading your fame up in these parts.
Respectfully yours, GEO. PERKINSON, Jr.
To J. H. Josselyn, M. D., Resident Physician at the Electropathic Institute.

CAUTION.
The public are informed that I cannot be seen at any other place in the State except at the Electropathic Institute (179, old No.) 645 new No., Washington street, south side, a few doors below Kearny. The reason of this caution is, certain Quacks have placed my name upon their doors, and have deceived strangers who wished my services.
19 J. H. JOSSELYN, M. D.

THE VERMONT
SEED-SOWER AND REVOLVING HARROW!
FARMERS, ATTENTION!
With this machine, any person that can manage a pair of horses, can perform the operation of
Seeding and Harrowing at the same Time.
It is adapted to the sowing of ALL KINDS OF GRAIN, and is regulated by the guage to DISTRIBUTE EVENLY OVER THE SURFACE, any desired number of pounds of Grain per acre, covering the Seed immediately, so that NONE OF IT IS LEFT IN SIGHT FOR THE BIRDS TO DESTROY.
IT IS SIMPLE IN CONSTRUCTION, STRONG, AND DURABLE,
Just the implement the Farmer needs at the present time, to enable him to raise Grain profitably at the prevailing low prices.
It now makes its first appearance on the Pacific Coast. For sale by
KNAPP, BURRELL & CO.,
310 Washington street.
San Francisco, Sept. 10, 1861. 2

PATENT RIGHTS FOR SALE.

The following Patent Rights of very new and valuable inventions (of which we have models to show their value, are now offered for sale. We hold the rights for the States of California and Oregon, and Utah and Washington Territories.

A Fortune for a Mechanic.

We have the PATENT RIGHT for the whole Pacific Coast for the best and most celebrated HORSE HAY-RAKE known.

ALSO—A CIDER-MILL and PRESS of the most approved construction.

A fortune can be made with either of these machines, by an energetic mechanic. The models may be seen at our office.

No. 1. A New Rotary Subsoil Plow.

Patented April 6, 1858.

This invention completely pulverizes the soil after lifting it, a very valuable implement, and one which will receive universal commendation.

No. 2. A Corn Cultivator.

Patent now pending; papers expected.

With this implement the soil is first thoroughly plowed and deeply pulverized, and upon the return it smoothly and perfectly hills up and harrows the ground between the rows. A very new and valuable implement.

No. 3. An Improved Clothes Reel and Bar.

Patented January 3, 1860.

This valuable domestic piece of furniture can be used in the Laundery, the Kitchen, the Nursery or Chamber, and can be made plain or ornamental; standing in the same relation as a piece of important furniture as does Wheeler & Wilson's Sewing Machines; neat when used and ornamental when not in use.

No. 4. The Mechanic's Spirit Level.

Patented September 13, 1859.

This implement will be of great value to Contractor and Builders, being one of the most valuable inventions yet out. 2000 were ordered for the New York market just before the sailing of the steamer. Builders will do well to examine this model.

No. 5. A Muskato Bar.

This will be much wanted in California. It is simple in its contrivance, perfect in its working, and can be affixed very cheap to all styles of bedsteads. Hotels, public houses and private families will find it a useful invention.

Also, Hyde's Patent Post-Driver,

A most excellent labor and money-saving machine, for which we offer rights, as will be seen by a card in our columns.

Holding the rights to all these new inventions, we invite the public to call and see the models. All persons who may be desirous to purchase either County, City, Town, or Individual Rights, can do so on application to

2 COL. WARREN, Editor Farmer

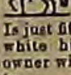
HOGS! HOGS!! HOGS!!!
THE HIGHEST MARKET PRICE WILL BE PAID
For Grain-fed Hogs,
At the Pork-packing House of
WILSON & STEVENS,
Corner Broadway and Sansome streets.
N. B.—Parties having tule or slop-fed Hogs NEED NOT apply. 5

WANTED, TO LEASE, ETC.

800 Acres Excellent Land
FOR SALE.

A SPLENDID TRACT OF LAND OF 800 acres, at the Mission San Jose.
This tract of Land is of the very best quality in all this section, suitable for Grain, Vineyards, Orchards, or grazing.
The Title is perfect. The Land will be sold at $25 an acre, one-half cash, balance one, two, and three years, at 1 per cent interest.
Whoever desires a splendid tract of Land, in a beautiful location, commanding in prospect, with everything desirable for a large Ranch or Homestead, will find this a rare opportunity. Inquire of
H. G. ELLSWORTH, on the premises,
11-3m Or of the Editor of this paper.

Saddle-Horse For Sale.



A FINE SADDLE-HORSE, FOUR YEARS old, got by Imp Lawyer; is well broken, and can run a mile in 1.55, when in racing order. Is just fifteen hands high, bright bay, with a star and white hind foot; a perfect gentleman's horse. The owner wishes to sell him for want of use for him. Apply to T. B. MERRY;
21 Farmer Office.

Breeding-Mares Wanted.
A PARTY WANTING A FEW MARES OF GOOD quality, would like to exchange Real Estate of improving value for the same. A band of twenty or thirty MARES is wanted. The Real Estate is in Sacramento. 18

BAILEY'S PATENT
COMBINED
WASHING AND WRINGING
MACHINE.

Patented April 5th, 1859; and March 27th, 1860.
THIS MACHINE IS ADAPTED TO ALL KINDS OF Clothes, from a pocket handkerchief to a bed-quilt. You can wring your clothes in less than one quarter of the time, and so much dryer that they will dry in one half the time, and not injure your clothes one half as much as when twisted by hand. This Machine is formed with
TWO SPRING ROLLS COVERED WITH RUBBER,
And so constructed as to run together with great pressure, and turn fast and easy. The springs in the rolls are so constructed as to yield the most in the center, where the bulk of the clothes are conducted as they pass between them. By this means the springs with the rubber close so tight around the clothes that they come through
NEARLY DRY ENOUGH TO IRON.
However uneven the garment may be, it receives an equal amount of pressure. It is also sufficiently strong and so arranged that it can be run by power for LAUNDRIES, FACTORIES, LARGE HOTELS, &c. Although it is a small and simple Machine, it is able to do a large amount of work in a short time.
This Machine has been thoroughly tested for sixteen months past, and found to do everything that it was designed to do. And after any one buys one of them, and finds it will not do what I claim for it, they can return it and have their money, as all my agents are authorized to do this. So there is no chance for you to get humbugged by giving them a fair trial, and it may be just the thing you want.
To wash with this Machine, put your clothes to soak for about twenty minutes in strong soap-suds and warm water, then run them through the rolls five or six times back and forth into the suds, when they will require no rubbing excepting the very dirtiest parts, such as collars and wristbands, which will require but a slight rub with the hands. By this process you will be able to do your washing in less than half the time you can by hand, or any other Machine in use, and much easier, and no wear or tear to your clothes, like the rubbing-board and twisting to get the water from them—as you can see the principle of my Machine is to squeeze instead of rub and twist, which evades all friction.
CHAS. T. DARROW, San Francisco.
General Agent for California and Oregon.
A Machine will be on exhibition at F. D. Cottle's Carpenter Shop, Pine street, below Sansome.
Price—20 to 25 Dollars.

THE CATARACT
Washing Machine
AND WRINGER.
Rubbing and Wringing Done Away!

THIS MACHINE IS REMARKABLE FOR THE FOLLOWING QUALITIES WHICH IT IS WARRANTED TO POSSESS:
It will wash and rinse the finest Lace Collar, or the largest Bed-Quilt.
It washes Flannels without shrinking them.
It does not wear the Clothes and never breaks a button.
It is perfectly simple, very strong and durable, and cannot get out of repair.
A common hand can with ease and perfect safety to the Clothing, wash FASTER and BETTER than FOUR Washer-women can by hand.
WRINGING IS DONE FIVE TIMES AS FAST as Clothes can be wrung by hand, and removes the water so thoroughly that the CLOTHES DRY IN HALF THE TIME.
☞ The Machines can be seen in operation at our store. Always for sale by
JOHN G. ILS,
176 (old number) Washington street,
16 Next Maguire's Opera House. SAN FRANCISCO.

Jebb's Patent Churn.
THIS NEW PATENT CHURN IS NOW READY TO be seen and tried. It is beyond question one of the best and simplest constructed Churns ever invented, and Dairymen should call and examine it.
By the action of the crank, three distinct currents are made, which moves the cream with such rapidity that Butter is made in from three to five minutes with ease.
This Churn can be seen at the Farmer Office.
Patent-Rights can be had for all the counties in the State, and any experienced carpenter can make a fortune easier by these Churns than by gold digging. They only need to be seen to be approved. 13

Wholesale Produce Report.

This represents the prices paid by the dealer to the producer.

[Corrected weekly, by TODD & RICHARDS, No. 45 Clay Street.] Sept. 26.

RECEIPTS of Grain of all kinds upon our wharves still continue large, but no accumulation of Wheat takes place, as shippers and millers readily take up all arrivals, except, perhaps, a few thousand sacks, placed upon the wharves within a few days, of shrunken or "pinched" Wheat, which export buyers refuse, and millers decline taking, except at extreme low rates. Shippers have advanced their rates, and are now paying $1 50 to $1 55, and a still higher rate could be obtained for a sound lot of extra choice quality. Millers now find less difficulty in supplying themselves with the lower grades of Wheat than for some time past, as more of these qualities now seem to be placed upon our market. But in competing with shippers, for the choice grades, they pay even an advance upon shippers' outside rates, for strong Wheat for "Bakers'" Flour. We note sales of this description of Wheat as high as $1 60 for milling, in small lots. Late advices both from England and the States are unfavorable, so far as advancing rates at this time is concerned, and we can only attribute our late advance to competion among buyers, which just at this time is strong. A few parties are investing in Wheat for speculation, but the movement is far too limited to affect the market beyond the present time.

Barley arrives freely, and just at this time is dull of sale. A slight falling off in price is noticeable, and 85c may be quoted as the outside figure for a choice article.

Oats have accumulated to quite an extent upon our wharves, the quality of the same being generally quite inferior, which almost precludes sales at any price. We quote prices $1 05 to $1 12.

Hay still dull at our last quotations.

The Receipts of Produce for the past two weeks have been as follows:

Four, 18,991 qr-sks; Wheat, 140,331 sks! Barley, 25,952 sks; Oats, 24,998 sks; Corn, 185 sks; Potatoes, 8683 sks; Wool, 469 bales; Hay, 1045 tuns.

ONE LOT OF 350 EWES, } All super or.
ONE LOT OF 630 EWES, }
SPANISH MERINO BUCKS, }
SOUTHDOWN BUCKS, } Both very extra

Inquire of Editor of Farmer. 23

From the East.

THE telegraph is being rapidly extended across the Plains, and will soon be completed the whole distance. Communication has, however, been lately interrupted in Missouri by the rebels cutting the wires and obstructing the railroads; but this would soon be remedied, as the Federal troops had occupied St. Joseph.

The most important news by the latest Pony, is the partial recognition of the "Southern Confederacy," contained in the following proclamation issued by the Captain-General of Cuba, from her majesty the Queen: "I have declared, under date of August 7th, that all vessels occupied in legitimate commerce, proceeding from ports in the Confederate States, shall be entered and cleared under the Confederate flag, and shall be duly protected by the authority of the Island. Foreign Consuls will be notified that no interference on their part will be tolerated."

There is said to be plenty of Cotton in England yet, sufficient to run one year without touching the new crop.

The rebel army was said to be falling back on Manassus, yet a great battle was soon anticipated.

The news from the naval expedition to North Carolina is very important. After two days' engagement with the forts at Hatteras Inlet, they were captured, with slight loss, and 700 prisoners taken, besides large amounts of military stores, and vessels loaded with Cotton and Tobacco. The position is of moment, as the Government has obtained a foothold to compel a diversion of the Confederate forces, it being hardly possible that a struggle will be made againt them. This will have great effect on the money market, giving faith in the will and power of the Government to take such vigorous measures as must soon bring the rebellion to a close. There is still the utmost activity in sending off troops. The War Department, too, have pushed aside routine by appointing fit persons in the volunteer force in spite of the regular grades. One orderly sergeant who displayed notable bravery at Bull Run has just been made a Captain.

Besides the vessels seized for illicit trade with Texas by way of Metamoras, of forty-five different vessels, loaded, and some cleared, there has been one steamer, the Marion, nine ships, eight barks, two brigs, and seven schooners, seized under the Confiscation Act recently passed. In Boston, the U. S. Marshal is doing the same.

New York State has sent off some sixty regiments for the seat of war, with more preparing.

There is still great discussion about Cotton. It is said that Brazil, Natal, and especially Nicaragua, are every way suited for its production.

The 69th regiment (Irish) have had a very successful monster festival at Jones' Wood lately, for the benefit of its widows and orphans. The first week of September, the Scotch (79th) regiment, who fought side by side with them, were to have a similar affair.

The Secretary of the Treasury, Chase, has made an appeal to the people to subscribe to the loan, for which books will be opened throughout the United States. The loan was being liberally taken by the people.

There is a revival in business. Jobbers and importers report increase of transactions, especially in the Dry Goods trade, due to a reduction of stock in hands of country dealers and retailers. No long credits are given; most sales are cash, or sixty and ninety-day paper. Domestics are uneasy on account of the flutter in Cotton.

The Havre packet ship Wm. Tell was destroyed by fire on Monday morning, the 2d. No loss of life. The loss, in vessel, cargo, and personal property, was about $150,000. The sailors were arrested on suspicion of firing the ship.

A late heavy gale on the Florida Coast has disturbed the blockading force and wrecked many vessels.

A report from Louisville, Kentucky, says that the Confederate Congress has adjourned on account of the illness of Jeff. Davis. There is a report in circulation (not confirmed) in the N. Herald from the same place, announcing his death, which, if true, accounts for rebel flags being half-mast. The Vice-President, Stephens, is also sick.

GEN. MCCLELLAN'S WAR PREPARATIONS.—The Chicago Journal of Sept. 1st says: We learn from a private source, worthy of credence, that Gen. McClellan, on last Tuesday morning, had 52 batteries of artillery, of six guns each, of various caliber, and about 150,000 men, at and near Washington, and that this army will be increased to at least 200,000 men before the end of the present week. The organization and drill of these troops are going forward with industry and care, and the degree of discipline already apparent in every company, regiment, and brigade, is in the highest degree creditable to the officers and men, and promise great effectiveness in any future operations that may be undertaken against the enemy. The movements of troops and everything connected with the army preparations, are carefully kept from public knowledge, but the facts above given (to state which can be no harm now, but will gratify public interest) may be relied upon, coming, as they do, from one who knows whereof he speaks.

TOMALES BAY.—We call attention of those who wish a pleasant trip to the country, to enjoy Bay Scenery, and also a season of Hunting for Deer, Quails, Rabbits, Hares, Ducks, Geese, Brant, etc., with the fine sport of good Fishing, to the Preston House, at Tomales Bay, where they will find an excellent Home, and will be provided with all the requirements for their varied excursions, and enough of this world's comforts to make them enjoy to the full their trip to the country. We know the Host of the Preston House, and none better than Col. Preston to make everybody very happy.

Jebb's New Patent Churn.

This famous Churn can now be had at our Office. We have had some made to answer the demand. They are a grand Churn. Persons at a distance can be suppled by sending an order with reference for the amount, $12 50. Patent-Rights for sale.

A Chance for a Saw-Mill.

An experienced man at the Saw-milling business, one who has a cash capital of $5000, can hear of a chance by which he can secure a half-interest in a Saw-Mill, a Farm, and a Stock-Ranch, where his money can be doubled every year. The present advertiser wishes to go to the Atlantic States, to be absent some months on important business, and he desires to find a partner in whom he can confide. None need apply without they have the means, and can make the references all right. The Right Man can secure a grand chance.

Inquire of the Editor of the Farmer, who will give all particulars.

Valuable Blood-Stock For Sale.

We would invite all who desire Dairy-Stock of the very highest character, to call on us, or write to us, as we have for sale about twenty-five head of as choice Durham Stock as there is for sale in the State, as follows:

One Full-Blood Durham Bull, 2 years old, of the highest pedigree, and as handsome an animal as has ever been offered in this or any other country.

One young Full-Blood Calf, 8 months, a perfect picture.

Several younger Blood Calves.

About twenty Cows and Calves, Durham, Devon, and Ayrshire, with Calves by their sides.

Among the Cows are some of the very best milkers in the State. Inquire at the Farmer Office. 18

A Grand Opportunity for a Home.

For sale in one of the interior Mountain Towns, a good House and Garden, with outbuildings, including a Smoke-House in successful use, being capable of realizing a good income.

The buildings are good. The Orchard is in full bearing, with Peaches, Plums, Apples, Grapes, etc., and small Fruits. There are also on the estate several small tenements, which bring in an income of about $30 a month. The Fruit sold from the Garden, together with the certain income, will pay in two years or less the price now required for the estate. It is offered low for an immediate Cash sale, as the owner desires to locate in a different part of the State, where he has other property which requires his attention.

For particulars inquire of Editor of Farmer. 24

Pulu! The Wonderful!

ANOTHER cargo still, is just received
At SCHREIBER'S Depot! 't is believed
There is a charm about the PULU crop,
It comes, and goes,—the sale will never stop;
For everybody wants a PULU BED,
So EASY to the body, so COOLING to the head;
Another charm, too, in the PULU found—
Where PULU is, no INSECTS come around.

PULU! the famous PULU, now is known
As BEST FOR BEDS, and it has grown
So much in favor that the People go
Always to SCHREIBER'S great PULU Depot;
'Twas Schreiber had the first 'twas ever sold,
And then it almost cost its weight in gold;
But now, his ships, they come so thick and fast,
It sells so quick, a cargo does not last
A month or more, and then, it is so low
That all who want GOOD BEDS should surely go
Direct to SCHREIBER'S STORE on Sansome street,
There they will find a stock complete,
ALL KINDS OF BEDDING, everything that's wanted,
There too, the best accommodation granted.

Now don't forget the Number, 'tis 406;
Another fact upon your memory fix—
That Schreiber's is THE DEPOT OF PULU,
And HE the PIONEER IMPORTER TOO;
The man who first this luxury gave,
Then surely he *the best of trade should have.*

Now go and make your purchases complete,
At SCHREIBER'S, 406, on Sansome street. 1

To Wool-Growers!

THE SUBSCRIBERS WOULD call the attention of the Wool-Growers of California to their flock of

Fine Full-Blood Merino Sheep,

Which is acknowledged by the best judges to be the finest flock of Sheep in this State.

Our flock originally consisted of nothing but Full-Blood Merino ewes, and the bucks were imported from the celebrated flocks of J. D. Patterson, Chataque Co., N. Y., consequently we have never had upon our ranch anything but the finest Full-Blood Stock. We now have

A Limited Number of Bucks For Sale,

Which we intend to offer at such prices as to place them within the reach of all who wish to improve their flocks of Sheep. There has never been finer Stock imported into this State, and the bucks we now offer for sale have the advantage of having been

REARED HERE,

And Fully Acclimated,

Therefore more desirable than imported Stock.

Persons wishing to see our Stock, will find a sample of our bucks at FISH'S STABLES, on Pine street, San Francisco.

For information concerning the Clip from our flocks for this year, and quality of the Wool, we refer to Mr. J. E. PERKINS, Agent of the Wool-Growers' Association, San Francisco, or to Col. WARREN, of the California Farmer, who will show the Bucks to purchasers.

Persons wishing to address us will send letters to care L. B. BENCHLEY, San Francisco, who will give any information required concerning our flock of Sheep.

16 Rancho Passo Robles, San Luis Obispo Co

Southdown Bucks
For Sale.

THE SUBSCRIBER NOW OFFERS FOR SALE
200 Half-breeds;
100 Three-quarter Breeds;
20 Seven-eighth Breeds.

The above BUCKS are bred from American Ewes, crossed with full-blood Southdown, imported from the stock of J. C. TAYLOR, of New Jersey, and are of the "WEBB STOCK."

Among the sires are found the names of MASTER FORDHAM, MASTER FRANK, and WORLD'S PRIZE—the finest sheep ever sent to the States by Mr. Webb.

I will guarantee them to be of the grade marked against them, and equal to any in the State.

Their hardiness of character, aptitude to fatten and maintain their flesh on short feed, render them a very desirable class of sheep for Breeders.

....ALSO....

30 Half-breed FRENCH MERINOS;
30 Half-breed LEICESTERS.

The above will be sold at prices to suit the times.

For further particulars, inquire of the subscriber, on the Ranch, "SAN JUAN GRANT," fourteen miles from Sacramento, where the Sheep can be seen: or of A. REDINGTON, Esq., Sacramento city.

Annual Address by Wilson Flint,

Before the Eldorado Agricultural Society, at the Exhibition held at Eldorado City, Sept. 13, 1861.

MR. President and Members of the Eldorado Agricultural Society, and Ladies and Gentlemen:

The most pleasing and startling fact connected with the settlement and progress of California is seen by the presence of so many of the citizens of Eldorado county, met here amid the gorges of the Sierra Nevada to celebrate an annual Agricultural Fair. Scarcely ten years have passed since the surrounding hills were covered by the primeval forests, beneath whose darkness and gloom no sound broke the silence save the wail which rose on the storm, mingled with the howl of the beasts of prey which found undisturbed lair in the jungle by the side of mountain torrents which never ceased their hoarse murmurs. Indeed, this whole outlying region was of so dreary and desolate an aspect that the savage Indian has left within it but few traces of his lodge, nor scarcely marked his war path through its dark defiles. Even the covetous Spaniard, after a century of conquest and rule over the simple native who swarmed the open plains which stretch along the sea, with all his boldness and love of adventure, was still content to admit that these mountain wilds were a "terra incognitia" at the moment they received the avalanche of Anglo American civilization, whose shout rose from the cañon at Coloma, Eureka! Eureka!! What a marvellous change! The river, which leaped in wildness along its rocky bed, and flashed the dancing sunbeam among golden sands in its clear mirror, blending liquid music to the sigh of the arching pines, is no more. The grassy turf, in which was nurtured the perfumed honeysuckle, while it festooned the rocky walls until its flowing lips kissed the bosom of trembling waters, is swept away, and a dull red stream instead oozes along, over shoreless desolation, the useful slave of avarice.

From the time of the discovery of gold, the opinion was entertained by those working the mines, that the land in the gold-bearing districts was worthless for any other purpose than mining, and this opinion has found industrious circulation in distant communities, greatly to the detriment of our permanent prosperity. Indeed, tourists have, until a recent period, represented the mineral districts of California as of no value whatever for agricultural purposes, and predicted that when the gold placers should become exhausted the country would be deserted, as there was no source of labor to employ a contented population in these localities aside from mining. Even the Federal Government, usually well informed in its land policy, and correct in its system of disposing of the public domain, has fallen into the prevailing error with regard to the true character of the lands in our mining districts, by having reserved them for mining purposes, thereby practically withholding them from the agriculturist.

It is to dispel this error with regard to the exhaustless wealth of your county, found in other branches of industry than gold mining, that you have established an Agricultural Society; and when the eye gazes upon the various agricultural and horticultural products which swell the splendor of your exhibition, it becomes apparent how unfounded and gross the opinion is which could not place your mountain districts in the front rank as an agricultural country; and while you have accomplished so much in planting the germ of a noble, powerful, free and advancing civilization, it is a source of unspeakable pride to me to have the honor of addressing you on this grand occasion, and if the crude ideas I am able to present to you in furthering the common object of directing attention to the sources of exhaustless wealth to be derived from the virgin richness of your lands, can speak half as eloquently as the cheerful faces and happy hearts surrounding me, then I shall feel that my feeble effort has in some measure added interest and instruction from an occasion joyous, I trust, to all who meet here to celebrate it.

Eldorado county comprises an area of about two thousand square miles, no acre of which is claimed under a Spanish or Mexican grant; hence the nightmare of endless litigation will never fall upon the prosperity of your people from this source, as it has done in many parts of the State. True, however, you labor under a serious disadvantage in regard to the tenure of land in the mining sections, the most of it being withheld from entry at the land offices of the Government, being reserved for mining purposes; so that it is nearly impossible to obtain vested rights in such lands as shall have a completed title of record, which leaves you at the hazard of a possessory right only. Now up to the period when these lands shall not have obtained any very great intrinsic value, and while living witnesses are convenient to prove priority, no great inconvenience can be felt in the adjudication of conflicting claims; but as this great region becomes densely peopled, and thriving industry shall rear up among the valleys of the mountain wilderness busy villages and swarming cities, taking their thrift and prosperity from a thousand vine-clad hills, what then will be the peril of those who have made this wilderness to bloom and blossom as the rose! In the dim years to come, when the dust of time shall have obliterated every landmark from the fading memory of living men, or the present generation shall have been gathered to the peaceful slumber of their fathers, and these vines and fig trees planted by your hands shall have a value to tempt the cupidity and avarice of future generations, would it not be far better that there should follow in the changes of time a chain of vested rights derived from the Government, and fortified against all dangers by the records of the public archives?

For several years, indeed, since I became aware of the value of the lands in the mountain districts for agricultural purposes, the impossibility of procuring titles to these lands, which would be of legitimate record, has been to me a source of deep and increasing anxiety, and I have felt that each year's delay in the adoption of some practical plan for the disposition of the lands in the mining localities, more and more complicated the whole question. That the Government title should become extinguished to what are known as the mineral lands of California, is becoming more apparent every year, even to our mining population—a class of persons jealous, and rightfully so, of every measure calculated to concentrate in the hands of monopolists the minerals of the country.

High considerations of political economy demand that the population of our State shall become more fixed in their habitation, and this can only be secured by the citizen becoming a landed household proprietor. The manner in which these public lands shall be disposed of is surrounded with grave difficulties, on account of rights in mining claims, farms and town locations, which have been made rather as temporary than permanent possessions. The dissimilar condition of the public lands designated as agricultural and mining lands respectively, makes it obvious that the general laws applying to the first will not be found suited to the latter; hence the necessity for legislation by Congress which shall be adapted to the complications which have grown up around the subject of the mineral lands of the nation. Were Congress to cede to the State of California all those lands set apart and known as mineral lands, with the condition that they shall be disposed of in such manner as our State Legislature should deem most appropriate, the proceeds to be applied to the building of the Pacific Railroad in the State, then we might have a practical solution of a question of vast importance to our people. Not only would the extinction of the Government title afford the clearly defined and uncontestible basis, upon which would rest the proprietary interests of the individual, but it would afford the clue to a more equal distribution of the burdens of taxation and add largely to the public revenues. Under individual proprietorship our valuable forests of timber would be carefully preserved for the use of future generations, and its wholesale destruction averted, which, under its present improvident use, may be regarded as a public calamity.

The spoliation of land, which is a necessary result of surface mining, gives to the mining districts a dreary and desolate aspect, as wherever the eye traces the river margins it meets the ever-moving drifts of bleaching sand and glistening bowlders hurried onward from the miner's sluice. Thus almost every flat piece of land formed between the jutting hills by the annual accretions of leaf mold and decaying vegetation, has been sluiced into the rivers to be floated down and deposited in the channels of our navigable waters. Were an estimate made of the number of acres of the richest land in the State thus destroyed and lost forever to the husbandman, its aggregate would be astounding. To the original value of that land, add the cost of the labor used in its destruction, and see whether—had such labor been applied to the planting of the vine—California would not at this day have been far richer. Within the grape-producing range of our mines, there probably has been an aggregate of five hundred thousand acres of surface diggings where the soil is entirely washed away—the labor of doing which, has cost not less than two hundred million of dollars—to which add the cost of lumber for dams, flumes and sluices, and there will be an added like sum, making a total of four hundred million of dollars expended in destroying five hundred thousand acres of land. Two hundred millions of the above sum would have planted the five hundred thousand acres with choice grape-vines, and provided the appurtenances for wine-making, besides building up flourishing towns and cities to shelter the large population required to conduct the labors of the vintage. Let us glance a moment at the value of the five hundred thousand acres in vineyards. It has been stated by competent authorities that good vineyards are valued from four to six thousand dollars per acre in portions of Europe. Five hundred thousand acres at four thousand dollars per acre would foot up to the astonishing sum of two thousand millions of dollars. Calculating the net receipts of the five hundred thousand acres at ten per cent per annum, which is a low estimate, and the income would be two hundred million dollars each year. The labors in manipulating this enormous vintage would demand a vast internal transportation, and build up cities by the sea where a mightier fleet would appear than ever yet dotted the Pacific Ocean.

Have those who have been engaged in the spoliation of so much of the best land in the mining districts, received to any considerable extent adequate compensation for so prodigious a labor? I think an examination into the facts would prove they have not. Were an estimate made of the cost of all the labor expended on surface mining, and the value of timber used in its varied operations added, the sum total to be charged to this branch of mining would, without doubt, absorb the entire sum of gold extracted from such enterprises, while a computation of the damages accruing to posterity from the spoliation of arable land and timber will not be appreciated by the present generation.

During a recent extended tour through the mining districts, I observed with little regret that general surface mining was on the decrease among our white population, it having become monopolized to a great extent by the Chinese, a class of laborers who should never have been permitted to become proprietors of mining claims. Indeed, the policy of encouraging the domicil in our midst of a race of people who are excluded from citizenship, has been a grave error. In a free democratic representative government, the existence of caste is unnatural, and where it is found to any considerable extent, the inferior race become the "hewers of wood and drawers of water." Under this condition of things, labor—that stimulant of all progress and useful enterprise—is shunned with contempt by the privileged class, and all conditions of society become involved in the self-inflicted paralysis.

I have stated that more than a half-million acres of land have been destroyed by surface mining; let it not be inferred from this that there is a scarcity of good tillable land, suitable to all kinds of agriculture, in the mining districts. The best vineyard lands are yet covered with chaparal, or lie parched and sear under the midday solstice. It is on the rocky and steep hillsides of the vast region lying east of the Sacramento and San Joaquin rivers, known as the foot-hills of the Sierra Nevada mountains, that the greatest wine district of the world will yet be found. This area embraces the wide rolling sandy plains, and ascends the hills to an altitude of 2500 feet, covering a breadth of sixty miles, and a length, from the Tejon Pass to beyond Shasta, of about 700 miles, containing millions of acres of land suited to vine culture. Nor does this include the plains west of the Sacramento, and the hills of Solano, Napa, and Sonoma, to say nothing of Santa Clara, Monterey, Santa Barbara, San Luis Opisbo, San Bernardino, and the outstretching, illimitable valleys of Los Angeles and San Diego, where the mellow winds of the Pacific Ocean lisp of Eden among orange groves, clustering vines, and the olive.

An examination of the meteorology of your county will discover that you are favorably situated, being in the track of the moist winds which break through the Coast Range walls, which are depressed at San Francisco. The configuration of the land at San Francisco is such, that the ocean wind, drawn inland by the heated lands of the interior, are forced through the tunnel formed by Monte Diablo on the south and the Solano hills on the north, which, expanding as it sweeps over the bay of Suisun, and the extensive tule country about the confluence of the Sacramento and San Joaquin rivers, becomes modified and invested with a great amount of humidity, to be deposited along its track. This meteorological phenomena is as advantageous to the vegetable kingdom as it is grateful to animal life. These ocean breezes are felt more sensibly in El Dorado county than further north or south, as their course is nearly eastward from Benicia, until they meet the Sierra, when they part in an eddy current to the north and south, which make your morning mountain breezes. Thus, your county is favorably situated for the most perfect success in all departments of fruit culture; for, let it be remembered, that all fruits receive their principal supplies of food from the elaborated juices of the leaf; hence, it is of first importance that the foliage of a tree or vine should be kept in a moist and luxuriant condition.

So far as general agricultural productions are concerned, particularly in the cereal crops, your county can hardly expect to compete with the rich deltas bordering the Sacramento and San Joaquin rivers, or the magnificent valleys and plains of Yolo, Solano, Napa, Alameda, and Santa Clara, where, in no long time, the steam-plow will revolutionize even their present marvelous facilities for cultivating and harvesting enormous crops of grain. It is true there are vast ridges of red lands above an altitude of 2500 feet, on which you may raise wheat, barley, and oats, of a superior quality; yet the obstacles against the application of labor-saving implements in plowing, sowing, and harvesting, will be such that you cannot well excel in cereal agriculture, although it will be a wise economy for you to produce sufficient for your own consumption. If the configuration of your mountain lands is such that the steam-plow and the steam-reaper will be debarred from their manipulations, which are like the sweep of the hurricane, you may feel no regret, as this very eccentricity of topography has given you a formation of soil and climate in which you can have no compeers for the production of the world's richest vintage.

The vine will become the new and exhaustless source of wealth which is to plant in the salubrious and freedom-loving atmosphere of your mountains, a populous, intelligent and happy people, from whose voluntary and cheerful industry shall flow, through the ages to come, streams of wealth, inundating every mart of commerce, and bringing back to your doors the contributions of the world of luxury, art, science and literature.

Gold mining, as an employment, has illy remunerated those who have devoted to it years of the severest toil, and it may be said with candor that Europe and the Atlantic States have profited most by the gold discovery. It has been our misfortune that our large imports up to this time have been subject to double freights; as, when vessels had to take ballast for a return cargo, the expense of the voyage would be chargeable on the outward one, it being apparent that if ships could procure return cargoes, the freight on our imports would be cheapened one-half. The gold export of California, although enormously large in intrinsic value, is insignificant as a commodity of return freight, and involves a trifling expenditure for its transportation from the sluice-box to the bank vaults of Wall street. Were the sixty million annual export of gold so much wheat or wine, its carriage would gridiron our interior with railways, and fill San Francisco Bay with a mighty commercial marine. In fine, if a miner takes out of his claim $1000 a year, the proceeds of his labor can be transported to market in one's vest-pocket; while, if it were in wheat or wine, three of our mountain clippers would be required to haul it to navigable waters, thus multiplying employments—the expense of which are chargeable to the consumer abroad. The question was asked at an early day of the gold discovery, as to what would be done with all the gold likely to be added to the bullion of the world from the new El Dorado, and one of the German States lost no time in prohibiting gold as a legal tender—a remarkable, and it is hoped isolated instance, of a people guarding against having too much money. In like manner, also, when we began to produce such marvelous crops of wheat, it was said that our supply would vastly exceed the demand; yet, wheat commands remunerative prices at the door of the producer, and however large may be the surplus raised, it will find markets abroad. So of wine. Indeed, in the latter article, it may be truthfully said that the soil and climates in which the grape will flourish are confined to a limited portion of the globe; and in France, Spain and Germany, long the great wine-producing countries, the culture of the vine is becoming an occupation of much hazard, on account of diseases which, in unfavorable years, destroy nearly the entire vintage.

The production of pure wines has not kept pace with the rapid increase of population, and the consequent demand induced by the tendency of this age to luxurious habits; and in order to meet the constantly increasing consumption, recourse is had to sophistications of the grape-juice to swell its quantity; and to a vast extent the entire falsification of beverages passed upon the ignorant public as vinous, are nothing but a compound of drugged vegetable juices, of which the grape forms no part.

It has been ascertained by meteorological observation that the seasons are becoming more cold and humid in the south of Europe during the summer, and it is thought to be the cause of the mildew and blight which is so destructive on the grapes in the vineyards of France. The mildew on the grape in California makes its appearance during the sudden changes of the weather, while the grapes are in the process of forming the seeds, and is simply caused by minute quantities of the aciduous juice pressed to the surface of the skin by the rapid expansion of the seed; the juices corroding the moment of coming in contact with the chilly night air, form a species of tartaric acid on the grape. I have been led to this theory by having noticed the effect of puncturing the young and rapidly developing peach-leaf with the point of a needle, during a chilly, raw spell of weather, when it would become covered with a fungus called the curled leaf. The peach is strongly impregnated with prussic acid, and it can be noticed in a marked degree on a fungus leaf, the aciduous juices of which, being exposed to a cold atmosphere, corrode and form an acid in a higher state of elaboration.

[TO BE CONTINUED.]

Hurrah for the Buckeye State! Good for Ohio!

WE ask the attention of our readers to the following wise act of the Legislature of Ohio.

We think the visitors to the various Fairs already held in our State could not but have seen with what eagerness the various exhibitors of "Learned Rats," "Dancing Monkeys," "Sword Swallowers," "Overgrown Humans," "Animal Abortions," together with "Gambling Tables" of all kinds, sought out the best positions, and crowded up and around the very Hall of Exhibition, until their presence and noise became a nuisance, and will see this evil in its true light, and aid in measures before another season to stop the evil for the future. The remarks of the Editor of the Working Farmer are pertinent. The time of those that should be given to Lectures and Debates is consumed in foolish shows, and the great aims and objects of our gatherings is almost wholly lost.

As far as we have learned, there has not been a single meeting, at any of the Agricultural Fairs thus far held, for the discussion of the subjects connected with the science of Agriculture. In all other States, meetings are held on almost every evening, where the Farmer, Orchardist, Dairyman, and Stock-raiser, come together and give their experience in a pleasant and familiar way touching their past year's labors. The results of such meetings have done great good. We regret that this plan could not have been adopted here; but until our Agricultural Societies are managed by those exclusively who are real live practical Agriculturists, instead of Professional Men, and men elected on account of wealth, title, or outside influence, the great practical good that would result to the cause will be lost:

LAW TO PROTECT FAIRS.

SECTION 1. *Be it enacted by the General Assembly of the State of Ohio*, That it shall be unlawful for any person to exhibit or show any natural or artificial curiosity for any price or gain, or to set up to let or use for profit any swing, revolving-swing, flying-horses, or whirligigs, within one-fourth of a mile of the Fair-Ground of any Agricultural Society in this State, while the Fair of such Society is being held therein, unless such person shall first have obtained the written permission of the Board of such Agricultural Society to make such exhibition.

SEC. 2. That if any person shall violate the provisions of this act, he shall, on conviction thereof, be fined in any sum not less than one nor more than one hundred dollars; and all moneys derived from the violation of this act, shall be appropriated to the support of Common Schools. Passed April 6, 1861.—[Field Notes.

We are glad of the above enactment. It is quite time that Agricultural Fairs should be freed from the annoyance consequent upon gamblers' booths, exhibitions of fat children, and other monstrosities.

The true spirit and intention of these Fairs have been sadly perverted; indeed, these frequent exhibitions and amusements, where Fairs have been held, seriously interfere with the Agricultural Lectures, etc., appropriate and needful to the occasion.—[Working Farmer.

* * *

BREAD AND HONEY CHEAPER AND BETTER FOR CHILDREN THAN BREAD AND BUTTER.—Will parents look at this question, both as it regards Health and Economy in the family? Honey now is offered at reasonable rates. But let all who want good pure Honey, buy it *in the comb*. Three-fourths of the *strained* Honey sold is *made* Honey, and what is usually peddled, unless by a known Apiarian, is unfit for use. Honey, when pure, is a great luxury, and should be in every family as common as Butter. In New England, Butter and Honey are usually equal in price. Honey can be purchased here for much less than Butter, and will go much further, so that this luxury can be easily enjoyed by every family in our State. We would refer our citizens to the stand of Mr. Rumrill, in the Washington Market, who always has *fresh* and pure Honey at fair rates.

Sewing-Machines—Farmers' Grain-Bags.

ONE of the heavy items of cost to the Grain-Grower is the bags for his Grain, and large growers of Grain expend for bags alone several thousands of dollars annually, the cost of bags varying from twelve to twenty cents each. Twenty-five per cent of this cost could be annually saved by the Grain-Growers if they would practcie a wise economy.

It is almost always the case that they put off the purchase of their Grain-bags till the very time they are wanted; then the great demand causes a rise, often of twenty-five or fifty per cent, whereas, if they would purchase in the Winter or Spring previous, a great saving would be made. Another great saving could be made by having their bags *made at home*—a saving of at least twenty-five per cent. Some may say our women folks cannot make five, ten, or twenty thousand sacks every year. Well, if the women folks cannot, the boys and girls can. And if the Grain-Growers is a poor lone bachelor, he should "sit up nights," and work alone, as a punishment for the sins of single blessedness and the wrong he is guilty of to himself and his country; and as the candle burns down in the socket at the "midnight hour," let him remember there are "hundreds" of "noble-hearted girls," that would gladly aid him in his work, if he will only be a man and eschew a bachelor's life.

The present cry that Farmers cannot live at the *present price of Grain*, is a mistake; they can live, and live well, too, if they will only adopt a wise system of Farming. Ten cents saved on each bag of Grain is an important item, and this can be done by purchasing the material at the right time and making the bags at home. The time and money spent in hunting up bags, and then purchasing them at a late season of the year, at an advanced price, this and other extra expenses of the like character, using poor tools, Grain badly cleaned, storing Grain for a rise, when interest is eating it up, these are the causes of non-success. And it will be found that a wise economy at first—deep plowing, early planting, and on summer-fallow land, early harvests, well cleaned Grain in home-made bags, and quick sales at fair prices—will alone make Grain-Growing profitable, and save the grower from loss, disappointment, and ruin.

* * *

TRIUMPH WITHOUT THE PREMIUMS.—The contest which has been carried on so briskly among the proprietors of Sewing Machines for the last few years, at all our Fairs, is almost over. There has not been that fierce rivalry the present year as before, and we notice that H. C. Hayden, Esq., Agent of Wheeler & Wilson's Machines, has adopted a much wiser plan the present year, and instead of spending thousands of dollars for a show at Fairs, he has expended the money in *improving his machines*, making beautiful *Cases* to his machines, of California workmanship, thus enabling him to place his Improved Machines at a lower price than ever before, meeting the wants of the public, and winning their favor and approval. By this means, all hands have been kept busy in preparing and packing up Machines to order, and if *facts* prove anything, they are selling Machines faster and cheaper than ever before, and more than any other concern on this Coast, by a large majority, thus winning a Triumph without a Premium of any Society; and, what is better, the PREMIUM OF PUBLIC OPINION.

The Osage Orange.

THIS fine Hedge Plant is being better understood and appreciated than formerly. It has been, in many cases, successfully grown, both for Hedge and for an ornamental tree. The trouble heretofore has been in not fully understanding the importance of preparing the seed when planted; it should be scalded with boiling water, to break the shell, and then planted early. It often remains in the ground *two years* before sprouting, unless it has been prepared as directed. There are several fine Hedges now in California, as well as large trees. At the Sacramento Fair, we saw large seed-balls of the Osage Orange, shown by A. P. Smith, and also J. McClellan and others. As a Hedge, it has no equal. It can be made so close and compact by pruning, as to shut out even a rat. No kind of cattle can break down an Osage Orange Hedge after it is once formed.

* * *

HOME-PRESERVED FRUITS—JELLIES, JAMS, ETC.—One of the good signs of the times that we notice, is the attention that has been given the past year to drying and preserving the fruits of California. One of the most attractive features of all the Fairs we have attended this season has been the numerous samples of Dried Fruits, Can Fruits, Jellies and Jams, all prepared in such an admirable style as to prove that California will now be independent of all foreign fruits in the preserved class. At Stockton the number of exhibitors was large; at Sacramento, the show was very fine; at Marysville, an excellent show; at Santa Rosa, most excellent; at San José, as usual, a fine show. At all the other exhibitions, the numerous specimens gave evidence that this branch of "Home Industry" is now being well attended to. Our reports will give a list of Home Manufactures in this branch fully, and we hope our citizens will always buy "Home-Made" in preference.

Old Spanish Accounts of the Indians of the Ocean Coasts South.

The Indians of San Juan Capistrano, and the Coast of the Canal of Santa Barbara.

THE CHINIGCHINICH.

CHAPTER XIII.

The Immortality of the Soul.

This chapter may cause some perplexity, from circumstance of its treating of that which is imperceptible to the senses; of a substance incorporeal and spiritual. Still, I can in a very few words make known the belief of these Indians relative to the rational soul, and what they understood concerning its immortality. There are arguments pro and con, which are of particular interest, inasmuch as they involve the future destiny of man: I will be more explicit in my remarks here, than in the preceding chapter, and recount all that I have been enabled to acquire relative to the subject.

In their gentilism, they were undoubtedly materialists, for they believed that the soul was the "*espiritu vital*," received from the air, which they breathed, and which they called "*piuts*," signifying "*to live*." They possessed no knowledge, nor did they believe in the existence of any other substance than the material body. On this account they said (and many believe it at the present time), that man was composed of bones, flesh and blood only; for "*piuts*," which is the breath, is another thing, like wind, that goes and comes. The body they call "*petacan*," a term applied to the brute creation, as well as man, or, rather, to all living or animated beings. To designate the soul belonging to the body from the "*espiritu vital*," they possessed no term but "*pusuni*," which is general in its meaning, and signifies a "substance within," applied to things animate and inanimate, and to the heart, on account of its location, and particular importance to the body.

They penetrated no further than was perceptible to the sense, for the reason that the spirituality of the soul was incomprehensible to them; they only understanding the materials of the body. Thus they were materialists, for they said that when the body died, and was burned, naught remained, for all was consumed. Death, they believed, was an entity, real and visible, who, when in anger with any one, took away by degrees his breath, until all was removed, and then the person died. I have observed in a previous chapter, that the punishments they so much feared from Chinigchinich were all corporeal, such as falling over stones, and upon the earth, the bite of the serpent, bears, etc.; and lastly, death—the termination, without reference to pain, punishment, or glory, afterwards. I think this sufficient to prove that they were materialists; but as they relate a thousand novel accounts, relative to the immortality of the soul, which have proceeded from dreams or delirium, I will recount some of them, as they were related to me.

Materialists, as I have supposed them (without adding other convincing reasons, such as the great insensibility manifested at the hour of their death—the little inclination for divine things and desire for the unholy, which go far to show plainly their want of knowledge of the rational soul, and consequently of its immortality); still, the words or expressions made use of in the tenth chapter, relative to the moon, are of opposing force—viz., "that, as the moon dieth, and cometh to life again, so we, having to die, will again live." But, as I observed in the chapter cited, I cannot comprehend how they understood it, nor can I think that their ancestors believed in the resurrection of the flesh. They may have had such a belief many ages back, and the tradition may have been preserved in songs. Other verses are used in opposition, and are frequently sung at their festivals—viz: "Let us eat, for we shall die, and then all will be finished"—words similar in sense to the passage in the Holy Scriptures, referring to the expressions of the foolish young men.

Let us refer now to some of the accounts respecting the soul's immortality. It is affirmed by some, that 'when an Indian died, he went to the abode of his God Chinigchinich, "a sort of earthly paradise, called "*tolmec*," applicable, more properly, to *hell*; for it implies a location below the earth, and, since their conversion, the same word is made use of in their catechism to signify the abode of Satan. They believed that Chinigchinich "resided in that region; that there was plenty to eat and drink, and to wear; that there was constant dancing and festivity; that no one labored, no one was sorrowful; but, on the contrary, all were contented and happy, every one did as they pleased, and selected the number of wives they wished." The reader will compare this belief with the doctrine of the immortality of the soul. It was taught by the moderns, undoubtedly, and since their conversion to Christianity; for the old men at the time of their gentilism, had no such idea; to confirm which, I will relate the following account, as it was given to me by a female, who had been many years a convert to Christianity.

In the year 1817, in the Mission of St. Juan Capistrano, I visited this woman, who was recovering from a severe attack of malignant fever. When in the worst stage of the disease, and in a state of paroxysm, she said, that she died, and the Indians, her relatives, carried her to Chinigchinich, where she beheld a great number of men and women. Some were dancing, some playing, and others were bathing in a stream of pure, transparent water. The rancheria was large and beautiful, and the houses were of different construction from those in modern use. Having arrived at the house of Chinigchinich, she was informed that she could not enter to reside with them yet; that she must return to her home. Food was given to her, of delicious quality, such as she had never eaten before, soon after which, she returned, without having beheld Chinigchinich; but she could not recollect if she came alone, or if she were accompanied by others. It is evident that this account was the result of delirium, for I visited her during the paroxysm, when she partook of a glass of warm water, sweetened, that I administered myself, and of which she drank the whole. This water may have been the repast which she referred to, as having been given to her in the house of Chinigchinich; it caused her to perspire profusely, and broke the fever, so that in a few days she recovered.

The ancients said that when an Indian died, though the body was burnt, still the heart did not consume—which must be the *spirit* or *soul*, for the heart of flesh, of course, would perish with the body—that it went to a place destined by Chinigchinich. If a chief, or one of the puplem, it went to dwell among the stars, and like them throw its light upon the earth. For this reason, they said that the planets, and most luminous bodies, were their hearts, or, in other words, they were themselves, in reality.

In the year 1821, there appeared in the northeast a comet. The Indians believed, with undoubted faith, that it was a chief of a rancheria, who had died; and who, previous to his departure, had told them that he should in time behold them again from the heavens. This idea they received from their ancient traditions, because, according to *Seutonio*, the gentiles believed, that at the hour of the death of any illustrious personage (as was seen at the death of Julius Cæsar), there appeared in the heavens some notable meteor, which was translated to the stars, and arranged among the gods. The reason given why the chiefs and puplem alone went to the heaven of stars, and the other people did not, is this: because "*Tacue*," "the eater of human flesh," had eaten of them previous to their being burnt; and if it happened that he did not eat of them, in consequence of their dying in the power of their enemies, or on account of their being drowned, then they did not go to the stars, but to another place, to which they were destined by Chinigchinich. Others, who were not of noble rank, were doomed to the borders of the sea, or to the hills, mountains, valleys or forests; and there they remained an indefinite time, while Chinigchinich held them doing penance for the faults they had committed, in not obeying his precepts, but after the performance of said penance, whether they returned to their former shape, or removed to any other location, they could not tell.

The Indians, when they saw any strange thing, or imagined that they beheld any extraordinary figure, said that it was a ghost, and considered it a bad omen—the forerunner of misfortune. They believed that if the dead appeared to any one, it was for the purpose of injury, and particularly so, if appearing to females, whom, weak and timid as they were, it required but little to terrify. On this account, there were villains who personated such figures to effect their brutal purposes. This custom was not confined to the Indians in their heathen state, but prevailed also among those who had become christianized. I will relate an occurrence of the kind, which took place in this neighborhood.

On a certain occasion, two females, mother and daughter-in-law, went out in search of wild fruits, which they called "*naut*." When in the vicinity of a grove, they heard loud groans and lamentations—a breaking of the shrubbery and limbs of trees—then followed a voice, calling upon her daughter, by her proper name, to come to the place, or she would be murdered. The poor girl, filled with terror, and believing it an apparition, went into the grove, where she beheld one, who appeared, dressed in feathers from head to foot, with his face covered. She was told that he was such a one, who had died at such a time, and that Chinigchinich confined him there. He told her to inform his widow, that she must resort to a certain place at night. On her return home, she gave the message to the woman, who immediately went to the spot directed, to behold her departed husband and ascertain his wishes. At first, she could find no one; but in a little while she heard a voice, which said to her that she must remain until night. Supposing that in reality it was the voice of her deceased husband, she rejoiced greatly, for they had loved each other much in their youth. She remained with him three nights, during which time he spoke to her but very little, and then in a disguised voice. She went about in the daytime in search of fruits, and he, on return of evening, would bring her meat, that she might eat. On the third day, in the morning, after separating, she went out upon a hill, and beheld the same person in conversation with another. She knew them both, and returned immediately to the Mission, where she gave information, and many of her friends went out to the place, and discovered them in a cave with three hostile Indians.

Others remained about the houses of widows, and the houses of their relatives, terrifying them and doing them injury; and on this account, it was the custom, whenever the deceased were burnt, to burn also the house, and rebuild in another direction, so that when the husbands returned in search of them, there would be nothing remaining to denote their existence, and thus they would escape their persecutions. The converted Indians of the present day have the same idea.

There is another case which I witnessed in the Mission of St. Luis Rey, in the year 1813. A Christian died, and the Indians said that he was poisoned or bewitched by another Christian of the same Mission; that his death was the result of witchcraft. The deceased, in his lifetime, possessed a small garden, where he was accustomed to sow yearly certain grains and seeds. This he left to a relative, at a time when the plants were in blossom; but immediately everything dried up and was destroyed, so that nothing was harvested of either grain or fruit. The plants whilst young were fresh and fruitful, like the plants in the surrounding gardens, but the moment the blossoms appeared as if ready to produce seed, they died; so that in the course of one night, nearly all were destroyed, as if consumed by fire. The Indians said that the deceased was seen moving about at night in every direction of the garden, and that whatever he touched, perished. This was revealed to them by an old woman who owned the adjoining garden, and who related the story to me also, so that I was induced to go to the place to witness the same, and found, as she had stated, the greater part of the plants dead, or in a perishing state; some, however, were still flourishing. These I took particular notice of, and on the following day I returned, and found seven of them, consisting of corn, pumpkins and watermelons, dried up and consumed to their roots. In this way the whole was destroyed. Said Indian died of *dysentery*, and not by witchcraft, nor poison, as believed. They were superstitious in their belief that whoever died in this way, died of poison, and this accounts for the tradition of the death of their grand captain *Ouiot*. We have seen that the story of the garden was given by an old woman, and for this reason is entitled to but little credit, but that which has caused me some difficulty to explain is, why the plants were thus decayed. It was not from want of care, or from disease received from insects, or animals either, because, if so, there would have been spots about them, and they would not have been diseased to their very roots. This may excite wonder in the reader, and I have used every diligence possible to ascertain the cause, but without success. What I conjecture is this—that the Devil did all this, that but few should escape from his hands, and the motive I have for believing so is, that at this time there were many gentiles in the mission, principally sorcerers (some were catechumens, and others not), who, night after night, performed their heathen ceremonies.

What has been said, I think, is sufficient to prove that these accounts and stories relative to the immortality of the soul are mere fables, frauds and inventions to deceive the simple: that the first and original settlers in this region had a knowledge of the spirituality of the soul, and consequently of its immortality; that by tradition, they have preserved the same without believing it, and perhaps ages before, they had a totally different account. We often perceive that a history, by numerous editions and revisals, loses much of its originality; how much more liable to corruption, tradition must be, among an ignorant race like the Indians. But little respect is attached to their belief of the spiritual substance with which we are adorned, not only by the rude and ignorant of the present day, but by the wisest and best instructed in our Holy Religion. To remove all doubt from the reader, that he may not think my ideas extravagant, I will relate two events which happened in places where I have resided.

In the year 1808 I was a missionary in the Mission of "La Parissima," when a young man of the establishment became seriously indisposed. His age was twenty-three years; he had been reared from infancy by the fathers, and was instructed in everything appertaining to religion, often serving as interpreter for them, and was almost always with them. When first attacked he refused to take medicine, nor could he be persuaded to do so by any advice of the fathers; but he went in search of one of the quack physicians, who practised upon him all his diabolical art. The fathers, seeing that he became worse, daily exhorted him to confess, and prepare for death like a Christian; but he declined, with the excuse that he was weak, he required examination, and (as was the the opinion of the quack), he did not think he should die. But, alas! he was deceived; for when the *doctor* saw that his chicanery and witchcraft had no effect for the better, he forsook him, saying, "that as he had always believed the teachings of the priests, his God (or more properly his devil) was angered and sent him death as a punishment." Hearing this, the poor invalid concluded to confess; he did so, but not with that satisfaction to the fathers which they had desired, and very soon after, death followed.

In the year 1817, in the Mission of St. Juan Capistrano, an Indian thirty-five years of age, who, like the one just mentioned, was well instructed, became afflicted with a dangerous disease and died. No persuasions on the part of his friends, or exhortations of the priests, could prevail upon him to confess and partake of the holy sacrament. At the bare proposal he became frantic, and uttered expressions which were contemptuous and blasphemous. A short time previous to his death, I called to see him, to give him that consolation which the promises of our Holy Religion impart to the penitent soul, and I urged him, since he could do no more, to receive the extreme unction, to ask pardon for his sins, for God was infinite in his mercy to the repentant sinner. But all in vain! my words were ineffectual, and they were spurned with disgust. His limbs were extended; the froth came from his mouth; his eyes rolled back into his head, presenting a true picture of the appearance of one condemned to the torments of hell; and three persons were insufficient to confine him. These demonstrations seemed to me the effects of the violence of the malady, but after a while his tranquility returned, and some one exclaimed, "Why do you not confess?" "Because I will not," he replied, with anger; "If I have been deceived whilst living, I do not wish to die in the delusion!" These were his last words, for soon after he expired, and there remained a corpse, truly horrible and revolting to the sight. Consider, what must have been my feelings! Such a spectacle before me, revealing to the letter the words of David, "*Pecator videbit et irascetur, dentibus suis fremet et tabescet, desiderium peccatorum peribit.*"

I presume there may be some persons who will say, notwithstanding these accounts, that they are not satisfactory evidences of a total want of faith and belief; for rare occurrences happen everywhere, and God has permitted them to take place for his own inexplicable purposes, and for advantages resulting to others. To this I concede, but exceptions are few. These accounts generally conform to each other in substance, and he who has perused them with attention, or is familiar with the character of these Indians, knowing that when they appear the most intelligent and entitled to the greatest confidence, they are the least to be trusted; he will, I say, agree with me, generally, regarding their belief; as all their operations are accompanied by stratagems and dissimulation, they easily gain our confidence, and at every pass we are deluded.

[TO BE CONTINUED.]

Fibrilla.

[CONTINUED.]

Hemp, or *Cannabis sativa*, from which we possibly derive the modern term canvas, was known to the ancients and used by them for rope and cordage and occasionally for cloth. It was found early in Thrace, in Caria, and upon the Rhone. Herodotus says that garments were made of it by the Thracians "so much like linen that none but an experienced person could tell whether they were made of hemp or of flax."

Moschion, who flourished two centuries before the Christian era, states that the celebrated ship Syracusia built by Hiero II. was provided with rope made from the hemp of the Rhone. Although the plant is indigenous in Northern India, where it is cultivated for its narcotic qualities, it is adapted to a southern climate; and we may safely infer that it was not a native of either Italy, Greece, or Asia Minor, but was doubtless introduced into Caria by the active trade between the Euxine and Miletus. Cloth of hemp is still worn by boatmen upon the Danube; but although its fiber is nearly as delicate as that of flax and cotton, it is used principally for cordage, for which purpose it is imported from the interior of Russia into England and the United States. In 1858 the entire importation into Great Britain was forty-four thousand tuns. A large amount is now raised in Missouri and Kentucky, whose soil is admirably adapted to the hemp-plant. Hemp grows freely in Bologna, Romagna, and Naples, and the Italians have a saying, that "it may be grown everywhere, but cannot be produced fit for use in heaven or on earth without manure." The Italian hemp is aided by irrigation.

The plant is annual, and attains a hight of three to ten feet, according to the soil and climate. Its stalk is hollow, filled with a soft pith, and surrounded by a cellular texture coated with a delicate membrane which runs parallel to the stalk and is covered by a thin cuticle. In Russia the seed is sown in June and gathered in September.

The Manila hemp (*Musa textilis*) does not appear to have been known to the ancients, and is now found in the Philippine Islands, the Indian Archipelago, and Japan, regions unexplored by the ancients. It is also found at the base of the Himalaya Mountains. It is a large herbaceous plant, which requires a warm climate, and is cut after a growth of eighteen months. The outer layers or fibers of the plant are called the *bandola*, which is used in the fabrication of cordage; the inner layers have a more delicate fiber called the *lupis*, which is woven into fine fabrics; while the intermediate layers, termed *tupoz*, are made into cloth of different degrees of fineness.

The filaments, after they are gathered, are separated by a knife, and rendered soft and pliable by beating them with a mallet; their ends are then gummed together, after which they are wound into balls, and the finer qualities are woven without going through the process of spinning. With the produce of this plant the natives pay their tribute, purchase the necessaries of life, and provide themselves with clothing.

The imports of this article into Great Britain in 1859 were very considerable, while the United States also imported a very large amount. It is used for cordage by the ships of both countries. In one respect it differs from wool, cotton, and hemp, the fibers of all of which are found by the microscope to consist of tubes, while the filaments of the *Musa textilis*, although often fine, are in no case hollow, and consequently are less flexible and divisible than other fibers.

Within the last twenty years, a new export from India, in the shape of Jute and its fabrics, has grown up from insignificance into commercial importance, and is now among the chief exports of the country. This article demands our particular attention, as it requires but four months for its production, furnishes a very large supply of textile material, is raised at one-fifth the expense of cotton, and has been sold in India as low as one cent per pound.

Jute is generally grown as an after-crop in India upon high ground, and flourishes best in a hot and rainy season. The seed is sown broadcast in April or May, when there is sufficient rain to moisten the ground. When the plant is a foot-and-a-half high it is weeded. It rises on good soil to the hight of twelve feet, and flowers between August and September. The stems are usually three-fourths of an inch in diameter. The leaves have long foot-stalks, the flowers are small and yellow, and the capsules short and globose, containing five cells for the seed. The fruit ripens in September and October. The average yield in fiber to the acre is from four hundred to seven hundred pounds. When the crop is ripe, the stems are cut close to the root, made up into bundles, and deposited for a week in some neighboring pond or stream.

The process of separating the fiber from the stem is thus described by Mr. Healy in the "Journal of Agriculture for India":

"The native operator, standing up to his middle in water, takes as many of the sticks in his hands as he can grasp, and removing a small portion of the bark from the end next the roots, and grasping them together, he with a little management strips off the whole from end to end, without breaking either stem or fiber. He then, swinging the bark around his head, dashes it repeatedly against the surface of the water, drawing it towards him to wash off the impurities."

The filaments are then hung up to dry in the sun, often in lengths of twelve feet, and when dried the jute is ready for the market.

The color at first is a pure white, but gradually changes to yellow. The fiber, which is fine and delicate, is tubular, like that of flax and cotton, and is easily wrought; but its tenacity is not equal to that of other textile materials, although it is substituted in many fabrics for wool, flax, and cotton. A large portion of the crop, which already exceeds two hundred thousand tuns, is exported to England as it comes from the field, and is there used in the manufacture both of wool and cotton to cheapen the fabric. The vigilant eye will often detect it in woolen manufactures, in shawls, and even in sail-cloths; but when spun with cotton or wool, it is very difficult to discover its presence.

A few years since, there was a great reduction in the price of plaid shawls from England, which took the dealers by surprise, as the cost was previously supposed to have reached the lowest point; but a close examination of the threads elicited the fact that the manufacturer had adroitly twisted in with his wool a liberal allowance of jute, costing but two or three cents a pound when wool cost thirty, and thus reduced the price of the fabric.

By the use of shoddy in the manufacture of woolens, and of jute in both cotton and woolen fabrics, the English artisan saves many millions of pounds both of wool and cotton. In those districts of India where British skill and commercial enterprise have checked the manufacture of muslin and calicoes, the Hindoos of all classes find in the culture and manufacture of jute employment for all, "from the palanquin-bearer and husbandman down to the Hindoo widow, saved by the interposition of England from the funeral pile, but condemned by custom for the residue of her days literally to sackcloth and ashes." The fine and long-stapled jute is reserved for the export trade, for which it bears a comparatively high price; the residue is spun and woven by these classes as a domestic manufacture; it is made into gunny-cloth, which is circulated through the globe, forms the bagging for our corn, wheat, and cotton on their voyage to distant ports, and finally makes its last appearance as paper.

The long stems of the jute are highly esteemed in India; they resemble willow wands, are useful for basket-work and fencing, for trellis-work and the support of vines, and to make a charcoal which is valued for the manufacture of gunpowder.

The export of jute from India to England for 1859 was sixty thousand tuns. The export of gunny-cloth from India to the United States in the same year amounted to several millions of pieces.

Why should not this valuable plant be introduced into America? It requires the same season and soil as our Indian corn, and would doubtless flourish in the rich alluvial lands of the West, and furnish a very cheap and useful domestic manufacture for our Western farmers.

The term Linen is doubtless derived from *Linum*, the classic and botanic name of flax. In Holy Writ, Moses called down the hail upon the growing flax of Lower Egypt, and Isaiah speaks of those "that work in fine flax." According to Herodotus, the ancient Egyptians wore linen. Plutarch informs us that the priests of Isis wore linen on account of its purity, and mentions a tradition that flax was used for clothing "because the color of its blossom resembles the ethereal blue which surrounds the world"; and he adds, that the priests of Isis were buried in their sacred vestments. An eminent cotton-spinner, who subjected four hundred specimens of mummy-cloth to the microscope, has ascertained that they were all linen; and even now, when aspiring cotton has contested its superiority, and claimed to be more healthful and more beneficial to the human frame, the choicest drapery of our tables and couches, and many of our most costly and elegant articles of dress, are fabricated from flax.

Flax is sown in the spring and harvested in the summer, and requires but three months for its growth. While cotton grows in hot climates only, flax grows both under the tropics and in temperate climates, and as far north as Russia, Ireland, and Canada; and while at the South it runs mostly to seed, the best varieties are produced in Normandy, Belgium, and Poland.

In another particular flax has the advantage over cotton. While the latter, under the ordinary course of cultivation in South Carolina, yields but one bale to four acres, and in virgin soil rarely more than one bale to two acres, flax yields in good soil from five to eight hundred pounds of fiber to the acre, which may be converted into flax-cotton by modern machinery; and as the product has but three per cent waste, while cotton loses eleven per cent in its manufacture, the flax-cotton which is produced from a single acre is the equivalent of one to two bales of cotton.

With these important advantages, namely, its adaptation to a northern climate where the white man can labor, and a capacity for yielding so large an amount of fiber, flax holds a high place in the list of textile materials.

Flax can be raised with very moderate expense up to the time of harvest. If the soil is free from weeds, it requires little more preparation, care, or expense for its culture than wheat or barley. But from this point onward a large expenditure of labor is requisite, which greatly enhances the cost, carrying it up as high as ten to twenty cents per pound, according to the degree of fineness; for the filaments must be separated from the stem by immersion in water, must be kept in parallel lines, and prepared for the spindle by skillful and long-continued labor.

To insure the best quality, it must be pulled and bound in bundles before it is entirely ripe, thus impairing the value of the seed, while the edible and nutritious portion of the stalk is lost or injured in the water.

For many years it was spun on the little wheel, but of late years improved machinery has been applied at Belfast, Leeds, Dundee, and other cities of Great Britain; yet nearly a third of the value is lost in the broken filaments, which are reduced to tow in its preparation for the spindle. With a fiber at least as fine and delicate as that of cotton, its full value to the world will not be demonstrated until it is effectually cottonized.

In its present state, however, it has come into very extensive use. More than eighty thousand tuns were, in 1859, imported into Great Britain, and many acres are there devoted to its culture. The consumption in that country is estimated to exceed one hundred and sixty thousand tuns, a quantity equivalent to eight hundred thousand bales of cotton. In addition to this, ten millions of bushels of flax-seed are annually crushed in Great Britain, a large portion of which is drawn from India.

[TO BE CONTINUED.]

Protecting Animals from Rain-Storms.

I believe that Farmers, generally, are not aware how much loss they sustain in the flesh of their domestic animals, and how much they suffer during cold storms of rain in the Summer, or at any other season of the year. Warm showers never injure animals; indeed, they appear to have a good relish for such a sprinkling as they frequently get, providing it is not as cold as ice. Most animals will endure pretty severe cold, as long as they can keep dry; but as soon as their bodies have been wet, and are kept wet, evaporation commences. And as evaporation is a cooling process, the heat of their bodies is carried away very rapidly; and the sudden transition from heat to cold chills them in a very short time, and injures them more than a severe storm in Winter.

Animals will endure a very sudden change from cold to heat with impunity; but sudden changes from heat to cold are often attended with very injurious consequences. We are apt to think because it is Summer, or not freezing weather, that a storm of rain will not hurt our animals. But, could they communicate to us their feelings during a storm of cold rain, there would not be so much negligence about protecting them, especially during the cold and stormy days and nights of Autumn.

I well remember, that about twenty years ago, there was a severe rain-storm in the month of June; and although our Sheep had been sheared more than two weeks, we thought they ought to be brought home to the barn. But many of them were so cold and feeble in consequence of the rain, that it was necessary to go after them with a wagon.

About the 1st of July, 1861, there was another very cold storm of rain, which swept away hundreds of Sheep in the town where I reside. One Farmer lost about sixty of his choicest Sheep, although they had been sheared several days before the storm came on. I have heard of more than three hundred lost during the storm.

It is infinitely better for animals, to keep them in a stable or shed, where they cannot get a mouthful of food for twelve successive hours, than to allow them to be exposed for only two hours to a storm of cold rain.

When I was accustomed to keep Sheep, I was always careful to let them have the benefit of a shed, if they needed it, not only in Winter, but in Summer; and it was very unusual that our neat-cattle were left for one hour in the field during a cold storm. Cold storms not only make Horses *look* bad, but they do really injure them, by rendering them stiff and dull; and they often contract severe cold, which many times will superinduce catarrh and glanders.

Young Calves and Colts often suffer extremely from exposure to cold storms, even in Summer; and to shelter them will be time and money well appropriated. "A merciful man regardeth the life of his beast."

Work- Bulls.

All Bulls might be made to do work enough to pay the expense of keeping them, and they would in every respect be the better for it. If they have any disposition to be turbulent, nothing will more effectually "take the conceit" out of them, and render them safe and manageable, than constant labor. Mr. E. R. Andrews, of West Roxbury, owns the imported Ayrshire Bull Albert, and for some time past has worked him almost daily. A yoke was made for him, and by means of a saddle and breeching, he is harnessed in the thills of a wagon or cart, and hauls any load of suitable weight for a horse. Indeed, the men who have him in charge state that he can pull more than any horse on the farm. They take him to the field, and carry from thence to the barn a tun or more of Grain or Hay at once. He is very tractable and easily managed, but is quick in his action, generally walking faster than a Horse commonly does. He has been used considerably in hauling manure out of the barn-cellar, and there being considerable of a rise in the ground, he has been shod to assist him in getting a foothold, and to keep him from getting foot-sore. We were assured that he often takes a heavier load up this rise than two stout horses could. He is said to be "handy" anywhere. A man saddles him as he would a horse; gets on his back, and by lines attached to the ring in his nose guides him, and "takes the road" at a smart pace. In fact, he is made "generally useful" about the premises.—[Boston Cultivator.

The Chester Whites.

A writer in the Country Gentleman says: I notice in your paper of July 18, 1861, a communication from a Chester County Farmer, on the subject of the Chester County Whites. Having myself been long breeding and shipping this valuable breed of Swine, and pretty well acquainted with their origin, I beg leave to correct an error or wrong impression made by the communication above referred to, in regard to the origin or first impulse to the improvement of our Swine, disclaiming in toto any Berkshire blood in our genuine Chesters. Why, the very name, Chester White, would not sound well as having originated from a Black Berkshire. The origin was of pure white, from Bedfordshire, England, imported by one of our citizens, Captain Jefferis, long before the Berkshires were introduced into this State. I acknowledge that a few Farmers were induced about twenty years since to allow some of the Berkshire blood to get infused into their Swine, thinking by so doing to improve their stock; but soon found they had got the wrong sow by the ear, and therefore have been striving for years to get rid of the black spots. I believe our Chesters have been fairly tried in competition with all the celebrated breeds, both foreign and domestic, and from the continued increased demand for our Swine, from all parts where they are known, would judge that they had proved superior to all others.

Cotton in the Sandwich Islands.—In the village of Waianae-uka all the inhabitants have joined together with one accord, under the lead and guidance of Mr. Manuel Authon, an old resident of Portuguese extraction, and gone in with a will for the cultivation of cotton. They are inclosing a lot of about four hundred acres with a substantial stone wall and breaking up the ground preparatory to planting. The same village, acting jointly as one man, cleared and planted this spring a lot of about 150 acres with coffee trees.—[Polynesian.

THE FARMER.

A Poem read by Myron Coloney, Esq., before the Douglass County (Minn.) Agricultural Society.

WHEN the emerald hills are reddening, in the sunset's rosy glow,
And across the rolling prairies, silvery shadows come and go,
With a light step, wandering homeward, comes a hardy son of toil,
Tanned and browned, broad-handed farmer, lord and monarch of the soil.

Who can see him without longing for the roses in his cheek?
Or his full, rich intonations, as we list to hear him speak!
Hear him tell about his meadows, or his thrifty field of corn—
How his wheat, his oats or barley, must be cradled in the morn.

How his pumpkins and his squashes have completely hid the field;
While his turnips and potatoes will turn out an awful yield—
How his cattle and his horses fat and thriftily appear,
And his sheep—it beats all nature—really double every year.

Mark the sparkling look of pleasure, which these simple themes afford;
And his pride of independence, as he draws around his board;
How he thanks the Generous Giver, of all good and perfect things,
For his health and for the harvest, and the plenty that it brings.

Here you see him in his dwelling, which he has by slow degrees,
Wrought entirely and unaided, from the giant forest trees;
While within his humble mansion, built of logs in early days,
Lordly strut his Cochin Chinas, wildly cackling o'er their lays.

All the food upon his table, bounteous, varied though it be,
Is the fruit of his strong sinews—who so much a king as he?
Pick me from mechanics, merchants, bankers, traders, if you can,
Such another independent, self-sustaining, happy man.

Banks may fail and prices vary, stocks and bonds go up and down,
But he gaily laughs at panics, never dreads a Famine's frown.
Bright and happy, whistling, singing, lightly glide his hours of toil,
Tanned and browned, broad-handed farmer, lord and monarch of the soil.

Friends and neigbors from this picture let us glean a word of cheer,
It will nerve us in our struggles, it will whisper "persevere,"
It will fill our mouths with sweetness, when we drain a bitter cup,
Tell us of a golden future, bid us never give it up.

It will point us to the prairie—oh what yields its bosom makes—
To the timber hovering near it, to our lovely, lonely lakes;
To our meadows, thick with verdure, to our streams that never freeze,
To our dry and healthy winters, and our cooling summer breeze.

Where has earth a finer Eden, than before our very eyes?
Up then, route the woods and vermin! occupy this Paradise!
Break and fence and sow the prairies, raise your stock with careful hand;
Soon will comforts thicken round you, there'll be plenty in the land.

Then as years go hastening onward, as they surely, surely will,
And the crow-feet round the eyelids gather thicker, thicker still,
Oh! how peaceful is the feeling, that the world we need not roam,
Calmly, quietly enjoying each his own dear treasured home.

Management of Honey-Bees.

THE union of weak swarms in the month of July, at the North, is a matter of great importance to Bee-keepers, owing to the fact that very few families of Bees can endure our severe winters unless they are strong and populous in numbers.

The inexperienced Bee-keeper is sure, in most cases, to commit the error of endeavoring to increase his stocks or families too fast, and of wintering swarms that are entirely too small and weak to prosper.

The first swarms that issue are generally of good size, and need no doubling; but the second, and especially the third issues, are frequently so small that it would be folly to attempt to winter them, and the remedy is to join them with other swarms that come out at or about the same time.

I have found that swarms may be joined the same day they issue, without any fighting; and but very little contention for the mastery takes place till after the fourth day, when the Queen has commenced laying eggs.

My system of uniting weak swarms, is to hive them separately, as they come out; and if two issue the same day, I join them at evening as follows:

Soon after sundown, I take the weaker swarm of the two, if there be any difference in them, and carry it to the stand of the swarm with which it is to be united; before which I spread a sheet or blanket upon the ground, and as close to the front of the hive as possible (my hives being set upon stands but four inches high), and one edge of the sheet is drawn under the hive an inch or two, and secured there by small blocks of wood at the two front corners, about an inch thick, which raise the hive in front an inch high, while the back rests close upon the stand. The hive is thus raised in front so as to allow the Bees in the other hive to enter rapidly, which would not be the case if the hive were not raised.

The sheet now being spread in front of the hive, I then dislodge the Bees in the other hive by a sudden rap or two on one corner upon the sheet or ground, and they fall in a mass directly in front of the hive containing the swarm with which they are to be joined, and the Bees immediately commence running up the sheet and into the hive very fast.

I sometimes raise the lower sides of the sheet, and throw the mass of Bees against the front of the hive, in order to expedite their entering; but in most cases they will all have entered in a few minutes. There will always in such cases be a great uproar created in the hive on the entrance of the swarm, and a combat between the Queens will ensue; but before morning one of them will be killed, and harmony will be restored.

Some Apiarians seek for the Queen as the Bees are entering the hive, on being dislodged as above described, and remove her, which is a good plan, but it is not always practicable. The dead Queen is generally found upon the stand on the following morning after the union, surrounded by a dozen or two of worker-Bees in a close cluster.

Two small swarms may be joined to a third one on the above plan, and at the same time; or the union may take place at the time of swarming, if they issue at the same time, and cluster separately. One or more swarms may be joined to a swarm four days old; but I do not recommend a union after that time.

As a general rule, all swarms should be doubled at least that issue after the 10th of July. This season, owing to the lateness of swarming and the backwardness of the white-clover crop, may require its modification somewhat.

My readers, of course, will understand me to refer in dates to the latitude of central New York.

A swarm of Bees that will store up sufficient honey to carry it through the winter, should contain a peck, at least, when in a close mass. A quart of Bees are not able to store up one-fourth as much honey as four quarts can; nor can four quarts store one-half as much as a peck of Bees can; the consequence is, that three weak swarms might all perish if hived separately, while if all were united in one they would be prosperous. The reason of this is, that three united swarms are able to send out to the fields a great many more Bees, in proportion to their united numbers, than they could do in separate hives; while their joint increase is more than *six* times as much as it would be in separate tenements, owing to the fact that it requires a large body of Bees to generate the requisite heat to build combs and rear the young brood.

In some cases it will be good management to return late swarms to the parent-family, by searching for the Queen and removing her from the swarm. This may sometimes be done at the time of swarming; but she is more easily found by dislodging the Bees soon after sundown upon a sheet, and placing the hive near them, and as the Bees spread out on the sheet and run into the hive, the Queen may be discovered by those who are accustomed to thus searching for her. On removing her, the Bees will all return the next day to the hive from which they issued.

The object of returning late swarms to the parent-families is, because such swarms would not, probably, live through the succeeding winter, and the parent-families, having become greatly depopulated by over-swarming, would be in danger of perishing without the return of such swarms; as, aside from the necessities of an abundance of food for the winter, a small body of Bees are liable to perish simply from the fact that they cannot generate heat enough in cold weather to enable them to remove from one comb to another, in order to reach their stores.—[T. B. MINER, in the Genesee Farmer.

Let our Apiarians take note of these excellent suggestions.

Heating and Lighting Cities by the Power of the Tides.

SIR Humphrey Davy once remarked that people need have no anxiety in regard to the exhaustion of the coal-mines, for long before that was effected some cheap mode would be discovered of decomposing water, and this would supply an unlimited amount of fuel. This prophecy is already accomplished. If all the coal-mines in the world should spontaneously take fire and burn up, it is now in the power of science and art to extract boundless quantities of heat and light from the rivers and seas. By magnetic-electro machines water may be decomposed without any expenditure except that of mechanical power, and some recent improvements in these machines, by which their power of decomposition has been greatly increased, have suggested this article.

In a recent number we pointed out the superiority of hydrogen over all other substances for heating purposes, and on page 280, Volume 3, is an illustration of the apparatus by which this gas is produced for the purpose of lighting the city of Narbonne. As hydrogen can be obtained in unlimited quantities merely by mechanical power, we have only to make suitable arrangements to avail ourselves of the forces of Nature, in order to get all the fuel and light we want, without any current expense whatever, except the trifling one of keeping the apparatus in order.

The tide, as it sweeps through Hell-Gate four times in the 24 hours, probably exerts sufficient power to turn enough magnetic-electro machines to decompose water and furnish hydrogen for all the mechanical and domestic purposes for which fuel and light are required in this city!

Here is an opening for a discovery which will be eminent among the marvels even of this wonderful age. In place of the enormous expenditure at present incurred for fuel and gas, our steam-engines may be driven, and our dwellings may be warmed and lighted, by the perpetual and undiminishing power of gravitation.—[Scien. Amer.

Professor Horsford's Mode of Preserving Cider.

WE have been asked so many times to reprint the excellent recipe of Professor Horsford for arresting the fermentation of cider or other saccharine juices, at any desired point, that we feel bound to comply, says an exchange. We have tried the experiment so as to satisfy us of its value, and recommend our readers to do likewise. Our plan has been to add the sugar at an early stage of the fermentation, and the sulphite soon afterwards, and in somewhat larger quantity than here recommended. The sugar-makers add the sulphite as soon as the juice is expressed. Dr. Ure says the action of sulphur is to obstruct the fermentation by absorbing oxygen, and thereby preventing the elimination of the yeast particles. The following is the recipe:

"When the cider in the barrel is undergoing a lively fermentation, add as much white sugar as will be equal to half or three-quarters of a pound to each gallon of cider, and let the fermentation proceed until the liquid attains the right taste to suit; then add an eighth to a quarter of an ounce of sulphite (not sulphate) of lime to each gallon of cider in the cask; first mixing the powder in about a quart of the cider, and then pouring it back into the cask, and giving it a thorough shaking or rolling. After standing bunged up a few days, for the matter added to become incorporated with the cider, it may be bottled or used from the cask.

"Don't mistake sulphate of lime, which is a natural production and known as Plaster of Paris, for sulphite of lime, which is a manufactured article, and is worth by the barrel about 33 cents a pound, and by the cwt. 37½ cents, and by the single pound 50 cents. It has been of late years much used by sugar-makers to prevent fermentation of cane-juice; and in our opinion it will be found more effective as a preventive of fermentation in cider than as an arrester of it after it has proceeded nearly to completion."

CONSOLIDATION.—We learn with pleasure that the San Francisco packets, consisting of the Yankee, Comet and Speedwell, are henceforth to constitute one line, under the agency of Messrs. Wilcox, Richards & Co., in Honolulu, and Messrs. McRuer & Merrill, in San Francisco. Some changes in the ownership of the packets have been made, Messrs. Waterman & Co. having disposed of their interest in the Yankee. These vessels are all fine sailers, and two of them have long had the reputation of being the fleetest and most popular passenger packets in the Pacific. Under one management, as they have now been brought, they will undoubtedly be conducted much more to the interests of our trading and traveling public, and be made to pay a fair profit as an investment. There is trade enough now to keep them all running as rapidly as they can fill up; but with good management, and with such packets as we now possess, our trade with San Francisco must constantly increase. For passengers, no packets in the world possess finer accommodations and more polite and attentive officers than our San Francisco line—that is, if we may judge from the praises bestowed on Captains Smith and Paty, by those who have voyaged with them. From personal observation, we have not had an opportunity to judge; but when we find a spare berth, a goodly crowd, and nothing else to do, we intend to jump aboard and see for ourselves.—[Com. Ad.

A Grand Opportunity for a Home.

For sale in one of the interior Mountain Towns, a good House and Garden, with outbuildings, including a Smoke-House in successful use, being capable of realizing a good income.

The buildings are good. The Orchard is in full bearing, with Peaches, Plums, Apples, Grapes, etc., and small Fruits. There are also on the estate several small tenements, which bring in an income of about $50 a month. The Fruit sold from the Garden, together with the certain income, will pay in two years or less the price now required for the estate. It is offered low for an immediate Cash sale, as the owner desires to locate in a different part of the State, where he has other property which requires his attention.

For particulars inquire of Editor of Farmer. 24

THE

UNION FARM AND PLANTATION MILLS.

TO FARMERS, Stock-Raisers, —AND— STABLE KEEPERS,

YOU ARE

PARTICULARLY INVITED TO EXAMINE THE MILL

BUY ALL YOUR PEARLS ......OF...... TUCKER!

HOTELS.

Union Hotel, Sonoma.

EBENHARDT & GLASSEN, HAVING purchased the UNION HOTEL, of the late proprietor, Mr. A. G. Oakes, are prepared to give the best accommodations to the traveling public. 15-3m

SPERRY'S HOTEL.

Murphy's Camp.

THE COMMODIOUS FIRE-PROOF BUILDING, lately erected by the subscribers, at Murphy's, has been elegantly furnished throughout, after the most approved style, and is now ready for the reception of guests. Parlors and suites of rooms for the use of ladies exclusively, and parties visiting the "BIG TREES," or other natural curiosities in the vicinity.

The management of the Domestic Department is confided to Mrs. Perry, a lady of experience.

The Bar is stocked with fine WINES, and the larder daily supplied with seasonable delicacies.

Stages arrive and depart daily for Mokelumne Hill, Sacramento, Stockton, Sonora, and Columbia.

Parties of pleasure and transient guests will find every accommodation for their comfort.

20-3m SPERRY & PERRY.

PRESTON'S PLACE

Tomales Bay, Marin Co.

I WISH TO INFORM MY FRIENDS AND the public, that the demand for a house of entertainment at this place has been such as to induce me to fit up my house for that purpose. To parties wishing to pass a few days pleasantly in the country, this locality has few equals. Boat-Sailing, Fishing, Hunting, and gathering Shells on the Bay and Ocean Beach, are among the pastimes; and then all have "a claim" in the Clam-Beds free of charge. The place is situated 18 miles westward from Petaluma, and is a nice drive, over a good road, through a fine farming country. It will be a pleasure to endeavor to make your visits agreeable.

21 R. J. PRESTON.

UNION HOUSE!

Corner of Main and Center streets,

MOKELUMNE HILL.

Henry Atwood, Proprietor.

THIS SPLENDID THREE-STORY STONE Building, long acknowledged equal, if not superior, to the best Hotels in the Mountains, has been thoroughly renovated and greatly improved, and a

SPLENDID BILLIARD TABLE ADDED.

The Dining-room has been divided into a Family Dining-room and Restaurant, both hard-finished, and newly and elegantly furnished. The former will be for regular boarders who may prefer it; the Restaurant will be open at all hours, and be supplied with the best products of the market.

The parlors and chambers have all been thoroughly renovated and elegantly furnished, and will accommodate seventy-five persons.

The Stages all arrive and depart from the "UNION," and for the accommodation of travelers the House is kept open all night.

The proprietor avails himself of this occasion to say to travelers *en route* to the various places of recreation in the Eastern portions of Calaveras county, that no pains will be spared to make their sojourn at the Union pleasant and agreeable.

HENRY ATWOOD.

Mokelumne Hill, May 11th, 1860. 20-3m

DOWNIE HOTEL,

South End of Durgan Bridge,

Nevada street, Downieville.

W. M. DOWNEY, Proprietor.

WITH INCREASED BUSINESS, I HAVE enlarged facilities for accommodating my guests.

The Hotel has just been painted, papered, and carpeted, from top to bottom; and a large number of sleeping apartments, well furnished and ventilated, added to the usual number.

REDUCTION OF PRICES:

Board, per week	$7 00
Single meals	50
Board and Lodging, per week	$8 50 and 10 00
Lodging, per night	25 and 50 cents
Liquors and Cigars	12 cents

Warm Springs Hotel!

Near the Mission San Jose,

28 MILES FROM OAKLAND.

THIS BEAUTIFUL PLACE OF RESort is now open for the season for the reception of private families, tourists, invalids, and general visitors.

The Warm Springs are so widely and generally celebrated throughout California, that it is unnecessary here to recapitulate their various qualities. To invalids, they offer the greatest advantages; their medicinal virtues being unsurpassed even by those of the Rhine, so extensively patronized from all parts of Europe and America.

The buildings are new and extensive, affording accommodation for a great number of guests, and containing every requisite usually appertaining to a fashionable Watering-place.

The assistants are the best that can be procured in the State, and being under the immediate supervision of the proprietor, visitors may rely that every attention will be paid to their comforts.

The Table is supplied with every delicacy which can be procured in the State.

Fine hunting-grounds and trout-fishing within a short drive of the Springs.

14-6m LEWIS BRADY, Proprietor.

Jebb's Patent Churn.

THIS NEW PATENT CHURN IS NOW READY TO be seen and tried. It is beyond question one of the best and simplest constructed Churns ever invented, and Dairymen should call and examine it.

By the action of the crank, three distinct currents are made, which moves the cream with such rapidity that Butter is made in from three to five minutes with ease.

This Churn can be seen at the Farmer Office.

Patent-Rights can be had for all the counties in the State, and any experienced carpenter can make a fortune easier by these Churns than by gold digging. They only need to be seen to be approved. 12

The California Farmer.

SAN FRANCISCO:
FRIDAY.............................OCT. 4, 1861.

The "Ladies' Department" of this Journal, under the charge of Mrs. Lizzie Wiley Warren, M. D., will be found on the sixth page, and to which we call especial attention.

Look to Our Special Advertisements.

Our readers will always find important advertisements in our Special Advertising columns. We have at this time Stock-Farms, Orchards, Saw-Mills, and Property to Exchange or for Sale, all worthy Special notice.

Who Grows Flax!

Growers of Flax can have the highest price paid for their crop by applying to this Office, or sending samples of their crop and the quantity for sale.

California Agricultural Fairs for 1861.

The Annual Fairs of the State, District, and County, Agricultural Societies of this State, for the current year, will be held as follows:

Alameda County Society—At Oakland, Tuesday, Oct. 1st, to 5th.

Contra Costa County Society—At Pacheco, Oct. 1st to 5th.

Humboldt County Society—At Hydesville, Tuesday, Oct. 8th.

Fairs in Oregon for 1861.

State Society—At Oregon City, Oct. 1st, to 4th.
Umpqua Valley Society—At ———, Sept. 12th.
Yamhill County Society—At McMinnville, Sept. 24th and 25th.
Benton County Society—At Corvallis, Oct. 3d and 4th.
Lane County Society—Eugene City, Oct. 9th and 10th.
Marion County Society—Salem, Oct. 11th and 12th.
Washington County Society—Hillsboro', Oct. 16th.
Multnomah County Society—Oct. 23d and 24th.

TO CORRESPONDENTS AND READERS.

During the Fair Season, we are compelled to leave out much that we should like to publish, in order that we may make room for the Addresses. Our Reports, too, are necessarily short, yet all will be given in good time. Much of our correspondence is also delayed.

The beautiful song of "Theo," from the pen of the highly-gifted Mrs. James Neal, will touch tenderly upon many a mother's heart. We know our many readers will appreciate every line of this sweet strain, and we hope the artist Scott will set these words to music, for rarely do we find *words* so melodious, even though they would demand a soft sad strain.

Historical.—We invite attention to the "Indianology" in our columns. As a matter of the history of the Pacific Coast, it is really invaluable. We also refer with pleasure to the "Letters on Literature" by Mary Merrill. They are valuable to the historian.

Our notes of Mountains, Orchards and Vineyards will be resumed in our next. The press of Fair matters has delayed them.

Home-Made.

Why is it that the people of California are so backward in sustaining *Home-made goods?* Why is it that so many Pioneers in Manufactures are permitted to languish and become poor, and finally give up in despair, even while the very articles they produce are better and equally as low in cost as those imported? Why is it that there is no more true interest shown in the foundation of our State's prosperity?

We cannot but feel that there is a lamentable neglect everywhere to encourage Home-made goods, or to speak encouragingly of important new inventions. How much good a kindly word will often do to help on those who are struggling amid numerous difficulties and embarrassments to introduce inventions of great utility and importance!

It is an undeniable fact that at *all the Fairs* thus far held in our State, the Halls of Exhibition have been mostly occupied by "imported goods," placed there for show and attraction, and to induce sale, occupying the most prominent places, while the Inventions and Manufactures of our own Mechanics have hardly had a chance of display. This has been so much the case in past years that it has discouraged many from exhibiting the present year, and hence the want of an interest in exhibition by those who should have had the foremost rank.

We have watched the several Fairs which we have attended, and have been pained to notice how little encouragement the Pioneer Workingman received for even the most deserving invention or the most skillful manufactures, especially if he did not have the means to make a great display. This is also the case with all the New Products of the earth—they have the go-by, when they should be placed in the first rank, most conspicuously before the people.

We regret to be obliged to speak thus, but as our Journal professes to be the friend of *Home Productions*, and to aim to encourage Home Manufactures, we must speak thus; and we know of thousands of our Mechanics that will sustain every word we say, because they have suffered by this neglect.

We ask any one to examine the Lists of the State Agricultural Society and all the District Fairs, and notice the indifferent sums offered for Premiums upon the most costly Implements; a sum that would not pay the *drayage* of the article to and from the Fair, while hundreds of dollars have been paid for exhibits and displays that only resulted in retarding the whole enterprise, by keeping away many of the most energetic and valuable contributors.

We repeat what we have often said—our Fairs must look more to *Merit and Utility*; more to the future good of our State, and less to the popular applause of those who are not Workers, else evil will come.

Clean Grain.—How important that Grain-Growers should clean their grain perfectly. It is economy to do so before sacking, for it saves grain bags, labor, hauling, and secures to the Farmer his own Pig and Chicken Feed that he would otherwise *buy*, and he realizes a much higher price for his grain, while he secures credit for being a good Farmer, besides.

The Honey-Bee—Its Success.

Results tell the story of every occupation, whether it be Grain-Growing, Wine-Making, Sheep-Raising, Orcharding, or the labor of the Apiarian.

Results tell the story. It will be well remembered by many of our readers that some three years ago, when the Bee-fever began, this journal warned those who were catching the mania, of the danger they incurred by meddling with a business with which they were wholly unacquainted. We then said that many persons would sacrifice their time and money, and would ruin themselves, by meddling with the business.

What has been the *result?* We can name scores of men, who in despite of timely warning, invested hundreds and thousands, and lost all. We know men that were made wholly bankrupt by their foolish schemes. But such results we expected. It is truly Californian. There has never been an instance but what all legitimate branches of business have been the subject of a speculative mania and overdone, carrying loss and ruin to some; while the true and systematic business-man, who has steadily pursued his calling, has quietly passed the crisis, and won the goal of success.

The Honey-Bee and Honey-Raising are now assuming a legitimate form. Hundreds of speculators *have paid their smart-money* and left the field, and the "Working-Bee" among business-men, the legitimate Apiarian, has the field all to himself, and we think they are doing well.

We found great pleasure, when at the Stockton Fair, in an examination of the new Hives of Rev. H. Hamilton, a very successful Apiarian of Stockton, of whom we have often spoken. Mr. Hamilton exhibited a splendid polished Hive of large size—28 inches square—a Langstroth pattern. Over this square Hive a case was thrown, to open with two folds. This first case rested upon another of larger size, from which apertures were made to admit the Bees up into small frames and goblets. These were arranged around the large Hive—ten frames and seventeen goblets. The Hive, frames, and Goblets, had all been filled in *five weeks* with pure white Honey, weighing 60lbs! It was a beautiful *result*. The Hive-case, polished sugar-pine body and redwood top; a double case, very elegant. Mr. H. had also on exhibit two Presses to make Artificial Comb, from wax. This is found better for the Bee, as it aids in the early working, and the Bee can only build *worker-cells* by this pattern. Mr. H. had on exhibition, also, 100 cases of fine Honey, 500lbs, and 100 cakes of Beeswax of very pure quality.

We learned from Mr. H. that he has sold recently 65 swarms of Common Bees, besides some Italians; that he has 10,000lbs best Honey on hand, which will sell at wholesale for twenty-five dollars per 100lbs, retailing from thirty-seven to fifty cents a pound, and the Wax at seventy-five cents. Mr. H. has now on hand 350 swarms of Bees in good order. Thus we have such *results* as prove Mr. H. to have deserved the name of a successful Apiarian.

We also examined the stands of Mr. D. K. Woodbridge. His exhibit was in a Langstroth Hive of the same construction as Mr. Hamilton's. We esteem them very excellent, as it gives enlarged space for Working-Bees, and the Honey made is in more saleable order. Mr. Woodbridge had 25 boxes in his Hive, and from 80 to 90lbs of Honey, made in eight weeks. Mr. W. has 400 swarms of Bees and 5000lbs Honey on hand. His Bees are all Common Bees. He finds abundant food for his Bees now in the Bottom-lands near Mount Diablo.

In our observations in places we notice many upper boxes empty that should be full. We ask of Apiarians: Do Bees refrain from work because of upper boxes, or not? and when full, do they cease work? These questions are important to Apiarians.

At the State Fair we saw the exhibition of J. S. Harbison, consisting of Hives, Bees, etc. His Hive with new improvements is a valuable one. His Bees were at work finely (the Common Bee) Mr. H. also showed a Parlor Hive, which was a very fine one. Mr. H. exhibited a great variety of samples of Honey in jars, made, as near as could be learned, from different plants and flowers, such as Annis, Mint, Buckeye, and mountain flowers; the Honey was of different colors and of various tastes. There were ten different kinds, and as many shades. Mr. H. exhibited fifty cans of Honey, among which was one can of Red Honey, made from the flowers on the Tule-lands. Mr. Harbison has a large number of swarms of Bees in various localities, and has made a large quantity of Honey. He has been one of the most indefatigable Bee-workers in our State, and has done more by his work and writings to awaken attention to the Bee-Business than any man in the State. Mr. H. has been literally a "Working-Bee." His book should have a large sale.

Mr. A. J. Biglow had at the State Fair a very handsome Hive, with the Italian Bees. The Hive was mahogany and showy; it had four boxes, and was full of Honey, which was pure and beautiful. He also showed several Pattern-Hives, and also one made of the "tule," a Cone-Hive, strong and good. We really think they can be made available, on account of their cheapness. Mr. Bigelow has been very successful as the propagator of the Italian Bee, and as an Apiarian. His sales have been good, both of Bees and Honey.

Mr. B. H. Hoag, of Napa, exhibited at the State Fair a case of Honey in section; this is the approved way; also Beeswax of a very superior kind, both white and yellow. Mr. Hoag has also been successful as an Apiarian.

J. V. Hoag, of Yolo, exhibited a Parlor Hive of Italian Bees; also a case of Honey in sections, which was very fine.

There were several exhibitions of Honey and Bees at the Fair at Santa Rosa, indicating success. Thus it will be seen that in despite of the heavy loss of which we spoke by speculators, the steady perseverance of work! work! work! wins; and so with Bees. Steady constant attention to business is sure to win. We are glad to see the industrious prosper.

The Fair of Sonoma County.

This county held its Annual Fair, as advertised, at Santa Rosa, from the 24th to the 28th inst., and when we consider the numerous claims on the public for the time and interest of the people, we must say that the Fair was a good one. The citizens in all that region came forward—Farmers, Stock-Raisers, Dairymen, husbands and wives, children, and all, had a good social gathering, in good old fashioned "Cattle Fair" style; there was nothing "Prim" about it. If the officers were not experienced in Agricultural Fairs, they took hold of the work in good earnest, worked hard, and did their duty to the utmost.

The Pavilion was located under a grove of large shady oaks, in a cool and appropriate place; the Hall was well filled for an interior show—a very fine collection of Fruits, Wines, Preserves, Jellies, Butter, Cheese, etc. The wives and daughters of the county did admirably, bringing the work of their hands—Bread, Cakes, Butter, Cheese, Preserves, and an abundance of Quilts, Counterpanes, Embroidery, and useful domestic articles, together with Paintings, Pencilings, etc. What would an exhibition be without the women, God bless them? It would be no Fair at all.

The Stock Yard, numbering some 200 pens, was well filled; not so many as there should be, but numerous fine specimens in each department, of which we shall note the best.

The Fair was well attended; we think much better than most Fairs, for those that came seemed interested in the work.

The Races excited considerable interest, especially the Lady Equestrians, and were well attended. The Address, by C. W. Wilkins, Esq., delivered on Friday, was one of the most practical and most eloquent addresses that we have heard, and we hope to give it to our readers entire. The Address was replete with eloquent, earnest and truthful words, and such admirable truths from Nature's text-book, that it must do good. The stand of the speaker was most admirably located for a treatise from Nature's garden-field, for opposite the speaker's stand there was a semi-circle of seats for the audience, arranged under large oaks, from whose branches long folds of moss hung in graceful forms, waving in the breeze, as if applauding the eloquent words of the speaker. The audience was large. Such an arrangement for a public address is much better than within a hall, where one-half of its beauties cannot be appreciated.

We were much interested in the Fair from the general good feeling that prevailed. On the last day, Friday, the Hall was cleared about noon, preparatory to the Annual Meeting at 3 P. M. and the declaration of Premiums.

The Annual Meeting was pleasingly harmonious. The vote to have the next Fair at Sonoma was carried without a dissenting vote, by acclamation, and with cheers; and the same feeling was manifest in the election of officers, all made without dissension or opposition, save one candidate—the rest all joyously, by acclamation. This is the right kind of feeling, and knowing the new Board, we are most happy in saying, a better President and Board could not be found. The list of officers will be found below:

President, William McPherson Hill; Vice Presidents, Col. A. Haraszthy, Stephen Akers, G. L. Wratten, M. Carriger, I. G. Wickersham, James P. Clark, Lancaster Clyman, H. M. Wilson, O. W. Craig; Corresponding Secretary, William McConnell; Recording Secretary, H. F. Leidstrom; Treasurer, G. P. Swift; Directors, J. M. Maxwell, Ed. Gillan, Dickson Shattuck, William Boggs, Frank Selby, F. Schell, David Rupe and David Shattuck.

The Exhibition in the Hall was a general one; some neglect in the vegetable department. We saw no Potatoes, save one bag, no Onions, Turnips, or any article, save big Squashes, Melons, Beets, one parcel Corn, and a few other minor articles. Further reports in future.

The Fair at Oakland.

We regret to record that little interest has thus far been manifested in this Fair. We are aware that Fairs have been numerous all over our State, but our Oakland neighbors should not have been forgotten. The trip across the Bay is a pleasant one, and the Exhibition creditable. We were surprised and disappointed to know that many on the Alameda side were not represented at the Fair, when they could have aided quite liberally by their products. It is to be regretted, also, that the Race Grounds occupy so much of the time and means of our Fairs. The general result will be found to be bad. Racing, trials of speed, exhibits of the style of movement of the horse, are all well enough, but too much of it spoils all; and it can easily be seen that the Races take the masses from the Fair, and consume the largest portion of the income of the Society. This must be changed, or our Fairs will all degenerate into sporting meetings. While we approve of good racing and all legitimate trials of speed, we do not desire to have the legitimate business of Fairs lost sight of.

The Stock Grounds were better supplied with Stock than was anticipated. Patterson, Forbes & Thompson, the brothers Blacow, and other contributors, had noble Stock on the ground, all of which we shall particularize in our future numbers.

The Fair winds up with a Ball on Tuesday evening, when it is expected a pleasant party will assemble. The receipts will go to discharge the debt of the Society, and it is to be hoped a goodly number present will make a happy time, and greatly aid the Society in defraying their expenses.

Jaws of the Mastodon.—There was exhibited at the outside ground at the Santa Rosa Fair a collection of bones said to be the "jaws of the mastodon," and reported to be found in the sand of the Petaluma Creek by Mr. Edmund Smith of Petaluma. The bones have all the appearance of being genuine. They are surely worthy of investigation by scientific men. The finder is a young man who has had the misfortune to have lost an arm, and deserves sympathy in his effort to maintain himself by showing this curious specimen in natural history.

Bay District Agricultural Fair.

The Second Annual Fair of the Bay Disteict Agricultural Society came off last week at San José. As we were unable to be present, being at Santa Rosa, we copy from the San José Tribune of Friday a brief general notice of the Fair. It says:

The Fair of this Society opened on Tuesday, under favorable auspices. The lateness of the season, however, and the number of Fairs held throughout the State during the year, combined, doubtless, to diminish the attraction. But, notwithstanding these drawbacks, the Fair has been a greater success than we anticipated. The city, during its continuance, has been crowded with strangers. The hotels, and, in fact, every place where lodgings could be obtained, have been filled to overflowing, and the streets have presented a bustling and animated appearance.

The Horticultural, Pomological, and Miscellaneous Fancy Departments of the Fair, have been held at the City Hall, and the Cattle Show at the Fair-Grounds. The exhibition of Thoroughbred Stock, including Horses, Brood-Mares, Horned Stock, Sheep, and Swine, in point of quality, bore unquestionable evidence of the superiority of Santa Clara county in all descriptions of first-class animals.

The display of luscious Apples, Pears, Peaches, Grapes, etc., it is generally admitted, has far surpassed that of any other Fair held this year in the State, and warrants Santa Clara county to challenge the world to produce their equal.

We hear it generally remarked that the Fruit Exhibition at San José far surpassed that at the State Fair, and this is nothing more than was to be expected from this noted Valley, with such growers whose names we see among the exhibitors, as B. S. Fox, A. Delmas, D. T. Adams, L. A. Gould, W. O'Donnell, L. Prevost, C. Smith, J. C. Cobb, L. Pellier, L. F. Sanderson, A. King, F. Gates, A. C. Erkson, Dr. Bascom, J. Hobson, A. Suñol, J. B. Bontemps, and others. The Stock Show would also compare favorably with other Fairs, and in the Horse Department, particularly, the blood and bottom of this District challenged comparison.

We shall give further notice of this Fair.

The Stockton Fair.

Our constant attendance on the Fairs in the several districts, and the State Fair, has prevented our writing out in full all the valuable particulars we have collected, and as the dailies have given considerable attention to the subject, which we are glad to notice, we shall when the Fairs are over continue our full notes, and recall the attention of the readers of the Farmer to all that is worthy of notice. We think this a much better plan than crowding in a hurried way everything shown into our columns. We have also learned this fact, exhibitors do not give that attention to reading during fair time that they do shortly after the shows are over; then they read attentively and meditate upon results.

The Fair at Stockton was marked by one grand feature,—that of a kind and social character, a desire to make everybody feel agreeable. It is too often the case that a spirit of selfishness and a desire to make money only out of the Fair, robs it of all the satisfaction that might be otherwise derived from it.

Among the many notable things in the Fair at Stockton we found the following:

FRUITS.

E. S. Jarvis, a collection of 22 dishes, 6 each, of Apples, extra; 5 dishes of Pears, and some other fruits; all fine.

Dr. Hunt exhibited very extra Pears.

W. P. Miller exhibited the Japan Pear, a new variety, from seed, a large specimen.

Clement Detter exhibited a very fine collection of Foreign Grapes, which were creditable to him.

Vincent Galgiani had 12 varieties of Foreign Grapes.

Dr. Locke made a good show of Apples and Peaches.

D. K. Woodbridge made a fine display of Fruits, consisting of 25 varieties, very fine, and some very extra.

W. L. Overhiser, a fine show of Grapes, some 8 kinds, foreign, and large specimens.

Perley & Knapp made a very promising display of Fruit from trees planted at one year old, now three years, and without any irrigation; their orchard contains 1000 trees, all doing remarkably well.

West Brothers, showed 40 varieties of Pears, 3 of Plums, 7 of Apricots (in glass), 5 of figs, and 6 of Grape. They also exhibited a collection of 78 kinds of Apples for B. S. Fox of San Jose, which were truly superior.

Dr. Harris had fruit that was very creditable; a good display.

The Ladies did nobly here. Mrs. Benson made a display of 28 dishes very fine apples, bearing the marks in their appearance and arrangement of a lady of taste.

Mrs. Chicard exhibited some fine Apples, Gloria Mundi, and mammoth Pippin.

Capt. Weber as usual had a fine collection of Grapes, splendid and choice Plants, and many samples of valuable fruits.

R. B. Lippincot, Grapes and Apples.

VEGETABLES.

A large and perfect collection of Vegetable shown by Louis Pilhac, the best lot we ever saw at a Fair.

W. H. Lyon, good old-fashioned crookneck Squashes.

W. McPridgeon, fine Onions, on Tule land.

Dr. Locke, extra specimens Rhubarb.

Thomas Miller, a show of Vegetables, very fine.

W. H. Stearns, Island Ranch, fine sweet Potatoes, and three monster Squashes weighing 156, 175, and 192 pounds.

B. H. Brown, Blood Turnip Beets, 25 pounds each.

V. Galgiani, a fine show of Vegetables.

Other reports of stock, of Implements, works of Art, will be continued.

Success in Tobacco Growing.—From all parts of the State we have reports of success in growing Tobacco, proving conclusively that this will be one of our great crops.

Premium for Flax-Cotton.

We have received, and notice with pleasure, the noble proposition from the Rhode Island Society for the Encouragement of Domestic Industry, attested by Wm. R. Staples, Secretary, offering "the further premium of *Five Hundred Dollars* for the best bale of prepared Flax-Cotton of not less than fifty pounds, without respect to the place of its manufacture or production, which shall be exhibited at the Society's Exhibition in Providence on the 11th day of September" inst. The premium to be "awarded only upon the condition that the article is of a quality, and can be produced in quantity, and at a price, to be an economical substitute for Cotton—all which must be proved to the satisfaction of the Judges." The award is to be "made public on the third Wednesday in September, or as soon thereafter as the Judges may be able to make their Report." The Society also offer to defray all the necessary expenses of transportation on the bales of proper size offered for this premium.

We hope this premium will secure the production of the article sought, and we shall look with interest for the Report of the Committee. When will our State follow the example to thus encourage New Productions?

The Santa Clara College at Santa Clara.

This fine institution for the sons of our State can truly be classed as one of the highest character. There is no institution in our State where the facilities for a complete education are so perfect. It is a model establishment, having the most perfect apparatus in all the scientific departments, with teachers skilled in their duties, by long years of practice in a business that they love, aside from all sectarian feeling. A perfect education is to be desired, and at this Institute it can be had. Every dollar of cash expended for a pupil here is given back fourfold in a faithful and earnest attention to the wants of a scholar. What we have seen and known, we can testify to, and therefore cheerfully give our evidence, that pupils abroad may be benefited.

The College of the same character in our city, on Market street, is also an excellent College for the acquirement of knowledge. It is also under the best teachers, and has now about 124 scholars. The Santa Clara College has about the same number. Parents who have sons will do well to look to these Colleges.

Received.

We have received from the Managers of the Contra Costa Agricultural Society Complimentary Tickets for their Annual Fair.

Also, from the Managers of the Alameda Fair, Complimentary Cards for the Fair and Ball—The Ball to be held on the 8th inst.

We have on our table a pamphlet on the "Bertola Patent" for amalgamating and treating Gold and Silver Ores. The work describes the manner of working ores by this new patent, which comes with some considerable *eclat* before the community.

When at the Fair at Santa Rosa, we received of Mrs. Fowler, of Sonoma, sample bottles of Tomato Catchup, Mushroom Catchup, and Watermelon Sirup, all of excellent quality, and much superior to those usually found on sale as imported. The Melon Sirup was made from the rind of Watermelon, and was excellent. These are the kind of Home-products which pay, and are most creditable to the maker.

For the fine Fruits, Grapes, Apples, Pears, Pomegranates, etc., and some choice Wines of extra character, Sherry Wine, Red, and White, we were indebted to the collections that graced the tables of Gen. M. G. Vallejo, of Sonoma.

We were also presented with sample bottles of most excellent Wine from N. Carriger, Esq., of Sonoma.

Several parcels of Apples, Pears, and Quinces, were kindly given us by several contributors, for all of which we are grateful.

Several friends gave us parcels of extra Apples, the names of the donors of which were unknown to us, as the lots were marked in numbers. We shall hereafter note them.

Cider Mills Wanted.—The demand for Cider Mills has about cleaned the market of all good Mills, but we would suggest to those in want of them to call and look at the Union Farm and Plantation Mill, intended as a Mill for grinding Wheat and Corn, which is now at Greene, Heath & Allen's, Front street. This Mill can be converted into a Cider Mill very easily, and made available as an excellent Mill. It is worthy attention now, when Mills of this kind are so much wanted. Besides, it is one of the *best* Wheat and Corn Mills ever invented.

The Sinews of War.—*We* want the same material for our battles with the Types and Paper that the commanders of armies want when they are preparing for battle; it is *Money!* Money is the sinew of war, and Money is the thing ever needed in a Printing and Publishing Office, and as we constantly pay out, so it is equally necessary it should continually come in. Will those who have ordered the Farmer since July, and all to whom we have sent bills, send us by mail the amounts due us from them, and oblige us?

Why not Make "Tule Houses?"—The neat Bee-Hive made and exhibited by Mr. A. J. Biglow at the State Fair should induce others to try and make larger buildings of the "Tule." We believe very fine buildings can be made at little cost for all domestic animals—Henneries, Sheep Cotes, Dairy Stalls and Pig-Pens—we mean the roofing part of them. In some cases, such as Henneries, it would be strong, durable and cheap. Who will set the example?

In War-Times, "Grease the Wheels."—How important it is to be ready for war in time of peace! And so it is equally important that all who have carriages, wagons, coaches, etc., should always keep the wheels greased and ready for a hurried start, if needed. Then buy "Home-made" Axle-Grease always, and be sure to get the "H & L," the best ever made, and thus patronize those who, like Hucks & Lambert, have labored to build up our own industrial interests.

STATE SUMMARY.

The Nevada papers mention the arrival of a family of overland immigrants, consisting of husband, wife and 12 children. The father was only 28 years of age.

There are several patches of Tobacco in Tulare county. In growth and quality, it is pronounced by supposed competent judges, equal to that of any State East.

General Sumner received orders by the late Pony to have the regular troops on this coast ready to start for the East at short notice. Four companies of artillery will be retained to garrison the forts in this harbor. The volunteers lately called for will remain in the State, and occupy the posts vacated by the regulars.

The Uncle Sam which left on Tuesday for Panama, took $1,115,009 57 in treasure, for New York, except $93,495 for England, and $11,000 for Panama. Among the passengers were Rev. Dr. Scott, wife, and six children, who intend to take the English steamer at Aspinwall for Europe.

The finest sweet potatoes grown in this State, the Delta thinks it safe to say, are raised in Tulare valley, and that they are fully equal in size and quality to the best South Carolina. Here, again, if a market existed, they would be largely cultivated, and they could but sell where ever offered. The completion of the Tulare Canal would open a market.

Judge Cowles has decided in the cases of selling liquor or goods on Sunday, in contravention of the Sunday Law, that the party actually transacting business, be he clerk or proprietor, is the one to be arrested, and that, too, with or without a warrant. He also decided that all bona fide hotels can sell liquor, as the law exempts them.

A California Pear.—There is now "some pear" on exhibition at Gould's stand, in the Pacific Fruit Market. It is of the variety called Pound Pear, but weighs several; just what it weighs is four and a quarter pounds, being 21½ by 17 inches in circumference, and was raised at Napa, by Gen. W. S. Jacks. The pear is to be sent East, to astonish the natives.

The weather has been rather variable for some time, and the Dry Season is apparently about over. From the 20th to the 23d ult., rain fell in different portions of the State; up north at Yreka, southeast in Tulare county, and farther south in Los Angeles county. At Los Angeles the rain continued two days, and started the grass, while it injured the bean crop, but it is thought the grapes will not suffer.

A pretty good shot was made by W. H. Johnson, of Calaveras county, lately. While hunting, he shot three full grown deer at one shot and with one bullet. The first one struck was hit in the neck and fell dead in its tracks; the second was struck in the heart and ran about fifty yards; the third was so badly wounded that Mr. Johnson, by following half a mile, got another shot at it and "bagged his game."

Since the Game Laws let up, sportsmen are having good times, as game is represented to be very plenty throughout the State. Three gentlemen from Stockton, in twelve hours shooting on the hills about Copperopolis, bagged 280 quail, recovering their game without the assistance of dogs. At Visalia, the Delta says two individuals killed in a few hours, 63 quail and 13 rabbits; and a party of four, at the Sink of Deep Creek, in one day killed over a hundred rabbits and a large number of quail.

Tulare county appears to be well stocked with bees. The Visalia Delta says honey is abundant in its vicinity of the best quality. In the comb, fresh from the hive, it sells at only twenty-five cents per pound, and at that price there is very little demand. If any means existed of getting it to a market, very large amounts would be raised in this region. The Delta also states that "Mr. A. S. Hamilton, of this place, sold his Apiary, consisting of 70 or more stands of Bees, lately. The first hive sold brought $15, and the rest averaged only about $4, each. The hives were in good order, many containing from 50 to 75 pounds of honey each."

A pleasant and faithful picture of California is given by the Stockton Argus, in a "weather" item on the 24th ult. It says: The appearance of clouds floating over us and the peculiar feeling of the atmosphere betoken the coming upon us of early winter rains. The noise of geese overhead speaks winter almost distinctly, so closely is the presence of rains and wild geese blended. The air is more moist, and it is this that made the heat last Sunday at 91 degrees felt more oppressively than the 100 degrees of midsummer. Then the air is dry, and the animal heat passes off rapidly; now the dampness refuses this rapid passing away of heat from the body, and an oppressiveness is experienced that is unknown in a dryer atmosphere. We may soon expect the rains upon us; the dusty roads to give way "to the hubs" of our teamsters; the wild game to take the place of food of lesser note in our markets; the green grass to cover the earth as a beautiful mantle to hide the parched appearance of a summer's plain; the alternate storms and sunshine of an Eastern summer to usurp the series of months of our California summer's drought; the pattering of rain upon the roof as a music to contrast with the stillness of a summer's night; the beautiful flowers over the plains peeping up in gladness that they hide the deep crevices that gaped in the absence of water during the long summer days; the cattle rioting in food where they so long have wandered in search of a scanty subsistence. Winter in California is not looked upon as a season of resting nature, as on the Atlantic side. Here, it is indeed our real summer; there, it is a season of cold and privation. Here, all nature is joyous; there, it covers the earth with its mantle of white to protect it from piercing frosts. Here, the storms bring gladness to the miner and to the farmer; there, it creates anxiety from the distress it brings to the poor. Here, it conveys gladness to the eye, with its growing grasses and the green leaves put forth by trees in gratitude for the lowering clouds that assuage their long continued thirst; there, it is a look of desolateness over the land, of leafless trees moaning in the cold winds, of ice-bound streams, of crisping snow, of freezing blasts, of cold to that intensity called bitter—a term extracted from the roots of frost and snow and ice. Californians, themselves hardly appreciate the blessings enjoyed in our climate that protects us from the oppressive dampness of an Atlantic summer's heat, and from the dreary solitude that covers the landscape of an Atlantic winter.

From the East.

The Pony brings St. Louis dates to the 24th, and from Washington to the 22d ult. The intelligence is not of great importance. Kentucky is presented as the theater of the most interesting movements. Colonel Crittenden, at the head of an Indiana regiment, had marched through Louisville on his way into the interior, and was received with enthusiasm by the citizens. Brigadier General Anderson had published a proclamation calling upon the loyal people of Kentucky to flock to arms. A counter proclamation had been issued by General Buckner, the commander of a force of Tennesseeans who at last accounts was marching upon Bowling Green. Governor Magoffin is compelled, reluctantly, to carry out the instructions of the Legislature, and put the militia in a condition to repel invaders. From Western Virginia we have favorable reports of the continued success of our arms, wherever the United States troops came in collision with the rebels. General Rosencrans was, at last accounts, in possession of Muldrough's Hill, supposed to be near Summerville, on the Gauley river. General Reynolds, at Cheat Mountain, had obtained a victory over the rebels, driving them from position, with a considerable loss. A rebel camp at Petersburgh had been attacked and broken up by two companies under Captain Kidd, several of the enemy having been taken prisoners, and a quantity of stores captured. At Barboursville, also, Colonel Bigler had routed a small rebel force. Count de Paris and Duke de Chartres, sons of the late King of the French, Louis Philippe, had offered their services to our Government and been accepted. They would probably be placed on Gen. McClellan's staff. By the latest accounts the position of affairs on the Potomac was represented to be unchanged. The enemy are reported from two or three respectable sources to have about 100,000 men at Centreville, Fairfax, and in adjacent places, and to be in expectation of an attack from the Government forces. Their advanced positions had been shelled with success, as often as they had become visible from our batteries. From Cairo, we hear of an unimportant skirmish, in which the enemy were driven back. It is stated that our relations with Spain are unsatisfactory. Work is going forward on the new Government buildings in Washington, including the dome of the Capitol.

Too Many Fairs.

The public seem to decide that we have had too many Fairs. They say they cannot attend; that the encouragement to compete is not sufficient; that only a few contributors are noticed, and they the favored ones. We know there will always be grumblers everywhere, and those who do not get *First Premiums* are generally dissatisfied; but is it not a fact that there have been so many Fairs that the *interest* in them has been in a measure lost, and instead of the people looking at the good of the country and the public advance in the real industry of the people, it has become a scramble for Premiums, or a place for making money for some shows, together with the business of eating and drinking, betting, racing, traffic, etc? All legitimate business in the sales of New Implements and Inventions, of Stock, and Products, is right; but these seem almost secondary. Other kinds of business monopolize the public mind, and but little advance is made in the real objects of Agricultural Fairs.

Look Out for the Millers Among Your Bees.—Great complaints are made by Amateur Bee-men, that the Bee-Moth is making great depredations. We have heard of several instances where Hives have been entirely eaten up by the Moth. Such destruction can only occur, we think, where there has been neglect, for it is easy to prevent the entrance of the Moth; and even if they do get in, it is easy to examine the Hive, if the right kind is used (and none but good Hives, Harbison's or Langstroth's, should be used), and remove the Moth at once. Where the Miller is seen, the entrance to the Hive can be nearly closed at night (the night being the time the Miller enters), and opened in the morning; or the "New Patent Bee-Protector" can be used (a sample can be seen at our Office). This effectually precludes the probability of the entrance of the Miller. We wish our Apiarians would communicate with us on this subject.

A Wonderful Cow and Sheep.—We visited a tent at the Santa Rosa Fair, where was shown a Monster Cow seventeen hands high, weighing 2300 pounds; the cow was dark-red, good form and well put up. There was also exhibited a black Sheep with five legs, and, most singularly, the added leg started just where a horn should grow, and formed a leg with hoof hanging down about eighteen inches. They were raised by Mr. Richard Siske, Yuba, Sutter county, near the Butte Mountains.

Shipment of Wool to England.—Right glad are we to know of the activity in shipping Wool to England. For fine Wool it is decidedly the best market, and even coarse Wools do well. Messrs. W. T. Coleman & Co. are large purchasers of Wool, and are always ready to buy at prices that will prove remunerative to the Wool-Grower. This House are ready to aid the producer in the shipment of Wool or Grain on their own account, either to New York or Liverpool, and they will assist him as liberally as any house in the country.

Splendid Church-Ware.—Looking into the store of J. W. Tucker & Co., we saw some new and very beautiful goods, such as Opera-Glasses, opaque style, superb Fans, Visiting-Cards, Shell Combs, Fruit-Stands, and rare and costly Diamond goods, one Necklace being worth $1200, and other superb wares; but in addition to these, we saw magnificent Church-Ware, such as Baptismal Fonts, Chalices, Urns, Candelebra, and other rich and rare goods, such as one would expect to find at Tucker's only.

The Contra Costa Gazette says: "During the past week a lot of Cattle were offered at public sale in our county. After due notice of the time and place of sale, 40 head of American Stock were bid off at $5 75 per head. Their hides and tallow ought to be worth more than this price."

Help us to Report.—We ask of Farmers, Stock-Raisers, Inventors, and all, to furnish us with all important facts touching these great interests, for which information shall be glad to make them returns and reciprocate their kindness.

The End Justifies the Means.—The Oregon Statesman, a sterling Union journal, observes thus succinctly: Certain Secession newspapers have been suppressed by force, or by the refusal to carry them in the mails, yet they were probably —nay, certainly—an aid to the rebels, and the great mass of men can better live without secession newspapers than without government and laws. The writ of *habeas corpus* has been disregarded, where it was manifestly dangerous to trust the "glorious uncertainty of the law," and absolutely safe to rely on dungeon walls. It is better that a few Secessionists (we think no Union man has been immured) should be for a time deprived of liberty without course of law, than that the course of law itself should be arrested forever.

An Active Intelligent Young Man is Wanted

To take charge of an important business. A capital of two or three thousand dollars will give him the privilege of a business that will yield him a handsome revenue. Undoubted references will be required, and an entire freedom from all other business connections, as he will have almost entire control of a lucrative and increasing business, in which he can be partaker liberally. Energy, activity, and confidence, are the materials required.

Farms for Sale.

A valuable Farm of about 400 acres of excellent land, well fenced, situated near Petaluma, can be had at a bargain if applied for soon.

ALSO—A valuable Farm with good buildings, an orchard and vineyard, and pleasantly located in the immediate vicinity of Sonoma. Will be exchanged for real estate in the city of San Francisco. 9

Let Us Have Peace.

"Leaving one's country for one's country's good."

How significant this sentence at the present moment! How important, too, it is that these words should be properly understood; that there are very many in our midst that it would be better for them and our State that they should leave it, there can be no doubt. Both would be gainers, for by their education and birthright affinities they never can be contented here, and their presence seems only to make them restless and unhappy. How truly can it be said of such what is quoted above.

There are others, too, now in our midst, who by their *acts* have already become so embroiled in the unhappy political National quarrel that they cannot remain *contented* citizens. How much better for them to leave, for it is literally true that they would be "leaving for their country's good;" for if this unsatisfied, restless, and discontented portion of our population should depart from us, quiet would be restored, and therefore it would be true.

"They would leave their country for their country's good." Perhaps such persons might say, "They had as good a right to stay as any other citizens." We say, No! no! We are now a Government of Law; over the whole people this Law is a shield for all, and those who are not willing to yield *obedience* to that Law peaceably, would become subjects of that Law's penalty if broken. Now, we hold it would be much better for all concerned that those who cannot cheerfully and readily yield obedience to it, that they should seek another country or another locality, where Laws in accordance with their ways of life may be more agreeable to them, and leave those who are satisfied with the present Government to enjoy it in peace.

We hope, therefore, that those who are so belligerent that they cannot peacefully subscribe to our Laws, that they will speedily "leave their country for their country's good!"

The Visalia Delta.

Sorry, very sorry, that in these stormy times trouble should gather around the "Holmes" of Visalia, especially when they are so *green*.

In an article we published relative to our exchanges, we did say that "we did *not* intend to exchange with so many *foreign* papers, unless they would do something for California." It is a notorious fact that the great mass of newspapers in the old States entirely eschew any favorable notice of the resources of our State, they seem unwilling to speak well of California, for fear such notices should drain them of their population, and yet our State is flooded with newspapers from abroad, while the Press here labor to build up the very papers abroad that take their bread and butter from them. We go for Home Products and Home Manufactures, but we did not intend by our remark to say we should "withdraw the light of our countenance from Home Newspapers." We go for Home Production—aye, even especially for the "Holmes" in Mariposa. His wit often saves a doctor's bill, unless the glass runs too high or too low. What would our country do without the "Holmes" of the Mariposa Gazette and the Visalia Delta. Even though he had *done nothing for his country*—miserable old bachelor as he is—and the only evidence of his reform has been his *marriage* or *union* of interests of the Gazette and the Delta, and now he talks of *seceding* from his "Home" at Visalia. Oh, traitor Holmes! any man that will live, surrounded as you have been, by the soft smiles, the beauty and generous kindness of so many of the blessers of the "Homes of our Land"—any man that will live so long "out of the Union"—be a "Holmes," and yet not have a *home* of his own, nor do anything for his country, but live a lone bachelor—we will, like the "Autocrat" withdraw the light of our smiles from *such* a "country scrub," and give him over as a *hopeless case*, and cast him out among the "Holmeless wanderers of the mountains, even into the Yo-Semite Valley," and among the Big Trees, to find a place of rest in some old *burnt-out log*. Now, don't you feel bad?

Notice.

THE COPARTNERSHIP HERETOFORE EXISTING between A. H TODD and JAS. R. RICHARDS, under the firm of TODD & RICHARDS, is hereby dissolved by mutual consent. Either partner will sign in liquidation of the business of the late firm.

A. H TODD,
JAS. R. RICHARDS.

October 3d, 1861.

THE UNDERSIGNED WILL CONTINUE THE BUSINESS of PRODUCE AND GRAIN BROKERS AND COMMISSION MERCHANTS, at the old stand, No. 42 Clay street, near East, under the firm-name of A. H. TODD & CO.

A. H. TODD & CO.

San Francisco, Oct. 3d, 1861. 4

A. H. TODD & CO.,
Produce Grain Brokers,
AND
COMMISSION MERCHANTS,
No. 42 Clay street, near East.

Have for years been engaged in selling Grain and Produce in this market and in Oregon, have extensive acquaintance, and possess advantages unsurpassed for buying or selling.

We have permission to refer to many of our most substantial Merchants and Business Houses in this city and Oregon. Also, to a large number of Farmers in every part of the State.

Our terms for buying or Selling Grain and Produce: For amounts under $5000, 2½ per cent.; for $5000 and over, 2 per cent. Highest market-rates and prompt returns guaranteed.

Cash advances made on Grain in warehouse. 14

Riding Academy,
LIVERY AND SALE STABLES,
Nos. 197 and 199 Montgomery street,
One door above Jackson. *SAN FRANCISCO*

ORRICK JOHNSON .... Proprietor.

Horses Kept on Livery.

RIDING CLASSES for Gentlemen on Sundays, Mondays, Wednesdays, and Fridays.

RIDING CLASSES for Ladies on Tuesdays, Thursdays, and Saturdays.

Mr. Johnson has effected an arrangement with an experienced Military Trainer, who will open a Class for **Dragoon** Exercise whenever there are a sufficient number of Pupils to form a class.

The ACADEMY will be open EVERY EVENING, from 7 until 11 o'clock.

Having every accommodation for the purpose, Mr. Johnson will Train, Break, Bit, and Gait, Horses; or give instructions in the same.

Ladies and Gentlemen whose duties will not allow them to attend during the day, can receive instructions at night. 19

Water-Cure.—The public generally understand but little of the science of Water-Cure. The masses suppose it means "cold water" almost at all times and in all cases. Such is not the case. Water is only a part of the science, and not cold water alone, either, but water warm and cold, and connected with a well understood *diet* applicable to the case. This grand science, as connected with Electricity, will be explained to *Women* who "need a Physician," by the Editress of this Journal, whose Card appears in the Ladies' Department. Our duty to the sick and suffering demands that we should refer to one who is fully qualified for this important duty, and we feel confident that all who call will find relief from suffering more speedily than they anticipate.

Persons visiting the San Jose Course, may rest assured that no pains will be spared to add to their comfort during the Meeting.

J. C. SMITH,
24-td Proprietor.

Ladies' Department.

LIZZIE WILEY WARREN, M D.....EDITRESS.

"THEO"—AGED FIFTEEN.

BY MRS. JAMES NEALL.

The while I listened to the sounding glory
Of the far reaching sea,
A mother's lips were telling the sweet story
Of Theo unto me.
The tender solemn story, of sweet Theo unto me.

How all her life was rounded into beauty,
And passing days,
But saw her treading higher slopes of beauty,
And gladder ways;
And how her spring-time blossomed, 'neath the rays

Of love, which made an azure of her heaven
And round her threw,
Soft shadows such as glorify at even
The drifting blue,
When dying sunlight sends spent arrows through.

And all the while the day was slowly paling
Away from sight,
Yet on the sky, a gold and sapphire railing
Barred out the night,
And mellowing twilight purpled all the light.

A sweet sad story—sweet in that recalling
Beside the sea,
It seemed as though a lovely star was falling
Away from me,
A star, whose unseen trackless path was all eternity.

For Theo died! Alas! the mournful meaning
Athwart my soul,
Fell like a shadow over all things leaning,
And dirge and dole
Thenceforth were surging in the wild waves' roll.

And thus methought—Life is a flickering taper,
And Death may come,
To quench its flame as a mephitic vapor;
Then cold and numb,
In the drear darkness, Hope itself sits dumb.

Nay some sweet spirit whispered, as the glory
Of the far reaching sea,
Became a requiem and memento mori,
Of Theo unto me;
God early sets his chosen angels free.

And she was gathered, a sweet odored blossom,
While yet the dew
Was lying like a pearl upon her bosom,
And all the Blue,
Perpetual sunlight round about her threw.

Would ye have kept her till the winds had rifted,
The bud apart?
And one by one the tender leaves had drifted,
Leaving her heart,
Bare and unsheltered for the Archer's dart?

Ye know not now—ye may not hear the singing
Of glad release,
How Death, the white winged, unto her was bringing,
The boon of peace,
Your lamb was folded with unspotted fleece.

Oh! father! mother! well I know the weeping
Beneath the smile,
The tender memories that your hearts are keeping,
How all the while,
Ye whisper each to each—so pure, so free from guile

Why could it be? Oh! God's mysterious dealing
Ye may not scan,
But *all* is ordered the redemption sealing,
Of fallen man;
And life and death are wheels to carry on His plan.

Then rest in this—the silent inward teaching
E'en while ye weep
And ever as your thoughts are upward reaching
The memory keep
Of that sweet psalm; "God giveth His *beloved*, sleep."

[For the California Farmer.]

Literature—No. 5.

Lord Francis Bacon is recognized as one of the greatest philosophers and deepest writers the world has ever seen. He was son of Sir Nicholas Bacon, Lord Keeper of the Great Seal. He was born in London, January 1561, during the reign of Queen Elizabeth. He gave evidences of a mighty intellect in childhood, and as early as sixteen expressed his disgust with the prevailing system of philosophy. He complained of it because it did so little to benefit mankind. After spending about four years at Cambridge, he traveled in France, subsequently publishing a work entitled "Of the State of Europe." He returned to England in 1579, on account of his Father's death, and after endeavoring, through his uncle, Lord Burleigh, and his cousin, Robert Cecil, to procure some advancement, in vain, he attached himself to Essex, Burleigh's rival, who befriended him. This kindness he most cruelly repaid by appearing against the Earl of Essex when on trial for a conspiracy against the Queen. He had been devoting the most of his time to the study and practice of law, though he had not neglected literature and philosophy. He had, in fact, commenced his great work, "The Instauration of the Sciences." In his desertion of Essex, he showed himself entitled to the fame he earned, as being "the greatest, wisest, meanest, of mankind."

After James I. came to the throne, in 1603, he succeeded to various important offices, at last becoming Lord High Chancellor of England and Baron Verulam, which title gave place to that of Viscount St. Albans. As Chancellor, he was guilty of the meanest conduct, and showed an entire lack of moral principle. His violations of plain duty were so gross, that he was at length tried, and confessed to twenty-three articles of corruption in these words: "It is my act, my hand, my heart; I beseech your Lordships to be merciful to a broken reed." He was banished from public life, and gave attention to his philosophical and literary pursuits, which he had never entirely neglected.

In 1597 he had published his "Essays;" in 1605, his "Proficience and Advancement of Learning, Divine and Human." He also wrote "Of the Wisdom of the Ancients," "The Felicities of Queen Elizabeth's Reign," "History of King Henry VII.," etc. He is generally known as the Father of Inductive Philosophy, having taught the inductive method in the second book of the "Instauration of the Sciences," called "Novum Organum."

He died in 1626, and in his will was found the following: "My name and memory I leave to foreign nations, and to mine own country after some time is passed over." Posterity has recognized his greatness, and while they have mourned his lack of uprightness, some few of late generations have dared to think that as his spirit was subjected to the influences of a higher, better sphere in the life beyond the grave, he would gain of the soul's wealth, even as here he gave evidence of being endowed with mental superiority.

Mary Merrill.

Queen Victoria's Children.—At the seaside residence of Queen Victoria, in the Isle of Wight, a large portion of the pleasure-grounds is appropriated to the young Princes and Princesses, who have each a flower and vegetable garden, greenhouse, hot-houses, and even a carpenter's-shop. Here the royal children pass hours of their time. Each is supplied with a set of tools marked with the name of the owner, and here they work with the enthusiasm of an amateur and the zeal of an Anglo-Saxon. There is no branch of gardening in which the royal children are not *au fait*. Moreover, on this juvenile property is a building, the ground-floor of which is fitted up as a kitchen, with pantries, closets, dairies, larders, all complete in their arrangements, and here may be seen the young Princesses, arrayed *a la cuisiniere*, floured to the elbows, deep in the mysteries of pastry-making, like a rosy New England girl, cooking the vegetables from their own gardens, preserving, pickling, baking, sometimes to partake among themselves, or to distribute to the poor of the neighborhood the results of their handiwork. The Queen is determined that there is nothing which shall be unlearned by her children, nor are the young children ever happier than during their sojourn at Osborne.

Bitter Sweets.

AN OLD MAID'S THOUGHTS ABOUT MEN.

BY SARAH SNARL.

Men are Lords of Creation, eh? no doubt each and every individual of them!

The Lord only knows what some of them are Lords of, say I. There's Augustus Popinjay, a harmless but most aggravating specimen of the class yclept dandy, with not an idea above the color of his gloves, the curl of his moustache, or the tie of his cravat. Concentrated essence of puppyism, from the crown of his Knox-covered cranium to the sole of his faultless patent-leathers, limp-kneed and pale-moustached, what is he lord of, I wonder? not himself, be sure, as you'd say, could you see him cuff the little sinner who shines his boots—those small but most patent instruments of torture.

'Tis to be hoped the frigid temperament of Miss Stately Strongface, to whom they say he is engaged, may not bubble over sometimes at his helpless inanities, when he becomes legally Lord of her.

Poor Popinjay! mild fledgling! could not the ever-recurring novelty of neckties suffice for your temporal happiness? Why trust the puny frailty of your shell-like barge on the stormy ocean of matrimony, and as convoy, too, of so hard a craft? Has the silly ambition to be Lord of some one, or something, allured you, blind Popinjay—doomed dandy?

There's Alderman Poundwill Purseproud, who made his money by pork-packing. He is what you may call a Lord of Creation; now the way he holds in hand his several dependants, from the meek wife who crouches at the first creak of his boots on the door-step, to the smallest boy in his packing establishment, is a sight, I tell you?

The moment he, the master, enters that stately brown-stone Fifth Avenue pile, which weighs like a nightmare on his wife's mind, silence, save for the nerve-disturbing incessant creaking of those dreadful boots, reigns supreme. Why will pompous men aspiring to be Lords of Creation *par excellence* wear creaking boots? It is because they 'aggravate to the last degree; drive to the verge of distraction everybody around them.

To hear our Alderman punctuate his Lordly ascent to the upper rooms by a series of creaks on each individual step of the much-imposed-upon stairs, do you wonder that poor, pale, sensitive creature stops her ears? Then you, happy reader, have never been cursed with nerves! Would you like to see the puny, half-frightened, wholly-cowed expression of the children of this house, as with finger to lip, they scamper noislessly up three stairs at a time to the most out-of-the-way attic, at the resounding bang with which the hall-door daily announces the arrival of the most magnanimous Lord—this worse than Russian autocrat? Maybe I, Sarah Snarl, wouldn't like the training of such Lords for a spell! Wouldn't I take the creaks out of their shoes, though? Perhaps not!

Least bearable of all Lords, your solemn, long-faced Lord of Creation, Deacon Doughface, for instance, who sleeps, or rather snores, eats, and drinks, to a psalm-tune, if your eye is on him; but, God wot! that exterior is truly a whited sepulchre, concealing a festering mass of intolerance, and all manner of vice and uncharitableness.

See him with stiffly-starched neckcloth, meek, deprecating attitude, sanctimonious smile, spotless black, and measured, appealing tread, as he glides and subsides into, with upturned eyes, a well-cushioned pew, in a shady corner of one of our most fashionable worship-shops. Could you believe he was a systematic destroyer of innocence, a panderer to appetites the most degrading, a defrauder of the laborer, oppressor of the widow, encourager, nay, landlord, of dens so vile as to disgrace civilization? Yet he carries that hypocritical head day after day among his fellow-men with an air, "I am worthier than thou;" and God defers blasting it with his lightning for some inscrutable purpose, which I, Sarah Snarl, freely confess is more than I can understand.

That man, that Lord of Creation, if you will, is a devil incarnate, and should not be turned loose on any community, but shut up in a Pandemonium of his own selection; that, I, Sarah Snarl, would consider a capital punishment.

* * *

Jane G. Swisshelm on the Treatment of Babies.—In the last number of her paper, Mrs. Swisshelm devotes over a column to the treatment of babies, commencing with the moment when they are ushered into the breathing world. Her ideas are pointedly expressed, and show, however erratically on other subjects she may at times have wandered from her natural orbit, that warm instincts still maintain their sway. She starts out with the assertion that half the children born die in the first year, and that nineteen out of twenty are ruined in health by the carelessness of mothers. Give them plenty of flannel, keep them clean, warm, and dry, rub them well occasionally, let them have plenty of sleep and fresh air, but not expose them to drafts, and they will flourish. She says if infants were treated on the principle on which a good farmer treats lambs, goslings, etc., well fed and warm, they would live and grow well. Her prevailing idea is that babies are chilled to death, and that in Summer or Winter the greatest care should be taken to keep them warm. She says: "Keep the baby warm! Warmth is life. Cold is death. We think it unnatural to have their bald heads bare—believe that the air on the scalp is a constant and dangerous stimulant to the brain—believe that Nature, in her efforts to keep the head warm, sends too much blood to the head; and that is one fruitful cause of the dropsies of the brain, brain fevers, etc., which carry off so many of the children. If it were right and proper to have the scalp exposed to the air, nature would not have so clothed the human head; and until the natural covering comes, an artificial substitute should be supplied. But upon this point we do not hope to influence any one. Dutch babies wear caps, and how could any lady of taste have her baby look like a Dutch baby!"

Potato Pudding.—Three large-sized potatoes ("mealy taters") boiled and skinned, six apples, stewed and mashed with them, half tea-cupful of butter worked in, a grated lemon with its juice, sugar and a little nutmeg; all commingled and baked between two crusts, is an admirable imitation of lemon pie.

Corn Muffins.—One quart of sweet or sour milk, one teaspoonful of cream of tartar, one of carbonate of soda, two eggs, one spoonful of melted lard or butter; put all in a pan and mix them, adding as much corn meal as will make them the consistency of pound-cake dough; then grease the muffin rings and bake in a quick oven.

One Kind Act.

When Mary and I were married we were young and foolish, for we had nothing to be married with; but Mary was delicate, and I thought I could take care of her best. I knew I had a strong arm and a brave heart to depend upon. We rented a chamber and went to housekeeping. We got together a little furniture—a table, bedstead, dishes—but our money failed us before we bought the chairs. I told Mary she must turn up a tub, for I could not run in debt. No, no. It was not long before our rich neighbor, Mrs. M—, found us out, and kindly enough supplied us; half a dozen chairs were added to our stock. They were old ones, to be sure, but answered just as well for us. I shall never forget the new face those chairs put on our snug quarters, they never looked just right before. The tables are turned with Mrs. M— and me now, she has turned a poor widow; but she shall never want while I have anything, never. I don't forget those old chairs.

Ah! now the secret was out! It was the interest of the old chairs which maintained the poor widow. She was living on the interest and the compound interest of a little friendly act of years before, and it sufficed for herself and daughter.

How beautiful it is to see how God blesses the operation of his great and moral law, "Love thy neighbor;" and we should often see it, could we look into the hidden part of life, and find that it is not self-interest nor fame that binds heart to heart! The simple power of a friendly act can do far more than they. It is these, the friendly acts, the neighborly kindness, the Christian sympathy of one towards another, which robs wealth of its power to curse, extracts bitterness from sorrow, and opens wells of gladness in desolated homes. We do not always see the golden links shining in the chain of human events; but they are there, and happy is he who feels their gentle but irresistible influence!

CIRCULATION OF THE FARMER ABROAD.

We have often urged the friends of our State, to aid us in the Circulation of our Journal in the Old States, and Europe, so that we might be more instrumental of good, and help to increase the population of California, and thus make the State more prosperous.

We have often published strong Letters, from various States, proving the good our Journal is doing in making our State truly known in all her vast resources. We now ask of all who feel a desire to have our State double her population, to this work.

We append a Proposition, and hope the Friends of this Journal and the cause it pleads, and all who wish to carry out the desires expressed by our excellent Citizen, in Paris, will coöperate with us. We will make liberal terms to all Societies for Emigration, or Clubs, and Commercial Houses.

With a desire to make the Resources of California known abroad as widely as possible, we feel confident that if we could Circulate the California Farmer in all the Older States, it would be the means of showing the great Masses of the People, that California is the place for them to settle in; and we believe we could greatly benefit all the interests of our State, by Circulating our Journal extensively abroad.

With such views, we ask the coöperation of our Merchants, and Business Men, and all who desire to make California truly and widely known, to aid us in the Circulation of the Farmer.

Wishing to place the Farmer at so low a price, as to enable all to send it to their friends, we offer the following Terms for all Clubs to send to the Old States, and in Europe:

For eight Copies	$25
" ten "	30

(Each Copy to be mailed separately, if so desired).

For three Copies	10
" six "	20
" single Copy	4

* * *

MRS. LIZZIE W. WARREN, M.D.,

ELECTRICIAN AND HYDROPATHIST,

Corner Mason and Pacific streets.....San Francisco.

Mrs. Warren proposes to teach her patrons the means of attaining and preserving health, rather than the usual practice of physicians, of *doctoring the sick*. Believing in the old adage: "An ounce of prevention is worth a pound of cure," and also that the remedies used to eradicate disease are more deleterious to the human organization than the diseases themselves; therefore she dispenses with the use of drugs, relying on the curative power within the living organism and the supplying such conditions as the natural remedial agents afford. The natural remedies: Air, Diet, Exercise, Water and Electricity. The beneficial effects of water, properly used, are now generally understood, but the remedial effects of electricity are comparatively unknown. By the knowledge and application of a certain law, which recognizes hitherto unknown relations of the positive and negative forces to the functions of life, electricians are enabled to make a beneficial application to disturbed physical equilibrium, thereby rendering electricity the most powerful therapeutic agent; the most potent and all-pervading element which can be used, as it approximates to the principle of life, apparently identical with vitality. Its therapeutic uses are *reasonable* and *wise*, and may be relied upon whenever a cure or improvement is possible.

Mrs. Warren will be pleased to make arrangements by the year, with families requiring a better knowledge of the laws of health and the means of its preservation, as well as medical attendance and advice.

Having devoted many years in study and preparation for this profession, and having received ample testimonials from the College where she graduated, feels confident she will be able to prove her ability to attend to the claims of WOMEN and CHILDREN. To this practice she will give her *Exclusive Attention*.

As an ACCOUCHEUSE she claims to be eminently successful, and can produce ample testimonials of success in many difficult cases.

Those wishing to avail themselves of Mrs. Warren's advice will find her at her residence, on the south-east corner of Mason and Pacific streets.

☞ Arrangements have been made by which a few Patienst can be accommodated with Rooms and Board

Pulu! The Wonderful!

Another cargo still, is just received
At SCHREIBER'S Depot! 't is believed
There is a charm about the Pulu crop,
It comes, and goes,—the sale will never stop;
For everybody wants a PULU BED,
So easy to the body, so cooling to the head;
Another charm, too, in the PULU found—
Where PULU is, no Insects come around.

PULU! the famous PULU, now is known
As *BEST FOR BEDS*, and it has grown
So much in favor that the People go
Always to SCHREIBER'S great PULU Depot;
'Twas Schreiber had the first 'twas ever sold,
And then it almost cost its weight in gold;
But now, his ships, they come so thick and fast,
It sells so quick, a cargo does not last
A month or more, and then, it is *so* low
That all who want good Beds should surely go
Direct to SCHREIBER'S STORE on Sansome street,
There they will find a stock complete,
ALL KINDS OF BEDDING, everything that's wanted,
There too, the best accommodation granted.

Now don't forget the Number, 'tis 406;
Another fact upon your memory fix—
That Schreiber's is THE DEPOT OF PULU,
And HE the PIONEER IMPORTER TOO;
The man who first this luxury gave,
Then surely he *the best of trade should have*.

Now go and make your purchases complete,
At SCHREIBER'S, 406, on Sansome street. 1

EDUCATIONAL.

STOCKTON
Female Seminary.

THE EIGHTH SESSION OF THIS INSTITUTION, UNDER the charge of Dr. CYRUS COLLINS and Lady, assisted by competent Teachers, will commence on
Wednesday, September 25, 1861,
And continue FIVE MONTHS.

—TERMS:—

For Board and Tuition, in common English Branches, per session	$150
For Tuition in Music, per session	50
For Tuition in Painting or Drawing	25
For Tuition in Ancient or Modern Languages, each	25
Washing per dozen	$1 50

Payable Quarterly in advance.

For Tuition and Board per annum, in advance	250

☞ Pupils received at any time, and charged until the end of the session.

COURSE OF STUDY:

The first aim of this Institution is thoroughness; and although any plan proposed can only be disciplinary, yet we have chosen that course which will be the most practical, involving those sciences most available in common life. Beginning with fundamental principles, the student is carried by natural and easy graduations, through a course of study, calculated to strengthen and invigorate the mind, and prepare it for healthful action.

Our course of study comprises Two Departments, a Preparatory of two, and an Academic of three years.

THE STUDIES OF THE PREPARATORY COURSE.

FIRST YEAR.

Reading, Writing, Orthography, Arithmetic (Thompson's Rudiments), Primary Geography, Grammar, and Composition.

SECOND YEAR.

Rhetorical Reading, Arithmetic, Book-Keeping, Geography, History, Grammar, Penmanship, and Composition.

THE STUDIES OF THE ACADEMIC COURSE.

FIRST YEAR.

Algebra, Geometry, Natural Philosophy, Physiology, Rhetoric, Physical Geography, and Composition.

SECOND YEAR.

Trigonometry, Astronomy, Natural History, Botany, Logic, Intellectual Philosophy, and Composition.

THIRD YEAR.

Political Economy, Moral Philosophy, Evidences of Christianity, Belles-Lettres, and Composition.

The Ancient and Modern Languages, Music (Instrumental and Vocal), Drawing, Painting, and Ornamental Needlework, optionary through the whole course.

Pupils can omit, with the consent of parents or guardians, any of the above studies, but none will be entitled to the Diploma of Graduation who have not completed the whole course.

All young Ladies from abroad will be expected to board with the Principal.

Classical School
FOR BOYS.

We have established a Department for Boys. The course of study the same as in the Female Department. Particular attention paid to those preparing for College.

☞ Terms the same as in the Female Department.
7 Dr. CYRUS COLLINS, A.B., Principal.

SANTA CLARA COLLEGE.

THE TENTH ANNUAL SESSION OF THIS INstitution will commence on MONDAY, August 20th. The plan of instruction embraces two regular Courses—the Classical and the Commercial, besides a Preparatory Department.

TERMS.

Entrance, to be paid but once	$ 15
Board and Tuition per session	335
Washing and mending of articles washed, per session	45
Stationery, per session	10
Medical attendance and medicines (unless it be preferred to pay the bill in case of sickness), per session	10
Vacations, if spent at the College	35

N. B.—When there are more than two brothers, each one over two pays only half price.

Use of Instruments in Chemistry and Natural Philosophy, Vocal Music, Piano, Violin, and Drawing, form extra charges. School Books are furnished at store prices. No extra charge for any of the languages. Payments to be made half a session in advance.

For further information apply to the President of Santa Clara College, Santa Clara, Cal., or to Rev. A. Maraschi, S. J., St. Ignatius' Church, Market street, between Fourth and Fifth, San Francisco. 2

HUNTER'S
GRAIN SEPARATOR!

THE GRAIN-GROWERS OF THE PACIFIC COAST have now an opportunity never before offered them of cleaning their Wheat in the most perfect manner.

The undersigned would offer them his

NEW GRAIN SEPARATOR,
Patented April 9th, 1861,

As one of the best Implements ever invented. Mustard, Radish, Chess, Barley, and all other impurities, are separated entirely, leaving the Wheat in a pure and clean condition.

The importance of this Implement can be seen at once, as the

INCREASED VALUE
OF
Well-Cleaned Wheat

Will be more than sufficient to every Grain-Grower of any amount

TO PAY FOR A MACHINE.

The Patentee will visit all the principal cities and Farming districts to appoint agents at each place, and exhibit one of his Machines.

He feels confident that every Grain-Grower

WILL BE CONVINCED OF THEIR VALUE

The moment an opportunity is presented to see them work.

OUR ORDERS.

Weave no more silks, ye Lyon's looms,
To deck our girls for gay delights!
The crimson flower of battle blooms,
And solemn marches fill the nights.

Weave but the flag whose bars to-day
Drooped heavy o'er our early dead,
And homely garments, coarse and gray,
For orphans that must earn their bread!

Keep back your tunes, ye viols sweet,
That pour delight from other lands!
Rouse there the dancer's restless feet,—
The trumpet leads our warrior bands.

And ye that wage the war of words
With mystic fame and subtle power,
Go, chatter to the idle birds,
Or teach the lesson of the hour!

Ye Sybil arts, in one stern knot
Be all your offices combined!
Stand close, while courage draws the lot,
The destiny of humankind!

And if that destiny could fail,
The sun should darken in the sky,
The eternal bloom of nature pale,
And God, and truth, and freedom, die!

Antiquities Discovered. — During the late cruise of the Phenix Island Guano Company's packet-schooner Liholiho, Capt. Goddard, the Company's Agent landed on Malden's Island, to explore the same, and gives an interesting account of the remains of houses, wells, and graves, which were found on the eastern side of the Island. The houses had been built to cover ground in the shape of a cross, the foundations only remaining. These were built of large slabs of coral, and the floor inside covered with small pebbles. The paths between the houses and the main road to the beach were paved with coral slabs, and the wells were laid up with the same material, everything being finished in the very neatest and most substantial manner. At the present time the wells are filled with salt water. The graves were near the houses, and were quite numerous. On examination, there were found in some of the graves trinkets, mostly necklaces, of the style usually worn by Catholics. Capt. G. brought away a skull and some other little articles. Here is a question for the curious, as to who the former inhabitants of Malden's Island were, and how they came there; and if the wells once contained fresh water, what has caused the change? The general supposition is that this was a stopping-place of some of the Spanish buccaneers, which three centuries ago cruised between South America and the Manillas. But whether this was one of their depots or settlements, as Ascension Island probably was, or whether the ruins are all that remain of a castaway crew, will probably never be known. Future investigations may furnish some clue as to who the settlers were. Malden's Island is a low coral island, without trees or verdure of any kind but coarse grass, and apparently uninhabitable by human beings.—[Pacific Commercial Advertiser.

Dr. Porson and the Lady's Bottle.—When Hoppner, the painter, was residing in a cottage a few miles from London, Porson one afternoon unexpectedly arrived there. Hoppner said that he could not offer him dinner, as Mrs. Hoppner had gone to town, and had carried with her the key of the closet which contained the wine. Porson, however, declared that he would be content with a mutton-chop and beer from the next ale-house; and accordingly stayed to dine. During the evening, Porson said: "I am quite certain Mrs. Hoppner keeps some nice bottle for her private drinking in her own bedroom; so pray try if you can lay your hands on it." His host assured him that Mrs. Hoppner had no such secret stores; but Porson insisting that a search should be made, a bottle was at last discovered in the lady's apartment, to the surprise of Hoppner and the joy of Porson, who soon finished its contents, pronouncing it to be the best gin he had tasted for a long time. Next day, Hoppner, somewhat out of temper, informed his wife that Porson had drank every drop of her concealed dram. "Drank every drop of it!" cried she; "it was spirits of wine for the lamp!"

Diarrhea.—The following seasonable advice we copy from Hall's Journal of Health: It may be well for travelers to know that the first, the most important, and the most indispensable item in the arrest and cure of looseness of the bowels is absolute quietude on a bed. Nature herself always prompts this by disinclining us to locomotion. The next thing is to eat nothing but common rice, parched like coffee, and then boiled and taken with a little salt and butter. Drink little or no liquid of any kind. Bits of ice may be eaten and swallowed at will. Every step taken in Diarrhea, every spoonful of liquid, only aggravates the disease. If locomotion is necessary, the misfortune of the necessity may be lessened by having a stout piece of woolen flannel bound tightly around the abdomen, so as to be double in front, and kept well in its place. In the practice of many years, we have never failed to notice a gratifying result to follow these observances.

Triumph of the Stars and Stripes in Wales.—At a regatta which came off at Cardiff, Wales, on June 2d, the first prize, £4, was won by an American boat, pulled by an American crew, and commanded by a Portland boy. They came up to the Judge's-stand with the old Stars and Stripes flying at the stern, amid the cheers of the crowds of admiring spectators.

Jebb's New Patent Churn.

This famous Churn can now be had at our Office. We have had some made to answer the demand. They are a grand Churn. Persons at a distance can be suppled by sending an order with reference for the amount, $12 50. Patent-Rights for sale.

Machine for Making Wine.

☞ Several Valuable MACHINES for WINE-MAKING, including a Machine for stripping the Grapes from the bunches, with presses, etc., capable of making Wine in the best and most rapid manner, can be had on application to this office.

A Chance for a Saw-Mill.

An experienced man at the Saw-milling business, one who has a cash capital of $5000, can hear of a chance by which he can secure a half-interest in a Saw-Mill, a Farm, and a Stock-Ranch, where his money can be doubled every year. The present advertiser wishes to go to the Atlantic States, to be absent some months on important business, and he desires to find a partner in whom he can confide. None need apply without they have the means, and can make the references all right. The Right Man can secure a grand chance.

Inquire of the Editor of the Farmer, who will give all particulars.

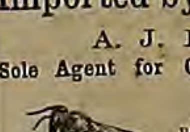
Pure Italian Bees!

Imported by S. B. Parsons.

A. J. BIGLOW,
Sole Agent for California and Oregon.



Flushing, Oct. 30, 1860.

I have this day furnished to A. J. BIGLOW one hundred and thirteen ITALIAN QUEEN BEES, which he is to take to California to propagate and sell on our joint account. Besides these, I have sold no Bees to go to California. My sales here have been to two classes—Agents, and non-Agents. The latter have been supplied only on their written agreement neither to sell, loan, or give away, prior to the first of June, 1862. The former are allowed to propagate and sell for me, making the same conditions to those to whom they sell.

S. B. PARSONS.

These Bees have been pretty generally distributed throughout the State, and as far as heard from, are coming up fully to the anticipations of the purchasers as to their superiority over the common black Bee. "Their beautiful color and graceful form render them an object of interest to every person of Taste." A Circular, containing the terms and conditions of sales, will be sent to all who send me their Post-office address.

The following-named persons have some of this lot of Bees, and are acting as Agents for me:

Rev. Hiram Hamilton, of Stockton;
J. S. & A. Harrison, of Clear Lake, Napa county;
J. V. Hoag, Yolo county;
Geo. W. Ramsdell, Marysville;
Frederick Neidhardt, Illinoistown;
Dr. D. G. Perry, Auburn, Placer county;
M. Hardy, } San Jose;
Jackson Lewis, }
B. H. Hoag, Napa county;
O. W. Childs, Los Angeles;
Fred. Woodward, Yolo county;
Benj. N. Bugbey, Folsom;
Isaac Hoag, Yolo;
P. V. Veeder, Knight's Landing, Yolo county;
Dr. W. S. Livingston, Pilot Hill.

A. J. BIGLOW.
Sacramento, March 20, 1861. 5-3m

Electricity as a Remedial Agent.

DISEASES CURED
Without the Use of Medicines,
AT THE
Electropathic Institute,
625 Washington street,
Between Montgomery and Kearny streets,
SAN FRANCISCO.

When it was promulgated that disease could be entirely eradicated from the system without the use of poisonous drugs, the unthinking, or those who do not look deeply into cause and effect, scouted the assertion as chimerical, and adduced strong evidence of its utter impossibility. Long articles, replete with arguments, seemingly unanswerable, of the position that only through the digestive system could the blood be purged of the accumulation of the poisons which constitute the disease. A great cry went up from those interested in the continued supremacy of the old system of one poison to cure another; that electricity, as a curative agent, had been tried and proved to be of but little if any value—thinking, poor souls, that the world of science stood at the same point it occupied one hundred years ago. They were wrong, while those old fogies were content if they cured one in every five patients, there were those who were diving deep into the science of electricity, and finally it was discovered that the trouble was in the instruments used. From that time to the present, improvements have rapidly advanced, until every disease in the catalogue of human ills has been either cured altogether, or checked so as to enable the sufferer to seek those changes of climate which ultimately perform a perfect cure. Diseases hitherto considered incurable, have been cured, and those diseases which took months, and even years, to cure by medical process, are now cured in a few weeks; and all by the improved instruments of DR. J. H. JOSSELYN, Resident Physician at the Electropathic Institute, New No. 645 Washington street, between Kearny and Montgomery streets, San Francisco. It is astonishing to see the number of patients and diversity of diseases that have been relieved by the Electropathic system. From early morn till late at night his instrument is engaged, imparting health and strength to all who have the good fortune to obtain his services. The charges, too, are not as heavy as by the old system, besides there is no medicine to pay for, let alone the unpleasantness of swallowing the nauseous stuff. During the time that the Institute has been in operation, there has been more benefit to the human family derived from the system than from all other systems combined during the same period. Among the most troublesome diseases to which Californians have been exposed, is Rheumatism; none have given the honorable practitioner more trouble to relieve, and none have pretended to cure (if we except known empirics) permanently. But this subtle disease gives way before the Electropathic system in a very short time, enabling the sufferer to go about his business without pain or the fear and dread of relapse. And so with most other diseases, considered incurable. We mention Rheumatism because of its abundance, but we could enumerate many other diseases full as troublesome, and some far more fatal in their results.

To the nervous, the Directors would say, that you can be entirely relieved from those dreadful feelings of evil-foreboding, and your system strengthened so that nothing can disturb the current of your life. Several cases of insanity, arising from a disarrangement of the nervous system, have been permanently cured by this system. The Directors, in stating these things, do so in the hope that it may be the means of awakening the public who have not studied into such things, to a sense of their duties, and if possible, prevent those who have the care of the rising generation from poisoning their young charges with vile drugs, thereby entailing upon them troubles which in after life may cause them to curse their origin.

It is unnecessary to enumerate all the diseases in the catalogue, for that would be occupying space to no purpose. Every disease has been under treatment by this system, and there are none but have received benefit either in this State or at the East.

There are at present but few instruments in the world that can be depended upon. A good instrument costs very heavy, and must be manufactured to order, and there are very few who are able to manufacture them, for want of knowledge of the healing principle. The only instrument to be depended upon in this State is at the Electropathic Institute.

Connected with this system are the renowned Electro-Magnetic Baths. Here let us caution the public against the numerous impostors in the bathing line. The pure magnetic bath is one of the most effective aids in the removal of disease from the system, but if given at the wrong time, are likely to aggravate trouble, and cases have been known where the patient has been injured so badly as to require months to remove the injury. Persons in quest of this bath should be careful and not apply to a place where there is no physician to judge of the necessity of the remedy. In fact, the only place where they can be obtained in all their purity is at the Institute, where the Resident Physician will always be happy to examine and see that they are not unseasonably administered, and if not necessary, advise the requisite remedy.

Below will be found a list of the cases which have been successfully treated by the Electropathic system at the Institute, during the first year of its establishment. The record is good, and challenges the admiration of the world:

Name of Disease.	*No.*
Rheumatism	421
Neuralgia	368
Dyspepsia	297
General and Sexual Debility	240
Asthma	220
Bronchial Affections	187
Fever and Ague	183
Female Irregularities	161
Mercurial Affections	130
Diseases of the Eye	85
Paralysis	78
Scrofula (long standing)	30
Catarrh of the Lungs	27
Catarrh of the Head	21
Liver Complaints	20
Deafness	18
Panama Fever	10
Consumption	7
All others, among which is almost every nameable disease	128
Total	2626

The above shows what can be accomplished by combined energy when it has truth and science upon its side. The Electropathic Institute was started amid the cry of interested charlatans, who used all the power their riches and the prejudices of the public gave them, to prevent its success. It has risen to a position that is beyond their baffled malice, and will be honored in the scientific world when they are forgotten, or only remembered for their crimes and impositions. A thinking public are fast consigning them to that oblivion their works merit.

Persons seeking remedial assistance may wish to know something of the system by which diseases are so rapidly removed from the body. Electricity is a fluid of so subtle a nature that it can only be studied by its results. We know by its action it forces everything of a foreign nature in the body from the center to the surface by its energy; while the vitality which it imparts fills up the vacuum, preventing thereby the subtle poisons from returning to the hitherto cleansed parts; and here let it be understood that the Bath should never be administered until the disease has been forced to the surface, except, perhaps, in cases of cold where fever has not set in. Its action upon Mercurial Diseases is peculiar. The best authorities are of the opinion that it liquifies the mercury, which, when in a liquid state, by its own specific gravity, forces itself out of the body. This result has been arrived at by testing the water after an Electro-Magnetic Bath. After such tests have been found in the water, the patient is not troubled any more with those pains peculiar with the diseases. In all other cases it forces to the surface and is washed off by the bath. The whole system, in its application, is a LUXURY, there being no pain or inconvenience attending upon it, but the reverse is the case, being one continued pleasure. Try it, you that are suffering either from disease or the injudicious use of poisonous drugs, and you will be made to rejoice that you have had the courage to strike out from the beaten path.

Below are a few certificates from patients that have been cured at the Institute:

CERTIFICATES OF CURES:

San Francisco, April 18th, 1861.

This is to certify that I have been under the treatment of Dr. Josselyn at the Electropathic Institute, and that he has cured me. My disease was mercurial, accompanied by chills. I applied to him on the 11th day of this month. I recommend all afflicted to employ him. He has cured me without medicine, by the use of his Electropathic Instrument.

JOHN CALLAGHAN.

State of California, City and County of San Francisco, ss.
Subscribed and sworn to before me this 18th day of April, A. D., 1860 P. BARRY, Notary Public.

Hornitos, Nov. 1st, 1860.

Well, Doctor, I am at home, and have been to work in the water for several days, and there is no return of the Rheumatism, as I call it, and mercurial pains, as you stated them to be. I feel as gay as a lark, no pain or bad feelings, no stiffness, but perfectly well, and all done by you in three weeks, without one drop of medicine. You had hard work to make me believe before you commenced that you could cure me, but now I find it very easy to believe. Although my friends look rather incredulous, but they cannot doubt my sober earnestness. Doctor, you have my thanks, and I will benefit you all I can by spreading your fame up in these parts.

Respectfully yours, GEO PERKINSON, Jr.

To J. H. Josselyn, M. D., Resident Physician at the Electropathic Institute.

CAUTION.

The public are informed that I cannot be seen at any other place in the State except at the Electropathic Institute (179 old No.) 645 new No. Washington street, south side, a few doors below Kearny. The reason of this caution is, certain Quacks have placed my name upon their doors, and have deceived strangers who wished my services.

19 J. H. JOSSELYN, M. D.

THE VERMONT
SEED-SOWER AND REVOLVING HARROW!

FARMERS, ATTENTION!

With this machine, any person that can manage a pair of horses, can perform the operation of

Seeding and Harrowing at the same Time.

It is adapted to the sowing of ALL KINDS OF GRAIN, and is regulated by the guage to DISTRIBUTE EVENLY OVER THE SURFACE any desired number of pounds of Grain per acre, covering the Seed immediately, so that NONE OF IT IS LEFT IN SIGHT FOR THE BIRDS TO DESTROY.

IT IS SIMPLE IN CONSTRUCTION, STRONG, AND DURABLE,

Just the implement the Farmer needs at the present time, to enable him to raise Grain profitably at the prevailing low prices.

It now makes its first appearance on the Pacific Coast. For sale by

KNAPP, BURRELL & CO.,
310 Washington street.

PATENT RIGHTS FOR SALE.

The following Patent Rights of very new and valuable inventions (of which we have models to show their value, are now offered for sale. We hold the rights for the States of California and Oregon, and Utah and Washington Territories.

A Fortune for a Mechanic.

We have the PATENT RIGHT for the whole Pacific Coast for the best and most celebrated HORSE HAY-RAKE known.

ALSO—A CIDER-MILL and PRESS of the most approved construction.

A fortune can be made with either of these machines, by an energetic mechanic. The models may be seen at our office.

No. 1. A New Rotary Subsoil Plow.
Patented April 6, 1858.

This invention completely pulverizes the soil after lifting it, a very valuable implement, and one which will receive universal commendation.

No. 2. A Corn Cultivator.
Patent now pending; papers expected.

With this implement the soil is first thoroughly plowed and deeply pulverized, and upon the return it smoothly and perfectly hills up and harrows the ground between the rows. A very new and valuable implement.

No. 3. An Improved Clothes Reel and Bar.
Patented January 3, 1860.

This valuable domestic piece of furniture can be used in the Laundery, the Kitchen, the Nursery or Chamber, and can be made plain or ornamental; standing in the same relation as a piece of important furniture as does Wheeler & Wilson's Sewing Machines; neat when used and ornamental when not in use.

No. 4. The Mechanic's Spirit Level.
Patented September 13, 1859.

This implement will be of great value to Contractor and Builders, being one of the most valuable inventions yet out. 2000 were ordered for the New York market just before the sailing of the steamer. Builders will do well to examine this model.

No. 5. A Musketo Bar.

This will be much wanted in California. It is simple in its contrivance, perfect in its working, and can be affixed very cheap to all styles of bedsteads. Hotels, public houses and private families will find it a useful invention.

Also, Hyde's Patent Post-Driver,

A most excellent labor and money-saving machine, for which we offer rights, as will be seen by a card in our columns.

Holding the rights to all these new inventions, we invite the public to call and see the models. All persons who may be desirous to purchase either County, City, Town, or Individual Rights, can do so on application to
2 COL. WARREN, Editor Farmer.

HOGS! HOGS!! HOGS!!!

For Grain-fed Hogs,

At the Pork-packing House of
WILSON & STEVENS,
Corner Broadway and Sansome streets.

N. B.—Parties having tule or slop-fed Hogs need not apply. 5

BAILEY'S PATENT
COMBINED
WASHING AND WRINGING MACHINE.

Patented April 5th, 1859; and March 27th, 1860.

THIS MACHINE IS ADAPTED TO ALL KINDS OF Clothes, from a pocket handkerchief to a bed-quilt. You can wring your clothes in less than one quarter of the time, and so much dryer that they will dry in one half the time, and not injure your clothes one half as much as when twisted by hand. This Machine is formed with

TWO SPRING ROLLS COVERED WITH RUBBER,

And so constructed as to run together with great pressure, and turn fast and easy. The springs in the rolls are so constructed as to yield the most in the center, where the bulk of the clothes are conducted as they pass between them. By this means the springs with the rubber close so tight around the clothes that they come through

NEARLY DRY ENOUGH TO IRON.

However uneven the garment may be, it receives an equal amount of pressure. It is also sufficiently strong and so arranged that it can be run by power for LAUNDRIES, FACTORIES, LARGE HOTELS, &c. Although it is a small and simple Machine, it is able to do a large amount of work in a short time.

This Machine has been thoroughly tested for sixteen months past, and found to do everything that it was designed to do. And after any one buys one of them, and finds it will not do what I claim for it, they can return it and have their money, as all my agents are authorized to do this. So there is no chance for you to get humbugged by giving them a fair trial, and it may be just the thing you want.

To wash with this Machine, put your clothes to soak for about twenty minutes in strong soap-suds and warm water, then run them through the rolls five or six times back and forth into the suds, when they will require no rubbing excepting the very dirtiest parts, such as collars and wristbands, which will require but a slight rub with the hands. By this process you will be able to do your washing in less than half the time you can by hand, or any other Machine in use, and much easier, and no wear or tear to your clothes, like the rubbing-board and twisting to get the water from them—as you can see the principle of my Machine is to squeeze instead of rub and twist, which evades all friction.

CHAS. T. DARROW, San Francisco.
General Agent for California and Oregon.

A Machine will be on exhibition at F. D. Cottle's Carpenter Shop, Pine street, below Sansome.

Price—20 to 25 Dollars.

THE CATARACT
Washing Machine
AND WRINGER.
Rubbing and Wringing Done Away!

THIS MACHINE IS REMARKABLE FOR THE FOLLOWING QUALITIES WHICH IT IS WARRANTED TO POSSESS:

It will wash and rinse the finest Lace Collar, or the largest Bed-Quilt.
It washes Flannels without shrinking them.
It does not wear the Clothes and never breaks a button.
It is perfectly simple, very strong and durable, and cannot get out of repair.

A common hand can with ease and perfect safety to the Clothing, wash Faster and Better than Four Washer-women can by hand.

Wringing is Done Five Times as Fast as Clothes can be wrung by hand, and removes the water so thoroughly that the Clothes Dry In Half the Time.

☞ The Machines can be seen in operation at our store. Always for sale by

JOHN G. ILS,
176 (old number) Washington street,
16 Next Maguire's Opera House. *SAN FRANCISCO.*

Colby's Patent Improved
CLOTHES WRINGER

THIS MACHINE IS ATTACHED TO A TUB WHEN IN operation. It consists of a pair of India Rubber Rollers, hung in a framework of galvanized malleable iron of peculiar form, held together by a single rod, or tie, which forms a joint in the frame, by means of which the rollers are held in their proper place, and the Machine clamps itself firmly to the tub or box.

I give seven good reasons why every family should have a Machine of some kind for this purpose; and if we allow each reason given to make a saving or be worth but two cents per week, you will have the price of the Machine in one year, and it will last a lifetime.

1st—It will save time, which is money.
2d—It will save strength, which cannot be bought.
3d—It will save the clothes, which cost money.
4th—Any man, boy, or girl, can use it, who could not wring clothes by hand.
5th—It helps to wash the clothes, and by running them a few times through the Machine, out of hot suds, it will clean them as well as half the Washing-Machines in use.
6th—It leaves the clothes in a better condition to dry.
7th—It helps to make Washing-Day more pleasant.

It will be seen by the above that no family can afford to be without such a Machine.

I can give many excellent recommendations, if necessary.

For sale by

Wholesale Produce Report.

This represents the prices paid by the dealer to the producer.

[Corrected weekly, by A. H. Todd & Co., No. 42 Clay Street.]
Oct. 3.

Since our last report, we have to note the completion of the loading of the ship Fearless for New York, with 7800 sacks Wheat, 11,000 sacks Barley, 510 bales Wool, 3000 Hides, etc. The brig Therese for Hongkong on the 28th ult. carried 4000 qr-sacks Flour, 2868 sacks Wheat, 340 sacks Oats, and 950 flasks Quicksilver. The ship Galatea, for Liverpool, carried 26,500 sacks Wheat, and 2000 sacks Barley. The ships Charger and Moonlight cleared yesterday for Hongkong, carrying as a portion of their respective cargoes 4800 qr-sacks Flour, and 9700 sacks Wheat. The ship Electra, for Sydney, and the bark Constance, for Auckland, New Zealand, cleared yesterday, the former with 7958 sacks Flour, 8062 sacks Wheat, and 3720 sacks Oats, and the latter with 6900 sacks Wheat, and 250 sacks Barley.

There are now loading, the ship Herald of the Morn- Liverpool, and the bark Oregon for Australia. The ship Franklin Haven for Liverpool, which we mentioned as having gone to Vallejo to load Wheat, has about completed her cargo. It is reported that several other vessels are now chartered, and if we may be allowed to form an opinion from the active competition prevailing among buyers, shippers, millers, and speculators, they either have orders or are firm in the belief that Wheat is sure to advance. The competition created by these parties, all being in the market, has enabled sellers to advance rates fully five (5) cents ₱ 100 pounds. We quote the market to-day for Wheat as to quality, from $1 40 to $1 70 ₱ 100 pounds, with an upward tendency. Barley remains dull, and Oats are without sale, with large stocks on the wharves, and daily growing larger.

There is a slight improvement in Flour, shippers paying $4 40 for superfine, and from $4 80 to $5 50 for extra. Hay continues at our previous quotations, and receipts are ample.

The receipts of Produce for the past week have been as follows: Flour, 17,306 qr-sacks; Wheat, 59,298 sacks; Barley, 19,436 sacks; Oats, 9000 sacks; Cornmeal, 197 sacks; Bran, 1458 sacks; Middlings, 113 sacks; Buckwheat, 110 sacks; Beans, 343 sacks; Potatoes, 6032 sacks; Onions, 700 sacks; Salt, 3150 sacks; Wool, 261 bales; Hay, 736 tuns.

Wool Market in New York.

New York, Sept. 10, 1861.

Gentlemen: Since the date of our last respects, 31st ult., there has been no abatement in the demand for Wools for Army and Navy cloths. Almost everything of suitrble quality has been bought up. There is not a bale of California Wool now here unsold. Lots that hitherto would hardly be looked at by buyers, have been taken at full value. The cargoes daily expected per "Sierra Nevada," "Mary Robinson," and "Belle of the Sea," will find a ready market. No material advance in prices has recently taken place. The large lots afloat from Europe have kept the rates in check. While no decline is looked for, a considerable rise is improbable, as the English markets are heavily stocked and depressed, and large importations can quickly, and will undoubtedly, be made. As the season for the Fall clip is at hand, we would again most urgently impress on all interested in the trade, to discourage the bringing to market of Wools filled with clover-burs,

Very respectfully, John W. Smythe & Co.

◆

The Curative Effects of Grapes.

Dr. Herpin, of Metz, has published a very interesting account of the curative effects of grapes, in various disorders of the body. They act, firstly, by introducing large quantities of fluids into the system, which, passing through the blood, carry off, by perspiration and other excretions, the effete and injurious materials of the body; secondly, as a vegetable nutritive agent. Employed rationally and methodically, aided by suitable diet and regimen, the grape produces most important changes in the system, in favoring organic transmutations, in contributing healthy materials to the repair and reconstruction of the various tissues, and in determining the removal of vitiated matters, which have become useless and injurious to the system. Directed by a skillful physician, this valuable curative agent can be made to produce the most varied effects on the constitution. It It also possesses the advantage of being acceptable to invalids. The treatment lasts from three to six weeks. The quantity of grapes that may be consumed varies from one to four pounds a day, commencing with small quantities, which are gradually increased. The skins and seeds must not be swallowed. In the absence of grapes, the most beneficial effects may be obtained from dried raisins, provided a quantity of water, sufficient to satisfy the thirst they create, be taken at the same time, or they may be stewed in the same manner as prunes.

◆

Brandy from Grapes.—The following directions for making brandy were given by Dr. Graves, in the Tuolumne Courier: To make brandy from grapes and their refuse, and if you wish to make from the refuse (that is, what remains after pressing out the juice for wine), you must add to them tepid water, to extract the spirituous part left in them. Take now your extracted fluid, and put the same into your still and distil it over, the same as whisky. This first product is put into a tub with one-fourth pound of fresh-burned pulverized charcoal to the gallon. Stir the whole well up for half-an-hour, and then fill again your still, and distil it over again with a slow fire. If the heat is too strong, you will not only lose in strength, but in flavor also. In order to make a firstrate brandy, it requires a third distillation. And if you go through the process right, you will have, when of a proper age, an article vastly superior to any imported article you can buy; as there is very little brandy imported but what is made from alcohol, or at least alcohol and brandy mixed; to say nothing of the unscrupulous use of prussic acid, which is sometimes used to give it a flavor, to represent age; thereby destroying health and often life. The above directions will answer to make good and cheap brandy, if properly followed; and now is the time that such information is most needed, as our gardeners scarcely know what to do with their abundant crops.

"Float Land."—The curious statement is made by the Stockton Republican, that in its Agricultural district there are quite large tracts of land that actually float upon deep water. The soil on them is some two or three feet deep, and a 20-foot pole forced through it finds no bottom below, as there is usually a lake of great depth beneath it. This, we should say, is at high tide, for the lands rise and fall with it. Some of the tracts are very superior grazing land, and large quantities of Hay are cut upon it, persons going with their carts, animals, and machinery upon the tracts. At high water the lands bend up ahead like a small hill, when a heavy team passes over it, which embarrasses the cattle very much. They are generally driven over it at low tide. The bending is like that of ice in some stages, and there are air-holes in the land. Persons navigating the sloughs are sometimes compelled to pry an acre or two one side or the other, to afford room for their vessels to pass. These singular formations originate, probably, from floating tule and other drift-stuffs which have collected, and by some means have sunk under the water sufficiently to receive the sediment left by floods for years. The owners of these lands intend by artificial means to double the depth of the soil on their islands, considering them a valuable part of their possessions.

◆

Coal Oil.—In Humboldt county, coal oil springs have been discovered within a mile of the ocean, in Lower Mattole. Some of them yield a number of gallons in twenty-four hours. The Times says the oil is very pure, has the peculiar smell, and when lighted, produces the same kind of light as our common kerosene, the only difference being in the color—the natural coal oil being very dark, in fact, nearly black. A number of companies have been formed for the purpose of prospecting for oil. One company has commenced to bore for oil upon Mr. Davis' ranch, and have gone down already some eighty feet. They have struck some small veins of coal, and will undoubtedly strike a very extensive one, as the country has every indication of being an extensive coal field.

◆

Four Hundred and Fifty Acres Rich Land.

A valuable tract of rich Land, of the extent named, in a beautiful location. Will be sold a bargain if applied for soon. Title perfect. Inquire of Editor of the Farmer. 14

Valuable Breeding-Stock.

Those who have valuable Breeding-Stock should be sure to make that Stock known through our columns by their regular advertisements. This is the only way to extend the information so as to make it known over the whole State.

The Paddock.

Young Wallace.

We herewith give the pedigree of the noble Clydesdale Stallion, Young Wallace, recently imported here on the bark Camilla, from Australia, by A. C. Cushing, Esq., and of which we spoke in our last issue.

This fine animal can be seen at "Ben Fish's" Stable, on the corner of Pine and Sansome streets, and is worthy of special notice, as this is a class of Stock very much wanted to improve our Draft-Stock:

Young Wallace, black entire colt, bred by Edward Bradley, Esq., of Craigieburn, Victoria, got by the imported Clydesdale horse, Cochrane's Clyde, out of the Clydesdale mare Nance, was foaled 16th of November, 1858.

Cochrane's Clyde, a rich bay, was bred by Mr. Alexander Bridge, of Earn, near Perth, Scotland. He was exhibited at the Highland Society's Show, at Berwick, and gained the prize, beating twenty-nine others. At the Port Phillip Farmers' Society Show, at Melbourne, in 1849, he was awarded the first prize.

Clyde is by the celebrated horse Prince Royal, the property of John Barr, Esq., of Erskine, Renfrewshire. Twenty-eight of Prince Royal's progeny were used as sires in Scotland. Clyde's dam gained the first prize three years in succession at Perth, in 1849, 1850, and 1851.

Nance is by the imported Clydesdale horse Douglass, out of an imported Clydesdale mare.

◆

Pedigrees of Stock.—We request those who have procured full Pedigrees of their Stock, to forward the same to us at an early day, that we may publish them. We will publish the Pedigrees of all Stock of high character, and thus make known extensively all valuable animals of all kinds.

◆

May We Have Your Aid!

We wish to place our journal in every county of every State where it can be mailed among the old States of our glorious Union. This will make known the resources of our rich State, and no more acceptable newspaper can be sent abroad than our journal. Now, we ask our friends to aid us in this work. See our new Prospectus, and the reduced prices.

Pay Us Through the Mail.

We are often inquired of by our subscribers, "How can we send our dues?" We answer: Send by Mail. Money is always safe in the Mail. We have agents in many important places, but distant subscribers can always send by Mail safely.

Information of the Wool Markets.

We have now completed an extensive correspondence with all the various Wool Markets of importance in the world, and can keep Wool-Growers well posted upon these matters. To these reports we refer our readers; they will find them important.

Valuable Blood-Stock For Sale.

We would invite all who desire Dairy-Stock of the very highest character, to call on us, or write to us, as we have for sale about twenty-five head of as choice Durham Stock as there is for sale in the State, as follows:

One Full-Blood Durham Bull, 2 years old, of the highest pedigree, and as handsome an animal as has ever been offered in this or any other country.

One young Full-Blood Calf, 8 months, a perfect picture.

Several younger Blood Calves.

About twenty Cows and Calves, Durham, Devon, and Ayrshire, with Calves by their sides.

Among the Cows are some of the very best milkers in the State. Inquire at the Farmer Office. 18

To Wool-Growers!

THE SUBSCRIBERS WOULD call the attention of the Wool-Growers of California to their flock of

Fine Full-Blood Merino Sheep,

Which is acknowledged by the best judges to be the finest flock of Sheep in this State.

Our flock originally consisted of nothing but Full-Blood Merino ewes, and the bucks were imported from the celebrated flocks of J. D. Patterson, Chataque Co., N. Y., consequently we have never had upon our ranch anything but the finest Full-Blood Stock. We now have

A Limited Number of Bucks For Sale,

Which we intend to offer at such prices as to place them within the reach of all who wish to improve their flocks of Sheep. There has never been finer Stock imported into this State, and the bucks we now offer for sale have the advantage of having been

REARED HERE,
And Fully Acclimated,

Therefore more desirable than imported Stock.

Persons wishing to see our Stock, will find a sample of our bucks at FISH'S STABLES, on Pine street, San Francisco.

For information concerning the Clip from our flocks for this year, and quality of the Wool, we refer to Mr. J. E. PERKINS, Agent of the Wool-Growers' Association, San Francisco, or to Col. WARREN, of the California Farmer, who will show the Bucks to purchasers.

Persons wishing to address us will send letters to care L. B. BENCHLEY, San Francisco, who will give any information required concerning our flock of Sheep.

GODCHEAUX & BLACKBURN,
16 Rancho Passo Robles, San Luis Obispo Co

RAMS!
FOR SALE
PURE AND THOROUGHBRED
SAXON RAMS!
From specially imported Stock.

THOROUGHBRED CATTLE,
Sheep, and Swine.

HAVING ARRIVED BY THE last steamer from New York, with a choice lot of THOROUGHBRED STOCK, which, with that recently received by previous steamers, will enable me to supply the market with French Merino, Spanish Merino, Southdown, and Leicestershire SHEEP; Essex, Berkshire, Suffolk, and Leicestershire SWINE. Also, a few Short-Horn Durham CATTLE, including some superior YOUNG BULLS.

This Stock has never been surpassed by any previous importation of the kind, and it will be sold as low as the same quality can be purchased from any other RELIABLE source. The Stock can be seen at our Ranch directly across the Bay from San Francisco, a short distance below the Ferry Landing at San Antonia. I will also keep a few of the SHEEP at the Black Hawk Stables, on Pine street, San Francisco, where I will be happy to show them to any one wishing to see truly good Stock.

Regular Packet!

Leaving the Embarcadero of Sonoma (for the Summer months) at 9 o'clock, A. M., MONDAYS, WEDNESDAYS, and FRIDAYS; and Pacific Wharf, San Francisco, TUESDAYS, THURSDAYS, and SATURDAYS, at 1 o'clock, P. M., connecting with Stages leaving immediately for Santa Rosa, Healdsburg, etc.

This is the only route by which passengers can leave San Francisco and arrive at Santa Rosa and Healdsburg the same afternoon.

Passengers can leave Healdsburg and Santa Rosa in the morning, and arrive in San Francisco in time to connect with the Sacramento steamer of the same day.

For Freight or Passage, apply on board; to
WM. GREEN, Agent,
At Embarcadero; or
E. K. DODGE, Agent,
530 Davis street, 2d door from Pacific Wharf,
6 San Francisco.

COLEMAN'S LINE.
SAN FRANCISCO TO NEW YORK.
HAVING ESTABLISHED A LINE
..OF..
CLIPPER SHIPS,

To sail regularly from San Francisco to New York, we are prepared to offer unusual facilities to

Shippers of California Produce.

Freight will at all times be taken on the most Favorable Terms.

Goods from the Interior, and from other Ports, will be received and forwarded, Free of Commission.

ADVANCES made on desirable Merchandise consigned to our New York House.

Insurance provided under our open Policy with the Great Western Insurance Company of New York.

24 6m WM. T. COLEMAN & CO.

HUCKS & LAMBERT'S
CELEBRATED PATENT
H & L AXLE-GREASE.
A CARD.

THE SUBSCRIBERS HAVE THE PLEASURE OF announcing to their numerous Patrons and Friends, that they have been honored by the Committee

....OF THE....
MECHANICS' INSTITUTE
....WITH A....
First Premium
....FOR THEIR....
UNRIVALED AXLE-GREASE.
ALSO, THAT THE
S. F. BAY AGRICULTURAL SOCIETY
Have Awarded them their
First-class Prize
FOR SAME.

But however gratifying to the advertisers to have their
"HOME MANUFACTURE"
thus distinguished, it is with greater pride they state the fact that (notwithstanding the overwhelming importation of an article from the East, assuming their title), the demand for their NOW POPULAR

H & L AXLE-GREASE
HAS MORE THAN DOUBLED DURING THE PRESENT SEASON.

And whilst the Manufacturers offer their grateful thanks to all those friends to
"CALIFORNIA PRODUCE"
who have given them so large an encouragement, they beg to say that no pains will be spared in future to sustain the
WIDE-SPREAD REPUTATION
their material has acquired, of being
THE BEST AND CHEAPEST
Lubricating Medium
FOR WHEEL-CARRIAGES, ETC.,
ever introduced into California!

HUCKS & LAMBERT,
Inventors and sole Manufacturers,
10 Natoma street, San Francisco.

CALIFORNIA FARMER.

List of Agents.

[Our Subscribers can send money by mail safely. Register at the Post-office, and the money will come direct and sure.]

Wells, Fargo & Co., *at all their Offices in this State.*
Postmasters, *throughout the State are requested to act.*
J. W. Sullivan, *Washington street, San Francisco.*
M. Ullmann, *cor Washington and Sansome, San Francisco*
J W. Sanborn, *Benicia.*
Thos. T. Hooper, *Postmaster, Benicia.*
Martin L. Haas, Esq., *Napa City and County.*
F. Rohrer, *Postmaster, Sonoma.*
A. B. Webster, *Brooklyn.*
E. B. Davidson, bookseller, Fourth street, *Sacramento.*
L. C. Van Allen, *Stockton.*

VOLUME XVI. SAN FRANCISCO, CALIFORNIA: FRIDAY MORNING, OCTOBER 11, 1861. NUMBER 5.

The California Farmer.

AND JOURNAL OF USEFUL SCIENCES.

COLONEL WARREN, Editor and Proprietor.

PUBLISHED EVERY FRIDAY MORNING.
Office—No. 186 Montgomery street (up stairs), near Jackson SAN FRANCISCO.

TERMS.—By mail, for one year, $4; for six months, 2 50. For a club of five new subscribers, a sixth copy will be sent gratis. To City subscribers, delivered by carrier, 12½ cents a number, or $5 a year in advance.

☞ Advertisements and Subscriptions must be paid for in advance.

JOB-WORK.—Of every description, done with promptness, at fair rates; orders will be faithfully attended to.

Address by Hon. C. P. Wilkins.

Before the Sonoma County Agricultural and Mechanical Society, at its Third Annual Exhibition, at Santa Rosa, Sept. 26th, 1861.

It was a custom in the olden time for the Greeks yearly to gather together to celebrate their great Olympic games, when poetry and philosophy, music, eloquence, and all things beautiful in art and useful in science were expended—poured out in rich profusion to swell the annual tribute to their national grandeur. It was a custom for the Hebrews once a year to assemble together from the valleys and the mountains, from the gardens and the deserts, to worship round the high altar of their common God, and pour forth at the Feast of the Tabernacles the rich productions of Judea.

So have we this day come up from the gardens and the vineyards, the harvest-fields and the grazing pastures, the workshop and the laboratory, to present our offerings upon the altar of civilization and progression, to exhibit the results of our labors and promote with earnest heart and willing hands the advancement of the science of Agriculture, of Mechanics and the Fine Arts.

Here is no shock of steel-clad warriors in the fierce tournament of a barbaric age—here no contest of the gladiator of ancient times, nor the bloody and brutal exhibition of the modern ring—nor are the strength and intelligence of man here pitted against the keen courage and rapid instincts of the wild bull and the still wilder tiger.

We make to-day no bloody sacrifice—we excite no ignoble nor dangerous passion; but, carrying in our hands the emblems of the peaceful occupations of our daily lives, we meet together as a common brotherhood, to advance still onward the cause of domestic as well as national prosperity.

You are practical and earnest laborers within the great arcana of Nature—you are daily and hourly standing in the midst of the wonderful machinery that unceasingly performs the husbandry of God—while your speaker can only utter plain and practical truths that are potent to him as layman. He is standing like one outside of the mysteries of the temple—he cannot, from his ignorance and his inexperience, rend the vail from this most sacred subject. Sacred! for what brings you nearer, what binds you closer to the Throne of God, than the never-ending manifestations of His daily operations? Sacred! the first offerings ever made upon the altars erected unto Deity by the wandering offspring of fallen man, were the "fruits of the ground" and "the firstlings of the flock." Let us treat this subject then as sacred, and let us hope that your offerings and sacrifice will be beneficial to yourselves and acceptable in the sight of God and man.

Nature herself is the first as well as the best of all agriculturists, and from her formulas and her broad principles we can gather, as from an open book, deep lessons of wisdom. She does not plant where she cannot reap an abundant harvest. She places the appropriate seed on the appropriate spot. She sows broadcast her finest clovers as well as her richest garlands of flowers upon the warm alluvial prairie, or in the deep deposits of the river bottom.

For the protection of the gentle daisy, mother Nature with careful hand seeks the bosom of some overhanging crag, that "the winds of heaven may not visit its cheek too roughly."

With strong arm and unerring instinct she plants her pine tree upon the summit of yonder coast range, the mountain top for its pedestal, the sky for its coronet, and the ocean for its mirror, and then from their nature will that pine tree grow,—

"Loftiest on loftiest and least sheltered rocks,
Rooted in barrenness, where naught below
Of soil supports them 'gainst the Alpine shocks
Of eddying storms; yet springs the trunk and mocks
The howling tempest till its hight and frame
Are worthy of the mountains from whose blocks
Of bleak, gray granite unto life it came
And grew a giant tree."

Upon the exhausted plain Nature periodically pours down from the hillside the accumulated riches of past ages. She blasts the lime rock with the lightning and grinds it to fertilizing powder in the thunder storm. She appears in the flood and the freshet, the richest loams and warmest sands from the river bed, and with fertilizing waters spreads them broadcast upon the hungry plain.

The lessons that Nature teaches us are the primary letters in the great alphabet of Agricultural science—and if in any respect we violate these fundamental principles, we wander from the pathway of success and progression. But with an earnest purpose, receiving these lessons in the elementary school of Nature, we may add up vast stores of knowledge from experiments made by ourselves and from the teachings of almost every known principle of mechanics and natural philosophy. The pioneer upon the soil of California a few short years ago saw but little to encourage husbandry—a few scattered spots, apparently the only ones favored by Nature, were all that met his inexperienced eye; the impressions derived from the results and long experiment of missionary labors were unfavorable to this State as a grain-growing or fruit-producing land. Armed with the pick-ax and shovel a whole host of hardy adventurers from every clime, sought wealth from the rock-bound mountain and went down into the depths of waters to draw forth the rich deposit of gold. But how great, how beneficial the change! Had California been fated to stand upon the catalogue of nations as merely a gold-producing State, what terrible destiny might have awaited her unfortunate position! While pouring forth from the reservoirs of her wealth the streams of precious metals to swell the commercial channels of the world, she might have fallen beneath the enervating influences that have destroyed almost every mining country upon the face of the globe. Even our boasted Anglo-Saxon race, clad as it is in all the panoply of civilization, girt as it is with intellect, and energy, and courage, might have fallen beneath the blasting corruptions of a purely mining community. Yet, to-day we feel prouder of our rank as an agricultural than as a mining people. The orchards, the vineyards, the grain-fields, and our live stock, form the true and substantial elements of our wealth and stability as a State. We out-number that portion of our State exclusively devoted to mining. Side by side with the monthly shipments of gold ride upon the ocean for a foreign market, our swift clippers freighted with the cereals from the valleys of these once condemned and slighted counties. While mining has overturned mountains, filled up the beds of rivers, destroyed blooming valleys, and transformed the whole western slope of the Sierra Nevada into a desert of uppiled rocks, we here in the more peaceful and pleasant pursuits of a pastoral and agricultural life, have made the barren places to smile, and the land teems with a hardy and industrious people.

Close upon the advancing footsteps of the miner and the farmer we demand the presence of the manufacturer. In this State we need the establishment of workshops, with a whole host of ingenious mechanics, to consume the surplus productions of our prolific soil and for the investment of our surplus supplies of silver and gold. Separated as we are from the dense manufacturing ponulations that line either side of the Atlantic ocean, the transportation of our surplus grains is attended with too much cost to make it remunerative to the producer. We need consumers. England, France and the Northern States, crowded as they are with workshops of every description, contain within themselves a home market for all the productions of their soil, and they are compelled to draw their supplies from the great granaries of other lands. With our immense yield of gold, with our abundant harvest, with an extensive mining population to feed, we yet need the workshops of the manufacturer and mechanic to give certainty and stability to the market for our grain, fruit, vegetables and meats, and exchange at reasonable rates the coinage of the forge and the hammer for the crops of the plow and the harrow.

We have a palpable evil in our midst. It is, that we have in cultivation to-day too many acres of land. This may seem strange to many, yet the history of modern experiments and the teachings of common sense emphatically tell us, that it is better to cultivate one acre properly, systematically, as it should be cultivated, than to farm by an ignorant, careless and improvident method a greater number of acres of the same description of land. And this results, perhaps, from our over anxiety to be the possessors of large tracts of land, far beyond our means to handle advantageously; as, for instance, the farmer of the far West has been taught from his earliest childhood, that he is entitled as a birthright, as one of the inherent blessings of his manhood, to no less than one hundred and sixty acres of land; and he will be content with no less. If he is of limited means and is unable to purchase he settles in good faith, with an earnest heart and hand, upon the broad domain of the general government. He insists at once, that he must farm this entire tract—the whole hundred and sixty acres are under his control and he must farm the whole—and what is the necessary result? He half fences the whole—he one-third plows the whole—he one-fourth sows the whole, and he produces a one-tenth crop from the whole. Without means, without skill, for ten long years he has been scratching over the mere outer surface of a most rich and prolific soil, without ever attempting to feed his exhausted acres when they hunger and thirst for the proper fertilizing agents, without ever dreaming that it is necessary to rest the overtasked and weary earth, by letting it sleep every three or five years, while the air, and the sun, and the rain, and the honey-laden dews of night pour down rich manna upon its bosom, the reckless husbandman goes on from year to year weakening his own strength and destroying the virgin purity and native vigor of his generous homestead.

It costs as much money and as much labor to thus half-farm one hundred and sixty acres of land as it does to plow and subsoil, and then subsoil, perhaps, again, and well fence and well keep eighty acres, and in most instances the smaller number of acres will yield as much gain as the one hundred and sixty acres, and this can be well done by the farmer himself—a matter of immense importance, when the high price of labor in general consumes the price of his crop; for it becomes him, if he would preserve his manhood and his independence from the curse and slavery of horrible debt, to cultivate no more land than he can attend to well, thoroughly, and by his own industry and the labor of his own household. Farming with him should be no gambling transaction—leave that to the professional speculator, the stock-jobber, and the money-broker. Then, if the season does fail every three or five years, as it most probably will do, yet the prudent tiller of the soil has a noble, because safe, income, from the kind and grateful earth.

But the moderately rich man has the same monomania—say one who enters upon the fertile valley of the Russian River. He, too, lives by the same rule, and he must possess one hundred and sixty acres of the finest Corn land upon the Pacific Coast; no less will suit his ambition. He pays part of the purchase-money, and deliberately signs the death-warrant of his rich acres by executing a mortgage for five thousand dollars, the balance to be paid, with interest, in five years. Honor to his courage, but little praise to his prudence! Every acre must now sweat, and groan, and labor under the cruel taskmaster. For five long years the man labors as the sturdy and honest man of the plow can labor—with all his heart, and intellect, and skill—to overcome the mountain of debt which year by year rises higher and higher with its accumulated pile of interest, before his affrighted vision. He glues his footsteps in the blood and sweat of toil. He presses upon every acre, that it may yield, without rest, without food, the quantum of the principal and interest of the heavy debt that the record proclaims that it owes, until, finally, in nine cases out of ten within the experience of every man, this farmer, dispirited, broken in health and fortune, sinks under the pressure. The labor of years has been added to the loss of his money, and the land lies almost lifeless and valueless—worn out and exhausted by labor and famine; a fit companion for the reckless and improvident master. Such men have our sympathy, but how much better to have been content with fifty acres, paid cash for what he did buy, laid by the balance of his ready money for the year when the rain faileth and the sun withholds his beams; or have applied it to the careful improvement and expansion of the capabilities of his land.? He would have been saved this attempt to force Naturne beyond her capacity, and avoided the horrible struggle for freedom—for life, while the waters of overwhelming debt rolled round him. As a general rule, and one to which there is no exception, it is more safe and profitable to cultivate thoroughly a small tract than to partially attempt the subjugation of a much larger one, of the same character of land. Our soil here is rich; nay, it is called inexhaustible, containing within its native bosom all the necessary and luxuriant chemical and mechanical properties of fertility. But are not all of you, by excessive, exhausting, and continuous cultivation, year by year destroying that luxuriance and those elements? We take away with every crop, with every drove of cattle, certain known agents that are given by the wonderful combinations of Nature to all vegetable matter; and how many of you, practical and intelligent men, return any of these material and necessary elements back again, for the purpose of preparing for the future crop? How many of you yearly use the manures your stout teams carry to the commercial outlets of your country, in the shape of Grain, Vegetables, and Meat, a large proportion of the fertilizing elements of every farm? Who has daily seen upon these smooth roads that returning team carry back the supply of lime, guano, or the common manures that lie wasting at every stable door? How many of you indulge your broad acres with a rotation of crops? How many of you gather with careful hand those huge piles of straw that mark the progress of the Thrashing-Machine, and preserve it, not only as food for your starving cattle, but as a necessary payment of an honest debt which you owe to the land that is your home and the inheritance of your children? Are you not expecting to reap from a soil that you have not sown? Will not your improvidence entail upon you and upon your posterity the curse and burden of a worn-out farm? By the fearful drains made by the continuous Tobacco-crop upon the fertile shores of James River, in Virginia, some of those splendid and extensive plantations were some years ago abandoned to a new and second growth of timber, and it is only in later days that small farmers have repossessed moderate portions of those lands, and by care and skill have reclaimed them from their abandoned property. So will it be at no distant day upon the fertile banks of the Russian River, upon the rich Potato-fields of Bodega, and through those Grain-lands of Santa Rosa, unless the system of a continuous Corn, Grain, and Potato-crop, be abandoned, and farmers learn from the teachings of philosophy, that there is a limit to the sign and power of Nature.

It was said in a late Address delivered before an Agricultural Society in the city of Stockton, that "In no part of the States is farming carried on with more science and expense than in New England, yet, by negligence in cultivating and fertilizing, the soil has so deteriorated, that it is estimated on high authority that it would require the enormous outlay of *one thousand millions of dollars* to repair the effects of a wasteful and exhausting system of cultivation."

Daniel Webster says of what he personally observed in England: "An English farmer looks not merely to the present year's crop; he considers what will be the condition of the land when that crop is off, and what it will be fit for next year. He studies to use his land so as not to abuse it. On the contrary, his aim is to get crop after crop, while still the land shall be growing better and better. It is upon this fundamental idea of constant production without exhaustion that the system of English cultivation, and, indeed, of all good cultivation, is founded. * * * But some rotation, some succession, some variation, in the annual production of the same land, is essential. White crops (Wheat, Barley, Rye, Oats, etc.,) are not to follow one another. * * * Green crops, or Turnips, Potatoes, beets, Vetches, or Tares (which are usually eaten while growing by cattle and sheep, or cut for green food), and clover. * * * But the Turnip is the great green crop of England. Its cultivation has wrought such changes in fifty years that it may be said to have revolutionized English Agriculture."

Think of it, farmers! that the introduction of the commonest Vegetable of the field should have revolutionized a kingdom! that by the occupation of idle hours in such experiments as are suggested by this fact, the condition of Agriculture in our county, in our State, might be revolutionized!

These Agricultural Societies may do much to awaken an interest in these matters, by bringing together an enterprising body of men, who may interchange opinions and make known the results of individual experiments. But they cannot do all that is necessary to advance you up to the requirements of the age in which we live. Agriculture in its highest and broadest acceptation, is a science, the most attractive and the most useful that can occupy the intellect and industry of man. Agriculture is the power to labor, with the power to reason and improve. We are too much accustomed on such pleasing occasions as these, when the sturdy yeoman stands here in all his power, proud conqueror of the strongholds of Nature, erect, and surrounded by the wonderful spoils of his victorious harvest home, we are accustomed too much to laud the dignity and glory of mere physical labor. But here we have a higher duty to perform. We harness manual labor side by side with intellectual labor, and thus coupled we glorify their manifold achievements. Labor is the outward and visible monarch of the universe, but there is in this pavilion, on these stock grounds, in the workshop of the mechanic, yonder upon the open plain, an invisible "power behind the throne," greater than the monarch himself. It is the genius of intellectual improvement, driving labor with glorious impulse in the proper channels of its victories.

Agriculture is the hardy pioneer of civilization, and whenever and wherever, in all countries and in all ages, the progress of Agriculture has made its mark, it has preceded and produced the enlightenment of the people—whether in looking far back to the days when Egypt was a land flowing with milk and honey, or whether we trace the history of modern nations, and mark the day when the plowshare made harvest homes upon the battle fields of Europe.

Agriculture is a science, and is the centre upon which botany and chemistry, astronomy, mechanics and navigation shed their concentrated rays. Like all other sciences, it demands the deepest research and the closet study. It is not stationary—it conquers prejudices, it demands energy—it is progressive—it sets aside the dull wooden plow with which our ancestors tilled the meager fields and cuts the deep furrow with the keen steel, fashioned by the skillful hands of its sister science of mechanics.

It has been well said, and I will quote it, as better than I can say it, "That when any necessary ingredient is wanting in your soil, the Science of Agriculture, with the aid of chemistry, shows the husbandman how to supply it; when in excess it teaches him how to bring about the required equalization; it teaches him the theory of the rotation of crops; it explains to him the influence of the various elements which surround him, and prepares him for their advantageous reduction to purposes of practical utility; it introduces him to a knowledge of the agency of these elements in modifying and improving the organic species which he is engaged in cultivating; it simplifies the mysteries of the introduction of new varieties, and the means of perpetuating which he most admires—it throws a flood of light upon the nature and treatment of diseases which have blasted his crops and defied his exertions. In a word, it collects together the scattered fragments and isolated facts which a world-wide experience supplies, and by combinations and comparisons, by the simple process of careful gleaning and judicious arrangement, makes them available for future application." Is not science thus described worthy of our warmest devotion? Who among you give it attention for the highest purposes of art and science—who understand its every-day performances? As an illustration: In England, the old custom, and one it would be well for some of you next year to institute, was, to let the land lie fallow every four years, but now, as we have before seen, instead of that system, but for the same purposes, the land is sowed with turnips. What is the reason for this economical plan? Some will readily answer that turnips do not impoverish the soil. True, but why is that a palpable truth? The answer is, that the turnip did not mature its seed before it is gathered, and it is in the perfection of the seed as in corn, wheat, and barley, that vitality is drawn from the soil; and besides this, the turnip with its broad leaves expanded to the atmosphere, draws its principal nourishment from the air, rain, sun, and dews, and at the same time keeps the land moist and healthy. Who among you can tell this audience in plain language what fertilizer your farms upon which you have lived for the past five years, needs at your hands—whether it be lime or ammonia, sand or marl? and, if ammonia, why it requires that particular fertilizer? If to-day I have awakened an interest in the humblest amongst you in the cause of this science, I shall be well repaid for these crude and hasty thoughts, for it is not for me in such a place, before this vast audience, and with so vast a theme, to attempt instruction, but simply to excite thought and direct attention.

It is said by high authority that every farmer in California has at least six months of unemployed time upon his hands in every year; if this be true, how many of you explore the regions of this science? How many works upon agriculture, cattle-raising, stock, farms, or horticulture, have you upon shelves at home, within the daily touch and sight of yourselves and your children? How many of the long winter nights do you devote to the improvement of your own systems, and in teaching your children the lessons of experimental philosophy?

Fellow-citizens, these are times that not only test the strength of our mighty nation, but try the metal of communities and the endurance of individuals. These are days when frugality must sit at your board, and economy must be the companion of your daily lives; when your farms will be strained to meet the extraordinary emergencies of the remarkable times in which we live. To Agriculture must the nation look for the sinews of war. To your herds and your granaries a whole nation must look for food; and now while we feel the throes of a mighty revolution, it is proper that here, this day, we should sit in calm deliberation upon the best means of developing the wonderful resources of our adopted State. We may not only aid ourselves in a temporal and selfish sense, but from our abundance may issue the streams of plenty to nourish the sufferings of afflicted humanity. And when upon some future day, Peace, with her badge of plenty, shall hold a high carnival in the halls of the nation, when from the center even to the outer limits of this whole circumference of this Union, grim-visaged War has smoothed his wrinkled front, this State, with her full granaries, her ample wealth, her accumulated treasures, standing as the representative State of a whole world, may pour healing oil upon the disturbed waters.

Fellow-citizens, we have made our annual pilgrimage to this altar; here we have seen side by side the fruits that make fragrant the atmosphere of isles that gem the oriental seas where the nutmeg and the spices grow, and the fruits that ripen where the snow-capped mountain casts long shadows o'er the earth—where the apple and the nut flourish as merry food on Christmas-days. We are not only a representative people, a congress of the nations, but a climate takes to its warm embrace the extreme productions of every soil. With a sky that an Italian might envy, we have a winter that a Russian might enjoy. With vineyards clustering with their purple wealth, grain-fields bending with their golden heads, the substantial fruits of the north, the luscious delicacies of the south, what do we want in California? We can grow tobacco, rice, hemp. California grains have a name in the markets of the world. We have the thorough-breds of England, proud steeds of Arabian sires, the rapid roadster of the Atlantic States, the hardy Andalusian breed of California. What we do need in California for future improvement in these various productions of our own and foreign lands! We demand a deep devotion to the science of the farm and the breeds of the pasture.

We need agricultural education. We need seminaries of learning, devoted to its peculiar departments. We need the fostering hand of Government. The mechanic who invents the spinning jenny, or improves the method of cutting pins, receives a patent and a fortune from a liberal law. The man who discovers a new mode for improving and preserving the potato crop, has no reward. We demand now that the Government should acknowledge merit in Agricultural science. We need that the Agriculturist should appreciate the high position which he occupies in the social and political world—that he should understand the dignity of his high calling—no longer hewers of wood and drawers of waters, but stripped for an intellectual contest, we dive into the bottom of the deep, and pluck up drowned honors by the locks. We go back into antiquity, and find its foundations deep laid in the institutions of the eldest born of nations. It flourished in all its splendor even at the base of the pyramids of Egypt, and has its record sparkling through the illumined pages of the Book of Books. The Latin tongue, wielded by the genius of a Virgil, exhausted its splendors upon the delights of Agriculture. Temples decorated by the elegant hand of Grecian architecture, marked the estimation with which the sacred rites to Ceres and to Pan were held by the richest and most cultivated of ancient nations. And still, far back upon the first records given of our race, the awful voice of God sounding deep into the remotest destiny of humanity, gives his first edict unto fallen man, that he shall till the ground from whence he was taken.

And now, in obedience to the laws of nature and the history of antiquity, the science of modern Agriculture holds the destiny of every people in the hollow of its hand, twining itself the holiest affections of men, rearing homes within the shadows of mighty cities, humbly surrounding the tent of the pioneer upon the vast prairies of the West, giving light, and food, and raiment unto the sons of the children of men—it is the beginning and the end of modern civilization.

This temporary temple, this expanse of upturned faces, flashing with the enthusiasm of its victories, camped to-day upon a spot where, a few brief years ago, the wigwam of the savage stood, and the wild beast roamed undisturbed—this whole scene is a pleasing and profitable tribute to the genius, the progress, and power of Modern Agriculture.

Pedigrees of Durham Stock.

In answer to what we esteem a public call or demand for the geneology of Blood Stock, we give below the pedigree of Master Buttercup, a noble Durham bull, imported by A. B. Forbes, Esq., from the celebrated herd of Samuel Thorne, Esq., of Thornedale, N. Y., the owner of the famous Duchess stock, which has won the plate and praise of the world.

Master Buttercup has been exhibited at several Fairs this season, and at each he has won the first premium.

MASTER BUTTERCUP,

A beautiful roan, calved July 1st, 1858. Got by imported 2d Grand Duke (12961), dam imported Buttercup 2d, by Horatio (10335); g. d. Ravetti, by Lord John (11731); g. g. d. Christmas Rose, by Baron of Ravensworth (7811); g. g. g. d. Brisius, by Rarey Show (4874); g. g. g. g. d. Bessie, by Thinkhart (660); g. g. g. g. g. d. Campton Rose, by Expectation (1988); g. g. g. g. g. g. d. by Belzona (17091); g. g. g. g. g. g. g. d. by Comus (1861); g. g. g. g. g. g. g. g. d. by Denton (198).

Buttercup 2d was imported by Mr. Thorne from England in the fall of 1856, a young calf, for which he paid in England $1500. He is of the same family as Master Butterfly, the bull that was sold for $6000 to go to Australia, after taking the highest prizes at all the English shows. Buttercup 2d has also taken many high prises in England. The 2d Grand Duke, the sire of Master Buttercup, was imported in the fall of 1858 by Mr. Thorne, then a yearling, for which he paid $5,000. He paid also for a sister of Grand Duke $3000; another sister was sold for $3500, and a brother of Grand Duke for $5000. This animal (Grand Duke) is of the famous Duchess family, first bred by Thomas Bates, Esq., of England. When he was selected and imported, Grand Duke was considered the very best bull in England.

This pedigree shows Master Buttercup to have descended from the best blood in England, and can now be called one of the highest and best bred bulls we have in our State.

PRINCESS OF OXFORD.

A fine red, carved Dec. 22, 1557, got by Prince of Wales, dam Romeo's Oxford, by Romeo (13619); g. d. Oxford 5th, by Duke of Northumberland (1940); g. g. d. Oxford 2d, by Short-tail (2621); g. g. g. d. Match'em cow, by Match'em (2281); g. g. g. g. d. by Young Wynyards (2859).

This fine animal belongs to the Forbes' herd, with Master Buttercup, also, at Centerville.

HIAWATHA.

A rich roan bull, calved March 22d, 1860; sire Master Buttercup, dam Spikehorn; g. d. Primrose; g. g. d. Cherry. Spikehorn sired by short-horn bull Albert. Albert, Primrose, and Cherry, all pure Durhams, from the herd of J. M. White, Esq., of St. Louis.

PRINCE OF WALES.

A dark roan, calved May 1, 1860; sire Buttercup, dam Daisy; g. d. Butterfly. Daisy by Major, seven-eighths Durham, one-eighth Devon. Butterfly, bred by Col. O. Follats, St. Louis.

The above two fine young bulls, also of the "Forbes" herds of Centreville.

Annual Address by Wilson Flint,

Before the Eldorado Agricultural Society, at the Exhibition held at Eldorado City, Sept. 13, 1861.

[CONCLUDED.]

In California, where we have but two seasons—the rainy, called Winter, and the dry, Summer—we may expect to be exempt from mildew on the grape in its early stages of growth, and the rot near its time of maturity. The rot, the most serious enemy of the grape in the Atlantic States and Europe, is caused by heavy rains and sultry weather at the time of ripening. California will always be exempt from this, as our ripening season is dry and free from humidity. But while we are free from Summer rains, so injurious to the grape in other countries, we have the phenomena of cold nights to contend with, which are unfavorable to the health of the vine. In this connection it is worthy of remark, that our cold nights are caused by a current of sea constantly moving inland during the Summer from the ocean, and that the temperature becomes modified as sheltered positions are found or remote localities reached. Hence it has been found impossible to raise grapes by outdoor culture in the vicinity of San Francisco, where the atmosphere is harsh during the Summer, as not only the fruit but the entire foliage of the vine becomes covered with the blight from this cause. Judicious training of the vine, so as to guard against sun scald on the fruit and give it protection from the cold night air, will be found a subject of importance in the grape culture of California. Vine culture is a new branch of industry to most of our citizens, and its prosecution for a while will be attended with perplexities, and in many cases failure, because necessarily with most, a matter at first of experiment. We may avail somewhat of the practices of the vine dressers of Europe, but having an entirely different climate we should be careful not to cling with obstinacy to customs applicable there, but positively injurious under our new condition.

A State Vine Growers' Association, established upon broad and comprehensive views, for the purpose of collecting and disseminating reliable information on the subject of vine culture would be of great value to our State. This would produce skillful judges to classify our various wines, and provide against the ignorant committees at our Fairs, whose reports in many cases are injurious as they are obviously stupid.

Believing that the cultivation of the grape is that particular branch of agriculture to which your mountain districts are destined, I deem it in place to amplify the subject by discussing at some length various branches of this pleasant and lucrative business. Wine producing may be divided into two separate branches—the growing of the grapes, and the manufacture of wine; the first of which requires limited capital only as to the extent of one's vineyard, as wine makers will purchase alike from the small or large grower. But wine making, requiring great outlays for vaults, cooperage, presses, stills, and age to the wines to make them valuable, will necesssarily fall into few hands, who will possess both requisites to success, capital and skill. California grape growers need have no fear for a demand for their fruit, as capital and skill will make its appearance as soon as a reliable quantity of grapes are to be purchased. This will relieve our unskilled small growers entirely of the difficulty and risk attending wine making.

The rare facilities afforded in the delightful and healthy mountain districts of our State to poor men to make themselves homes which a prince might envy, cannot be equaled in the world over. Land can be had here for its occupancy, and all through the region are gold placers from which willing industry may get its checks cashed by those non-repudiators, the pick and pan. By working at mining a portion of the year when the vineyard requires no care, any energetic person may support himself and family, and in the course of five years own a vineyard of such income that will afford him the pleasures of a world's travels. Were those heedless thousands of strong men who may be seen at all times drinking whisky and playing cards in public houses, to improve a moiety of the opportunities showered around them, they would cease croaking that "California was played out," and our thousand hill sides would smile in emerald garbs and laugh under the harvest of purple clusters; and how many homes, O! how many homes, now desolate in far lands, would rejoice with exceeding great joy!

Great stress is laid on the matter of irrigation by those who have given wine culture only a superficial investigation. From careful observation and thorough examination through several years' experience in vine culture in California, I am satisfied that much injury is being done to vineyards and orchards all over the State by irrigation. There is not a foot of land in the State which is suitable for the vine, where it will not produce a good wine grape without artificial irrigation, if a proper system of cultivation is given the soil until after the rainy season is over. Plant young, well-rooted vines early in the Winter, and keep the earth loose and friable among them until into Summer, and no matter how dry the soil naturally is, the vines will survive the season's drought, and the roots become deeply fixed in the soil, so as to push with great vigor afterwards. Vines thus established, without being forced, will be short-jointed, the desideratum of all experienced vintners, and the crops of grapes afterwards grown on such vines will greatly exceed in value those raised on forced growth, for wine making.

An instructive fact, showing the little need of Summer irrigation on our mountain soils, may be seen in the dense thickets of young pines, self-planted, springing up everywhere in great luxuriance.

But, *if* irrigation is deemed indispensable, the facilities for obtaining it in copious supply are always at hand, as canals and ditches divert the mountain rivers at their very sources, and traversing every dividing ridge, distribute the gushing fluid over all the land. It is important on planting a vineyard that the kinds of grapes set out are such as are suited to this climate. The California Mission variety has established its reputation through a cultivation of three-quarters of a century, and in localities removed from the effects of the ocean winds, proves hardy and a prolific bearer. Yet there are many kinds of foreign grapes better adapted to this climate than the Mission grape, among which may be mentioned the Black Hamburg, Chasselas de Fontainbleau, Catawba and other hardy, strong growing kinds. The Mission grape, when entirely ripe, is remarkably rich in sugar, and devoid of those austere qualities from which alone pungent, high-flavored wines are produced; therefore, its value will be increased by the admixture of more highly flavored sorts. Our people should turn their attention to the raising of seedling grapes, with the hope of producing varieties of superior excellence to any yet under cultivation. In planting a vineyard, let it be remembered we are investing for after as well as the present generation; and when that great want of our nation is supplied—an Atlantic and Pacific Railroad—the unequaled vintage oj our State will find its way over the iron track, and then the populous cities of the East will be made to realize, as they quaff the life-inspiring nectar and taste the luscious clusters fresh from our vineyards, that as one of the Sisterhood of States,

> "She round him twines her marriageable arms
> And to him brings her dower,
> The adopted clusters to adorn his feast."

Marvelous innovations have taken place in the fields of human labor during the last quarter of a century, by the introduction of labor-saving machinery, and, though it has tended to multiply human employments, yet it is driving manual labor to the wall in almost every branch of industrial enterprise. The substitution of the reaper, mower, and thrashing machines, for the sickle, scythe, and flail, has ameliorated harvest labor to such an extent as to have produced a social revolution in our agricultural districts, while the recent successful experiments with the steam-plow promise the near approach of the time when hunger shall be fed almost exempt from the sweat of the brow. When the steam-plow shall have been introduced to our great wheat-growing plains, the small farmer will be forced to turn his attention to other branches of agriculture. With the steam plow and a machine to pick cotton—which will be invented when its want becomes a necessity—human labor may forever drop cotton growing. Against these certain results, which are nigh their accomplishment, the Allwise has made ample provision for the myriads who will be forced to seek new fields of labor.

A vast region, stretching almost from the Equator to the North Pole, along the center of the American continent of more than a thousand miles in width, is richly sown with mineral substances, and over vast portions of which the ban of the Almighty has forbidden the introduction of the reaper and the cotton-gin. Here millions of the human race may find employment through all coming time in delving for hidden treasures deeply buried; while just on its western margin will be found the vine-clad hills of California, teeming with its happy people, amid luxury and contentment found only there.

Vine culture is a light and fascinating employment, and much of it adapted to the strength of women and children. Since woman's labors have been lightened by the introduction of sewing machines, it is to be hoped that she will not content herself with a life of ennui and comparative uselessness. Would it not be far nobler to devote a portion of her precious hours to the healthful exercise obtained from the light labors of the vineyard, acquiring therefrom a bronzed cheek in which shall be burnished the roses of health, than to loll in listlessness days and years which mark their dreariness in pallid cheeks, sunken eyes and famished hopes. The atmosphere of California being dry, the preparing of the grape so that it becomes the raisin of commerce, with most other labors of the vineyard, afford large employment for manual labor, and that of a character adapted to the strength of women and children. In all countries where the vine is extensively cultivated there is concentrated a dense population.

Not least of the great articles of commerce in which our State can excel as a producer is the hop. Delighting in a moist, deep, rich soil, it is found to flourish equally in the range of the cool ocean winds and the sultry valleys of the interior. The hop of California is not subject to the danger of early frost and heavy rains before ripening and while being harvested, consequently it retains the entire amount of pollen secreted inside of the strobels, and they can be cured without being subject to the artificial heat of the kilns, none of the essential oils are lost, and brewers find that one pound of California hops is equal in strength to three imported. As our State is preëminently a barley growing country, and of a quality regarded as superior for brewing purposes, it would seem that the enterprise of brewing ales for the markets of the Pacific world could be undertaken in California with favorable results.

The cultivation of the apple should receive a large share of your attention. Of all fruits none promise better in the mountain districts than the apple, and I doubt not the time is not far distant when the superior excellence of mountain apples will be acknowledged in the San Francisco market. A glance at the great plateau stretching along the first snow range, at an elevation of above three thousand feet, indicates where the apple may be grown of a texture which fits it for long keeping, so that we may expect that among the products we shall send to the Sandwich Islands, and other countries in the Pacific, will be the apple.

The growing of the prune and its preparation as an article of export should receive great attention in California. The plum has proved to succeed well by the sea shore, and through all kinds of climates up to the highest altitudes where vegetation flourishes among the Sierra Nevada. Nor has the curculio, that pest of the smooth-skinned fruits, yet made its appearance on our coast, and it may never be dreaded, as our nights, being cool all over the country, it will be unable to commit its depredation on our fruits, as it is a nocturnal brigand and unable to travel in the cold.

Not the least important among the many satisfactory results of arboriculture in our State, and especially in the mountain districts, is the entire success in the growing of the white Italian mulberry tree. The luxurious tendency of the age producing an increased demand for silk fabrics, renders its production a matter of first importance in countries where it can be raised. Silk culture in France and Italy has long been attended with great and increasing difficulties, owing to cold and wet seasons, which fill the leaf of the mulberry with gases injurious to the silkworm. From this cause myriads of the worms sometimes perish in a few hours. Our climate being entirely dry, the leaf of the mulberry will have a dark rich color, and elaborate from the atmosphere peculiar chemical properties which give health and vigor, so that the worm can go through its several moultings, and secrete in its capacious stomach that wonderful composition from which it can spin more than four hundred yards of silken cable. The gathering of the mulberry leaves and feeding them to the worms, and the various little attentions required by the operations of the cocoonery are of a fascinating character, and well calculated to promote industrious and cheerful habits, and a higher order of intelligence among those devoted to this lucrative business.

The day is not far distant when California will become as celebrated for the unequaled texture of its silks as for the various products in which she already excels all other countries, and at the risk of raising a dubious smile on the countenance of some victim of the *morus multicaulis* fever of a quarter of a century since, I earnestly urge upon our people to plant the mulberry, for shade and ornamental purposes, as no tree is of more rapid growth, and its entire exemption from the attacks of the insect tribes makes it an agreeable associate of residences and the vicinage of orchards and vineyards. In no long time silk should become one of our staple articles of export.

The raising of silkworm eggs for the cocooneries of France and Italy can be made a lucrative business in our mild and dry atmosphere, where the moths are remarkable for size and vigor. The eggs of the moth bred in Southern Europe are found to raise worms of sickly, feeble habits, consequently large importations of silkworm eggs are make annually from China. Now, our climate being more favorable than that of China, and overland transportation rendering their delivery in Europe from our State a matter of no moment in time and expense, we certainly should lose no time in supplying those markets with this important article.

The similarity of our climate and that of the great Himalaya range in Asia would indicate that our Sierra Nevada steppes are admirably adapted to the rearing of that valuable fibrile animal, the Cashmere goat. The fleece of the pure Cashmere goat commands upwards of six dollars per pound, and while the world shows an increasing taste for rich garments there need be no fear that the supply of this incomparable fiber will exceed the demand.

The breeding of the Curagoa goat, valuable for its peltry for the manufacture of morocco, could be made a highly lucrative business in our rough hilly districts. Even the common goat is valuable for its pelt, and its marvelous rapid increase should entitle it to consideration.

The growing of cattle and horses on an extensive scale in the mountain districts can hardly be undertaken with the expectation of successful competition with those conducting the business on the Coast Range and in the great alluvial valleys where grasses are abundant.

Sheep raising in small bands seems to be well adapted to many portions of your county, but it will be found difficult to graze large bands, as the rough and broken nature of the country is such that there is a liability to large losses by herds becoming frightened, when they will precipitate themselves into ravines, and smother and trample each other to death in great numbers.

Further than to grow your own supplies of hay, your mountain districts have not the natural facilities, nor can artificial means be applied without such an expense as will make hay-growing an unrecompensing enterprise. If the hay crop should ever become one of your staples, its production must be sought on those extensive natural meadows extending along the foot of the high peaks of the Sierra, where the great depth of snow which falls in the Winter renders the season so short that nothing else can be produced. By the introduction of improved grasses on these, with their wealth of surrounding timber, enterprise may yet find a remunerative field for its efforts.

No country offers greater advantages to the manufacturer, as water-power is everywhere to be had, and the abundance and superior quality of the various timbers for the fabrication of wooden utensils should have long since supplied our wants in the article of doors, sashes, pails, tubs, and other necessaries of every day use.

It should be a prominent object of your Society to gather and impart reliable information touching the best modes of cultivating your mountain soil, so that the general public may have the benefit at the earliest moment of any discovery of value made in the practice of an individual. Indeed, the objects of exhibition brought to your Fairs fail to accomplish the true design, if there can only be known that certain results have been accomplished, but that it is a sealed book how they were brought about.

The subject of artificial irrigation has been deemed of first importance in California agriculture—happily every year lessened The damage done orchards in your mountain districts by injudicious irrigation is beyond belief. Almost everywhere ditch-water, being abundant, is turned on to the orchard and led in little channels by the trunks of the trees during the heat of the day. This causes the bark to scald and check the ascending and descending sap. It also induces the emission of a clump of hair-like roots just under the surface of the ground, which intercepts the descending sap which forms the woody fiber of the deep running roots, and unless the water is kept constantly around the tree, the ground dries and the newly emitted surface roots perish; and having already nearly destroyed the vitality of the lower roots, the tree will become sickly, and prematurely perish. If irrigation is used, the water should never be allowed to run near the tree, and the ground should be stirred afterwards as soon as it can be done without becoming lumpy. Since ditches and canals have been made to traverse almost every ridge in the mining district, it becomes apparent that the earth is growing more moist in those localities, as copious springs are found to gush out of rocky hillsides, before parched and sear. To this cause may be attributed the rapid growth of the young forest pines springing up in dense thickets everywhere. The limits to which my remarks must be confined will not permit that elaborate discussion of the subject of artificial irrigation which its importance demands. Suffice it to say that the thorough cultivation of the soil, so that it is kept in a mellow, friable condition, until after the close of the rainy season, will to a very great extent prove of more utility than surface irrigation.

Fellow citizens: Before you are seen in magnificent array the triumphs of peace, the voluntary offerings of Agriculture, Art and Science, developed as they only can be under a free government. Here the children of every race and clime meet in a spirit of generous emulation, to contend in friendly contests for prizes which shall betoken superiority in the various departments of industry and enterprise. Long may we continue to meet in harmonious community, to celebrate the annual return of so joyous an occasion, unawed by the roar of battle and the shock of civil warfare.

But a little more than a decade of years has passed since our young empire was the scene of periodical revolution and the prey to military despots, who knew no law but their arbitrary proscriptions. Under their bloody rule the people were despoiled of the fruits of their industry, and semi-barbarism took the place of civilization. Thus, under Mexican dominion, every chief of a petty district issued his pronunciamento, and the secession of his department from the Central Government became invested with the dignity of revolution. Compare the distracted condition of California, under the Mexican regime, with her consolidated and growing power under the ægis of the American Constitution, and who will not shudder at the thought of the expulsion of our glorious starry banner, under whose ample protection we have marched with rapid strides, in happiness to empire.

Men and women of California, cherish this starry ensign in your hearts forever; let it be nourished in your warmest affections as an ever present keepsake, inherited from a patriotic ancestry, to be handed down to your descendants without a star dimmed or a stripe erased from its panoply.

> "Flag of the free heart's hope and home,
> From angel hands to valor given;
> Thy stars have lit the welkin dome,
> And all thy hues were born in heaven."

Millions of men in lands where despotism fetters the tongue are lifting up their eyes to Heaven with prayerful orison for thy safety, in this thy hour of peril, and myriads of hearts, throbbing with aspirations of liberty, all over the world, tremble and utter a murmur of despairing hope lest thy folds no longer float as the beacon of universal freedom.

The Sex of Eggs.—Mr. Gennin, in a paper addressed to the French Academy of Sciences, says he is able, after three years study, to state with full confidence that all eggs containing the germ of males have wrinkles on their smaller ends, while female eggs are equally smooth at both extremities. [We were told the same thing by the keeper of a small "chicken-ranch," who stated it with "full confidence," being the result of about a year's observation.]

What a glorious world this would be if all the inhabitants could say, with Shakspeare's shepherd, "Sir, I am a true laborer. I earn that I get; get that I wear; owe no man hate; envy no man's happiness; glad of other men's good; content with my farm."

Fibrilla.

[CONCLUDED.]

The culture of Flax was introduced into this country early in the last century by the Scotch, who crossed over to Ireland under Elizabeth and Cromwell, and soon after the siege of Derry transferred their arts and their industry to this country. Several colonies of these were planted in Pennsylvania and Tennessee, and a large colony was established at Natfield, New Hampshire, upon a tract twelve miles square, one of the best sections of the State, situate in the area between Manchester, Lowell, Lawrence, and Exeter. Here every farmer cultivated his field of barley and flax, here every woman had her little wheel, and the article formed the curency of the place; notes were given payable in spinning-wheels. Girls were seen beating the linen on the grass; and when the harvest was over, men mounted their horses, and with well-filled saddle-bags threaded the by-roads of the forest to find a market in Boston, Lynn, Salem, or Newburyport. Fortunes were thus accumulated, and a flourishing academy and two Presbyterian societies are now sustained by funds thus acquired by the Pinkerton family. But as the wages of girls gradually rose from two shillings to two dollars per week with the invention of the cotton-gin, the power-loom, and the spinning-jenny, the culture of flax was gradually abandoned, the seat of manufactures removed from the hills to the waterfalls, and the flax-fields converted into market-gardens or milk-farms. The town of Derry, once the great seat of New England manufactures, is now principally distinguished for the Stark, Rogers, and Reed it gave to the French War and the Revolution, for the Bells, Dinsmores, Wilsons, and Pattersons it has given to the halls of legislation, and the McKeens, McGregors, Morisons, and Nesmiths it has furnished to commerce or the Church.

At the present rates of labor, the culture of flax cannot be revived in this region until the mode of curing and dressing it is cheapened; and there is reason to hope that this revolution is at hand.

At the present moment flax is raised both in India and Ohio for the seed alone. An acre of ripened flax yields from ten to twenty bushels of seed, and each bushel affords nearly or quite two gallons of linseed-oil. The well-ripened seed is most prolific in oil.

It has been supposed by some that flax exhausts the soil. It is undoubtedly true that it does best under a rotation of crops, and that the ingredients it withdraws from the soil should be restored to preserve its fertility. But the reduction of the plant to ashes shows that its chemical components can be restored at a cost of three dollars per acre, while the properties withdrawn by the seed can be easily supplied by returning in other fertilizers the equivalent for half a tun of flax-seed. If the oil-cake be consumed upon the farm, little more than the above and its product in manure will be required.

The ashes of the flax-plant have been analyzed. Dr. Royle, of England, a distinguished writer upon fibrous plants, assures us that the following compound will supply to one acre all that the plant requires, and leave the land as fertile as before the flax was gathered:

	℔s.		s. d
Muriate of Potash	30	cost	2 6
Common Salt	28	"	0 3
Burned Plaster of Paris	34	"	0 6
Bone dust	54	"	3 3
Epsom Salts	56	"	4 0

It has been ascertained by the microscope that wool, cotton, hemp, jute, and flax, are composed of minute fibers, each of which forms a hollow tube, and there is a close resemblance between the tubes of each, the tube of the cotton however collapsing as it ripens. These tubes in the jute and flax are closely cemented together, and the term *Fribrilia* has been applied to fibers of the plant when reduced to a short staple like cotton. The process for effecting this result is very accurately described in a work just published, entitled "Fibrilia." The pateentees of this invention claim that their process, in the space of twenty-four hours, converts the flax and tow, as they come from the thrashing-mill, into an article which may be spun and woven by the same machinery as cotton. The article produced and lately exhibited at public meetings resembles cotton in its appearance and qualities, with the advantage that it wastes less in the manufacture, has more luster, and receives a superior color. The patentees and their friends further claim that this cotton can be raised in all temperate latitudes, at the rate of four to eight hundred pounds per acre, and profess within the past year to have manufactured twelve thousand pounds.

These statements have been confidently made at public meetings in the State House of Massachusetts, and it is understood that a mill containing one hundred looms, half of which are now in operation, has been erected at Roxbury, under the direction of gentlemen who are familiar with the manufacture Should the same results be obtained on a large scale which have attended the manufacture of the first few bales, the first step in a great revolution will be effected.

By the process of Mr. S. M. Allen of Boston, the great outlay of labor which has usually attended the culture and preparation of flax is avoided. When the plant has attained its full bight of twenty to thirty inches, and its seed is ripened, it is harvested like grass with a mowing-machine, dried like hay or oats in the field, and then carried to the thrashing-mill. After the seed is separated, the stalk is transferred to a patent brake, moved by two or four horses, and costing from three to four hundred dollars. This machine is composed of several sets of fluted iron rollers, between which the stalk passes from one set to another, the rollers gradually diminishing in size, but increasing in rapidity of motion, by means of which the woody texture of the plant is effectually broken and separated. The filaments are then carried through a coarse card or picker. The shives are thus separated, and two tuns of stalks reduced to half a tun of linten, which may be either taken at once to the retort or baled for shipment. When the flax is thus reduced by the farmer to linten, the article is reputed to be worth to the manufacturer four cents a pound, or at least twenty dollars for the product of an acre yielding a single tun of flax straw.

According to this statement the farmer would realize from his crop at least as follows:

Estimated value of *seed*, 14 bushels, at $1 25	$17 50
Estimated value of 500 ℔s of linten, at 4 cents	20 00
Estimated value of ¾ of a tun of shives from unrotted stems, valuable for cattle, at $8 per tun	6 00
Produce of an acre	$43 50

And this produce would be realized with little more labor than a crop of oats or wheat, returning less than twenty-five dollars to the acre. Unless the soil should be foul, no weeding would be required, while the breaking would cost little more than a second thrashing, and a second crop of turnips can be taken from the same soil.

From the patent brake and the picker the linten is carried to a retort, which may hold from five hundred to three thousand pounds of fiber, the capacity of one hundred cubic feet being required for each thousand pounds; and the retort, which may be made from boiler-plates, costs from three hundred to fifteen hundred dollars. Here the linten is put into a hot bath of air forced through heated water, and thus charged with moisture, which softens the filaments and diminishes the cohesion of the fibers. After this air-bath, pure water of the temperature of one hundred and forty to one hundred and sixty degrees is admitted into the retort, and the linten is immersed in it for five or six hours.

After this steeping process is completed, the water is let off from below, and pure water admitted from above under pressure, until the color begins to change; the fiber is then steeped from three or four hours in a weak solution of soda-ash; the alkali is washed out by the admission of pure water alternating with steam, and, if necessary to complete the bleaching, a weak solution of chlorine is applied. All this may be effected without removing the linten from the retort. The product is then dried as in ordinary drying-rooms.

When dried, it is carried again through a set of cards, and a piece of machinery termed a railway-head, with positive draught, which can be set so as to give any length of staple, and to present the flax-cotton thus produced in any form required for spinning, either separately or mixed with cotton or wool, and thus adapted to the machinery used in the manufacture of either of these articles. The cost of this process, from the brake to the final production of the cotton, is set by the patentee, after leaving him a fair profit, at three cents per pound of cotton; and if we add this to the cost of the linten, and allow for freight and storage, the entire cost of the fibrilia is but eight cents per pound, or two-thirds of the present price of middling cotton.

The idea of modifying the filaments of flax and hemp so as to convert them into cotton is by no means a new one. As long ago as 1747 it was proposed to convert flax into cotton by boiling it in a solution of caustic potash, and subsequently washing it with soap; and in 1775 Lady Moira, aided by T. B. Bailey, actually converted some refuse flax into cotton by boiling it in alkali. The result was, that the fibers seemed to be set at liberty from each other, after which it was carded on cotton cards, spun, and woven as cotton.

The Chevalier Clausen, as recently as 1850, claimed to have discovered the process, and actually took out a patent; but his invention, which consisted in boiling the cut and crushed stems of the flax in a solution of caustic soda, turned out a failure; the cutting, crushing, and boiling processes proving alike defective.

New discoveries are the result of repeated trials; perseverance usually prevails; and if States are to secede at pleasure and withhold their cotton, and no other good uses can be found for flax or hemp, why should not their fibers secede also, be set at liberty and resolve themselves into a cotton state?

We might pass from the fibrous plants, and the metamorphosis of flax into cotton, to the *Pinna*, whose fibers grow in the sea on the coast of Italy, and anchor the huge shell-fish to the rock or the sand. These fibers are brought up by divers, and woven into beautiful fabrics. We might repeat the tale of the crab which lives with this shell-fish, and apprises his blind housekeeper of the approach of danger (a tale confirmed by ancient and modern naturalists), for there are strange doings in the sea as well as upon the land. We might also dilate upon China grass, which is manufactured in the East into delicate fabrics. But our limits compel us to defer those topics.

Fall-Planting Trees.

Upon the proper season to plant Trees, much has been said and written. But notwithstanding this, there seems to be a division of opinion on this subject among those who plant. But it is a settled fact among intelligent tree-growers, that the tree is in the most dormant state in the Autumn or Fall of the year, immediately after it commences to shed its leaves freely. There is then the least circulation of sap in the tree; which being the case, transplanting is then done with far greater success than when the sap flows freely in the Spring of the year, because the tree is affected when transplanting is done in proportion to the greater or less flow of the sap at that time. But, says one, plant early in the Spring. But when you plant early, the root is liable to injury by freezing and thawing, and consequent heaving before the ground becomes settled. And if this is the case, you are no better off than later planting, and perhaps not so well; for in addition to the want of fresh fibers or roots being formed before warm and dry weather comes on, the tree is, perhaps, half hove out of the ground. Upon the contrary, if planted in early Fall, the ground becomes settled and firm before Spring comes. It should be borne in mind that the essential organs of vitality are the small fibers or roots formed after the tree is transplanted, if the circumstances are favorable; if the tree is planted in early Fall, the fibers continue to grow during the Fall and warmer Winter months, and when Spring comes, and Nature dictates growth to the tree, it starts right along. But if you wait until Spring before you plant, this same process of production of fibers has to be gone through with again by the tree; and perhaps by that time warm and dry weather comes on, and the tree suffers by evaporation—a feeble and stunted growth is made that season, if death does not ensue, unless you can take a ball of earth with the root, which is not easy to do. The tree may be taken up ever so carefully, so as not to break off the small fibers—when they come in contact with the atmosphere they perish. This the Fall-planted tree escapes, and consequently makes a vigorous growth the first season after planting. Reader, with these few thoughts hastily penned, I leave the subject with you. But before I close, I would simply state, that in my experience and practice, I have invariably found that Fall-planting is the best; and among the thousands of trees annually sold from my Nursery, Fall and Spring, those planted in the Fall show the best by far.—[S. B. Kimmel, in the Wooster Republican.

Kindness to Milch Cows.

Attention dairymen! Read! reflect! and practice! We find the following in Wilke's Spirit of the Times: "One of the greatest errors in overcoming cows that are unquiet while being milked, is to whip, beat, kick and bawl at them. This is generally done, and the cow becomes afraid or angry, and instead of becoming better grows worse. Milch cows cannot be whipped or terrified into standing quietly, gently and patiently during milking. They dislike to be milked, for they know that loud words and hard blows always attend the operation. They dread to see the milker as the little urchin dreads to see the birchen rod in the hand of an angry pedagogue, when he expects to have it applied to his back. A cow, kindly and properly treated, is pleased to see the milker, gladly awaits his or her approach, and submits with pleasure to the operation of being milked. Every one having experience with cows knows this to be true. But the cow is opposed to a change of milkers; she soon becomes attached to one person who performs the operation, and does not willingly and freely give down her milk to another person; therefore, have one regular milker to certain cows, and bear in mind, if you change milkers, it is at the expense of a loss of milk and of injury to the cow. All animals appreciate kind treatment, and resent abuse. See that those who milk them can control themselves, govern their passions, speak low and kindly under almost any provocation, and soon the cows will learn that they are not going to be abused, and will submit to the operation. Milking should be performed at regular hours, not varying fifteen minutes one day from the other. No talking or laughing should be permitted."

Old Spanish Accounts of the Indians of the Ocean Coasts South.

The Indians of San Juan Capistrano, and the Coast of the Canal of Santa Barbara.

THE CHINIGCHINICH.

CHAPTER XV.

[CONCLUDED.]

Origin of the Population of the Mission of St. Juan Capistrano.

Having thus far dwelt upon the usages, belief, and customs of these Indians, it may not be uninteresting to know the origin of those who first settled in the neighborhood of St. Juan, the account of which, will contain many absurdities, and some equally extravagant as those already related. The first, or earliest people, who populated this section of the country, emigrated from a place called "*Sejat*," distant N. E. from the mission, seven or eight leagues, and in the middle of a valley, now known by the name of "el Rancho de los Nietos." Originally, the inhabitants were numerous, but the success, and influence of a holy conquest gradually eradicated their attachment to "*Sejat*," and all, finally, became subject to the spiritual, as well as temporal administration of the ecclesiastical missions. The chief, named "*Oyaison*," which name implies "wisdom" or "intelligence," and his wife, called "*Sirorum*," signifying that which is noisy (probably alluding to the noise made by the shells and beads attached to her dress), had three children, called *Coronne*, "*Vairagram*," and *Umiojam*. *Oyaison*, after the death of *Sirorum*, separated from among the people many families, who accompanied him and his daughter *Coronne*, in a colonial enterprise; for, in consequence of the rapid increase of population, the annual production of seeds on his lands, were insufficient to maintain so great a number, and, accordingly, the colonists commenced their march. After traveling southwardly seven or eight leagues, or more, they arrived at a place called "*Niguiti*," which is situated half a league only, N. E. from the mission. Here, they discovered a spring of fresh water, and from the favorable appearance of the neighboring country, they concluded that it was a place well adapted to the founding of a new colony. As soon as the erecting of their habitations was completed, and order had been established, the chief returned to "*Sejat*," leaving behind, his daughter "*Coronne*."

Twenty summers had passed away, and still no feelings of love, or wish to marry, had ever been known to exist in the heart of *Coronne*. The Indians said that she was very coarse and fat—that they never had seen, or in fact, that there never was another of such proportions. The name given to the new establishment was "*Putuidem*," which means "umbilicus projectura"; for *Coronne* was afflicted with an enlargement of that organ, and this was their notion for so naming the settlement. In course of time, owing to the scarcity of grain, many of the inhabitants separated; and, by permission of Coronne, located themselves about in different parts of the Valley of St. Juan; and in this way originated the many small villages, or towns, which were to be met with, in the route to Putuidem.

A custom was observed in all their new settlements, to appoint as chief or captain, the eldest of the families, and to him was given the name of *Nu*, and to the second in power, that of "*Eyacque*." Their wives were named, also, the first "*Coronne*," and the second "*Tepi*." These same appellations were given to a small insect, or fly, which was abundant in the fields and gardens, called by us the *lady bug*. The red ones were *Coronnes*, and the yellow, *Tepis!* The first was given to the wife of the chief, in commemoration of the *Capitana* of *Putuidem*, and that of *Tepi* to the wife of Eyacque, for the reason that the two names implied equality, as demonstrated in the character of the insects who varied only in their colors. These names are the principal distinctions of rank, known among the Indians, and there are many of the present day, who, on account of their appellations, are considered and respected as descendants of *Eyacque*.

A grand feast was given by *Coronne*, of several days' continuance, and all the neighboring tribes were invited to attend, and take part in the amusements and rejoicings. The feast commenced with dancing, playing and singing, and all their accustomed games and usages followed; but as in this world there cannot be complete happiness, or joy unadulterated, it happened that after she had retired for the night, whilst asleep, her body swelled up prodigiously, and in an instant became a mound of earth; thereupon the people retired to their respective rancherias. In the place where the town was located, and where they celebrated the feast, there is a small rising ground, which was probably formed by the course of the water in a freshet; but the Indians say, and religiously believe, that it is the body of *Coronne*.

After having taken leave of their friends, who remained sorrowful, and disconsolate for the loss of their *Capitana*, the Indians on returning home, arrived and put up for the night at a place called "*Acagchemem*," distant, from where the mission now stands, only about sixty yards; and from this time the new colony assumed the name corresponding to the place. "Acagchemem," signifies a pyramidical form of anything that moves, such as, an anthill, or place of resort for other insects. Other apply the term to things inanimate; such as a pile of stones, etc.; but, the most correct signification of the word is understood as having relation to a heap of animated things.

The motive alleged by the Indians, for having dropped the name of their nation, and substituted that of "*Acagchemem*," is that they passed the night before mentioned, literally piled upon each other; men, women, and children; and when rising on the following morning, they vociferated "Acagchemem," implying, that they had slept in a heap; and from that time the appellation remained as if to commemorate forever the event.

When the Indians came to settle in the valley of St. Juan Capistrano, they spoke a language somewhat distinct from the one now in use, and in a dialect, not dissimilar to the one used in St. Gabriel. They say the cause of the variation, originated with their chief "*Oyaison*," who told them that as they were to change their place of residence, they were necessarily obliged to alter their mode of speech, as well as their customs, in order to become a distinct nation.

The name, "*Sejat*," signifies a place of wild bees, and "*Sejat pepau*," the honey. In this region there were to be found many hives, located in holes formed in the earth. The Indians search for them at all times, to extract the honey, and it is made use of in their food. The color is black, and it is rather bitter, but I have been informed that there are places, where it is to be found, of a kind, equally as good, as that which is extracted from the hives of the domestic species.

CHAPTER XVI.

The Character of the Indian.

To complete this history, and to give a relation of all my observations during a period of more than twenty years' residence in the province, it will be important to delineate the character of the Indians, as I have been enabled to learn it. The undertaking will be arduous, I know, and a curate of forty years' residence among them, once told his bishop, "they were incomprehensible"—to which I agree; but nevertheless, I will make the attempt. My idea is that the natural, or Divine precepts implanted in the heart of man by his Creator, are by the Indians observed in a retrograde manner, or in the opposite sense—that is, the affirmative with them, is negative, and the negative, the affirmative; and this opposition appears innate among all classes of them. An Indian curate of the Indians, appears to be of the same opinion, if we may judge from his description. "The Indians," he said, "lead a life of indolence, rather than devote themselves to the enlightening of their souls with ideas of civilization and catholicism; it is repugnant to their feelings, which have become vitiated by the unrestricted customs among them. Their inclinations, to possess themselves of the property of others, are unbounded. Their hypocrisy, when they pray, is as much to be feared, as their insolence, when in tumultuous disorder. They are never grateful for any benefit, nor do they pardon an injury, and they never proffer civilities, unless to accomplish some interested motive. They are ready to expose themselves to the greatest danger, to satisfy their predominant passions. The future from them, is ever vailed by the present. Their inconstancy and want of confidence deprive them of friends, and he, who, by deception, holds them in subjection, may reduce them to almost abject slavery." Such is the picture of them drawn by this Indian curate, who was of Mexico, and I think, although referring to the Mexicans, it is sufficient to comprehend the general character of the Indian. Those of California are less curious, and in no wise so industrious; for the Mexicans, when in their gentilism, sowed and prepared the *maize*, as well as other grain for eating, and the females spun and wove a covering for the body, out of cotton, which they also cultivated.

The Indians of California may be compared to a species of monkey; for in naught do they express interest, except in imitating the actions of others, and, particularly in copying the ways of the "*razon*," or white men, whom they respect as beings much superior to themselves; but in so doing, they are careful to select vice, in preference to virtue. This is the result, undoubtedly, of their corrupt, and natural disposition.

The Indian, in his grave, humble and retired manner, conceals a hypocritical and treacherous disposition. He will deceive the most minute observer, as has been the case with many, or with all, who have endeavored to learn his character, until time has revealed to them his true qualities. He never looks at any one, while in conversation, but has a wandering and malicious gaze. For benefits received, he is never grateful; and instead of looking upon that which is given, he beholds only that which is withheld. His eyes are never uplifted, but like those of the swine, are cast to the earth. Truth is not in him, unless to the injury of another, and he is exceedingly false.

Mythology.

These Indians had the same belief as the Ancients, regarding the course of the sun, and believed that when he set, he went to repose in the arms of Thetis. He had twelve Palaces, which were placed at equal distances around the earth; in each of which, he was accustomed to pass a month. These twelve palaces were marked by a circle, called the zodiac, but with signs, which alluded to certain passages in the fable.

CHARACTERISTIC ANECDOTES OF THE INDIANS.

A chief of a rancheria, or village, not far distant from the Presidio of St. Diego, who had observed, with much attention, the manner and authority with which the "Comandante" governed his officers and soldiers, as well as the inhabitants of the place, had heard, also, that the King of Spain was their grand chief, to whom, they all owed allegiance, and in case of disobedience were liable to severe punishment, and even death.

Desirous of imitating the domination of his royal master, he commenced a tyrannical use of his power, which gained him many enemies. However, it was of short duration. In 1822, when D. Agustin Yturbide was proclaimed Emperor of Mexico, and when his government was recognized, in due form, at St. Diego, there were many Indians present, who listened attentively, to the declaration that Mexico no longer acknowledged the Spanish authority. The king (or viceroy) had been deposed, and another placed in his stead, with the new title of Emperor. A few months afterwards, a grand feast was observed in the Indian village, to which all the neighboring Indians were invited.

To commence the ceremonies, they burned their chief alive! and elected another. The feast continued eight days, when the Indians dispersed and returned to their several homes. Those who lived in the Presidio, were censured for such inhumanity, which produced the following remarks:—"Have you not done in Mexico the same with the King of Spain?" (meaning the Viceroy). "You say he was not good, and you killed him! Well, our captain was not good, and we have burned him. Should the new one be bad, we will burn him also!"

How little is the faith of these Indians in the teachings of the Catholic truths! A missionary, of the mission of St. Luis Rey, who had baptised several adults, the youngest of whom had reached his fiftieth year, attempted to explain, after the ceremony was concluded, the sort of life which they were to observe for the future; and he told them what they were to do to avoid the influence of Satan. By invoking the sweet names of Jesus and Mary, he said, and by the sign of the holy cross, well performed, we destroy the power of the devil, and drive out all unholy thoughts. A satrap, or governor, of one of the rancherias, smilingly observed to the others, "See how this Padre cheats us! Who believes that the devil will leave us, by the sign of the cross? If it were to be done by dancing, as authorized by Chinigchinich, he would depart; but that he will do so, by the means which *he* says, I do not believe!" The others united with him in laughter, and appeared unimpressed with the efficacy of such ceremony.

About the middle of December, 1823, a comet appeared in the north, which was visible until the latter part of January of the ensuing year; and in September, 1825, another was seen. The latter appeared in the south-east, with its direction to the north-west, and was visible, though faintly, till the first of November.

The Indians, who had observed them, believing they were their deceased chiefs, consulted together as to the cause of their appearance, and were all of one opinion, that they denoted some important change in their destiny; but how or in what manner it would be, they were ignorant. Some thought that they would return to their primitive mode of life; that it was "Sirout" whom they had seen, he who was the father of their grand Captain, Ouiot! and when *he* came, he ever brought good things, for their profit and happiness. Others said no! that it denoted that they were to live free, and do whatever they pleased, without being under subjection to any one; yet they would still remain occupants of the Mission. The elder ones said Sirout foretold that another people would come, who would treat them as slaves, and abuse them; that they would suffer much hunger and misery, and that the chief thus appeared to call them away from the impending calamity. Others said that the comet was Taco, the father of Ouimot or Chinigchinich, which was generally assented to. These ideas have, undoubtedly arisen from the fact that when the declaration of independence was proclaimed in Mexico, the Indians were made to believe, that they would no longer be subject to the regulations of the Missions; that each family, or person, would live separate, as colonists. But the Government, considering them unfit for such a condition, has not made any innovation, up to the present time of November, 1825.

An Indian vaquero of the Mission of San Luis Obispo, who had been dispatched on business to some place not far distant, did not make his appearance until the day following, and then so pallid and trembling, that he could hardly speak. Upon inquiring as to what ailed him, he replied, "that being in a certain place, a phantom appeared before him, which prevented his progress; and his horse, though vigorous, remained immovable at the sight. The phantom commanded him to tell his people not to travel in that direction, for if they did, he should molest them! Immediately three of us padres went out, and remained all that day about the same spot, but nothing was seen of the phantom.

In a certain rancho or farm, were several Pima Indians, and some Sagues, who were employed in erecting a building; he who directed them was one of the *razon*, or native Spaniards. One day, whilst superintending the work, he discovered concealed in one of the apartments, a small wooden ball, which had around it an unfinished crown of thorns. He inquired of a Sague what it was for. "Ah, sir!" he replied, "you have really escaped; with this ball you would have been destroyed. You were to be killed for having chastised the Pima Indian, and only two days more were required; that is, until the completion of the crown of thorns around the ball; then, immediately, you would have been attacked with pains in the head and heart, and would have died."

TO THE FARMING INTEREST!

R. F. JONES, 51 Wall street, New York. | HENRY H. HEWLETT, Stockton.

JONES & HEWLETT,

IMPORTERS AND WHOLESALE AND RETAIL DEALERS IN

HOTELS.

SPERRY'S HOTEL.

Murphy's Camp.

THE COMMODIOUS FIRE-PROOF BUILDING, lately erected by the subscribers, at Murphy's, has been elegantly furnished throughout, after the most approved style, and is now ready for the reception of guests. Parlors and suites of rooms for the use of ladies exclusively, and parties visiting the "BIG TREES," or other natural curiosities in the vicinity.

The management of the Domestic Department is confided to Mrs. Perry, a lady of experience.

The Bar is stocked with fine WINES, and the larder daily supplied with seasonable delicacies.

Stages arrive and depart daily for Mokelumne Hill, Sacramento, Stockton, Sonora, and Columbia.

Parties of pleasure and transient guests will find every accommodation for their comfort.

20-3m SPERRY & PERRY.

PRESTON'S PLACE

Tomales Bay, Marin Co.

I WISH TO INFORM MY FRIENDS AND the public, that the demand for a house of entertainment at this place has been such as to induce me to fit up my house for that purpose. To parties wishing to pass a few days pleasantly in the country, this locality has few equals. Boat-Sailing, Fishing, Hunting, and gathering Shells on the Bay and Ocean Beach, are among the pastimes; and then all have "a claim" in the Clam-Beds free of charge. The place is situated 18 miles westward from Petaluma, and is a nice drive, over a good road, through a fine farming country. It will be a pleasure to endeavor to make your visits agreeable.

21 R. J. PRESTON.

UNION HOUSE!

Corner of Main and Center streets,

MOKELUMNE HILL.

Henry Atwood, Proprietor.

THIS SPLENDID THREE-STORY STONE Building, long acknowledged equal, if not superior, to the best Hotels in the Mountains, has been thoroughly renovated and greatly improved and a

SPLENDID BILLIARD TABLE ADDED.

The Dining-room has been divided into a Family Dining-room and Restaurant, both hard-finished, and newly and elegantly furnished. The former will be for regular boarders who may prefer it; the Restaurant will be open at all hours, and be supplied with the best products of the market.

The parlors and chambers have all been thoroughly renovated and elegantly furnished, and will accommodate seventy-five persons.

The Stages all arrive and depart from the "UNION," and for the accommodation of travelers the House is kept open all night.

The proprietor avails himself of this occasion to say to travelers *en route* to the various places of recreation in the Eastern portions of Calaveras county, that no pains will be spared to make their sojourn at the Union pleasant and agreeable.

HENRY ATWOOD.

Jebb's Patent Churn.

THIS NEW PATENT CHURN IS NOW READY TO be seen and tried. It is beyond question one of the best and simplest constructed Churns ever invented, and Dairymen should call and examine it.

By the action of the crank, three distinct currents are made which moves the cream with such rapidity that Butter is made in from three to five minutes with ease.

This Churn can be seen at the Farmer Office.

Patent-Rights can be had for all the counties in the State, and any experienced carpenter can make a fortune easier by these Churns than by gold digging. They only need to be seen to be approved. 13

The California Farmer.

SAN FRANCISCO:
FRIDAY..............................OCT. 11, 1861.

THE "LADIES' DEPARTMENT" of this Journal, under the charge of Mrs. Lizzie Wiley Warren, M. D., will be found on the sixth page, and to which we call especial attention.

◆

Look to Our Special Advertisements.

Our readers will always find important advertisements in our Special Advertising columns. We have at this time Stock-Farms, Orchards, Saw-Mills, and Property to Exchange or for Sale, all worthy Special notice.

◆

Who Grows Flax?

Growers of Flax can have the highest price paid for their crop by applying to this Office, or sending samples of their crop and the quantity for sale.

◆

Durham and Devon Cattle, Blood Horses, Leicester and Cotswold Sheep, American Ewes and Lambs, and other Stock, for sale. See advertisements in the Special column.

Sales of Grain and Wool.

Those who desire to realize the very highest price for their Grain and Wool, can be informed of the best chances in our city, where, on all special occasions, they can realize high prices without delay. Samples sent to us from the country, with particulars, will be responded to.

◆

To Our Agricultural Readers.

WE take particular pleasure in calling attention to the noble Agricultural Addresses which appear in our columns this week. The Address of Wilson Flint, Esq., before the Eldorado Agricultural Society, is one deserving the highest encomiums. It is replete with great practical truths, applicable to *our own men and times*, and to *our soil and climate*. We feel them to be true, for they reiterate forcibly the doctrines we have so often put forth; and we are glad to have so able a writer promulgate these sound doctrines in so practical a way. Let every Farmer read, and re-read, until he feels them to be true, and then go and put them into practice.

The Address of Hon. C. W. Wilkins is another most valuable address. It conveys plain truths as to the causes of the non-success of many of our Farmers; it also tells of the honor and glory of the true life of a Farmer. There is also the real fire of true enthusiasm, and a genuine love and appreciation of nature. The address contains very many noble and beautiful sentiments and soul-inspiring passages that must interest the reader. We bespeak for this Address also a careful reading; it will do good.

◆

World's Fair.

THERE has been considerable effort made here among certrin parties, to have our State and its interests represented at the *World's Fair*, in Paris, next May. We alluded to these efforts some time since, and surmised that these efforts were more for *somebody's* good than for that of our *State* or its *interests*. This will be likely to prove true, for we are advised, by those who know, of another meeting to be held in this city next week, when efforts will be made to send two or more *distinguished* citizens as Ministers to the coast of France, *at the expense of the State*. The sums now proposed to be raised are from $5000 to $25,000 from the *Public Treasury* of our State. While all these plans are in operation for *individual* benefit, where are the *products* that are to be shown to *immortalize* our State?

One thing should be now remembered, as *particularly interesting,—no Goods can be entered* under any circumstances *after first of February*; and it is now impossible to prepare *anything* in season that would be at all creditable, and this present effort is only for *private* benefit.

◆

Home Industry.

THE large rise of Grain Bags ready made, has awakened the attention of our Farmers to the importance of *making* their own Grain Bags. It has been found that by purchasing the drilling, and using one of Wheeler & Wilson's Sewing Machines, that even now after the rise on the drilling, a saving can be made to our Farmers of twenty to twenty-five per cent on the cost of their bags, so that Farmers who buy even two or three thousand bags can save enough in this way on almost every thousand bags to pay for a machine. Those who raise five, six, or ten thousand bags of grain can save a very handsome sum in their own family by this plan.

Wheeler & Wilson's newly improved machine at their reduced rates, will soon save enough to our grain-growers to educate a large family of children, and "lift the mortgage" besides.

◆

Good Fruit.

WE have been favored by some samples of Fruit this season that we think will be hard to beat in any part of the world. We received the large Apple shown at Santa Rosa (Gloria Mundi) which measured 17 inches round each way, and weighed two pounds two ounces. We received also several weighing from one and one-half to two pounds.

We received the large and splendid Quince exhibited at the Oakland Fair, by J. Lewelling, Esq., of San Lorenzo; it weighed two and one-fourth pounds, and measured 19 by 17 inches. These two specimens, we think, have not yet been surpassed in our State.

We were also presented with the splendid Orange grown by Mons. Bruguier, and shown at the Oakland Fair; it measured 14 inches in circumference, and is fair and beautiful. The tree which bore this fruit was unfortunately broken in carrying to the Fair, and the other fine specimens destroyed.

◆

REPORT OF THE WOOL-GROWERS ASSOCIATION.—We are indebted to J. E. Perkins, Esq., Secretary and Agent of this Association, for a copy of this Society's report. It is a neat pamphlet containing many valuable statistics, suggestions, and facts. We shall make use of this pamphlet frequently. Every Sheep-raiser should become a member of this Society, as it would aid him in his plans greatly.

What are our Fairs for?

WE have attended four of the *Annual Fairs* the present season, and have given our time to a careful and quiet observation of the "Doings and going on at Fairs." We have been carefully cognizant of the manner in which the exhibitions of manufactures of California and our most valued products have been cared for. We have noted new products, and waited often with much anxiety to hear the *report* of Committees; but, alas! such reports—such Committees—were like everything else *this* year—done up *Brown* in a hurried manner, and we venture the assertion that if the President and Board of Managers were to be asked what important *new* inventions had been presented, or what *new* product offered, they could not tell; and we do not believe there has been a single report made by any Committee on any invention or product, setting forth its importance to California in the future, which said report has occupied twenty lines.

We make these remarks from the fact that we took pains to collect and show to many persons interested at Stockton and Sacramento the Fleeces of the Cashmere (Turkish) Goat, and the Fleeces of the Indian Goat; as also "Fibrilia," or Flax-Cotton, an article that is of the greatest moment to us in this State, as being the product of Flax. These samples were also shown conspicuously in show-cases, together with important models, at the Sonoma County Fair and the Alameda Fair, and yet in such matters, Committees or Boards of Managers take but little interest. Something that will create *present* favor, like a *horse race*, is excellent; but the first sample of a new product that shall in five years' time count in millions annually—that is "in the dark future," and cannot be attended to *now*.

We make these remarks only to show the *present state of feeling*; there is nothing deep, earnest, tangible—nothing hopeful—it is all show and parade; thousands and tens of thousands of dollars expended, and what has the State or the Counties gained? In a few weeks, premiums paid in cash, the money will be all gone, the Diplomas little valued by the masses, and used to paper rooms with, and the *results* of all our Fairs will be *moonshine*.

The one single article of Flax-Cotton deserves a notice from our Societies commensurate with the importance it will assume in the future of California.

Fibrilia, or Flax-Cotton, is the product of our common Flax, which can be grown in our State with great success, and made very profitable. The flax by the new process of bleaching with chemicals can be prepared almost immediately for use, at about *one-half* the cost of cotton; hence the great value it will be to all our wool-growers and grain-raisers, for by this article manufactured, wool-bags and grain-bags, of linen material, can be made at less price than those of cotton; by this means a very much stronger and better article is obtained at less price.

When this fact shall be duly valued in all its bearings—when the public shall be aware of the importance of this product to California, then our Agricultural Societies will give a more rational attention to and an encouragement of so valuable a product to our State.

◆

Some Failures, a Public Calamity.

A mercantile failure is too often looked upon as a mere *personal affair*, talked about a few days, commented on by the selfish, the shrewd and knowing ones with more or less severity, and after a brief time permitted to be forgotten; but there are cases when a single mercantile suspension may affect a whole city, and produce a series of misfortunes that are justly classed as a public calamity.

The recent misfortune that has fallen upon the mercantile House of J. C. Fall & Co., of Marysville, is an instance of this kind; and it is an event demanding more than ordinary attention, for there has not been an enterprise of any note, nor any institution (civil, literary, or religious), nor any public work, that has not had the manly generous aid, or fostering care of J. C. Fall, and with his aid that of his friends and kindred. Where a man of such enterprise and public spirit bows before the storm of misfortune, every one must feel the blast; and when a man of such known integrity as his mercantile business has always proved him to be, meets with misfortunes, let him have the manly aid and sympathy of every generous heart.

J. C. Fall in other days has proved his noble integrity, and it will shield him now. The citizens of Marysville owe him a debt of gratitude for what he has done to awaken enterprise, encourage industry, improve public and private taste, and to offer aid, and give credit to hundreds who were in the need of aid and assistance. And it is most undoubtedly owing to his readiness to help others that has now embarrassed his own business. We trust, however, that a noble and generous spirit on the part of all connected with him, will soon enable him and his friends to resume their place and influence in the business relations of Marysville and our State.

We have often visited Marysville, and are familiar with its public and private enterprises, and in an experience of more than Ten years, we can always remember to have seen and heard of the moving of a "master spirit," with a strong arm, and a willing heart; and to J. C. Fall more than any other man, the city of Marysville is now indebted for its general prosperity. It cannot be, therefore, that when the clouds gather thickly about such a man, there shall not always be willing hearts and ready hands to bring back the sunshine of hope, as a just reward for past good deeds.

◆

MANGE IN SHEEP.—We give the following as a cure for the "mange" in Sheep: To ten pounds of salt add one pound of flour of sulphur; mix well, and place it in the cribs before the sheep. Let it be where they can always have it; they will soon acquire a taste for it. Let them eat all they want, and it will soon produce a cure. We received this recipe from Messrs. Flint, Bixby & Co., of San Juan, who approve of it, having found it a cure.

Where does the Money Go?

WE should grow and manufacture what we now import. In order to show where the many millions of gold that are continually being produced goes to, we append the following facts, gathered from the commercial reports that are continually seen, but not sufficiently reflected on:

APPLES.—One would suppose we could raise apples enough for California; yet there is recorded in shipments from April 9th to Sept. 6th, in five months, from New York and Boston in clipper ships, 3,214 half bbls., 71 qr. bbls.; and 343 kegs *dried apples*.

BUTTER.—Besides many thousands of half bbls, by the steamers, clippers bring 2,520 packages and firkins of butter.

CHEESE.—Only 206 boxes of cheese; here we gain on former times.

CANDLES.—We need *light* to awaken our State to a true sense of its *dependance* on others for the article of candles, when our State has been the head quarters for tallow for *forty years*. The amount imported is as follows: 69,025 boxes—only *sixty-nine thousand* boxes, or about *two hundred* boxes per day.

COD FISH.—194 drums.

LARD.—830 cases.

MATCHES.—770 cases.

MACKEREL.—6,792 kitts.

OLIVE OIL.—11,348 cases.

PAILS.—3,253 dozen.

PICKLES, PRESERVES, SAUCES, &c.—26,312 boxes and cases. Why don't we grow such things?

SOAP.—13,339 boxes, 4,737 half boxes, 40,220 quarter boxes. This is laying on the Soap pretty thick.

SUGAR.—213 hhds; 13,165 bbls., 430 half bbls. How long must we import sugar.

SIRUP.—25,118 kegs.

TUBS.—1,603.

Thus we gave a list of some of the articles we import into California, and for which we send out our gold. Here is the cause of the *poverty* of our State—the cause of the *hard times*, bankruptcy and distress found in our midst; in a State, too, whose wealth in mineral riches, wealth of soil, and wealth of climate, has no superior in the world.

How long need we import such articles as are enumerated above? Why import them at all?

Have we not *farmers* to raise such kinds of produce; dairymen to make our butter and cheese; soap and candle-makers, &c. Have we not good mechanics to make tubs and pails. (Starr King says we have.)

Why then import sugar and sirups, and such articles as can be made from our own products?

Our citizens must awake to the value of *home industry*, or we shall be a ruined State. Where has the wealth of California gone?

Behold! in the last ten or twelve years, California has sent abroad over *one thousand millions dollars of gold*, and what has California to show for it to-day?

California owns *one Lunatic Asylum* and one *State Prison*—fit emblems of crazy Politicians, and a criminal Legislature—for our Politicians have ruled the State to the utter neglect of its best interests; neglecting the industrial interest, until the mechanic and laborer became discouraged and despairing; then, if in their despair they transgressed the *law*, our wise Legislature had a *State Prison* for those whom their wicked neglect had made criminals.

The above list of *imported* goods shows the neglected industry of our State, which a wise Legislature could have corrected.

◆

Summer Fallow—Plant Now.

LOOK *to the fields of "Summer fallow."* We have been gratified many hundred times the present season as we have visited many parts of the State, to find so generous an interest in this all-important mode of farming. We shall be able, we trust, to give *practical results* from some of our extensive grain-growers of the *particular gain to them in their crops* by this system. The time is near at hand for them to secure the full benefit of such land as has been left in "fallow" the present year, for as soon as the first rains have fallen, and the land can be deeply and finely plowed let the grain be sowed and harrowed in; and if the land is *now* in such a condition as to be deeply and finely plowed, we would recommend the seed to be put in the ground. It is better in the earth than in the granary; and every grain-grower who will carefully try the system of early planting even in dry soil (when properly prepared) will find the good results flowing from it.

The philosophy of early planting as now urged, is based upon the following as the certain results: When grain is thus planted the *first* rain *swells* the grain, and soon as more rains fall the grain sends up its early sprout, and reaching light and heat forms its early blades and *ribbons* on *stools*, giving forth broad long leaflets, expanding widely over the ground. As the weather is gradually growing cooler the grain makes no attempt to form joints, while the earth receiving the warm rays of the sun, and the earth being warmer than the air, the roots grow and expand, forming large masses of roots, while the only growth above ground is in extended blade along the surface of the earth, the coolness of the year preventing the grain from growing much above ground. In this condition the grain grows more or less in the root all winter, and when the sun awakes to life again, the vegetation of the early spring, then the grain thus planted feels the sun, and the great mass of roots thus secured by early planting, send up bold strong stalks, making short thick joints, and bearing long heavy-headed grain, sustained, fed and nourished from its abundant supply of roots. This is the *grand result* from early planting.

But, when grain is late planted, the rains instantly causes it to vegetate, because of the power of the sun, and as quickly as it comes above ground it commences to grow into stalk and joint, for the heat of the sun draws it upward, and the grain having little or no root, the blade, stock, and head of grain must be proportionally small, and thus as is often seen, the low, yellow, dwarfed blade, short head, shriveled kernels, and short crop, or none at all. This is the general result of late planting.

We know from what we have seen and learned among practical men that this is the case; and we most urgently wish our grain-growers would try the experiment for their own benefit. What we state we know, and we hope our grain-growers will communicate with us upon this all-important subject.

Letter from Stony Brook.

Farmers Writing their Experience—Its Benefits—Deep or Shallow Slowing?—Nonpareil Wheat—The Borer—King Philip Corn, etc.

STONY BROOK, Oct. 8, 1861.

EDITOR FARMER: In my letter of the 25th of May, I told you I had one or two more subjects to write on, viz: Deep Plowing, and common Farmers writing their experience. What has become of Morley, and that man who once told us of building dog-fence three dogs high, and hosts of others that can write their experience in a plain, off-hand way that we all can understand and learn something from, get new ideas, etc. And now and then a scientific letter from such men as Agricola (I don't like fictitious names in an Agricultural paper) is interesting, but the plain common Farmer wants such information and ideas (if they are new to him) that he can put right in practice. The Stock-growers in this State would like to hear *often* not only from Rockwell, but others like him in that branch of Farming. The man that is trying to raise Fruit would like to hear from others.

When I first commenced Farming, twenty years ago, the first thing I did in the way of informing myself in that business was to subscribe for the Genessee Farmer, published at Rochester, N. Y.; and when the Michigan Farmer was established, I took that paper. Well, those papers were filled with the experience and practice of Farmers in all the different branches, from all parts of those States, and often letters were published from other States. Then old Farmers (such as didn't know it all) got new ideas, and new beginners went to work understandingly. Now, Colonel, if Farmers in the Old States can always learn something new through the medium of an Agricultural paper, of how much more importance is it that we Farmers of California should learn from each other's experience! Here, almost everything, owing to soil and climate, has to be done different from what we were brought up to in the Old States. Now, if every common-sense Farmer who has had an experience of eight or ten years practice in California would write their views, if but a little at a time, but often, of how much importance it would be to all, especially to the *new-comer*, if he has a mind to inform himself, who will begin right, instead of going to work (as he used to do in the East) and fail year after year here, till he has learned by sad experience that he began wrong.

Many old Farmers coming here from the East, and going to work as they did at home, would raise no crop (of Grain) at all if it were not for the superior power of our soil. The first thing he would do would be to hitch three big horses to a plow, and ram it in, beam-deep, and maybe follow it up with the subsoil plow; and then, when it comes harvest, stands and wonders, and is surprised, and looks within to see what great sin he has committed, that *his* crop should not be as good by twenty-five per cent as that of his next neighbor, who plowed his land with a pair of mustangs, and only about two inches deep at that! Not because his next neighbor knew better than he did; but because his next neighbor was not able to get a bigger team!

Colonel, I know you are an advocate of deep plowing. So was I once to my sorrow, in California. Deep plowing for Grain will not do in Alameda county. How it is in other counties, I can't say. Morley recommends deep plowing where he lives; it may be best there, but it will not do in San José Valley. The best and heaviest crops grown here, is on ground plowed from two to three, and not over four, inches deep. Go ask the Farmers around Mount Eden and Hayward's. The heaviest Wheat I saw this season was on the foot-hills south of Hayward's, where the ground was scratched by the plow not over two inches deep, and the scratches were as wide apart as every other furrow would be; say "cut and cover," just to get ground enough to cover the seed. The philosophy, or whatever you call it, is easily explained: In the first place I will say we have no stiff clay subsoil, or what is called hard-pan; our soil is all alike, from the top down, say from two to ten feet, or more. Where it has never been broke, you will find it very porous, full of small holes about the size of darning-needles; these holes in the rainy-season fill up with water, and if not broken will hold moisture a great deal longer than what is broke up. It is certain that the ground will dry out as deep as it is plowed, and then it acts principally as a mulch to keep the moisture in the subsoil. Now, if you plow deep, the roots of the Grain cannot, or do not, run down deep enough to get the benefit of the moisture of the subsoil; but if you plow shallow, the roots can easily reach the subsoil, and from its porous nature can easily penetrate it; the plowing operates as a mulch, hence the big crops on half-plowed land. If I am not right, I would like to have you or somebody else "righten" me through the FARMER.

In your last paper I find you are inquiring for the Nonpareil Wheat. You will recollect that in my letter of the 25th of May I told you of the tremendous growth of mine. Well, soon after that, I am sorry to say, the rust took it, and so badly did it rust, that I could not find a kernel filled out full enough for seed. I cut it up and threw it into my hog-pen. None of my other Wheat rusted. I concluded it would not do here; though if I could have saved some seed I would have tried it again on different land. I hope you will have better results from other quarters.

Colonel, you promised to reply to my letter of the 25th of May, published in No. 14, but you either forgot it, or did not think it worth any further notice. I think it is getting time to begin to do something with my gentleman Strawberries. Will you please inform me of the whole process of cultivation? By irrigation I find I can have Strawberries all Summer, if I only knew how to manage them.

The borer has not troubled my last year's Fruit-trees this season, but they got in a few trees of what I set out last Winter. The Rochester Rural says, wrap old rags round in the Spring a foot up from the ground, is the best way to prevent the borer; and take off the rags in the Fall. It looks to me to be the surest and cheapest way; I shall try it. From this season's experience I am led to think that the borer will not trouble my trees after the first year. If this proves to be a fact, I shall be all right as to raising Fruit.

I have a fine crop of King Philip Corn, all husked and in the crib, while the Eight-rowed Yellow I spoke of is just glazed and fit to cut up. The stalks grow too big to be profitable for fodder; the Philip corn-stalks are shorter and finer, and full of leaves, and Cattle will eat the whole, stalks and all. I calculate these stalks are worth as much as Hay, if properly cured, pound for pound. Respectfully yours, ABRAHAM CLARK.

We are pleased to hear again from our friend and correspondent, whose letter we give above. We would like to have discussions among our Farmers upon deep and shallow plowing, and the every-day-work and experience of the Farmer and Stock-Raiser. In reply to the inquiry of our friend, we would say, "Morley" is of age, and can speak for himself; so is "Rockwell;" our columns always welcome them. We agree with our correspondent fully upon the value of good common-sense letters of experience by Farmers. They always do good. Every Farmer *can talk on paper*; let them do away with the foolish idea that they must be *finished scholars* before they can *write for the newspapers!* What is wanted is simply a plain recital of facts: how their farm-work has been done; what has prospered; what was not successful. A simple recital of facts; the same as if it was *talked about* face to face. Farmers can do themselves and the public great good by such simple, plain, good, homely letters. Farmers should all take an Agricultural paper (the FARMER, of course), and they should write for it, too. No cultivator of the soil or Stock-raiser can be without such a journal as is connected with them in their own community without losing ten times the cost of such a paper. Relative to deep or shallow plowing, our opinions are known; we shall be glad to have a full and fair discussion of its merits, and we hope to hear from "Hayward's" locality, as there are some strong advocates of our system "all along the road" there. We give our views in favor of deep plowing, as a general practice. We have spoken of that subject in another column. We are sorry our friend was not successful with the "Nonpareil Wheat;" we hope to hear from others, however, more favorably. We intended answering the letter of May 25th, but delayed it, hoping to have the pleasure of a personal interview at "Stony Brook," but could not accomplish all our plans. If our memory serves us, however, we published an article on Strawberries about that time, which we supposed conveyed about all the information desired; and we subsequently published (in our paper of July 12th) a communication from a Farmer of Mariposa relative to the Borer, giving an effectual remedy and practical results from its use. However, we will endeavor to refer to these matters in future. We shall be glad to hear often from our friend and all others upon any and every subject that interests them.

◆

Raspberry Wine and Wine-Making.

WE are progressing as a State toward a true independence, and if we could only have that just attention and encouragement from "*all in authority*,"—if we could have the earnest interest of the people to encourage "Home Industry," California would be the richest and most prosperous State in the Union.

We paid a visit to the great Fruit depot of Messrs. Graves & Williams, on Clay street, and the piles of Apples, Pears, Grapes, and Quinces, is proof of the fertility of our soil in this branch of Horticulture,—(a visit to the wharves at our city front just now, will show what we can do in raising Grain), and in every department of our producing interests, Wine, Grain, and Wool Warehouses are full of our products. Messrs. Graves, Williams & Buckley have done a grand thing in thus opening such a market. Everybody who comes to our city should visit this place to see our grand products. Our object now in speaking of this establishment was to notice the very fine "Wine cellar" beneath this market; large, airy, and well arranged for this business. We were pleased to find it a place of *real active work*. It is not only a place to *store* Wine, but a *manufactory* also. We found Mr. Comins, a very active and ingenious mechanic, who now has charge of this department, busy at work, erecting and finishing Wine presses, Cider presses, etc. Here grapes are crushed, and apples ground; and here too, genuine Cider Vinegar is made. And now all these products are manufactured in the heart of our own city.

Mr. Comings has also commenced making Raspberry Wine, of which we tasted. It is very superior indeed. Such wine, with other pure wines, cider, and vinegar, can now always be had pure, of home make.

We also saw a very fine pencil drawing of the "Great Pear," done by Mr. Comins, a proof that he is an "artist" as well as a "mechanic," and highly creditable in each. Those who feel an interest in our State's progress should go and see.

◆

An Excellent Clip of Wool.

WE received the following facts from Mr. Flint, of the firm of Flint, Bixby & Co., of San Juan, Monterey county, the well known Sheep-raisers of that section.

Their entire clip the present season is about 100,000 pounds, and mostly fair wool. The clip was an excellent one, many animals giving ten and twelve pounds each; one Buck twenty pounds, and another twenty-five pounds. From seven-months lambs, four pounds each; wethers, two and three years old, six to seven pounds each.

This firm think it better to make one shearing only, and that in the Spring, unless it be done for health on special occasions. For Wethers intended for the next Spring market they approved fall shearing, as it gives a better growth to the carcass, and results better in the animal for the shambles.

STATE SUMMARY.

The rains, it is said, have destroyed hundreds of tons of Hay in Los Angeles county. It is anticipated that the article will advance in price.

Maj. Bidwell, of Chico, will manufacture this season some two thousand gallons of Wine from Grapes grown in his Vineyard.

A grand Ball is to be given by the Managers of the San Joaquin Agricultural Society, on Friday evening next, Oct. 18th. It is for the purpose of raising means to furnish their fine new Hall.

The Synod of Alta California convened at Sacramento last week. Among the business transacted was the passage of a resolution to establish a Female College.

What a destructive "cuss" is that Holmes, now of the Visalia Delta! The Sun says that he and another gentleman of Visalia brought in 385 Quail and a lot of Rabbits, the product of two days' shooting.

Many of the Apple-Trees in Contra Costa have blossomed a second time, and in some instances the Fruit has formed and is growing. The same is the case with trees in Sonoma county.

The Secretary of the San Joaquin Valley Agricultural Society is busily engaged in the preparation of the Reports of Committees for publication. It is expected they will appear in pamphlet form on or about the 15th of November.

Maj. Barbour, of the Q Ranch, made Peach-Brandy this season at the rate of ten gallons a day. He makes from five to seven quarts of Brandy to the bushel of Peaches. The fruit in this State makes quite as good a quality of Brandy as that of Virginia or Tennessee.

The editor of the Amador Dispatch has been shown Apples of a third crop this season nearly as large as a hen's-egg. They were grown on a tree at the Q Ranch. Those of the second crop as large as those of the third. He is also informed that Pardee, of Ione Valley, has gathered *nineteen tuns* of Grapes from two acres of vineyard.

A load of 31,000 pounds of Wheat was drawn from Stockton to the Stanislaus Mills, at Knight's Ferry, with a motive-power of fourteen mules. The load was contained in *three* wagons, manufactured by W. P. Miller, of Stockton. The front wagon is the same that was exhibited at the State Fair of 1859, and cost $1000. The second wagon cost $700, and the third $275.

The Marysville Democrat says: "Tom Mooney, of Empire Ranch, in this county, may safely claim to have raised the largest Sweet Potato ever seen. One was brought from his place yesterday which weighed seventeen pounds! Can anybody beat that?" Was this a *real* Sweet Potato, or was it merely one of the Sandwich Island Yams, which passed for Sweet Potatoes here until the introduction of the real Carolinas? As a Yam, it might not be very remarkable. Call things by their right names, Mr. Democrat!

The Tulare Canal project is said to have been abandoned, for the reason that the distance to be dug was found to be forty miles instead of twenty, and could not be completed within the time allowed by the grant. We learn that an application will be made to the next Legislature for an extension of time, on the ground that the operations of the Company were hindered by the Legislature repealing its charter, which repeal, however, the Supreme Court declared unconstitutional. Will they get it?

The valuable Clydesdale Horse and a two-year-old colt, belonging to John Johnson, were lost on Friday night, by the burning of the stable, near Alamo, Contra Costa county, in which they were kept. The Gazette says: both of these horses took premiums at the late Fair, and the encomiums lavished on the noble animals are yet warm on the lips of those who saw them, when the sad intelligence reaches us that they have met a horrible death! The fire is supposed to be the work of an incendiary.

A new style of Stamp Envelopes, differing both in the design and color of the stamp from those hitherto used, has been issued by the Post Office Department. Postmasters on receipt of them are requested to give notice of the fact through the press and otherwise. During a period of six days from said notice, the new envelopes will be exchanged for an equivalent amount of the old issue. After that time the latter will not be received in payment of postage.

The Chinese Sugar-Cane is to be tested in at least one instance in this State this season; as appears by the following from the Red Bluff Beacon: Our old friend Phillips, of the Oak Grove House, on Pine creek, is putting up a mill for thr manufacture of Sugar out of Chinese Sugar-Cane. He has successfully cultivated two or three large fields of this species of Cane, which he expects to make into Sirup as soon as the mill is finished, which will be in a very short time. His mill is to be put in motion by water-power. He has a convenient and substantial overshot-wheel, and the water to turn it is from near the foot of the mountain, several miles east of his house, through ditch and flume, to the mill. As soon as he gets to work we shall give our readers the result of the undertaking.

From the East.

The most important news is the confirmation of the surrender of the Federal troops at Lexington. The rebels, with a force of near 30,000, surrounded the place, and after a desperate fight succeeded in cutting off the supply of water from the Federals. The latter numbered less than 3000, under Col. Mulligan. They defended themselves for three days, expecting reinforcements, but none arriving, they were obliged to succumb for the want of water. The Federal troops were contrating for an advance on the rebels, and severe fighting is anticipated. No material changes have occurred in the condition of affairs on the Potomac. Several extensive naval expeditions have left New York, or are preparing to leave, for operations on the Southern coast, from which important results are expected. The National Loan is being rapidly taken up by the people of the States, and the notes can hardly be issued fast enough to supply the demand. No apprehension is felt for the want of funds.

"A Little Leaven Leaveneth the Whole Lump."—Good yeast is an invaluable agent in making good bread, and it is one of the most desirable agents in the domestic economy. There are hundreds of kinds of "yeast powders," but very few good ones comparatively. "Boardman's Yeast Powders" are now classed as *the* "Powders," and we recommend them to all who make yeast bread. We have many witnesses to their superior excellence. J. C. Winans on California street, is agent for their sale.

Blue-stone your Wheat.—Go buy your "blue-stone" now; better have it on hand. Many wise Farmers whose land has laid fallow the past Summer are now preparing to plant. *Blue-stone all the Wheat* that is planted is our motto; and be sure and plant only the *purest and best seed Wheat*, and the Harvest season will tell that such plans were wise and profitable. Bedington & Co., have blue-stone of California manufacture.

The first iron foundry in Nevada Territory poured its first casting on the 27th ult. The establishment is located between Silver City and old Hill, and ned by Hyde, Booth & Co.

Patriotism—Love of Country.

The present struggle for our Country, its Constitution, and the glorious Stars and Stripes, will show to the world many noble examples of true patriotism worthy the cause our patriot soldiers have espoused.

The ordinary newspaper reports do not convey to us many of the striking cases where the men lay their all upon the altar of their country—we only learn of a *general* enthusiasm for the cause. We have, however, a letter from one of the Captains in our army at Washington, which is full of that true and noble spirit that speaks the true patriot. The letter was never intended for the public eye, but we prevailed upon the brother here to allow us to give it to our readers, feeling confident it would animate them with that love of country, so important in this great and trying period of our country's history and trials.

The writer is Capt. Henry B. Todd, now, as will be seen, in active service. He has also another brother a Captain, and four nephews in the army, each and all full of love and devotion to their country and its cause; each and all leaving homes, kindred and friends dear to them, and business, to do battle for the Stars and Stripes. Capt. Todd gave up a prosperous business, and, as he writes, he leaves father, mother, wife, children—all are laid upon the altar, and his life also. These are the noble examples that we love to chronicle, so that the future generations may have the record of those who fought, and if need be bled and died for our country.

Capt. Henry Todd is a brother of A. H. Todd, Esq., commission-merchant, of the firm of A. H. Todd & Co., by whose kindness we are permitted to copy what relates to our country, and to give this example worthy of all praise. Well may Mr. Todd be proud of such brothers and kindred, in these times that "Tries men's souls."

Camp Meigs, Washington, D. C.,
Sept. 3d, 1861.

My Dear Brother—It is a long, long time since I have heard directly from you, and I had thought I would not write to you again until I received a letter from you; but being here in camp, with a little leisure, and hearing the booming of the cannon and volleys of musketry led me to think if I did not embrace this opportunity, I might never be permitted to write to you.

Well, here I am, having left home, business, wife and children, mother and all dear friends, to fight the battles of our Country, our Constitution and the Union—ready, if necessary, to spill the last drop of blood in so glorious a cause. I have a fine company of men, most of whom I can rely upon in a conflict. We are encamped back of Washington, up the Potomac—not on the Virginia side, although many of the regiments are located over the river in Virginia. We are within five miles of the main body of rebels; our out-pickets are so close to those of the enemy that they can converse one with the other—one being in one corn-field and the other in the adjoining field. Great preparations for a determined and bloody battle are being made on both sides, and constant shirmishes are taking place with bodies of scouts, numbering from 10 to 500 and 1,000 at a time; while writing now, the guns are popping away at Fort Albany, about five miles from our camp.

Henry B. Todd.

Country Life.

"God made the Country; Man made the Town." Every *Book* that pleads the cause of a "Country Life" should be called a good and glorious book, for it pleads for man's true development, and for his highest happiness.

We have just received a book from A. Roman & Co., Booksellers, of this city, bearing the title "Country Life." We hail it as an invaluable aid to every dweller in the country. It is just such a book as should be in the library of every Farmer and dweller in the country.

The volume to which we refer is a handsome book of over eight hundred pages. It is a compilation of every branch of Rural Art, embracing Gardening in every department, Farming, Orcharding, Vine-growing, and Ornamental and Landscape Gardening, with countless cuts to illustrate every subject treated of, together with beautiful illustrations of some of the finest residences in the New England and Middle States.

The author of this work, R. M. Copeland, Esq., of Beaver Brook, Belmont, near Boston, Mass., is a gentleman whose practical knowledge and taste as a Horticulturist and Landscape Gardener we can testify to, having known him personally for many years as a member of the Massachusetts Horticultural Society of Boston, and this valuable book is a proof of his ability.

The book will be found of great value to every one, and we cheerfully commend it to all.

Sales Stable for Horses.—Persons wishing to bring their fine horses to our city for exhibition, sale, or for training, are reminded that Ben Fish's stable is the best place. Many years' experience as a trainer has qualified him to stand at the head of his profession.

The Value of Electropathic Treatment.

We give with pleasure the following testimony of the good resulting to suffering humanity by the use of Electro Galvanic Baths, and the appliances of this system, over that of Drugs and Medicines:

[*From the Pacific Messenger.*]

We call the attention of our readers to the advertisement of Dr. Joselyn's Electropathic Institute. Voluntarily and unsolicited we make the following statement, proving its great beneficent effects, particularly in rheumatic cases. Some months since we were on an editorial trip, visiting the mountains. The stage-coach upset, and landed all the passengers, including the writer, below in the valley, where the Deer Creek overflowed by receiving the additional material extraneous to its usual contents. For some hours exposed in our wet clothes to night wind and weather, we soon felt the effect of the accident in the mountains—pains in the back, hip, and legs; so much so, that for weeks we could hardly walk. Treatments of all kinds were applied, but without avail, until our attention was called to the Electro-Galvanic baths and appliances of the above Institute. Thank God! after two weeks we have been fully restored, and enjoy now the free use of our limbs and body as fully as previous to the involuntary bath in Deer Creek. Dr. H. Hien, Editor.

The Best Churn Known

Jebb's Patent Churn!

Exhibited at the Santa Rosa and Alameda Fairs, where it won the Premiums, and attracted the attention of those interested, has been pronounced by the best Dairymen and Dairywomen the BEST CHURN KNOWN. A sample Churn can always be seen at our Office, where they can be purchased. 5

GARDEN-ENGINE FOR SALE.

A fine Garden-Engine, of capacity to throw a good stream of water 50 or 60 feet, can be had at a bargain on application at the Farmer Office. 5

A Whale, See he Spouts!

This was the cry of many of our citizens the past week, as a "Great Black Fish" came forcing his way into our harbor. Did any of the citizens think how emblematical of the times the visit of this Black Fish is? All our harbors and coasts are more or less visited with *Black Fish*, and we hope wherever they go they will meet the same fate—feel the harpoon of the "expert" watchman, and soon be tried up, and be made to "blubber" for their intrusion.

The visit of this monster of the deep has been made quite an event; thousands of our old Californians have for the *first time* "seen a whale," although many had seen the "elephant."

The present visitor is what is called the common Humpback or Black Fish, and presented to the gaze of the many as great a curiosity as has ever been seen on our coast.

Goldsmith says there are no *less than seven kinds* of whale, and describes them as the "Great Greenland Whale," without a back fin and black on the back; the "Iceland Whale," without a back fin, and whitish on the back; the "New England Whale," with a *lump* on the back (like our present visitor); the Whale with *six lumps* on the back; the "Fin Fish," with a fin on the back, near the tail; the "Pike-headed Whale," and the "Round-lipped Whale."

All these differ from each other in figures, as their names imply. They differ also somewhat in their manner of living: the Fin Fish having a larger swallow than the rest, being more active, slender, and fierce, and living chiefly on herrings; however, there are none of them very voracious, and if compared to the "Cachalot" (Sperm), that enormous tyrant of the deep, they appear harmless and gentle.

Our present "hump-backed" visitor was captured, after a somewhat merry and anxious rivalry, by George Rand, who with a harpoon touched him in a "vital part," and became his captor. Blacky was sold for $1,000, and drawn up on the "ways" at Tichenor's Dock, foot of Second street, and shown for several days, under a large tent to "wondering eyes." We made the "sea monster" a visit, and found about one hundred persons present. There has probably from three to four thousand persons visited this dark mass of blubber, so that it was a pretty speculation.

This animal was 48 feet in length, 35 feet in circumference, and 13 feet diameter across the body, near the eyes. Lance holes were seen where he was pierced, and the harpoon and rope still attached shows the cause of his death. There is a wound in the body, supposed to be from that great enemy of the Whale, the "Swordfish." Large barnacles were firmly fixed to his body, near the fins, one of which we obtained as a curiosity; it is the size of a small egg, and probably *years old*. The jaws were extended, and the open mouth was sufficiently large to admit men to "walk in without taking off their hats," the same way as Jonah did probably.

The mouth was guarded by the bones cased in hairs, which are the strainers for the delicate food of his delicate majesty of the briny deep. The weight of the creature is estimated at 60 tuns and will probably make 40 to 50 barrels of oil.

As people seem to wonder why a Whale should come into San Francisco harbor, and some think it "ominous" of some dark calamity brooding over this coast, *we* think his Fishship's coming portends rather to *light* rather than darkness. *We* think the harpooners and owners are now making him "blubber," and are thus making "light" of the *subject* too, as his coming is only the fulfilment of "prophesy." A review of the strange parts of California history shows "that it was here "Soloman's Temple was built" by "conning artificers." We have had the "locusts," and surely "quails" have rained upon the land, and "manna" is found in many parts of our State. Prophesy tells of Great Whales too, and if this is not "the very Whale that swallowed Jonah," it is the very Whale that many "Jonahs" have swallowed, if all the reports about him are to be credited, especially our neighbor's reports of the "Alta," about her very interesting *female history*. And surely there is one indisputable evidence more about this being the Promised Land of great things, for none will doubt but that like the days of Moses and the children of Israel, the "Golden Calf" has a goodly portion of worshippers. So we think with all those evidences, the Whale's coming now is portentious of the near approach of the Millenium.

California is, indeed, a "great country" for Whales.

Lad Wanted.

A young lad of active habits, one who is a good scholar, can write well, good at figures, and exemplary in all his habits, and can bring the best of recommendations, can hear of a permanent situation by applying at this Office, in the afternoon *only*, from 4 to 5 o'clock. 5

Another Herd of Noble Stock for Sale.

We can offer to those who want the best kind of Blood-Stock, the following:

A Full-Blood Devon Bull; pedigree perfect.

Several Calves, Full-Blood, and cross of same.

Several extra fine Dairy Cows; very superior.

A noble Draft stallion, sired by a high-blood English Draft Stallion, from a Vermont Morgan Mare.

Several Mares and Colts of high grades.

All the above will be sold at a bargain. Inquire of Editor of Farmer. 5

3000 Sheep For Sale.

We have 3000 fine Ewes, with lamb by French Merino Bucks, for sale at a great bargain, if applied for immediately. Any person wanting from 1200 to 3000, can have a very great bargain by applying at this Office, or addressing Col. Warren, Editor California Farmer.

Leicester and Cotswold Rams.

Six very splendid Leicester and Cotswold Rams, Full-Blood, and in very superior order, three of each, for sale at a bargain. Inquire of Editor of Farmer.

Full-Blood Durham Stock.

Purchasers of very choice Durham Stock will do well to call and see our Lists of Stock for sale. We have some for sale as fine as can be found in this country.

We have a number of Full-Blood Durham and also Devon Stock, of perfect pedigrees, worthy the attention of those who desire to find the very best blood. The pedigrees we can show, and give full particulars.

Also, about twenty fine Grade animals, of superior stock and parentage, to which we invite particular attention.

AGRICULTURAL OFFERINGS.

BY AGNES.

In times of Old, God's chosen people,
Led by His express command,
From the fold, the field, the vineyard,
Brought the first-fruits of the land;
As a free-will offering brought them
To their priests, a sacred band.

Thus their grateful hearts acknowledged
The kind hand that filled their store;
While confessing all their wanderings,
Deeply they their sins deplore,
Humbly asking for His guidance
To direct them evermore.

Can we not renew the custom,
As we gather to each Fair?
Let us all, as we assemble
To display our treasures rare,
Raise our hearts in grateful incense
For a Heavenly Father's care.

Though no blood of goat or bullock
Shed by priest for sins atone;
While the goodly gifts receiving,
If the giving hand we own,
Every Fair becomes an altar
Dedicate to God alone!

◆

Maternal Responsibility.

[We are most happy to receive the following from our esteemed correspondent "Agnes." At the present moment, especially, this theme is of deep interest to us, and the incident now alluded to conveys most truly the moral of Maternal Example]:

I sometimes fear that in the great effort, which we hear so much about, to enlarge the sphere of Female Influence, the responsibilities of her present station are too much overlooked. While many are harping on Woman's Rights, Woman's Duties occupy but a subordinate place in their thoughts. When I see wives, whose age and experience better fit them for the school-room than for the cares and labors of the wife and mother, assuming these relations, I cannot but feel sad, both for them and the young immortals who are committed to their charge. There seems enough anxiety connected with the faithful discharge of Maternal Duty to appal the most mature and enlightened mind. How momentous the results of a mother's instructions! How great her influence for good or evil, both for time and eternity! Yet with what reckless indifference we see children of all ages abandoned to the care of ignorant, and often unprincipled, nurses; while the mother, to whom God has lent them, is spending her time in worse than idleness!

But as I did not start to write a sermon, but merely to relate a little occurrence lately witnessed, which was to me more impressive than a dozen sermons, I will let my story convey its own moral:

I was recently sitting in the parlor of one of our hotels, when a gentleman and lady entered, accompanied by a fine intelligent lad, apparently a son, some fourteen or fifteen years old. The father seemed in haste to transact some business before the departure of the boat; and bidding the son attend to the comfort of his mother, left immediately. After writing a while, the mother remarked that she was very weary, and asked the son to procure her a glass of wine. He went out, and soon returned with wine, ice, and sugar, but a single glass. "Why did you not get one for yourself?" remarked the mother; "you are tired, and it would have done you good." The lad replied with boyish independence that he was all right, and had no need of wine to rest him.

These remarks would probably have passed from my mind without a second thought, as common occurrences, but just at the moment I happened to look towards the opposite sidewalk, and there, steadying and balancing himself under a load of the ardent, which was, indeed, hard to bear, stood one whose appearance indicated that but a few short years had passed since he, too, might have been the object of as tender solicitude to some fond mother, as the one before me. Now, alas! how fallen!

I felt an almost irresistible impulse to lead that mother to the window, and point out the case to her, and let the lesson be tried upon her which was making so deep an impression on my own mind; but propriety forbade, and I could only breathe a wish, that the brave youth might always find his own strength, with the aid of the Most High, a sufficient safeguard against not only the temptation, but the pernicious example of his own mother! That mother, who would, no doubt, have given her own life, if need be, to save her son; and yet, with a misdirected solicitude, could offer to his youth and inexperience an incentive to evil, before which strong men bow like reeds!

Will the time ever come, when these things shall be viewed in their proper light, when home-influences shall be purified, and home-precepts strengthened in such a manner as to form a real shield against the assaults of external vices! How can that mother, who offers her son the deadly wine-cup, or plays with him the *innocent* game of cards ("just to make home pleasant, you know!"), have the face to pray "Lead us not into temptation!" when she is herself leading the soul committed to her care into the worst possible temptation! Indeed, I often feel that to train one child in a proper manner requires more discriminating judgment, more care, and watchfulness, than to govern a kingdom! AGNES.

HOME VALLEY RANCH, Oct. 7, 1861.

◆

FUTURE HOUSEKEEPERS.—We sometimes catch ourselves wondering how many of the young ladies whom we meet with are to perform the part of housekeepers, when the young men who now eye them so admiringly, have persuaded them to become their wives? We listen to those young ladies of whom we speak, and hear them not only acknowledging, but boasting, of their ignorance of all housework duties, as if nothing would so lower them in the estimation of their friends, as the confession of an ability to bake bread and pies, or cook a piece of meat, or a disposition to engage in any useful employment. Speaking from our own youthful recollections, we are free to say that taper fingers and lily-white hands are very pretty to look at with a young man's eyes, and sometimes we have known the artless innocence of practical knowledge displayed by a young Miss to appear rather interesting than otherwise. But we have lived long enough to learn that life is full of rugged experience, and that the most loving, romantic, and delicate people must live on cooked or otherwise prepared food, and in homes kept clean and tidy by industrious hands. And for all the practical purposes of married life, it is generally found that for a husband to sit and gaze at a wife's taper fingers and lily hands, or for a wife to sit and be looked at and admired, does not make the pot boil, or put the smallest piece of food therein.

Is Life Worth Preserving?

WE present the following most excellent Essay, from the pen of M. Augusta Fairchild, a distinguished female Physician. Whoever can reason thus, must be a good practitioner. We earnestly commend her reasoning, and ask our female readers to peruse and reflect upon the Enthusiasm of our Sister M. D. If Life is worth preserving, then the Laws of Life must be obeyed:

Health-reformers are almost universally accused of being "too enthusiastic."

Talk to a man about the Laws of Life and Health, tell him that if he would escape disease, his life must be one of obedience to physiological law, that when sick he may be cured without poison, that when well it is his duty to remain so; tell him of the delights which spring from a healthy organization, how the mind expands, and the soul grows, when not fettered by a diseased body, but sustained by a healthy one. Show him how far the question of health and disease is one of his own answering, *not* governed by chance; and he will immediately raise the cry, "O, you are too enthusiastic!" That is the "knock-down argument." He thinks he has won the victory, and, if you are not convinced, you are, at least, convicted.

People think if they can only give one the name Enthusiast, they have gained a fortress. And they have. In the eyes of most people, you appear afterwards in very much the light of a hyena, of a crazy person, at least. They shun you, as *mad*. But they *know better*. Only, they like to have an excuse for not obeying the great truths, as written in the human frame, for not governing their appetites, forming such habits as will lead to the possession of health, even though they be called upon to practice a little self-denial. *Your* habits of life reprove theirs. Your whole influence reproves theirs. What wonder, then, they would silence you! Enthusiastic! It is *well* to be enthusiastic in a good cause.

Who doubts that the cause of Health Reform is good? Is it not good to alleviate the sufferings of humanity? To teach the people how they may lead true, healthful, useful lives? Is it not good to follow the teachings of our great example, in laboring to bring men up to higher conceptions of life and duty? That is just what Health-reformers are doing. They are working hard, breaking up the ground, sowing seed. And they will reap. God is a "God of righteousness," he will surely bless and prosper the right. Then if we are working in harmony with God and his laws, may we not even afford to be called "enthusiasts?" The term does no harm. I think it is rather praising us. I feel as though we scarcely deserve such a high encomium; we are not enthusiastic enough. Look at the magnitude of the work; look at its bearing upon society! It underlies *every other reform*. People may preach at man's heart, and lecture at his head, as long as they please, but it will avail little if they do not take into consideration the fact that man is not disembodied, that he has a real, material, living frame, and such is the union of the physical with the mental and moral natures, that the one cannot be despised without involving the other. The *body* has been despised. It has been called "clog," "house of clay," "a wicked, despicable thing," dragging the soul down to the very "slough of despondency." All this has been done with a view to purify the spirit.

"The hurt of the body is good for the soul."

This is proved to be a mistaken idea. It is proved by the vast amount of disease and of crime we find througout our land. It is proved by the tendency of the present rising generation to make a scoff at moral restraint, to rush headlong into the very whirlpool of destruction. It is proved by the coldness of our churches, by the want of spiritual vitality. Surely there has been preaching enough done, there has been *doctoring* enough done, there have been "Maine laws" enough made. *Now*, the Health-reformer proposes to place the "ax at the root" of the tree. He proposes to place man in such good physical conditions that he may not spend his days in useless repinings at his lot, but be what God intended he should: The *expression* of all God's works, the High Priest of Nature unto the "Great I Am."

Then, may not all who labor in this cause feel the enthusiasm of love, of joy, of right? "Too enthusiastic," indeed! What wild dreams of the enthusiast, what gay imaginings of hope, can excel that sublime ideal given us in the command: "Be ye therefore *perfect*, even as your Father which is in Heaven is perfect!"

We may aim to be *perfect*, like God. We may work with Him for the best interests of humanity. In this work He will sustain us. What more can we ask? "If God be with us, who can be against us?" We will then labor on, each doing whatever comes in his way, a hopeful toiler, sunny spirit, so enlightening those who may wander over the dark low grounds of error and disease, that they may rise to the bright pure regions of Truth, Health, and Right.

◆

THE AFFECTIONS THE FOOD OF LIFE.—The affections are the true food of life. They underlie all conduct. From them conduct departs, and to them it returns. To many, life is absolute famine without love, and a perpetual feast with it. There be some who, if they are not loved, and they have no liberty of loving, though you place them never so high, though you make them gorgeous with riches, though you surround them with every element that touches their vanity, walk sepulchral. No matter what they have, they are not fed unless they are fed inwardly. They were made to feed at the heart, and not through any other part of them. And there are many that are full, and strong, and happy when feeding upon love, who, when that is taken away, are utterly broken down and good for nothing; are like one that is starving to death. With such persons, while the heart is filled, the house is like a palace, upon which the sun-light rests by day, and whose glancing windows make artificial day at night.—[Beecher.

◆

FRIENDSHIP.—Do not think because a man smiles upon and seeks your society, that he is your friend. Smiles and professions, alas! are so abundant as to be of no value. He only is your friend whose heart is in his words, and whose actions illustrate them, through all his life, who stands by you through all the vicissitudes of fortune, "in sunshine and shade." When you find such a being make him your second self, cling to him as to your very life, for the jewels of the earth are scarce, and, therefore, precious, for the sand of life glitters in the radiance of a high enjoyment, and even the golden bowl is broken at the fountain.

MIRTHFULNESS.—As the diamond is found in the darkness of the mine, as the lightning shoots with most vivid flashes from the gloomiest cloud, so does mirthfulness frequently proceed from a heart susceptible of the deepest melancholy.

DOMESTIC jars, when concealed, are half reconciled. 'Tis a double task to stop the break at home, and men's mouths abroad.

CANTELOPE PICKLES.—Take Cantelopes just when they begin to turn yellow, but while the flesh is still solid; pare, cut up in slices half an inch thick; dip a moment in hot water, and then pack in jars with spice and cloves, and cover with good pickling vinegar. In a week you will have as delicate and fine-flavored a pickle as ever was made.

CIRCULATION OF THE FARMER ABROAD.

WE have often urged the friends of our State, to aid us in the Circulation of our Journal in the Old States, and Europe, so that we might be more instrumental of good, and help to increase the population of California, and thus make the State more prosperous.

We have often published strong Letters, from various States, proving the good our Journal is doing in making our State truly known in all her vast resources. We now ask of all who feel a desire to have our State double her population, to this work.

We append a Proposition, and hope the Friends of this Journal and the cause it pleads, and all who wish to carry out the desires expressed by our excellent Citizen, in Paris, will coöperate with us. We will make liberal terms to all Societies for Emigration, or Clubs, and Commercial Houses.

WITH a desire to make the Resources of California known abroad as widely as possible, we feel confident that if we could Circulate the CALIFORNIA FARMER in all the Older States, it would be the means of showing the great Masses of the People, that California is the place for them to settle in; and we believe we could greatly benefit all the interests of our State, by Circulating our Journal extensively abroad.

With such views, we ask the coöperation of our Merchants, and Business Men, and all who desire to make California truly and widely known, to aid us in the Circulation of the FARMER.

Wishing to place the FARMER at so low a price, as to enable all to send it to their friends, we offer the following Terms for all Clubs to send to the Old States, and in Europe:

For eight Copies........................$25
" ten " 30
(Each Copy to be mailed separately, if so desired).

◆

MRS. LIZZIE W. WARREN, M.D.,

ELECTRICIAN AND HYDROPATHIST,

Corner Mason and Pacific streets.....San Francisco.

MRS. WARREN proposes to teach her patrons the means of attaining and preserving health, rather than the usual practice of physicians, of *doctoring the sick*. Believing in the old adage: "An ounce of prevention is worth a pound of cure," and also that the remedies used to eradicate disease are more deleterious to the human organization than the diseases themselves; therefore she dispenses with the use of drugs, relying on the curative power within the living organism and the supplying such conditions as the natural remedial agents afford. The natural remedies: Air, Diet, Exercise, Water and Electricity. The beneficial effects of water, properly used, are now generally understood, but the remedial effects of electricity are comparatively unknown. By the knowledge and application of a certain law, which recognizes hitherto unknown relations of the positive and negative forces to the functions of life, electricians are enabled to make a beneficial application to disturbed physical equilibrium, thereby rendering electricity the most powerful therapeutic agent; the most potent and all-pervading element which can be used, as it approximates to the principle of life, apparently identical with vitality. Its therapeutic uses are *reasonable* and *wise*, and may be relied upon whenever a cure or improvement is possible.

MRS. WARREN will be pleased to make arrangements by the year, with families requiring a better knowledge of the laws of health and the means of its preservation, as well as medical attendance and advice.

Having devoted many years in study and preparation for this profession, and having received ample testimonials from the College where she graduated, feels confident she will be able to prove her ability to attend to the claims of WOMEN and CHILDREN. To this practice she will give her *Exclusive Attention*.

As an ACCOUCHEUSE she claims to be eminently successful, and can produce ample testimonials of success in many difficult cases.

Those wishing to avail themselves of Mrs. Warren's advice will find her at her residence, on the south-east corner of Mason and Pacific streets.

☞ Arrangements have been made by which a few Patienst can be accommodated with Rooms and Board

Pulu! The Wonderful!

ANOTHER cargo still, is just received
At SCHREIBER'S Depot! 't is believed
There is a charm about the PULU crop,
It comes, and goes,—the sale will never stop;
For everybody wants a PULU BED,
So EASY to the body, so COOLING to the head;
Another charm, too, in the PULU found—
Where PULU is, no INSECTS come around.

PULU! the famous PULU, now is known
As *BEST FOR BEDS*, and it has grown
So much in favor that the People go
Always to SCHREIBER'S great PULU Depot;
'Twas Schreiber had the first 'twas ever sold,
And then it almost cost its weight in gold;
But now, his ships, they come so thick and fast,
It sells so quick, a cargo does not last
A month or more, and then, it is so low
That all who want good BEDS should surely go
Direct to SCHREIBER'S STORE on Sansome street,
There they will find a stock complete,
ALL KINDS OF BEDDING, everything that's wanted,
There too, the best accommodation granted.

Now don't forget the Number, 'tis 400;
Another fact upon your memory fix—
That Schreiber's is THE DEPOT OF PULU,
And HE the PIONEER IMPORTER TOO;
The man who first this luxury gave,
Then surely he *the best of trade should have*.

Now go and make your purchases complete,
At SCHREIBER'S, 406, on Sansome street. 1

PRICE REDUCED!

PATENT

HYDRAULIC HOSE

MANUFACTORY.

HOSE

SEWED WITH FOUR SEAMS,

For 15 Cents per Yard,

GUARANTEED TO STAND THE PRESSURE OF ONE HUNDRED FEET FALL AND LAST AS LONG AS THE DUCK, WITHOUT RIPPING.

I am also prepared to sell PATENT-RIGHTS for States, Counties, or Townships, as I hold the documents from the Patent Office at Washington City, with the Seal stamped upon them.

Miners and others interested will please address BOX No. 353 AT THE MARYSVILLE POST OFFICE, or through Wells, Fargo & Co.'s Express. All orders thankfully received and promptly executed.

For those having a disposition to invest a small sum in a safe and profitable business, now is the time. I have made sales to Mr. John Carbold, of North San Juan Township, and to Mr. John T. Allment, of Marysville. From these I have the highest recommendations, and numerous other recommendations relative to the value of this Machine.

S. HOWARD,
Pioneer Hose-Maker.

EDUCATIONAL.

STOCKTON Female Seminary.

THE EIGHTH SESSION OF THIS INSTITUTION, UNDER the charge of Dr. CYRUS COLLINS and Lady, assisted by competent Teachers, will commence on

Wednesday, September 25, 1861,

And continue FIVE MONTHS.

—TERMS:—

For Board and Tuition, in common English Branches, per session	$150
For Tuition in Music, per session	50
For Tuition in Painting or Drawing	25
For Tuition in Ancient or Modern Languages, each	25
Washing per dozen	$1 50

Payable Quarterly in advance.

For Tuition and Board per annum, in advance........250

☞ Pupils received at any time, and charged until the end of the session.

COURSE OF STUDY:

The first aim of this Institution is thoroughness; and although any plan proposed can only be disciplinary, yet we have chosen that course which will be the most practical, involving those sciences most available in common life. Beginning with fundamental principles, the student is carried by natural and easy graduations, through a course of study, calculated to strengthen and invigorate the mind, and prepare it for healthful action.

Our course of study comprises Two Departments, a Preparatory of two, and an Academic of three years.

THE STUDIES OF THE PREPARATORY COURSE.

FIRST YEAR.

Reading, Writing, Orthography, Arithmetic (Thompson's Rudiments), Primary Geography, Grammar, and Composition.

SECOND YEAR.

Rhetorical Reading, Arithmetic, Book-Keeping, Geography, History, Grammar, Penmanship, and Composition.

THE STUDIES OF THE ACADEMIC COURSE.

FIRST YEAR.

Algebra, Geometry, Natural Philosophy, Physiology, Rhetoric, Physical Geography, and Composition.

SECOND YEAR.

Trigonometry, Astronomy, Natural History, Botany, Logic, Intellectual Philosophy, and Composition.

THIRD YEAR.

Political Economy, Moral Philosophy, Evidences of Christianity, Belles-Lettres, and Composition.

The Ancient and Modern Languages, Music (Instrumental and Vocal), Drawing, Painting, and Ornamental Needlework, optionary through the whole course.

Pupils can omit, with the consent of parents or guardians, any of the above studies, but none will be entitled to the Diploma of Graduation who have not completed the whole course.

All young Ladies from abroad will be expected to board with the Principal.

Classical School

FOR BOYS.

We have established a Department for Boys. The course of study the same as in the Female Department. Particular attention paid to those preparing for College.

☞ Terms the same as in the Female Department.

7 Dr. CYRUS COLLINS, A.B., Principal.

SANTA CLARA COLLEGE.

THE TENTH ANNUAL SESSION OF THIS INstitution will commence on MONDAY, August 20th. The plan of instruction embraces two regular Courses—the Classical and the Commercial, besides a Preparatory Department.

TERMS.

Entrance, to be paid but once	$15
Board and Tuition per session	335
Washing and mending of articles washed, per session	45
Stationery, per session	10
Medical attendance and medicines (unless it be preferred to pay the bill in case of sickness), per session	10
Vacations, if spent at the College	35

N. B.—When there are more than two brothers, each one over two pays only half price.

Use of Instruments in Chemistry and Natural Philosophy, Vocal Music, Piano, Violin, and Drawing, form extra charges. School Books are furnished at store prices. No extra charge for any of the languages. Payments to be made half a session in advance.

For further information apply to the President of Santa Clara College, Santa Clara, Cal., or to Rev. A. Maraschi, S. J., St. Ignatius' Church, Market street, between Fourth and Fifth, San Francisco. 2

HUNTER'S

GRAIN SEPARATOR!

THE GRAIN GROWERS OF THE PACIFIC COAST have now an opportunity never before offered them of cleaning their Wheat in the most perfect manner.

The undersigned would offer them his

NEW GRAIN SEPARATOR,

Patented April 9th, 1861,

As one of the best Implements ever invented. Mustard, Radish, Chess, Barley, and all other impurities, are separated entirely, leaving the Wheat in a pure and clean condition.

The importance of this Implement can be seen at once, as the

INCREASED VALUE

OF

Well-Cleaned Wheat

Will be more than sufficient to every Grain-Grower of any amount

TO PAY FOR A MACHINE.

The Patentee will visit all the principal cities and Farming districts to appoint agents at each place, and exhibit one of his Machines.

He feels confident that every Grain-Grower

WILL BE CONVINCED OF THEIR VALUE

The moment an opportunity is presented to see them work.

THE WORLD FROM THE SIDEWALK.

BY E. R. D.

Have you ever stood in the crowded street,
In the glare of the fitful lamp,
And marked the tread of the million feet,
In their quaintly musical tramp?
As the surging throng move to and fro,
'Tis a pleasant sight, I ween,
To mark the figures that come and go
In the ever-changing scene:

Where the sinner treads with the publican proud,
And the priest in his gloomy cowl,
And Dives walks in the motly crowd,
With Lazarus cheek by jowl;
And the daughter of toil, with her fresh young [heart,
As pure as her spotless name,
Keeps step with the women that make their mart
In the haunts of sin and shame!

How gaily steps the country lass
In the midst of the city's ills,
As freshly pure as the daisied grass
That grows on her native hills;
And the beggar, too, with his hungry eye,
And his sad, wan face, and crutch,
Gives a blessing the same to the passer-by,
An' he gives him nothing or much.

When night has beaten the world's tattoo,
And, in dusky armor dight,
Is treading with echoless footsteps through
The gloom of the silent night,
How many of these shall be daintily fed,
And will sink to slumbers sweet,
Yet many shall go to a sleepless bed,
Had never a crumb to eat!

Ah, me! when the hours go joyfully by,
How little we stop to heed
Our brothers' and sisters' despairing cry,
In their woe and their bitter need!
Yet, such a world as the angels sought
This world of ours we'd call,
If the brotherly love that the Father taught
Were felt by each for all.

Yet a few short years, and this motly throng
Will all have passed away,
And the rich and the poor, and the old and young,
Will be undistinguished clay;
And lips that laugh and lips that moan
Will in silence alike be sealed,
And some will be under a stately stone,
And some in the Potter Field.

But the sun will be shining just as bright,
And so will the silver moon,
And just such a crowd will be here at night,
And just such a crowd at noon;
And men will be wicked, and women will sin,
As ever, since Adam's fall,
With the same old world to labor in,
And the same God over all.

THE VALUE OF MONEY.

BY C. C. RAWLINGS

Obscurely I had passed my life—
A wretched ignoramus—
Till I, like Byron, woke and found
"Myself one morning, famous."
All darkly had life's weather been,
Though now so bright and sunny;
But then the change is not so strange—
I've lately had some money!

Where'er I went folks ran away,
As if from burning lava;
I seemed a living emblem of
The "poison-tree of Java!"
'Tis not so now—for all, I vow,
Flock near like flies round honey;
Oh, magic change of fortune's wand—
I've lately had some money!

I used to say some funny things,
(At least I dared to think so),
But dead upon the ear they fell,
And all away would shrink so!
My mouth I never open now,
But all I say is funny;
They'll even bring hysterics on—
I've lately had some money!

Though young and handsome, once I thought
That I should ne'er be wedded;
Mammas their daughters kept from me,
As from a scarecrow dreaded;
The ugliest girl I could not move;
Nor her with hump and one eye;
But "angels" now run after me—
I've lately had some money!

On any subject in debate,
If I an idea started,
I ne'er was listened to, and none
Cared how in scorn I smarted;
My slightest whisper now is heard—
No more their ears are dummy;
They cannot act without my views—
I've lately had some money!

Anecdote of John J. Whittier.—They tell the following story of the amiable Quaker poet: On a recent occasion he was traveling with a friend over a New Hampshire Railroad, and during conversation Mr. Whitter's friend, who is also a member of the Society of Friends, told the poet that he was on his way to contract for a lot of oak timber, which he knew would be used in building the gunboats at Portsmouth, and asked him whether he thought it was exactly in consistence with the peace doctrines of the Quaker denomination. Without saying anything calculated to decide the question, the two arrived at their parting place, when Mr. Whittier, shaking his friend's hand, said: "Moses, if thee does furnish any of that oak timber thee spoke of *be sure that it is all sound.*

A clergyman while walking the deck of a steamer at St. John, N. B., where Secessionism has considerable footing, noticed the American flag flying from the masthead of a ship, tauntingly said to Col. Favor, "Why don't you take a slice off that flag since you have lost a portion of your country?" Yankee-like, the Colonel quickly replied: "Why don't you tear a leaf from your Bible because a part of your church have fallen from grace?" The clergyman had no more to say on that subject.

The Only Gentleman.—Dr. Franklin, in one of his visits to England, had with him an intelligent negro servant. During a journey of inspection through the principal manufacturing districts of the country, the servant said to him one day, "Massa, in this country every body, every thing must work—water work, wind work, fire work, smoke work, horse work, ass work, bullock work, dog work, only de pig no work, he only eat and sleep; de pig is de only gentleman in England."

Bee-Moth Trap.—Take a wooden bucket, or other large open vessel, and fill it about two-thirds with water. Then put in a quantity of old honey-comb, and set the vessel in the Aplary, at night, near the hives. The Bee-Moths or Millers will be attracted by the strong odor arising from the vessel, and after hovering over it awhile, will drop into the vessel and be unable to extricate themselves.

He that lives without a sense of his dependence and obligation, cannot be a moral man, because he does not know his returns of love and obedience, as becomes an honest and sensible creature, which very term implies he is not his own; and it cannot be very honest to misemploy another's goods.

It is only those who have done nothing, who fancy they can do everything.

Valuable Breeding-Stock.

Those who have valuable Breeding-Stock should be sure to make that stock known through our columns by their regular advertisements. This is the only way to extend the information so as to make it known over the whole State.

Electricity as a Remedial Agent.

DISEASES CURED

Without the Use of Medicines,

AT THE

Electropathic Institute,

625 Washington street,

Between Montgomery and Kearny streets,

SAN FRANCISCO.

When it was promulgated that disease could be entirely eradicated from the system without the use of poisonous drugs, the unthinking, or those who do not look deeply into cause and effect, scouted the assertion as chimerical, and adduced strong evidence of its utter impossibility. Long articles, replete with arguments, seemingly unanswerable, of the position that only through the digestive system could the blood be purged of the accumulation of the poisons which constitute the disease. A great cry went up from those interested in the continued supremacy of the old system of one poison to cure another; that electricity, as a curative agent, had been tried and proved to be of but little if any value—thinking, poor souls, that the world of science stood at the same point it occupied one hundred years ago. They were wrong, while those old fogies were content if they cured one in every five patients, there were those who were diving deep into the science of electricity, and finally it was discovered that the trouble was in the instruments used. From that time to the present, improvements have rapidly advanced, until every disease in the catalogue of human ills has been either cured altogether, or checked so as to enable the sufferer to seek those changes of climate which ultimately perform a perfect cure. Diseases hitherto considered incurable, have been cured, and those diseases which took months, and even years, to cure by medical process, are now cured in a few weeks: and all by the improved instruments of DR. J. H. JOSSELYN, Resident Physician at the Electropathic Institute, New No. 645 Washington street, between Kearny and Montgomery streets, San Francisco. It is astonishing to see the number of patients and diversity of diseases that have been relieved by the Electropathic system. From early morn till late at night his instrument is engaged, imparting health and strength to all who have the good fortune to obtain his services. The charges, too, are not as heavy as by the old system, besides there is no medicine to pay for, let alone the unpleasantness of swallowing the nauseous stuff. During the time that the Institute has been in operation, there has been more benefit to the human family derived from the system than from all other systems combined during the same period. Among the most troublesome diseases to which Californians have been exposed, is Rheumatism; none have given the honorable practitioner more trouble to relieve, and none have pretended to cure (if we except known empirics) permanently. But this subtle disease gives way before the Electropathic system in a very short time, enabling the sufferer to go about his business without pain or the fear and dread of relapse. And so with most other diseases, considered incurable. We mention Rheumatism because of its abundance, but we could enumerate many other diseases full as troublesome, and some far more fatal in their results.

To the nervous, the Directors would say, that you can be entirely relieved from those dreadful feelings of evil-foreboding, and your system strengthened so that nothing can disturb the current of your life. Several cases of insanity, arising from a disarrangement of the nervous system, have been permanently cured by this system. The Directors, in stating these things, do so in the hope that it may be the means of awakening the public who have not studied into such things, to a sense of their duties, and if possible, prevent those who have the care of the rising generation from poisoning their young charges with vile drugs, thereby entailing upon them troubles which in after life may cause them to curse their origin.

It is unnecessary to enumerate all the diseases in the catalogue, for that would be occupying space to no purpose. Every disease has been under treatment by this system, and there are none but have received benefit either in this State or at the East.

There are at present but few instruments in the world that can be depended upon. A good instrument costs very heavy, and must be manufactured to order, and there are very few who are able to manufacture them, for want of knowledge of the healing principle. The only instrument to be depended upon in this State is at the Electropathic Institute.

Connected with this system are the renowned Electro-Magnetic Baths. Here let us caution the public against the numerous impostors in the bathing line. The pure magnetic baths is one of the most effective aids in the removal of disease from the system, but if given at the wrong time, are likely to aggravate trouble, and cases have been known where the patient has been injured so badly as to require months to remove the injury. Persons in quest of this bath should be careful and not apply to a place where there is no physician to judge of the necessity of the remedy. In fact, the only place where they can be obtained in all their purity is at the Institute, where the Resident Physician will always be happy to examine and see that they are not unseasonably administered, and if not necessary, advise the requisite remedy.

Below will be found a list of the cases which have been successfully treated by the Electropathic system, at the Institute, during the first year of its establishment. The record is good, and challenges the admiration of the world:

Name of Disease.	*No.*
Rheumatism	421
Neuralgia	368
Dyspepsia	297
General and Sexual Debility	240
Asthma	220
Bronchial Affections	187
Fever and Ague	183
Female Irregularities	161
Mercurial Affections	130
Diseases of the Eye	85
Paralysis	78
Scrofula (long standing)	30
Catarrh of the Lungs	27
Catarrh of the Head	21
Liver Complaints	20
Deafness	18
Panama Fever	10
Consumption	7
All others, among which is almost every nameable disease	128
Total	2626

The above shows what can be accomplished by combined energy when it has truth and science upon its side. The Electropathic Institute was started amid the cry of interested charlatans, who used all the power their riches and the prejudices of the public gave them, to prevent its success. It has risen to a position that is beyond their baffled malice, and will be honored in the scientific world when they are forgotten, or only remembered for their crimes and impositions. A thinking public are fast consigning them to that oblivion their works merit.

Persons seeking remedial assistance may wish to know something of the system by which diseases are so rapidly removed from the body. Electricity is a fluid of so subtle a nature that it can only be studied by its results. We know by its action it forces everything of a foreign nature in the body from the center to the surface by its energy; while the vitality which it imparts fills up the vacuum, preventing thereby the subtle poisons from returning to the hitherto diseased parts; and here let it be understood that the Bath should never be administered until the disease has been forced to the surface, except, perhaps, in cases of cold where fever has not set in. Its action upon Mercurial Diseases is peculiar. The best authorities are of the opinion that it liquifies the mercury, which, when in a liquid state, by its own specific gravity, forces itself out of the body. This result has been arrived at by testing the water after an Electro-Magnetic Bath. After such tests have been found in the water, the patient is not troubled any more with those pains peculiar with the diseases. In all other cases it forces to the surface and is washed off by the Bath. The whole system, in its application, is a luxury, there being no pain or inconvenience attending upon it, but the reverse is the case, being one continued pleasure. Try it, you that are suffering either from disease or the injudicious use of poisonous drugs, and you will be made to rejoice that you have had the courage to strike out from the beaten path.

Below are a few certificates from patients that have been cured at the Institute:

CERTIFICATES OF CURES:

San Francisco, April 18th, 1861.

This is to certify that I have been under the treatment of Dr. Josselyn, at the Electropathic Institute, and that he has cured me. My disease was mercurial, accompanied by chills. I applied to him on the 11th day of this month. I recommend all afflicted to employ him. He has cured me without medicine, by the use of his Electropathic Instrument.

JOHN CALLAGHAN.

State of California, City and County of San Francisco, ss.

Subscribed and sworn to before me, this 18th day of April, A. D., 1860. P. BARRY, Notary Public.

Hornitos, Nov. 1st, 1860.

Well, Doctor, I am at home, and have been to work in the water for several days, and there is no return of the Rheumatism, as I call it, and mercurial pains, as you stated them to be. I feel as gay as a lark, no pain or bad feelings, no stiffness, but perfectly well, and all done by you in three weeks, without one drop of medicine. You had hard work to make me believe before you commenced that you could cure me, but now I find it very easy to believe. Although my friends look rather incredulous, but they cannot doubt my sober earnestness. Doctor, you have my thanks, and I will benefit you all I can by spreading your fame up in these parts.

Respectfully yours, GEO. PERKINSON, Jr.

To J. H. Josselyn, M. D., Resident Physician at the Electropathic Institute.

CAUTION.

The public are informed that I cannot be seen at any other place in the State except at the Electropathic Institute (179, old No.) 645 new No., Washington street, south side, a few doors below Kearny. The reason of this caution is, certain Quacks have placed my name upon their doors, and have deceived strangers who wished my services.

19 J. H. JOSSELYN, M. D.

THE VERMONT

SEED-SOWER AND REVOLVING HARROW!

FARMERS, ATTENTION!

With this machine, any person that can manage a pair of horses, can perform the operation of

Seeding and Harrowing at the same Time.

It is adapted to the sowing of ALL KINDS OF GRAIN, and is regulated by the gauge to DISTRIBUTE EVENLY OVER THE SURFACE any desired number of pounds of Grain per acre, covering the Seed immediately, so that NONE OF IT IS LEFT IN SIGHT FOR THE BIRDS TO DESTROY.

IT IS SIMPLE IN CONSTRUCTION, STRONG, AND DURABLE,

Just the implement the Farmer needs at the present time, to enable him to raise Grain profitably at the prevailing low prices.

It now makes its first appearance on the Pacific Coast. For sale by

KNAPP, BURRELL & CO.,
310 Washington street.

PATENT RIGHTS FOR SALE.

The following Patent Rights of very new and valuable inventions (of which we have models to show their value, are now offered for sale. We hold the rights for the States of California and Oregon, and Utah and Washington Territories.

A Fortune for a Mechanic.

We have the PATENT RIGHT for the whole Pacific Coast for the best and most celebrated HORSE HAY-RAKE known.

ALSO—A CIDER-MILL and PRESS of the most approved construction.

A fortune can be made with either of these machines, by an energetic mechanic. The models may be seen at our office.

No. 1. A New Rotary Subsoil Plow.

Patented April 6, 1858.

This invention completely pulverizes the soil after lifting it a very valuable implement, and one which will receive universal commendation.

No. 2. A Corn Cultivator.

Patent now pending; papers expected.

With this implement the soil is first thoroughly plowed and deeply pulverized, and upon the return it smoothly and perfectly hills up and harrows the ground between the rows. A very new and valuable implement.

No. 3. An Improved Clothes Reel and Bar.

Patented January 3, 1860.

This valuable domestic piece of furniture can be used in the Laundery, the Kitchen, the Nursery or Chamber, and can be made plain or ornamental; standing in the same relation as a piece of important furniture as does Wheeler & Wilson's Sewing Machines; neat when used and ornamental when in use.

No. 4. The Mechanic's Spirit Level.

Patented September 13, 1859.

This implement will be of great value to Contractor and Builders, being one of the most valuable inventions yet out. 2000 were ordered for the New York market just before the sailing of the steamer. Builders will do well to examine this model.

No. 5. A Musketo Bar.

This will be much wanted in California. It is simple in its contrivance, perfect in its working, and can be affixed very cheap to all styles of bedsteads. Hotels, public houses and private families will find it a useful invention.

Also, Hyde's Patent Post-Driver,

A most excellent labor and money-saving machine, for which we offer rights, as will be seen by a card in our columns.

Holding the rights to all these new inventions, we invite the public to call and see the models. All persons who may be desirous to purchase either County, City, Town, or Individual Rights, can do so on application to

2 COL. WARREN, Editor Farmer.

Saddle-Horse For Sale.

A FINE SADDLE-HORSE, FOUR YEARS old, got by Imp Lawyer; is well broken, and can run a mile in 1:55, when in racing order. Is just fifteen hands high, bright bay, with a star and white hind foot; a perfect gentleman's horse. The owner wishes to sell him for want of use for him. Apply to

T. B. MERRY,
21 Farmer Office.

BAILEY'S PATENT

COMBINED

WASHING AND WRINGING

MACHINE.

Patented April 5th, 1859; and March 27th, 1860.

This machine is adapted to all kinds of clothes, from a pocket handkerchief to a bed-quilt. You can wring your clothes in less than one quarter of the time, and so much dryer that they will dry in one half the time, and not injure your clothes one half as much as when twisted by hand. This Machine is formed with

TWO SPRING ROLLS COVERED WITH RUBBER,

And so constructed as to run together with great pressure, and turn fast and easy. The springs in the rolls are so constructed as to yield the most in the center, where the bulk of the clothes are conducted as they pass between them. By this means the springs with the rubber close so tight around the clothes that they come through

NEARLY DRY ENOUGH TO IRON.

However uneven the garment may be, it receives an equal amount of pressure. It is also sufficiently strong and so arranged that it can be run by power for LAUNDRIES, FACTORIES, LARGE HOTELS, &c. Although it is a small and simple Machine, it is able to do a large amount of work in a short time.

This Machine has been thoroughly tested for sixteen months past, and found to do everything that it was designed to do. And after any one buys one of them, and finds it will not do what I claim for it, they can return it and have their money, as all my agents are authorized to do this. So there is no chance for you to get humbugged by giving them a fair trial, and it may be just the thing you want.

To wash with this Machine, put your clothes to soak for about twenty minutes in strong soap-suds and warm water, then run them through the rolls five or six times back and forth into the suds, when they will require no rubbing excepting the very dirtiest parts, such as collars and wrist-bands, which will require but a slight rub with the hands. By this process you will be able to do your washing in less than half the time you can by hand, or any other Machine in use, and much easier, and no wear or tear to your clothes, like the rubbing-board and twisting to get the water from them—as you can see the principle of my Machine is to squeeze instead of rub and twist, which evades all friction.

CHAS. T. DARROW, San Francisco.
General Agent for California and Oregon.

A Machine will be on exhibition at F. D. Cottle's Carpenter Shop, Pine street, below Sansome.

Price—20 to 25 Dollars.

THE CATARACT

Washing Machine

AND WRINGER.

Rubbing and Wringing Done Away!

THIS MACHINE IS REMARKABLE FOR THE FOLLOWING QUALITIES WHICH IT IS WARRANTED TO POSSESS:

It will wash and rinse the finest Lace Collar, or the largest Bed-Quilt.
It washes Flannels without shrinking them.
It does not wear the Clothes and never breaks a button.
It is perfectly simple, very strong and durable, and cannot get out of repair.

A common hand can with ease and perfect safety to the Clothing, wash Faster and Better than Four Washer-women can by hand.

Wringing is Done Five Times as Fast as Clothes can be wrung by hand, and removes the water so thoroughly that the Clothes Dry In Half the Time.

☞ The Machines can be seen in operation at our store. Always for sale by

JOHN G. ILS,
176 (old number) Washington street,
16 Next Maguire's Opera House. *SAN FRANCISCO.*

Colby's Patent Improved

CLOTHES WRINGER

This machine is attached to a tub when in operation. It consists of a pair of India Rubber Rollers, hung in a framework of galvanized malleable iron of peculiar form, held together by a single rod, or tie, which forms a joint in the frame, by means of which the rollers are held in their proper place, and the Machine clamps itself firmly to the tub or box.

I give seven good reasons why every family should have a Machine of some kind for this purpose; and if we allow each reason given to make a saving or be worth but two cents per week, you will have the price of the Machine in one year, and it will last a lifetime.

1st—It will save time, which is money.
2d—It will save strength, which cannot be bought.
3d—It will save the clothes, which cost money.
4th—Any man, boy, or girl, can use it, who could not wring clothes by hand.
5th—It helps to wash the clothes, and by running them a few times through the Machine, out of hot suds, it will clean them as well as half the Washing-Machines in use.
6th—It leaves the clothes in a better condition to dry.
7th—It helps to make Washing-Day more pleasant.

It will be seen by the above that no family can afford to be without such a Machine.

I can give many excellent recommendations, if necessary.

For sale by T. M. CHAPMAN, Petaluma.
TREADWELL & CO., Sacramento.

Wholesale Produce Report.

This represents the prices paid by the dealer to the producer

[Corrected weekly, by A. H. Todd & Co., No. 42 Clay Street.] Oct. 10.

The transactions in Flour and Wheat, since our last report, have been much livelier, and prices are gradually advancing under the influence of the favorable advices from New York and Europe. Among the most important advices is the certainty that there will be some deficiency in the Wheat-crop in England, and that the market was buoyant and prices enhancing. The deficiency in the Wheat-crop of Europe is estimated at not less than one hundred and fifty millions of bushels, of which France is deficient eighty millions. With this great deficiency in Europe, there must continue an active demand for Breadstuffs from foreign countries all through the year, and remunerative prices may therefore be reasonably anticipated. During the past week, the sales of Flour and Wheat have been on a liberal scale, chiefly for export, though considerable amounts of Wheat have been bought by our city Millers. Among the sales during the week may be included a round parcel of 25,000 sacks of choice Wheat, on board ship Franklin Haven, which we noted in our last as having loaded at Vallejo. The Wheat was intended for shipment to England, on account of the owner, Capt. Frisbie, of Napa, but receiving the offer of $1 80, the highest market price here, he sold it to one of our prominent shippers, rather than take the risks of exporting it himself. Choice Wheat commands to-day from $1 75 to $1 80 ₱ 100℔s, although sales have been made as high as $1 85 for some small parcels of very choice for milling. Flour, as will be seen from our quotations, has kept pace with the advance in Wheat.

Barley is looking upwards, owing to a slight speculative movement made during the past week, and some advance on the present low rates may be looked for shortly. Prices remain as quoted in our last report, at from 80 to 85c ₱ 100℔s, though a considerable discrepancy may be observed between those rates and the prices paid for choice brewing Barley, which sells at from 95c to $1.

Oats remain dull; though there have been some sales for consumption and export at current rates, and it is thought that there will probably be a demand shortly for the Australian market.

The ship Herald of the Morning has completed loading for Liverpool, carrying 28,600 sks Wheat. The Franklin Haven, for the same port, will carry some 10,000 sks Wheat in addition to the "Frisbie" lot. The bark Oregon will clear to-day for Sydney, with 3495 qr sks Flour, 9488 scks Wheat, 1000 sks Oats, and 307 sks Barley; the whole valued at over $24,000. The ship Western Star is now loading Breadstuffs for Liverpool, and the Noonday for London. The ship Santa Claus is taking in a load of Wheat for Callao, and will sail thence with Guano for Holland. The bark Glimpse is loading Grain and Flour for Sydney.

The receipts of Produce for the past week have been as follows: Flour, 17,692 qr sks; Wheat, 63,157 sks; Barley, 14,445 sks; Oats, 7,618 sks; Corn, 293 sks; Bran, 1841 sks; Middlings, 51 sks; Mustard Seed, 100 sks; Beans, 754 sks; Onions, 950 sks; Potatoes, 7000 sks; Salt, 2379 sks; Wool, 361 bales; Hay, 604 tuns.

The Turf.

The Tehama Races.

The Tehama Jockey Club held their Fall Meeting on Tuesday and Wednesday of last week. The first day's race was at mile heats, and Oregon John, Come-along-Jim, and Pluck were entered. We are indebted to the Beacon for the annexed report:

The Judges in the stand were Messrs. Benjamin, Galland, and Toomes; Mr. Benjamin, starting judge; timers—Messrs. Jackman and Thomes. All three of the horses were in fine condition, and we anticipated pretty good time. Oregon John had the inside, Pluck second, Come-along-Jim third. After one or two ineffectual attempts at starting, they came up to the score together, the drum was tapped, Oregon John and Pluck led off, while Come-along-Jim flew the track, but was reined into the track before getting to the turn, the recall flag was waved for them to come back, but was unheeded, and they ran round the track under a tight pull. The Judges decided it no heat, and the horses were allowed ten minutes before the next start.

First Heat.—The riders were called up to the start and reinstructed in reference to their duties. Horses were called, Come-along-Jim difficult to start—was brought up to the score and tapped off, Come-along-Jim again flying the track, but was reined in before reaching the turn, and passed Pluck half-way to the quarter pole; Oregon John took the lead, which he kept the whole heat, coming in near a length ahead, winning the heat, Pluck second, Come-along-Jim third. Time 1:55, not very good time, owing to the heaviness of the track.

Second Heat.—Horses were tapped off, Come-along-Jim trailing in the rear by understanding of parties—passed Pluck on the back-stretch, Oregon John taking the lead, which he easily kept, coming in ahead, closely followed by Pluck, winning the heat, race, and purse—Pluck second, Come-along-Jim third. Time, 1:59½.

SUMMARY:

Tehama Course, Tuesday, Oct. 1, 1861.—Jockey Club Purse of $200—free for all horses—mile heats.

Thomas White's b g Oregon John, by Old George, aged, 121 lbs. 1 1

J. R. James' b h Pluck, by Nome-cul. Joe, 3 yrs, 86 lbs.. 2 2

Wm. H. Burgess' b h Come-along-Jim, by American Boy Jun., 5 yrs, 110 lbs. 3 3

Time, 1:55—1:59½.

The second day's race was between Oregon John and Troubador, the conqueror of Rifleman—that is, in some folks' opinion. John had the track.

First Heat—Horses called up. Oregon John a little lame—got a splendid start, and neck and neck passed the quarter pole, when Oregon John took the lead, coming in on the first mile near a length ahead, and keeping the lead the whole of the second mile, coming in a neck ahead of Troubadour, winning the first heat, in 4:03—first mile in 1:58.

Second Heat—Oregon John was very lame, and considerable betting was done by outsiders—Troubadour being the favorite. The horses came up for the start, Troubadour having the advantage, but were not tapped off, and the wind blowing like a thousand fiends let loose from Pandemonium, the riders did not hear the call to come back, and the man with the "call-back" flag did not see the flag waved from the stand, and as Oregon John had recovered the advantage which Troubadour got in the start, it was, by general consent of parties, agreed to let them run, and make it a heat. Oregon John took the lead again on the back-stretch, and kept it, coming in but a very little ahead on the first mile, but after passing the stand opened a gap of half a length, and kept the lead the whole heat, coming in half a length ahead of Troubadour, winning the heat, race and money. Time, 4:03.

SUMMARY:

Sugar-Beet—Beet-Sugar.

The raising of the Sugar-Beet for stock (dairy-stock especially) and its use or conversion into Sugar and Sirups, we have urged for years. It was tried here some years ago,—the Sugar and Sirups exhibited, and won the Premiums at the State Fair at San Jose; and to the disgrace of all our Fairs, it has never been encouraged since. Had the State Fair Managers have done justice to that interest, we would have had a "Beet-Sugar manufactory" long since in successful operation.

We rejoice at every movement in favor of this important interest, and was pleased to notice a call of Mr. Gordon, the Sugar Manufacturer, for samples of Beet, that he might send them to "France for a trial." This may be well, but we ask in all reason, if we have not scientific men enough in our *own State* to do this work, without "sending to France!" We were in hopes Mr. Gordon had men in his employ qualified for this work; if not we hope such men will be found in California that can give us all the needed information, so that before we might *send to France and get returns*, we could have this matter ready to be presented to our own Legislature, and ask their aid in an enterprise that would save to California in Sugars and Sirups *millions of dollars annually*. We go for Home Products, Home Manufactures, and Home Labor also, so that our own State may prosper by and through her own resources.

Farms for Sale.

A valuable Farm of about 400 acres of excellent land, well fenced, situated near Petaluma, can be had at a bargain if applied for soon.

ALSO—A valuable Farm with good buildings, an orchard and vineyard, and pleasantly located in the immediate vicinity of Sonoma. Will be exchanged for real estate in the city of San Francisco. 9

Seed-Raising in California.

It will be remembered by our readers that last *planting season* quite a discussion was carried on in this Journal upon the relative value, contrasting Seed imported from abroad, and those of our own California growth. The discussion was somewhat pointed, and was entered into with a determination by S. W. Moore, Esq., our largest seed-dealer on California street, and J. B. Saul, Esq., of the firm of Smith & Saul, seed-raisers of Sacramento, and the Editor of this Journal. The result was, "*no lives were lost*"; each combatant claimed the victory, withdrew from the contest as planting season went by, and have laid on their oars till the season returns, and we shall now see who have kept their weapons bright for the new contest. It will be admitted, certainly, that those who do not come forward armed "cap a'pie," yield up the battle as vanquished.

To Mr. Moore, as an Importer of Seed, we shall look for his side of the arguments; to Mr. Saul for his side, and we shall be ready to give and receive from both.

It will be remembered that in our remarks against the injury inflicted upon California in the sale of Seed, the raising Seed of all kinds *promiscuously* had inflicted a very great injury, and that among all the raisers of Seeds we could make honorable mention of Messrs. Smith and Saul of Sacramento, and Mr. D. L. Perkins of Alameda, as the only persons who had given that careful, scientific and just attention to the business that its importance demanded, and to these persons and their efforts we have at all times bestowed a just meed of praise. We now desire to call public attention to the subject of *Seed-raising* and *Seed-planting*,—and true to our professed principles of ever encouraging "Home Productions," we desire to call attention to the collection of *Home-grown Seeds* that have been shown this year at all, or nearly every Fair held in this State by that energetic, hard-working and indefatigable worker, Mr. D. L. Perkins, of the Oakland Seed Gardens.

It is but a simple act of justice to say that the exhibition of samples of his vegetables embracing a numerous list, have in every instance we have seen (and we have examined them carefully) been of good character, and often uncommonly superior, showing conclusively that he has been a careful grower. The collection of Seeds was large, something over a hundred varieties, all plump Seed, well cleaned, and most creditable to him as a grower; we take pleasure in thus speaking of one who commencing first upon a single half acre of ground, has amid all discouragements and losses attending such an enterprise, steadily and faithfully toiled on, and in a modest and unpretending way succeeded most admirably in bringing to a high standard many of the leading Seeds wanting in our market. We therefore hope Mr. Perkins may receive for his long years' labor, a generous and liberal patronage the coming Autumn, for we can cheerfully recommend what we have carefully examined, as we are satisfied what he offers will prove good and useful to our State, as one of its important Home products.

◆

Ho! to Saddle.—Let any one step into the large Harness establishment of Messrs. Main & Winchester, and see the rooms full of Cavalry saddles, they would think that our country was indeed in arms. This firm have all the principal contracts, and the saddles made by them are really fine, and a proof of their finished workmanship. No establishment on our coast can show a finer lot of goods, and of California manufacture too. They have as many men now at work as their extensive rooms will hold.

◆

An Active Intelligent Young Man is Wanted

To take charge of an important business. A capital of two or three thousand dollars will give him the privilege of a business that will yield him a handsome revenue. Undoubted references will be required, and an entire freedom from all other business connections, as he will have almost entire control of a lucrative and increasing business, in which he can be partaker liberally. Energy, activity, and confidence, are the materials required.

Pay Us Through the Mail.

We are often inquired of by our subscribers, "How can we send our dues?" We answer: Send by Mail. Money is always safe in the Mail. We have agents in many important places, but distant subscribers can always send by Mail safely.

Information of the Wool Markets.

We have now completed an extensive correspondence with all the various Wool Markets of importance in the world, and can keep Wool-Growers well posted upon these matters. To these reports we refer our readers; they will find them important.

Valuable Blood-Stock For Sale.

We would invite all who desire Dairy-Stock of the very highest character, to call on us, or write to us, as we have for sale about twenty-five head of as choice Durham Stock as there is for sale in the State, as follows:

One Full-Blood Durham Bull, 2 years old, of the highest pedigree, and as handsome an animal as has ever been offered in this or any other country.

One young Full-Blood Calf, 8 months, a perfect picture.

Several younger Blood Calves.

About twenty Cows and Calves, Durham, Devon, and Ayrshire, with Calves by their sides.

Among the Cows are some of the very best milkers in the State. Inquire at the Farmer Office. 18

Sportsmen!

Powder AND SHOT.

Having perfected our arrangements with the manufacturers of Powder and Shot, we are enabled to offer purchasers the very best at the very lowest rates. We are receiving supplies by almost every clipper-ship.

Parties purchasing will please give us a call. Our stock consists, in part, of

500 kegs Blasting and Mining.
500 qr. kegs Sporting.
100 qr. kegs Eagle Sporting.
100 cases in 1℔ cans.
25 cases in ½℔ cans.
Hazard, Dupont, and Oriental.
1000 bags Tatham Bro.'s Shot. For sale by

23m JONES & HEWLETT.

The Plaza Stable,
DOWNIEVILLE.
RETICKER & MORRISON.

The proprietors of this Stable ask the attention of the public to their establishment. It needs for us only to say that we are at all times prepared to furnish HORSES and MULES, for the single day or longer period, and Horses and Mules for Exploring Expeditions for all the Interior. Our Stock is all trained for mountain travel, sure-footed, and well-broken to the trail. Charges always reasonable.

We have a Stage and Passenger-train running from Downieville to Virginia City, leaving Downieville Mondays and Thursdays, and leaving Virginia City same days, making the trip in two days. Price $15. 24-3m

FARM STOCK, &c.

Splendid Bucks!

THE VINE AND WINE IN EUROPE.

ANOTHER LETTER FROM OUR CORRESPONDENT.

Vineyards on the Rhine.

THE following letter from our valued correspondent in France will prove of more than usual interest, especially to our Vine-Growers. This very agreeable letter will come home to many of our readers who hail from "Sunny France," and those who have wandered along the poetic valley and Vine-clad crags of the Rhine.

We ask our Vine-Growers in California to mark well the well known facts (well known to those who have traveled in Europe) of our correspondent of the relative value of the Wines made from Grapes grown upon the mountain-side, as compared with those of the valleys; and mark, also, the frauds practiced by those who sell imported Wines. These facts are well attested.

The letters of our correspondent will we know be fully appreciated by our readers. The interest he manifests for California does him honor, and we are happy to inform him that his letters are looked for with much anxiety.

We shall hope to soon have the statistics of some of the most prominent Vineyards on the Rhine, especially those of "Johannisberg" and "Rudesheim." From these our most celebrated "Rhine Wines" are sent over the world, and there can be no doubt but that large quantities of *spurious Wines* bearing these names are sold; Wines, too, that were made in New York, or on the Atlantic coast:

Ems, 27th August, 1861.

EDITOR FARMER: There is some time since my last letter, and I must beg your pardon for my long silence, but I have had so many duties to perform since the last month and more, that I really had no time to write.

This morning I left Weisbaden in the omnibus for Biebrich, where I took passage on the steamer for Lahnstein. This is one of the most picturesque parts of the Rhine. On the right-hand side, we left the Grand-Duke of Nassau's summer residence, with its fine and large park, while on the left we admired that soft and charming scenery of which you see so much on the Rhine, and which ever furnishes beauty to the eye, and revery for the soul!

But let us leave revery there! It is all well enough to dream, and the Banks of the Rhine is certainly a dreaming land, but I make it a point, when I have no time, to turn all my faculties into *looking ones!* I beg your pardon for the expression, but it is the best I can make use of to convey the same idea. We passed several small villages right and left; then the famous Vineyard "Marco Brunnen," of which we caught but a glimpse, as it is at the bottom of a hillside, and is hidden from the Rhine by Willow-trees.

Soon after leaving this Vineyard, which, with so many others of the same standing, has the particular privilege and honor of having its Wine imitated, and sold in San Francisco as real Wine at a lower price than it can be bought for here in the cellar, and at wholesale: Soon after leaving this Vineyard then, we came to the Hattenheim. On the hill behind this village, the Grand-Duke has a Vineyard of about a half an acre, or three-quarters, which produces very good Wine. In leaving Hattenheim, behind it about a couple of miles, on the hill-side, we caught a view of the old gateway and a part of the walls of the *Steinberg* Vineyard, one of the Grand-Duke's very best. The inclination of the hill is very great, as seen from the Rhine. The Vineyard, which, before the Revolution of '93, belonged to and was founded by the monks, is fenced in by a stone-wall a foot or eighteen inches thick, and from six to seven feet high. The Wine from this Vineyard was made and kept in the Abbey of Erbach, which is half a mile up higher, in a little valley, and where the Grand-Duke at this moment has a Wine-cellar, which I shall describe in another letter.

Leaving on our right and behind us, Hattenheim, and many Vineyards, producing fine Wines, we continued our course down stream. On the left-hand side we admired the sites of villages on the hills, hill-sides, and in the vales; on the right side, they are more built near the water's edge, the hills and small valleys being reserved for the Vine-culture.

We at last caught sight of the chateau of Johannisberg. Hail! oh, three-times hail! great and noble Vineyard! Pride of our ancestors, our pride, and pride of those to come! The chateau is situated on an elevation which commands the Rhine and its beautiful scenery far up and down. In front of its terrace, and right next to it, is the soil which produces that Wine before whose fine color, delicious bouquet, exquisite taste, you can go down on your knees..........Down further the hillside are the Vines which produce the second Johannisberg quality of Wines, but which, the least of them, can rivalize with the very best Wines of Europe. We left Johannisberg, and while my eyes were still searching for it in the distance, we came to Rüdesheim. Here I saw one of the most curious sights, which brought forth at the same time my astonishment and admiration. Beginning at the very water's edge, and rising so steeply that it can almost be called perpendicular, is the Rüdesheim Mountain, whose rocky sides are actually walled up, to keep the scarce ground and the Vines planted on it from sliding into the Rhine. The walls or grades are from three feet to six, and even ten, feet high, and from ten to one hundred feet long, scarcely, however, attaining the latter length. When one wall ends another commences, a little higher up or a little lower down, and goes on in the same direction, or nearly so. I counted in one place as many as thirty-two grades up the mountain in a line from the foot. Some patches of two feet wide and ten long have a grade or wall varying from six to eight feet high. This will give you an idea that the Wine must be good, and must pay well, for so much trouble and expense. There's no plowing done here!

When will California be made to use her ground so economically? The day is not far, I hope; for she has sturdy and enterprising citizens.

The beautiful and romantic scenery from here to Lahnstein I will leave to a more poetic and able pen to describe; mine is unfit for the task.

Hoping that my letter may find grace in your eyes, I remain, yours, truly,

ARPAD HARASZTHY.

* * *

Mountain Orchards and Vineyards—No. 3.

WE renew from our "Notes of Travel" last Summer our sketches of Mountain Orchards, etc., with facts of the value of Hillside Cultivation.

The season of Fairs has very much hindered our sketches; but we hope, as we now resume, our friends will pardon the delay caused by the Annual Fair Season.

We left our readers at San Juan in No. 2 of our Sketches, and No. 2 of our journal.

We repeat what we have said often before: San Juan, Nevada county, is truly one of the prettiest mountain towns in all California. An excellent spirit is manifest among its citizens for the improvement of their "Homes," and we have not found in all our Interior travel so great a number of beautiful Homes, according to the population, as we have found at San Juan.

Aug. 8th, at 8 A. M., we took leave of our friends at San Juan, and taking our seat outside one of the stages of the California Stage Company, we looked out upon a bright sky and the bright and lofty mountains to which we wended our way. We would here speak of the great advantage to the public of the line of coaches of the California Stage Company, which, under the wise and energetic management of their excellent President, Haworth, has its thousands of coaches and tens of thousands of horses, reaching from Sacramento to Marysville, and to almost every mining region of the Pacific shores. We would commend the sagacity of the California Stage Company in selecting their agents. We were cognizant of the very excellent agent at San Juan, Mr. Ab. Waggoner, whose kind attention to all passengers secures the confidence and respect of the public.

The stage-road from San Juan to Forest City, though mountainous, is truly a fine road. We like the drivers of this company; they must all be good men, else we were in luck in riding several hundred miles this season, in meeting only the good ones.

Four miles from San Juan is the Forest Home, a good Hotel, kept by Mr. Wright; and scattered along this mountain road are some very good houses, with here and there a Mountain House. The variable scenery along these mountains, the water-ditches, with here and there indications that some "prospectors" had been looking for the "oro," and where occasionally they had "struck a lead," marks distinctly what "life is in California"—*a golden mania.* As the stages generally leave before breakfast, the morning ride awakens a good appetite, and as often as we came to a Hotel or dwelling, some one would ask, "Do we breakfast here?" Eight and a half miles from San Juan a new Hotel has been erected by W. H. Worth, Esq.; a good location for a Hotel, on a fine clearing, capable of great improvement by cultivation, and will ere long raise all the Fruits and Vegetables needed for the table. Mr. Worth is a working man, and a truly Worth-y landlord. We wish him great success in his New Home.

"Plum Valley," taking its name from an abundance of the Mountain Plums, is a rural spot, about 15 miles from San Juan, and here the stage changes horses, and the passengers change an empty stomach for a full one. Here is "Plum Valley Hotel," kept by Messrs. Pope & Kloecker. It is also the Post-Office, and is the head-quarters for all gatherings. Plum Valley Hotel can in truth be classed as one of the best Hotels in all our mountain towns, and equal in the qualifications of a good Hotel to any in the State. Here, too, the Marysville stage that leaves at 3 A. M. stops to give its passengers a glorious good warm breakfast! We speak what we know, for in all our travels we have never seen a table at a Hotel in the country so neat, handsome, and so well filled with excellent dishes of Fish, Flesh, and Fowl, and with a complete round of fresh Vegetables, and so promptly, too, as at the Plum Valley Hotel; we had also the word of many persons whom we met going and coming, that it was a matter of pleasant anticipations to them to be drawing nigh to the Plum Valley Hotel. Now, the reason for all this is, simply, that the proprietors know their business, superintend like men their own affairs, and secure good, attentive, and polite waiters. They grow their own Fruits and Vegetables, and furnish their own table with the best, fresh and well cooked, so that the hungry and weary traveler is really refreshed. This makes an impression on every traveler, and causes him to remember Plum Valley with pleasure. The abundant supply, the excellence of the cooking, the great variety of excellent fresh Vegetables, the prompt attendance, all surprised us, and we feel called upon to speak of this Hotel as one which reflects the very highest credit upon the proprietors. Travelers will always have the very best here. A large and well managed Garden supplies the table; and an Orchard and Vineyard feed the travelers with the luxuries, such as Cherries, Plums, Gooseberries, Strawberries, Apples, Peaches, and other good Fruits. Another year will make Plum Valley the garden-spot of all this region. No one who may visit this place a year hence in Fruit-time will say we can't raise Fruit in the mountains!

On every side after leaving Plum Valley we have the grandeur of mountain scenery. It is up, up, up! and although it is occasionally down, down, down, also, it only results in a steeper climbing soon after.

One thing we omitted to remark previously: we found a desire on the part of most female passengers to an *outside seat* on the stage; but we learned with surprise from the drivers that this was "tabooed"—"No lady passengers outside," being the *law* issued by President Haworth. We were much surprised at this from one of such known courtesy and attention to the real comfort of his lady patrons of the stage. We had always thought them *entitled* to the "highest seat in the synagogue," until informed otherwise by the drivers.

Now, Mr. President, this law *must* be repealed. In England, the first-class seats are on the *outside* of stage-coaches; ladies seldom take passage below-decks; and surely, where the glorious mountain scenery is to be enjoyed, as it ought to be, the excellent stage-coaches of the California Stage Company should not be the stages to *prevent* such a privilege! We are aware that this law was made to prevent casualties by those who might fall from an outside seat; but we think with such most excellent "whips" as the "Georges" and "Johns" that we have met on these routes, there will be no danger. The timid will not ask the privilege; the brave should not have it denied. So, Mr. President, repeal! repeal that law!

From Plum Valley the stage route leads to Wet Ravine, Smith's Flat, Allegany Town, and thence to Forest City. The approach to Allegany Town is precipitous, the town lying in a deep valley or gorge of the mountains. These are mining towns, and on approaching, passengers leave the stage and "foot it" down, or by a short cut to the left pass on down to Forest City. A walk of three-quarters of a mile accomplishes what it requires by several miles of the stage-road to arrive at. The whole scenery in this vicinity is grand. From the mountain above Forest City a fine view is had of "Fremont Peak," with its snow and ice-crowned summit.

Preferring a ramble, we left the stage and walked about a mile over the mountain, and thus had a view of Forest City from the summit, which is high above it. We had supposed from what we had heard of the famous tunnels and their riches, that Forest City would eclipse San Juan. It *did* eclipse it, if a somber and desolate appearance is an eclipse. We were much surprised to find so little signs of improvement; so great a contrast from the bright luxuriant Homes of San Juan! And when we asked why there was so little cultivation, the answer was, "Too much snow!" It is true that snow falls six, eight, and ten, feet deep, sometimes; yet that is no reason why the *earth* should not be cultivated. Even if there are early and late frosts, there are some products that must succeed. We found a great abundance of wild Gooseberries, very large; they were the thorny kind; yet this was an evidence that Gooseberries will grow. If Gooseberries will grow, then Currants, and Raspberries, and Strawberries, will grow; and we are satisfied that in many of the sheltered positions of the mountain-sides, Peaches, Apples, Cherries, Pears, and Plums, can be grown. At least it is worthy the trial. Grapes, also, may be grown here. The soil is deep and rich; we examined it and feel satisfied that success would crown the efforts of the laborer.

Forest City is famed for some of the largest tunnels yet made in the mineral regions. Of these we intend to speak in a separate article.

Downieville being our next place to visit, after a brief stay we took a seat with the driver, anticipating one of the most interesting stage-rides of our lifetime, by a ride from Forest City to Downieville, over one of the best stage-roads in our State, yet at the same time one of the most wild, grand, and precipitous, that is traveled in the United States.

Heavy Clips of Wool in Vermont.

WE give below the clips of several Wool-growers of Vermont, and we ask if it does not "pay" to raise good sheep. Our items were from the Vermont Register, and kindly sent us by a friend:

To the Register: I send you per agreement the shearing of my yearlings and two-year-olds, which you are at liberty to publish.

5 yearlings averaged............	11 pounds	8 ounces
Entire lot of yearlings.........	10 "	8 "
5 two-year-olds..................	14 "	1 3-5
Entire lot of two-year olds, consisting of twenty.........	12 "	14 "

E. S. Stowell, Cornwall, June 16, 1861.

More Heavy Fleeces.—Mr. Rollin Birchard of Shoreham, sends us the weights of fleeces taken from ten two-year ewes, all of which have lambs. The aggregate weight is 110¼ pounds, or something more than 11 pounds a fleece. These ewes are from the Robinson and Rich flocks. The wool, though unwashed, is white and free from unnecessary filth. Mr. Burchard also had a two-year-old buck that sheared 17 pounds.

A. H. Sperry, of Cornwall, gives us a statement of the shearing of ten two-year-old ewes that suckle lambs. The wool is of 11½ months growth, and was 103 pounds to ten sheep. The entire flock of 20 averaged 9 pounds 7 ounces. Mr. Sperry's sheep are of the Atwood stock. With the statement Mr. Sperry presented samples of wool which for quality and style are admirable.

Large Fleeces.—We learn that F. D. Douglas, of Shoreham, sheared from five two-year-old ewes 57 pounds 6 ounces of wool, of 11½ months' growth, while the aggregate weight of the same sheep after shearing was but 325½ pounds.

No. 26	sheared	11 lbs. 8 oz.	Wt. of body	61½ lbs.
" 27	"	10 " 4 "	"	67 "
" 28	"	11 " 6 "	"	63½ "
" 29	"	12 " 4 "	"	71½ "
" 30	"	12 " 0 "	"	62 "

The wool, though in its natural state, is clean white and bulky, and has the appearance, to the casual observer, of being well washed. This flock are of the Robinson blood of Merinos. Doubtless other breeders in this section have sheep that will produce an equal amount of wool with the above. We shall be glad to hear from any other flocks.

Mr. Chilion Crane, of Bridport, sends us the weight of ten fleeces taken from yearling ewes, which gives an average of 8 pounds 11 ounces to the fleece, of *washed wool.*

Heavy Fleeces again.—Edgar Sanford, of Cornwall, gives us the weight of fleeces of his two-year-old ewes from which we got the following: Five sheared 71 pounds 14 ounces, being an average of 14 pounds 6 ounces. His entire flock of two-year-olds gave him an average of 12 pounds 11 ounces, and a fraction over.

If our California wool can *equal* this, let them say so. If they can *beat* it, let them say so. Come, wool-growers, where's your figures?

* * *

Another Sugar-Cane Crop.

LAST week we published the statement that quite a large crop of Chinese Sugar-Cane had been raised in Tehama, with the intention of manufacturing it into Sirup. The Knight's Landing News gives the following report of another crop, with particulars in regard to its cultivation:

Mr. Charles St. Louis, whose farm is situated about a mile below town, has cultivated this year about six acres of Chinese Sugar-Cane, which he is now preparing to grind and boil down into Sirup. Mr. St. Louis has for the past three years raised this Cane and manufactured Syrup from it. From him we gather the following information respecting its culture, yield, etc.:

He plants the seed during the month of May, governed in some measure by the progress of the season, in rows about two feet apart, after which he attends to it by plowing, hoeing, etc., in the same manner as the common Corn-crop is attended. It grows on the river bottom-lands very luxuriantly, and will yield an average of two hundred gallons to the acre; Mr. St. Louis has raised it to yield two hundred and fifty gallons per acre, but considers two hundred gallons a low estimate for an average yield. The Sirup he manufactures is a superior article, resembling in taste and appearance the maple-tree Sirup. He is satisfied a good article of Sugar can be made from this Cane, and this year intends trying the experiment by making a sufficiency for his own use. The Sirup is not so easy to granulate as Maple Sirup, but Mr. St. Louis is confident he can make good Sugar from it; when he has tried the experiment, we will give our readers the result, whatever it may be.

We would inform the News, that from the reports we have published from other States, with the improved machinery in use, this Sirup granulates as readily as any, and no difficulty is experienced in making Sugar from it.

* * *

Durham Stock.

WE publish in this number cuts to illustrate Full-blood Durham Stock. The only Stock that will pay keeping now is Blood-Stock: the Durham, Devon, Ayrshire, and some others that will be introduced. We give these illustrations as this is the kind of Stock now advertised by us, of which purchasers can see the Pedigrees by calling on us. We shall illustrate other Stock in future numbers. Common Stock will not pay, as experience has shown. We urged this matter *two years since*, and showed good reasons then why common Stock should be laid aside, and Blood-Stock substituted. Those who neglected that advice, regret it now. And now it is better to give fifty head of common Stock in exchange for one good animal, than hold on until a herd eats itself up.

California Notes.

THE INDIANOLOGY OF CALIFORNIA

THIRD SERIES.

No. 59 of whole Series; continued from Farmer of Oct. 11, 1861.

X.—J.

Old Spanish Accounts of the Indians of the Ocean Coasts South.

SANTA ROSA ISLAND INDIANS.

THE Metate or Corn-grinder was said to have been made use of by them before the arrival of the Spaniards, in 1770, as I have been assured by several native Californians, also by several old Indians of the Island now living near Santa Ynez Mission and elsewhere in this county. A Californian assured me that he had several times seen the broken metates on the sites of the Santa Rosa Island rancherias. At any rate, the Priests for many years before 1820 often got the Santa Rosa Indians to make metates for the Missions of Santa Ynez, Purissima, Santa Barbara, and elsewhere, from a hard honey-comb basalt or a black rock found on that Island, and which, I am assured by several persons, is there very abundant. On Santa Rosa Island was the Mint of Shell-money.

Near Santa Ynez Mission (three miles off) is the present rancheria locality of Chumas, or Kachumas. Many of the Santa Rosa Indians were brought over to Santa Ynez by the priests. They used commonly themselves to land at the Gaviota Pass, in old times, and come through the pass, via Los Cruces, through to the Santa Ynez Valley. At any rate, an old Santa Rosa Indian tells me his people spoke entirely different from the pure Santa Ynez Indians.

Did not the Yumas of the Colorado make their way up north among the Islands and along the Coast, in the old times? Or did not the Kodiaks, etc., of the north-west, make their way down south among the Islands and along the Coast, ante 1500, as they both have latterly? The Kodiaks are bold sailors, and so are all the North-West Coast tribes, who might easily have crept in their canoes from point to point till reaching Mexico.

The Santa Ynez Mission Indians are very clean and orderly, and not often drunk. They have the usual long black hair and brown iris. The old men get very white-haired, and some of them can read and write.

Names of Rancherias of La Purissima Mission, taken from the Mission Books in 1860.

Lajuchu, Silimastus, Sisolop, Jlaacs or Jlacus, Huasna, Estait, Esmischue, Ausion, Esnispele, Silisne, Sacspili, Estait, Huenejel, Husistaic, Silimi, Suntabo, Alacupusyuen, Espiiluima, Tutachro, Sisolop, Naila, Tutachro, Paxpili or Axpitil, Silino, Lisahuato, Guaslaique, Pacsiol, Sibimi, Huenepel, Ninyuelgual, Lompoc, Nahuey or Nahajuey, Sipuca (two leagues from Santa Rosa Rancho), Stipu, Ialamma, Huasna, Sacsiol, Kachisupal, Salachi, Nocto, Fax, Salachi, Sitolo or Sautatho, Omaxtux.

The Mission was founded 8th December, 1787, by Padre Lasuen, at a place called by the Indians, Algsacupi, but was destroyed by an earthquake in 1812, and removed to its present site, called Amuiu.

Men's Names.

Alacscal, Emujalaniaichet, Alinnjaichet, Chuyahni, Chayahui, Chiquenyat, Aluismai, Sipinizihuit, Saputinuusjet, Sulpanna, Mapulubninoat, Timousma, Moinal, Huexjat, Epispat, Lajilics, Reyajasuit, Soyama.

Names of Rancherias of Santa Ynez Mission, taken from the Mission Books in 1860.

Sotomoenu, Katahuac, Asiuhuil, Situchi, Kulahuasa (San Lucas), Sisuchi, Kuyam or Cuyama, Ionata, Tekep, Kusil or Cascel, Sauchu or the Quemada, Sikitipuc, Temesathi, Tujanisuissilac, Tapanissilac, Ialamne, Chumuchu, Suiesia, Chumuchu, Tahijuas of Ortega, Tinachi, Lompoc, Ionata, Aguama, Sotonoemu on North-East of the College Rancho, Guaislac, Tequepas, Matiliha, Stucu near Aketsum or Kachuma, Ahuamhoue, Geguep, Achillimo, Alizway (Jones' Camp), Souscoc, Talaxano, Nutonto, Cholicus.

Santa Ynez was founded by Padre Esteran Tapis in 1804, the site of which was called Alajulapu.

Men's Names.

Sulpuaichet, Taluijanu, Silimuneyait, Reyajuichet, Matiamhuilahuit, Chanor, Tararviasuit, Inumalit, Colucuiubichit, Tilpajaut, Sumanchet, Sililunachet, Hinnapuchet, Telenahuit, Ajala, Alikissapunt, Cuearpisn, Tyeiijehaut, Huabindut, Emchual, Sumathe.

There were over 150 Indians living in Purissima and Santa Ynez Missions in August, 1856.

The Soap-Stone Utensils of Santa Catalina Island.

The Indians of these parts made pots and many other utensils of the compact Soap-stone which abounds there, and will likely be found of use at some future time. These utensils were well made, and in use during the last forty years among the Coast Missions adjacent. They are still often met with. The Soapstone was likely ground into a powder and used for painting the warriors.

XI.—K.

Miscellaneous.

THE INDIANS OF THE MISSION OF SAN FRANCISCO DOLORES.

For the information as to the following we are under favor to his Reverence, Archbishop Alemany, as well as for several other matters obtained through his kind influence and friendship, and used in the Indianology, for which we here make due acknowledgement and thanks.

Through the kindness of the Archbishop, the Rev. J. Prendergast, the clergyman in charge of the parish books of the Mission Dolores, did us the favor, in June, 1861, through the labors of a Spanish gentleman, of examining and searching out the following list of indigenous names of the tribes, clans, camps, localities, and rancherias, etc., of the aforesaid Mission, as appears in the handwriting of the Missionaries in the first Book of Baptisms, commenced in 1776. This list is a matter of interesting curiosity to the residents of the Bay shores, and has never before been printed:

Names of Rancherias.

Abmoctac, Amutaja, Altanui, Aleytac, Anchin, Aleta, Aramay, Altajumo, Aluenchi, Acuagis, Assunta, Atarpe, Anamás, Acyum, Anamon, Cachanegtac, Caprup, Cazopo, Carascan, Conop, Chutchin, Chagunte, Chapugtac, Chipisclin, Chynau, Chipletac, Chuchictac, Chiputca, Chanigtac, Churmutcé, Chayen, Chupcan, Elarroyde, Flunmuda, Génau, Guloismistac, Gamchines, Guanlen, Huncta, Halchis, Horocroc, Huimen, Itács, Juniamuc, Josquigard, Juchium, Juris, Joquizará, Luidneg, Luianeglua, Lamsim, Livangelva, Livangebra, Libantone, Macsinum, Mitlinó, Malvaitac, Muingpe, Naig, Naique, Napa, Ompivromo, Ousint, Oturbe, Olestura, Otoacte, Petlenum or Petaluma, Pruristac, Puichon, Puycone, Patnetac, Pructaca, Purutea, Proqueu, Quet, Sitlintaj, Suchui, Sohchiam, Siplichiquin, Siscastac, Ssiti, Silintajes, Ssupichum, Sicca, Soisehme, Saturaumo, Saturnuo, Sittintac, Ssichitca, Sagunte, Ssalayme, Sunchaque, Ssipudca, Saraise, Sipanum, Saruntac, Ssogereate, Sadanes, Tussint, Tatquinte, Titmictac, Tupuic, Titlyú, Timita, Timsim, Tubisuste, Timigtac, Torose, Tupuinte, Tuca, Tamalo or Tomales, Talcan, Totola, Urebure, Uturpe, Ussete, Uchium, Véctaca, Vagerpe, Yelamú, Yacmui, Yacomui, Yajumui, Zomiomi, Zucigin.

The following names appear in the aforementioned first Book of Baptisms of this Mission (1776—1784, et sig.), as distinguishing terms used by the early Missionaries for the different tribes of Indians from whose clans, camps, or rancheries, their early neophytes of the Bay shores were Christianized. The early books of the Mission Dolores were commenced by Father Junipero and his biographer, Father Palou, with the assistance of many of the pioneer "Fundadores y Conquistadores" of San Francisco Bay. The exact localities of these rancherias could only be ascertained from the oldest existing Indians of the several tribes:

Aguasajuchium, Apuasto, Aguasto, Carquin (Karquines), Cuchian, Chaclan, Chiguau, Cotejen, Chuscan, Guylpunes, Huchun, Habasto, Junatca, Jarquin, Sanchines, Oljon, Olpen, Olemos, Olmolococ, Quemelentus, Quirogles, Salzon, Sichican, Saucon, Suchigin, Sadan, Uquitinac, Volvon (or Bolbon).

The following appear as the proper names of men and women:

Men's Names.

Chamis, Pilmo, Zaulvo, Cunquisse, Pudiaste, Astacsé, Massea, Luimonde, Cocuich, Emptil, Chimus, Tipante.

Women's Names.

Liloté, Axpin, Soyste, Equéssene, Lascama, Yamissem, Paszem, Gisap, Tojcote, Ubiomis, Eugem, Jazini.

THE INDIANS OF THE GREAT BASIN.

Before the discovery of Washoe Silver, B. F. Prince, who has lived for the last five years with the Indians of Utah Territory, furnishes the New York Tribune with an account of those interesting tribes, of whose habits and customs so little is known. Prince was engaged in geographical and mineral explorations, and was one of the first to discover gold in Carson Valley. Employed in his pursuit, he crossed the Sierra Nevada Mountains, and followed the course of four different rivers, beside the Humboldt, which, like it, terminate in sinks, but which have not yet been marked upon any map of the country. The country is fertile and beautiful, abounding in grass and indigenous fruits; elk, deer, and antelope, and numerous varieties of birds and fish are abundant. Those who have traveled the usual road, along the Humboldt, according to Prince, have formed no adequate conception of the capacity of this country for civilized life. Coal and lead exist in various localities, and an abundance of iron, and some gold and silver. The climate is fine, being pure and bracing, varying like that of California. But it was in the primitive and unperverted natives of these secluded valleys and mountains that Prince felt the deepest interest. The Great Basin is occupied by three tribes: the Piutes, Shoshones, and Utahs, numbering not less than from sixty to seventy-five thousand. These tribes occupy different districts of country, and there is a distinguishing difference between them. The Piutes are somewhat superior to the California Diggers, but yet variable both in physical and intellectual endowments. The Utahs are generally a fine looking people, but as they are in closer contact with Mormons, they are losing much of their primitive manner. The Shoshones (the name signifies light of foot) are thus described by Prince: "This tribe occupy the center and principal part of the Great Basin, and probably number eighty thousand. I have visited them several times, and passed a great portion of three years among them. Thousands of them had never seen a white man until my sojourn with them. They are the most pure and uncorrupted aborigines upon this Continent. They are strong and well proportioned, particularly the warriors, who are selected for their manly bearing and stature. Yet they are not a warlike people. Having a fine country, with plenty of game, roots, fish, and fruit, they have no incentive but for peace, and only practice war for self-protection and to maintain the supremacy of their laws. They are scrupulously clean in their persons, and chaste in their habits. Prostitution and illegitimacy are unknown, and while attachments are commonly formed when young, they are not permitted to marry until eighteen or twenty years old; and so jealous is this nation of the purity of blood, that it is a capital offense to marry any of another nation without special sanction from their council and head chief. They allow of but one wife, and all the females, both old and young, are treated with consideration and respect. And such is their uniform observance of law, that it grows with their growth; so that their youth, from the age of fourteen or fifteen, seem to require no parental restraint, for they become a law to themselves. They inflict no penalties for minor offenses, except loss of character and disfellowship; and though whole families live together, of all ages and both sexes, in the same tent, immorality and crime are of rare occurrence. They have no prisons, no lawyers, nor poorhouses; for whatever one person needs another imparts. Neither have they any prevalent sickness. I saw but one cripple among them all. The men wear leggings made of deer-skins, and all of them, even the children, wear mocassins. The women often dress in skirts made of entrails, dressed and sewed together in a substantial way. These are kept neat and clean, and in winter robes of furs are worn. They do not tattoo themselves. They comb their hair behind their ears, showing phrenological developments equally progressive with any other race of men. They are very ingenious in the manufacture of such articles as they use; and in considering that they have nothing but stone hammers and flint knives, it is truly wonderful to see the exquisite finish and neatness of their implements of war and hunting, as well as their ear-rings and waist-bands, made of an amalgam of silver and lead.

"They are very choice in their horses, and will never ride any but those in the best condition. The horse is the only domestic currency they possess. In the Spring of 1854, I carried to them several kinds of garden-seeds, particularly beans, which they highly appreciated."—[Sacramento Union, Dec. 1857.

COL. MIGUEL CONSTANZA.

This California celebrity is known as the author of a notice of Alta California, published by order of the Viceroy of New Spain, at Mexico, in 1772 or 1774. A few hundred copies only were issued, after which as many as could be seized were destroyed by order of the Government, and it is now exceedingly scarce. One of these copies, however, got to England, and was translated by the celebrated geographer, Alexander Dalrymple, in London, about 1785—1790, a copy of which may be found in a collection of notices on California, by Wm. Rivere, or Rivard.

Constanza was the Engineer officer who accompanied Father Junipero's company from Lower California (in the Summer of 1769) to San Diego. He afterwards made explorations of all the coast countries of our State as far up as the Bay of San Francisco. An account of his services may be found in Father Junipero's Life; his services also in New Spain as a Surveyor, Engineer, Map-maker, etc., in that country, under several Vice-roys, before 1795, are highly applauded by Humboldt in his work on Mexico. This work of Constanza is of great historic value, as he was the *first writer* on the *internal* geography, natural history, and physical features, of Alta California. He seems to have been in these parts about eighteen months, and left for Mexico in 1771. His original manuscript notes, if in existence, must be of great value to California literaires.

[TO BE CONTINUED.]

JEAN PAUL says of children:—"The smallest are nearest God, as smallest planets nearest the sun."

Wasps Injuring Bees.

THE California Wasps, familiarly known as "yellow-jackets," are committing dreadful havoc among the bees in the vicinity of Visalia, says the Sun. It adds: They attempt to enter the hives, and when attacked by the sentries on guard, the latter are soon killed, and the wasp, after cutting off the wings and head, bears off the body for home consumption. When they have once gained an entrance into a hive, and fairly commenced destroying it, it seems impossible to save it. The workers offer battle at first, but as they soon ascertain that the wasp is a match for a dozen of them, they decline the combat—whereupon the queen takes it up, and attempts to defend her castle. She soon falls a victim to the invader, and when this occurs, the swarm is ruined for this season; as, owing to the scarcity of honey in July and August, the drones have been all destroyed, and consequently the young queen which may be raised is not fertile—but few of her eggs hatching out, and those that do, producing only a sort of hybrid, which is neither worker nor drone. One gentleman informs us that he has lost sixty swarms, during the last six weeks, from the attacks of this ravenous insect. Last week he commenced "tracking up" the wasps, and in one day he found and destroyed twenty-seven of their nests, but the numbers hovering about the apiary were not perceptibly decreased thereby. We lost two swarms entirely—there being nothing left in the hives but a handful of arms and legs. By watching, we found that the wasps are apparently much hardier than the bees, as they are abroad long before sunrise, and enter and leave the hives freely before the bees, chilled by the night air, are astir. To prevent this burglary, we close the entrance to the hives at night, and leave them shut until sunrise, at which time the bees are moving, and keep so strong a guard at the door that it is impossible for the marauder to effect an entrance. By this simple means, we think the remaining hives are saved, as the wasps have discontinued their attacks. If any of our citizens is aware of any other or better method, they will confer a benefit on the public by making it known.

How to Clear Land of Brush.

OUR pastures are encroached upon by shrubs and trees of inferior growth, making nestling-places for weeds, and shading much land which otherwise would produce grass. We prefer to use the brush-hook and cut up everything, to lay the dry brush over the stubs and burn it. If Sheep are kept on the lot afterwards, they will feed down the young growth which starts from the roots for the most part, and a scythe will keep under the remainder. A correspondent of the Homestead gives his views as follows:

This is often a problem of much importance, and the solution of it is attended in some sections with much difficulty and expense. After cutting and burning the brush piled up in heaps, many think the best and perhaps the only mode of extermination is plowing and thorough tillage. This is an effectual remedy, and where circumstances will admit, a good one. But there are many fields that cannot be treated in this manner. Either the occupant cannot sustain the requisite expense, or impediments to plowing stand in the way.

In many sections there are large quantities of land now comparatively useless, that would, if the brush is destroyed, be valuable for grazing. Last year I tried burning the land over without cutting the brush, and have been so well pleased with the result that I wish to recommend the practice to others, and also draw out the experience and opinions of others. Now is the time, as soon as the ground is dry enough. The fire runs best in the middle of the day. From a single experiment I have come to the conclusion that fire running over the land a few consecutive years will run out the brush, and the land be benefited by the operation, especially if a top-dressing of gypsum or something else be applied afterwards.

Chester Whites.

IT would seem as though this breed of Hogs were becoming very popular in all parts of the country. In 1860 they took the prize over all other kinds at many State Fairs. They originated some years ago in Chester county, Pennsylvania, or rather have been sent out from that county, having been obtained by a very careful breeding of the common white Hog for many years, until a very superior Hog was the result, of good shape, and much larger than the popular little Suffolk, which the Chester somewhat resembles.

An animal of this breed, when old and well fattened, frequently weighs from five to eight hundred pounds. We are glad to see the Chester Whites getting in among our farmers, and we learn that many of the fine Hogs that went to market last winter, and which elicited so much praise, were of the Chester Whites.—[Farmer and Gardener.

This breed of Swine was exhibited by J. D. Patterson at Stockton, and attracted considerable attention. We are glad to know of their introduction into our State. They will prove a valuable breed among us.

CHANGING SEED.—The practice of frequently changing seed is now recognized in many sections as essentially necessary to the production of a first-rate crop. We all know that the practice of procuring seed-potatoes from a distance—say 20 or 25 miles, and from a different kind of soil, has a most marked influence on the product. While the *rationale* of this is not quite obvious, the fact is indisputable. The same result follows also in the management of corn, wheat, pumpkins, beans, and garden-seeds. Even where exchanges are made between farmers in the same neighborhood, and where there is no very marked difference in the geological or mineral characteristics of the soil in the respective localities, the practice is inducive to improvement. Let those who have never tried the experiment do so—on a small scale at first, if they are at all sceptical, and mark the results, both as regards quantity and quality of crop.

A FORTUNE FROM A SHEEP.—In 1805, Mr. Bidwell, a law-student in Stockbridge, Mass., told a poor lad that if he would catch and turn out his horse, he might have it to ride home to keep Thanksgiving. The boy accepted the offer, and the day before Thanksgiving, as he was mounted on the horse ready to start for home, Mr. Bidwell handed him a silver dollar—the first dollar he ever had. Instead of spending it for personal gratification, he bought a sheep with it. From that sheep he had, in 1832, a flock of 1054 sheep, which he sold for $2500. This money he invested in up-town lots in New York city, purchasing ten lots for $252 each, which he sold in two years for $12,500. This was the beginning of the fortune of Nathan Jackson, Esq., distinguished for his generous and munificent donations at various times to Williams College, Massachusetts.

DUTY is the little blue sky over every heart and soul—over every life—large enough for a star to look between the clouds, and for the skylark happiness to rise heavenward through and sing in.

Packing Fruit.

IN no art are we more deficient than that of packing fruit so that it may be carried a long distance without injury. Three-fourths of all our summer fruits sent to market any considerable distance, are more or less injured. Indeed, much that is brought to cities by growers only a few miles distant is scarcely fit for sale. Mr. Kidd, gardener to the Marquis of Breadalbane, who sends fruits and flowers from the garden near Hampton Court, England, to the Highland residence of the Marquis, subject to five hundred miles carriage, is so successful in packing, that he can send fully ripe peaches "without losing a fruit," and bouquets that when received will be as fresh as when first picked. He gives his method of packing fruit as follows:

"I have found no better method in all my experience, which has extended over a period of twenty years, with all kinds of fruit, varying in distances from fifty to five hundred miles. It simply is—box, soft paper, and sweet bran. A box is chosen, in size, according to the quantity to be sent. A layer of bran is put at the bottom; then each bunch of grapes is held by the hand over the center of a sheet of paper; the four corners of the paper are brought up to the stalk and nicely secured; then laid on its side on the box, and so on, until the first layer is finished. Then fill the whole over with bran, and give the box a gentle shake as you proceed. Begin the second layer as the first, and so on, until the box is completed. Thus, with neat hands, the bloom is preserved, and may be sent to any distance; but, with clumsy hands, quite the contrary, and often an entire failure, as the putting in and the taking out of the box are the most important points to be observed. I have, invariably, packed sixty or eighty bunches of grapes, and fifty or sixty dozen of peaches or apricots in one box, and received letters from employers to say that they had arrived as safe as if they had been taken from the trees that morning.

Farm Work and House Work.

WHILE it is true that the farmers are the most independent class of workers in the world, it is also true that they labor more hours and harder than most classes of men. They usually rise before the sun has struck a light, and work until "evening lets her curtain down, and pins it with a star." Not a few voluntarily make slaves of themselves until they employed machinery, which has no acheing bones, no nervous energy to be exhausted, and is never prostrated by fatigue. Even now, vast numbers of farmers work too much; they do so because there is so much to be done—because so many persons shirk the yoke of labor, and seek ignoble ease in kid gloves and silk stockings, and the task of toil falls unequally upon the industrious.

It is a common saying, crystallized into a proverb, that the work of woman is never done. Half the women in the world are household drudges. We are paradoxical creautures. One class of men make dolls of their daughters, and seem to think the chief object of life is to teach them how to make lambs and lions lie down peacefully in the millennium of their worsted work; another class run to the opposite extreme, and, to use the mildest form of speech, permit them to make slaves of themselves.

On Monday the woman must wash, and draw the water from a deep well or distant spring, when a few dollars would put a pump in the house. On Tuesday she must iron, on Wednesday she must churn, on Thursday she must bake, on Friday she must sew, on Saturday she must patch, and on Sunday she must stay at home and take care of the children.

Now, these labors must be performed by somebody, but they can be lightened and abridged so that labor will be a pleasure as well as a duty—so that "toil will evolve happiness, as a flower exhales perfume." Let the ornamental and the useful be united in the education of girls. Let them play on the wash-tub and the piano, thread the meadows and the needle, make beds of flowers as well as beds of feathers.

The above from Field Notes is most excellent and worthy a careful reading by our Farmers.

The Cause of Inefficiency in Agricultural Societies.

WE find the following very true remarks upon the cause of inefficiency and decay in Agricultural Societies in the Minnesota Farmer and Gardener:

"We have often been led to inquire why it is that some Societies are so lifeless, while others are full of activity and laboring for the advancement of the great Agricultural interests of their counties. The blame, in most cases, lays with the officers. Good officers, as a general rule, make good Societies, and *vice versa*. All Societies should be careful and place none but working and practical men at the helm. Let your officers be selected from your best members; men who have shown themselves to be true friends of the Agricultural cause. Farmers, upon you depends everything in making a Society. Give a little attention to the selection of your Society officers, and when good and efficient men manage affairs, the Societies will certainly prosper.

FLAX-COTTON.—The progress made in the production and use of this material is encouraging. The N. Y. Express of Sept. 17, says: If King Cotton is not likely to be dethroned by his uncrowned rival, Flax, he is destined to get a severe poke in the ribs, which will make his seat uneasy. We have seen several specimens of the new commodity to-day, which come nearer to the genuine article than any that have yet fallen under our notice. They are to be seen at the office of Latson & Abbot, No. 149 Water street, where fabrics of the same material are also to be inspected. Flannel, calico, drilling, and thread, have all been made of the new flax fiber, and with a remarkable degree of perfection. New processes for preparing the fiber give great encouragement to those embarked in the business. Mills for the manufacture have already been erected in New York and in New England, and will soon be in operation, not only working the flax by itself into fabrics, but working it in connection with wool and cotton. American ingenuity is about to succeed in a line in which the English and French have hitherto failed.

VITALITY IN HORSES.—Some experiments have recently been made in France by persons skilled in the veterinary art, with a view of ascertaining how long horses may live without food in certain contingencies, as, for example, being shut up in besieged places. The following results have been noted: a horse may live for 25 days without solid food, and merely drink water. He may live seventeen days without eating or drinking. He can live only five days when consuming solid food, without drinking. After taking solid aliment for the space of ten days, but with an insufficient quantity of drink, the stomach is worn out. The above facts show the importance of water in the sustenance of the horse, and the desire the animal must feel to be supplied with it. A horse which had been deprived of water for the space of three days, drank eleven gallons in the space of three minutes.

Curious Trees.

THE uses and virtues of the breadfruit trees are known to be exceedingly important, and yet it grows in Ceylon and is little respected! In Guam it grows to be larger than our apple trees; when ripe it is soft and yellow, and its taste is sweet. When full grown, the Guamans bake it, it having neither seed nor stone, but is a pure substance like bread, and lasts in season eight months of the year.

In some parts of Norway, where vegetation is confined chiefly to moss and litchens, it has been discovered that even those vegetables may, with little trouble be converted into bread more palatable and nourishing than the bread of bark to which the Norwegians have so long been accustomed.

But the greatest of all vegetable phenomena, though not so useful to mankind as the breadfruit, appears to be the Palo de Vaca. This plant produces a glutinous liquid like an animal. It frequently grows upon the sides of a rock and has dry coriaceous leaves. For several months of the year its foliage is not moistened by a single shower of rain, and its branches appear completely dried up; but upon piercing the trunk, particularly at the rising of the sun, there flows a sweet and nourishing yellow juice, having a balsamic perfume, with many of the qualities of milk. In the morning, the natives of the country in which this vegetable fountain grows, visit it with bowls in which they carry home its milk for their children. So that this tree, says Baron Humboldt, seems to present the picture of a shepherd distributing the milk of his flock. The Araguans call it the cow; the Caucaguans, the milk tree. It grows too in the country from Barbuta to the lake Maricabo.

In the interior of Africa is a tree (shea) which furnishes excellent butter. It resembles an American oak, and its fruit is not unlike the Spanish olive. It grows abundantly in Ashantee and in the woods near Kabba. The vegetable butter which its kernel affords, is white, more firm, and in Park's opinion much better than that produced from cows. It has also the advantage of keeping all the year without salt, even in that intensely hot country. The cream-fruit of Sierra Leone affords a similar saccharine fluid—its flower resembles that of the vahea; its fruit that of the voacanga of which the Madagascareenes make bird-lime; and that of urcealca which produces the caoutchou of Sumatra. These trees lessen the consequence of the cow in these longitudes; but in some countries far more civilized, the natives seem to disdain to avail themselves even of that animal itself.

In some regions of America, Africa, and Asia, a liquid is exuded from the palm, which by an easy process is converted into wine. This species of palm is regularly tapped. In Congo it yields plentifully in the night, but not much during the day.

Between Table Bay and Bay False, near the Cape of Good Hope, there grows also amid white sand a shrub, the berries of which make good candles. This plant is well known in the Azores and America, which is called the candleberry-myrtle. Vegetable tallow grows also at Siac and Sumatra; while the bark of the quillai tree of China, has many of the properties of soap.

In Chili there is a shrub called Thurania which affords incense equal to that of Arabia. It exudes in the form of globules or tears, through the pores of the bark. These globules are white and transparent, having a bitter taste, but an aromatic perfume. In that fine country, too, grows a species of wild basil, sixty miles from the sea, which in a soil having no appearance of salt, is covered, in the morning, from spring to winter, with saline globes, which the Chilians use as salt. In Mexico there is a tree the flower of which, before it has expanded, resembles a closed monkey's hand; when unfolded, the open hand. From this circumstance is derived the name of Chiranthodeodron. Not long since, there existed only one specimen of this tree in the known world. It grows, and has flourished for many ages in Toluca, a city of Mexico, where it is esteemed sacred, and whither persons travel from great distances in order to procure its flowers. This was the only tree of its genus, previous to the year 1786, that was known to be in existence. But some botanists having visited Toluca in that year, they took slips and planted them in the royal gardens in Mexico, where one of them took root, and had grown in 1804 to 45 feet. The Tulipot of Ceylon grows to the hight of 100 feet, and its leaf is so large that it will cover from sixteen to twenty men like an umbrella. But the largest leafed plant in the world is the Troolie of Surinam. It extends on the ground, and has been known to attain a width of three feet, and a length of thirty. The natives cover their houses with it, and it is very durable.

Ives says, in his voyage to India, that he saw a Banyan, near Trevan de Parum, able to shelter ten thousand men; and Dr. Frayer alludes to some so large as to shade thirty thousand men and horse singly. On an island in the Nerbudda a few miles from Baroach, grows one, more remarkable than any other in India. Travelers call it "the wonder of the vegetable world," being two thousand feet in circumference. Armies may encamp under its branches. The Hindoos esteem it the symbol of a prolific deity; and British officers frequently in their excursions live many weeks together under this canopy. The Capot is the only tree that can be compared to the Banyan; and Bosman relates, that he saw one on the gold coast of Guinea which was so large that it will shade twenty thousand men, at least.

We may here say a few words relative to the ages of trees. Franklin mentions two cypresses which the Persians believed to be six hundred years old. Forbes says that he smoked his hookha under the very banyan beneath which part of Alexander's cavalry took shelter; and the age of the oaks of Lebanon is said to be at least two thousand years.

CARE OF TOOLS.—The haying season being now fully over, great care should be taken of the tools, so as to prevent rusting, shrinking of wood, etc. The amount of power necessary to move a mowing machine, is materially lessened by the parts being in perfect order; the slightest oxydation on the surface of the knives causes much friction, and calls for an increased amount of force. All parts of the metal work which come in contact, including the bearings, should be thoroughly cleansed and coated with a mixture of tallow and beeswax. The mould-board of plows may be protected by a slight coat of shellack varnish; it dries immediately, and the shellack, not being soluble in water, forms a perfect protection against moisture. The wooden portion may have a coating of shellac varnish, or of boiled linseed oil. All nuts and screws should be cleansed, and then screwed up tightly before oxydation; if left until wanted, this may be impracticable. All nuts and bolts coming in contact with wood, should be supplied with their iron washers, to prevent the bolt heads from sinking into the wood.

MY rule is to deliberately consider, before I commence, whether the thing is practicable. If it be not practicable, I do not attempt it. If it be practicable, I can accomplish it, if I give sufficient pains to it; and having begun, I never stop till the thing is done. To this rule I owe all my success.—[John Hunter.

"E PLURIBUS UNUM."

[We have received (says the Boston Transcript) the following noble, fervid, and patriotic lyric for publication, from its author, Rev. John Pierpont. It proves that the unwearied fire of genius still glows, undimmed by age, in the soul of an honored American poet, whose first production was published half a century ago. Mr. Pierpont is 76 years old, and his poem has the "spirit of '76." As regards mere age, however, time practices on us a deception in regard to him, for his form seems to grow more erect, his gait more vigorous, his mind more vivid and creative, as he advances in years.]

I.

The harp of the minstrel with melody rings,
When the muses have taught him to touch and to tune it;
But though it may have a full octave of strings,
To both maker and minstrel the harp is a unit.
So the power that creates
Our republic of States,
Into harmony brings them at different dates;
And the thirteen or thirty, the Union once done,
Are "E Pluribus Unum"—of many made one.

II.

The science that weighs in her balance the spheres,
And has watched them since first the Chaldean began it,
Now and then, as she counts them and measures their years,
Brings into our system and names a new planet.
Yet the old and new stars—
Venus, Neptune, and Mars,
As they drive round the sun their invisible cars,
Whether faster or slower their races they run,
Are "E Pluribus Unum"—of many made one.

III.

Of that system of spheres should but one fly the track,
Or with others conspire for a general dispersion,
By the great central orb they would all be brought back,
And held, each in her place, by a wholesome coercion.
Should one daughter of light
Be indulged in her flight,
They would all be engulphed by old Chaos and Night;
So must none of our sisters be suffered to run,
For, "E. Pluribum Unum"—we all go if one.

IV.

Let all the demon of discord our melody mar,
Or treason's red hand rend our Union asunder,
Break one string from our harp, or extinguish one star,
The whole system's ablaze with lightning and thunder.
Let the discord be hushed!
Let the traitors be crushed,
Though "Legion" their name, all with victory flushed!
For aye must our *motto* stand, fronting the sun;
"E Pluribus Unum"—*Though many, we're* ONE.

◆

Result of a Kind Action.

In September, 1805, a poor young mechanic, just arrived from England, was wandering about New York in deep dejection; he was without money, without friends, and without work; and far from his native home, he knew not which way to turn, but passing along Nassau street, an open door encouraged him to enter. The proprietor was a very little man, indeed, perhaps not five feet high, but he had a pleasant countenance and a large heart; for upon being asked by the homeless and penniless stranger if he could not direct him to some respectable person who could board him until he could find employment, and thus obtain the means of payment, the storekeeper, pleased with the expression and demeanor of the eighteen-year old boy, had it in his heart to offer him the desired favor himself; but he had a wife, whom he knew to be a woman of rare worth, for she was prudent, self-denying and humane. He might have known what would be her answer, for he had only to make the proposition in a way to indicate his own views, and it would have met with an instantaneous and cheerful acquiescence, unless from some almost insuperable reason. The young stranger was admitted into the family. But the yellow fever was raging in the city. In less than a week the poor lad was stricken with it, and recovered! although he was at the point of death for several days. During his illness, he was cared for by his host and hostess, with an assiduity and watchfulness which only they know who act from sterling principle and a high humanity. Just a quarter of a century later, this same man was applied to by Major Noah, of pleasant memories, who was then surveyor of the port of New York, to put together a machine in the Custom House, and take models of its various parts. This was done, and the mechanic conceived the idea of constructing a similar article, which should excel any thing of the kind for efficiency in the Old World or the New, and he succeeded. He died in 1833. His son succeeded him in business, and inheriting the inventive genius of his father, combined with rare business tact and indomitable energy, he has made improvement to improvement, until he has made the whole civilized world his debtor. It carries light to every household; hour by hour is lifting the degraded and the fallen; and is aiding in the revolutionizing of all nations which exist by oppression, wrong-doing and injustice. But that machine, what is it? Fifty years ago one might have been purchased entire for a hundred or two dollars; a common dry-goods box might have easily contained all its parts; but now, in its perfected state, it occupies a space of fifteen feet high and forty feet long; it is made of fourteen thousand seven hundred and thirty parts, weighs fifty thousand pounds, and costs thirty thousand dollars. One of its belongings, not named above, is thirty thousand and sixty-three yards of tape. The penniless English lad was Robert Hoe. The good Samaritans of Nassau street were Grant Thorburn and his wife, the latter an angel now; the former "still living" in an honored age, by seven years over four score. The machine is Hoe's ten-cylinder printing-press, as now in operation in the office of the New York World, and the largest ever made.

The first and only newspaper of our childhood was printed on a press which, with the aid of three men, turned out forty or fifty impressions in an hour. When, on the twenty-ninth day of November, 1814, the London Times announced that it was printed by a machine which made eleven hundred impressions in an hour, the whole city was astonished, and the pressmen themselves looked on in mute wonder and admiration; but to-day, through the agencies of Robert Hoe, the English lad of 1805, of the kindly Grant Thorburn and his wife, and Richard M. Hoe, of New York, there are made at the office of the World, in Printing-House Square, twenty-five thousand impressions in sixty minutes. Who can disclaim indebtedness to these four names? The merchant who sips his coffee at breakfast, and reads the latest news up to two or three o'clock in the morning, perhaps forgets to whom he is indebted for that pleasure; and so with the day-laborer, who finds time to glean from his paper, at a cost of one cent, what is going on throughout the habitable globe, ere he sallies forth to his daily toil. Rich and poor, learned and unlearned, all should remember with respect and gratitude the heads and the hearts to which every day makes them renewed debtors, to wit, to Robert Hoe and his son Richard M., to Grant Thorburn and his noble wife.

Reader, remember that kind acts pay; the influence of each for good drifts over the sea of time, and will drift until time shall be no more. Go forth, then, "while the day lasts," and perform as many as you can.—[Hall's Journal.

Old Jake, the Miser; or the Contribution.

"I declare, Ned, it is too bad!" exclaimed young Frederick Williams impetuously, casting aside the Times, he had just then been reading. "Here are boys a plenty in this village who say they are willing, and even anxious, to devote their services to their country, myself included; enough at least for two companies, if we only had the means to fit out with. But most of us are sons of men in limited circumstances, and we are poorly able to contribute any great amount. We can procure means by making our deficiencies known abroad, but then, it would seem a little more whole-hearted to go in at our own expense; what say you, Ned?"

"What say I? why I am with you every time, Fred, for we have the means among us; and we should rightfully have the use of some of the mouldy paper,—and I say, Fred, he who hath the means of lending aid, and withholds in such an hour as this, is most likely a villain, a black-hearted traitor, and I in my soul denounce him, for he is not fit to live in the States which give him the peace and quiet, in which he has prospered!"

"O, you are waxing warm, Ned, in the cause of your flag, but I indorse every word you have uttered, most heartily, for you are right. Look and see what other villages are doing—smaller than our own—encouraging, equipping, and sending out troops, crushing out cowardice, and making men of them, who are suspected of irremediable meanness, and I blush when I reflect on our own backwardness, and, must I say, disregard for this old flag, that has so long floated over our hills and valleys. It seems to me, Ned, that man has sunk low in the scale of humanity, when he becomes indifferent to his flag."

Upon a settee within a dim corner of the reading-room, unobserved by the speakers, reclined an old man. His features were thin and wasted, and his raiment worn and threadbare. He had been listening to the spirited conversation of the ambitious youths, and his sunken eyes would glow with a strange, unnatural light, and his wasted hands clutch nervously at his oaken staff. Poor old man! was a new light dawning o'er his worldly head; a strange and genial warmth bursting in through the long barred windows of his weary soul, melting away the frozen bonds that made his inner-man their slave?

At length he arose, and tottering from his secluded corner, he came and stood before the youthful speakers. Both started, and half arose from their seats, but he waved them back with his wasted hand, as he murmured,

"I wonder that you start, young men. Perhaps you think Old Jake, the miser, is here to reprove, —God forbid! I have been a listener to your conversation, and it has produced the right effect upon this flinty heart. I have the means you require to aid in the preservation of our good flag. They are yours; use them. I have hoarded my gold zealously, until it has crushed out nearly every high aspiration that my manhood knew. Take it —use it as your country requires, and rest assured, old Jake will sleep the sounder in his grave, for his contribution. I have degraded myself by worshipping a God so mean and low as gold; but still, boys, I'm not so low but that I love the old flag, and the Union!"

And they did take it, with a thousand blessings on the head of the aged giver, whose noble example was followed by many others, as bountifully able to bestow as himself. And as the old man stood on the platform, and saw the heroic and self-equipped troops, with banner and music, hopefully and cheerfully bid adieu to friends and home, to give themselves in all their pride and youthful hopes, and offering to their country, his furrowed brow was flushed with pride and a great spiritual delight, and heavy tears rolled down his sunken cheeks, as he felt in his heart—it was more blessed to give than to receive!—[Boston Cultivator.

◆

Food of Man and Animals.—It is perhaps pretty well proved that about seventy ounces of bread, or twenty of beef, or eighteen of peas or beans, or six of cheese, eaten daily by man, will supply the waste of the body. Of potatoes, to accomplish the same object, it will require nine or ten pounds, and of milk about three quarts. Yet no one would remain in a healthy condition for a long time, if confined to a highly concentrated diet exclusively. Nature has provided for both man and beast a great variety of food, much of which, like potatoes, turnips, &c., may be grown in large quantities, but are not highly nutritious. The stomach is also suited to a varied diet, and where very strong food is used too freely, or rather too exclusively, this organ becomes impaired. Nor is it best to confine men or animals to a diet containing but little nutriment in proportion to its bulk. This gives the stomach too much labor to obtain the sustenance required by the system. This organ requires exercise, and enough of it, but it should not be overworked. The animal system will accommodate itself to circumstances and necessities to a great degree, but we must not ask too much, or make changes too suddenly. The natives of India will consume such immense quantities of rice as to astonish Europeans, but this they are accustomed to from childhood. A horse that has been fed for a number of years on grass, hay, and bran, will exhibit his keeping even in his form, which a time under the hands of the jockey will materially change.

◆

Ages of the Generals.—Lieutenant General Scott is 75 years old; General Wool is 73; Harney, 65; Mansfield, 60; Totten (head of the Engineer corps), 80; Thayer, (Engineer), 80; Craig (head of the Ordnance Department), 66; Ripley (Ordnance), 70; Sumner, 65; Larned (Paymaster-General), 70; Gibson, Commissary-General, Churchill, Inspector-General, and Thomas, Adjutant-General, are all old men, having ettered the army in the beginning of the present century—Gibson in 1808 and Churchill in 1811. Gen. McClellan is not yet 35; Gen. Fremont is under 48; Gen. Lyon is about 44; Gen. Butler is 43; Gen. Banks is 44, and Gen. McDowell about 40.

An Active Intelligent Young Man is Wanted

To take charge of an important business. A capital of two or three thousand dollars will give him the privilege of a business that will yield him a handsome revenue. Undoubted references will be required, and an entire freedom from all other business connections, as he will have almost entire control of a lucrative and increasing business, in which he can be partaker liberally. Energy, activity, and confidence, are the materials required.

Valuable Blood-Stock For Sale.

We would invite all who desire Dairy-Stock of the very highest character, to call on us, or write to us, as we have for sale about twenty-five head of as choice Durham Stock as there is for sale in the State, as follows:

One Full-Blood Durham Bull, 2 years old, of the highest pedigree, and as handsome an animal as has ever been offered in this or any other country.

One young Full-Blood Calf, 8 months, a perfect picture.

Several younger Blood Calves.

About twenty Cows and Calves, Durham, Devon, and Ayrshire, with Calves by their sides.

Among the Cows are some of the very best milkers in the State. Inquire at the Farmer Office. 18

Farms for Sale.

A valuable Farm of about 400 acres of excellent land, well fenced, situated near Petaluma, can be had at a bargain if applied for soon.

ALSO—A valuable Farm with good buildings, an orchard and vineyard, and pleasantly located in the immediate vicinity of Sonoma. Will be exchanged for real estate in the city fo San Francisco. 9

TO THE FARMING INTEREST!

E. F. JONES, 51 Wall street, New York. | HENRY H. HEWLETT, Stockton.

JONES & HEWLETT,

IMPORTERS AND WHOLESALE AND RETAIL DEALERS IN

GROCERIES,
LIQUORS,
Provisions,
AND
HARDWARE, MINING, AND AGRICULTURAL IMPLEMENTS.

Henry Atwood, Proprietor.

THIS SPLENDID THREE-STORY STONE Building, long acknowledged(equal, if not superior, to the best Hotels in the Mountains, has been thoroughly renovated and greatly improved and a

SPLENDID BILLIARD TABLE ADDED.

The Dining-room has been divided into a Family Dining-room and Restaurant, both hard-finished, and newly and elegantly furnished. The former will be for regular boarders who may prefer it; the Restaurant will be open at all hours, and be supplied with the best products of the market.

The parlors and chambers have all been thoroughly renovated and elegantly furnished, and will accommodate seventy-five persons.

The Stages all arrive and depart from the "UNION," and for the accommodation of travelers the House is kept open all night.

The proprietor avails himself of this occasion to say to travelers *en route* to the various places of recreation in the Eastern portions of Calaveras county, that no pains will be spared to make their sojourn at the Union pleasant and agreeable.

HENRY ATWOOD.

Mokelumne Hill, May 11th, 1860. 20-3m

DOWNIE HOTEL,

South End of Durgan Bridge,
Nevada street, Downieville.

W. M. DOWNEY, Proprietor.

WITH INCREASED BUSINESS, I HAVE enlarged facilities for accommodating my guests.

The Hotel has just been painted, papered, and carpeted, from top to bottom; and a large number of sleeping apartments, well furnished and ventilated, added to the usual number.

REDUCTION OF PRICES:

Board, per week	$7 00
Single meals	50
Board and Lodging, per week	$8 50 and 10 00
Lodging, per night	25 and 50 cents
Liquors and Cigars	12 cents

Warm Springs Hotel!

Near the Mission San Jose,
28 MILES FROM OAKLAND.

THIS BEAUTIFUL PLACE OF RESORT is now open for the season for the reception of private families, tourists, invalids, and general visitors.

The Warm springs are so widely and generally celebrated throughout California, that it is unnecessary here to recapitulate their various qualities. To invalids, they offer the greatest advantages; their medicinal virtues being unsurpassed even by those of the Rhine, so extensively patronized from all parts of Europe and America.

The buildings are new and extensive, affording accommodation for a great number of guests, and containing every requisite usually appertaining to a fashionable Watering-place.

The assistants are the best that can be procured in the State, and being under the immediate supervision of the proprietor, visitors may rely that every attention will be paid to their comforts.

The Table is supplied with every delicacy which can be procured in the State.

Fine hunting-grounds and trout-fishing within a short drive the Springs.

14 6m LEWIS BRADY, Proprietor.

Union Hotel, Sonoma.

EBENHARDT & GLASSEN, HAVING purchased the UNION HOTEL, of the late proprietor, Mr. A. G. Oakes, are prepared to give the best accommodations to the traveling public. 15-3m

SPERRY'S HOTEL.

Murphy's Camp.

THE COMMODIOUS FIRE-PROOF BUILDING, lately erected by the subscribers, at Murphy's, has been elegantly furnished throughout, after the most approved style, and is now ready for the reception of guests. Parlors and suites of rooms for the use of ladies exclusively, and parties visiting the "BIG TREES," or other natural curiosities in the vicinity.

The management of the Domestic Department is confided to Mrs Perry, a lady of experience.

The Bar is stocked with fine WINES, and the larder daily supplied with seasonable delicacies.

Stages arrive and depart daily for Mokelumne Hill, Sacramento, Stockton, Sonora, and Columbia.

Parties of pleasure and transient guests will find every accommodation for their comfort.

20-3m SPERRY & PERRY.

Jebb's Patent Churn.

THIS NEW PATENT CHURN IS NOW READY TO be seen and tried. It is beyond question one of the best and simplest constructed Churns ever invented, and Dairymen should call and examine it.

By the action of the crank, three distinct currents are made which moves the cream with such rapidity that Butter is made in from three to five minutes with ease.

This Churn can be seen at the Farmer Office.

Patent-Rights can be had for all the counties in the State, and any experienced carpenter can make a fortune easier by these Churns than by gold digging. They only need to be seen to be approved. 12

The California Farmer.

SAN FRANCISCO:
FRIDAY..............................OCT. 18, 1861.

THE "LADIES' DEPARTMENT" of this Journal, under the charge of Mrs. Lizzie Wiley Warren, M. D., will be found on the sixth page, and to which we call especial attention.

◆

Look to Our Special Advertisements.

Our readers will always find important advertisements in our Special Advertising columns. We have at this time Stock-Farms, Orchards, Saw-Mills, and Property to Exchange or for Sale, all worthy Special notice.

Who Grows Flax?

Growers of Flax can have the highest price paid for their crop by applying to this Office, or sending samples of their crop and the quantity for sale.

◆

Durham and Devon Cattle, Blood Horses, Leicester and Cotswold Sheep, American Ewes and Lambs, and other Stock, for sale. See advertisements in the Special column.

Sales of Grain and Wool.

Those who desire to realize the very highest price for their Grain and Wool, can be informed of the best chances in our city, where, on all special occasions, they can realize high prices without delay. Samples sent to us from the country, with particulars, will be responded to.

◆

Ten Reasons why every Farmer and Stock-Raiser Should take the California Farmer.

1st. EVERY Farmer and Stock-raiser should be a reader of the Journal connected with the interests of his own profession in his own State.

2d. Every such person should give his sanction and support, generously and voluntarily, to a Journal that advances his own particular business in his own State.

3d. Every such person is *benefited* by the publication of such a Journal, and is in justice bound to reciprocate such labors.

4th. No person engaged in these employments can be without such a Journal without the loss of many times its cost annually.

5th. The Farmer and Stock-raiser will always be better advised of the markets, and that kind of information so important to his interests by the constant access to a Home Journal.

6th. The CALIFORNIA FARMER has faithfully advocated the best interests of the Farmer and Stock-raiser for eight years, and is the ONLY AGRICULTURAL JOURNAL IN CALIFORNIA.

7th. The CALIFORNIA FARMER contains the most important information relative to their interests in every branch of Agricultural science.

8th. The CALIFORNIA FARMER contains the announcement of all New Seeds, Grains, Grasses, etc., together with all New Implements that will advance the cause of the cultivators of the soil.

9th. The CALIFORNIA FARMER contains the arrival and introduction of all the best Stock of all kinds as soon as known, together with the full Market Reports of all the interests appertaining to Ariculture.

10th. The CALIFORNIA FARMER is now the *only paper* on the Pacific Coast that is continued by its *original Editor and Proprietor*, commencing at the time this Journal commenced; and having been constant in its efforts for the good of these Interests, deserves the cheerful patronage of all good men.

◆

VALUABLE ASSAYING SCALES.—When in Downieville we called at the Bank of Messrs. Barnes, Reis & Co., to examine the new Scales invented by Messrs. Gammon & Harris, of this firm. These Scales are of remarkable construction, and made by gentlemen more accustomed to the use of the pen than the tools of a workshop; yet their work proves them skillful in both. These Scales are of the most beautiful workmanship, perfect in every part, and so wonderfully exact that they are moved by the 400th part of a grain! The movement is entirely new, the Scales being supported by ivory props, which are dropped from the Scales in weighing, instead of the usual manner of lifting the Scales. The present elegant pair are used in this Banking-House, and are worth $200, and a most highly honorable evidence of skill and genius. This Banking firm and their brothers are owners of the famous Sierra Buttes Mining claim, their quartz-mills being in the peaks of the Sierras back of Sierra City. They cleaned up $30,000 in thirty-nine days. This mine is the richest in California. We visited this mill, and shall give particulars in future numbers.

AGRICULTURAL OFFERINGS.—We appreciated fully the spirit of the excellent lines which appeared in our last issue, by Agnes, with the above title. We have noticed with pain and sorrow how little thought is given to "Author of all our Blessings," at our Annual Fairs. Not a "motto" or "banner" to indicate any sense of gratitude or joy for a bounteous harvest. It will be remembered that at the first *three Fairs* held in our State the Hall was appropriately decorated with suitable inscriptions to testify in a just manner the source "whence all our blessings flow." Now our Fairs are changed. The spirit of gratitude and joy has departed, and in its place reveling, gambling, and drunkenness surrounds the place of gatherings. This is deeply to be deplored. The glory of such seasons has departed. This notice was intended to have accompanied the lines in question, but was omitted.

DR. C. F. WINSLOW.—Our old friend and correspondent Dr. C. F. Winslow, we learn by a brief note from him at Aspinwall, is now engaged on a scientific excursion to Peru, South America, and that after completing his survey we may expect to have a greeting from him once more in our own Eureka State. We shall gladly welcome our old California friend again, and we think he will find many that will gladly welcome him also.

PROSPECTS BRIGHTENING FOR THE FARMER.—The rise of Grain the past few days, even to the value of 24 cents per 100 lbs., will amount to over a million of dollars.

The Secret of getting Good Prices for the Crop.

SOME people seem to think that *some people* have a way of always getting a better price for what they raise than their neighbors, and it is a fact that they do; and the secret lays in growing a *better* product, and preparing it *better* for market,—and when all the particulars are investigated it results like this:

If the crop is Wool, they grow a better class of sheep, pack it better and cleaner, and get a better price.

If the crop is Grain, they raise a better quality, having prepared the land better, sown better seed, harvested it with better machines, cleaned it better, and sent it to market in better bags.

If the crop was Fruit, it was a better character of fruit, picked at the right time, packed better, in better boxes or baskets, and consequently like all such wise labors brought better prices. Such will always be the case. It does not pay to *half do* things; it shows a shiftlessness that will soon bring the grower to the bottom dollar.

We are led to these remarks from everyday observations in the sales of products from different farms, wherein there is a difference of from 25 to 40 per cent realized.

One Grain-grower realizes $1 35 to $1 50 per 100 pounds; another receives $1 60 to $1 75. Each had the same means at command.

One Wool-grower gets 11 to 13 cents per pound; another receives 17 to 20 cents. Both had the same facilities and knowledge at the outset.

One Fruit-grower gets 3 cents per pound for his apples, 4 cents for his peaches, 10 cents for his pears, and 3 cents for his grapes. Another pockets 10 cents for his apples, 12½ cents for his peaches, 20 cents for his pears, and 10 to 20 cents for his grapes.

One market gardener gets 3 cents per pound for his peas, 4 cents for his beans, 1 cent for his squashes, 1 cent for his tomatoes, and other things in like proportion; some productions thrown away. Another gardener receives 6 to 8 cents for his peas, 8 to 10 cents for his beans, 3 to 6 cents for his squashes, 3 cents for his tomatoes; and so every article of his raising commands the highest price, quick sales and ready cash.

Why such a difference? Simply, one man understands his business; loves his occupation because it is a pleasure to labor. He prepares his ground as it should be, in the right season; grows only the best; prepares it for market in a manner to reflect credit upon himself as a grower; and soon these products grown by such parties acquire a name and fame,—for a good article sells itself. Suppose we illustrate this matter to prove our position.

Take that all-important fruit or vegetable the "Tomato," and there is *one* garden that excels all others in our State, that of Bagge Brothers, of Oakland. Their clear, smooth, luscious, cherry red Tomatoes are as tempting as peaches; and their fame as gardeners is well deserved. Every product from their garden is of the very highest character, and always commands ready sale and good prices. Bagge Brothers never crowd an *inferior* article upon the market.

In Fruit there are several growers whose products are select, whose apples, pears, plums, peaches, and grapes are always sold readily to arrive.

Lusk's Strawberries of Oakland were of this class; Rumford's Lawton Blackberries of Fruitvale; Briggs' Peaches from Marysville, Grapes from Smith's Gardens, Grapes from Dr. Streutzel of the Alhambra Valley, and Grapes from L. E. Gould of Santa Clara, and from Mons. Delmas of San Jose. The splendid Apples, Pears, Cherries, and Plums, from J. Lewelling, of San Lorenzo; the Apples, Pears, and Plums, from B. S. Fox, and D. T. Adams, of San Jose. These are some of the evidences that good products always find a quick market and liberal prices.

We could name the Butter and the Cheese of Steele Brothers, of Olema, and the Dairy Butter of Ramsay, and of Pierce, and others; but these suffice. However much some may say farming "don't pay"—*slovenly farming* we admit "don't pay," but good wise management does pay, and pays well too; of this we shall give examples soon.

◆

Hop Plantations.

AFTER what was said the last year relative to the success of "Hop growing" in California, we are surprised that so few persons were induced to enter into it.

Hops are one of the products in which California can "beat the world"; our clear dry summers are just the thing to perfect the Hop, retaining the full aroma of the flower and boll, and producing when fully ripened a clear and beautiful cluster of bright bolls. Such has been the success of this plant that our brewers have decided that one pound of California Hops is worth two to three pounds of the imported. Hops raised the present year have been sold at seventy-five cents per pound. We have received the information of a crop grown on one-eighth of an acre in San Jose, by Mr. J. M. Patterson; the product was one hundred and five pounds, yielding over and above all cost of planting, roots, cultivation, etc., *seventy dollars*. This was for the first year after the planting, being at the rate of $560 per acre; and the probability is that another year the crop would be doubled. California can raise Hops for exportation with great profit. Let it be understood, however, that it is not *everybody* that can raise "Hops." Remember the *Honey-Bee speculation*. Don't everybody run mad about "Hops"; they require the right kind of land,—a good preparation of the land, a thorough cultivation, careful staking, together with a knowledge of growing, picking, curing, packing, baling, etc. Every man to his business, and every man *mind well the business in which he is engaged*. So it will be with Hop-raising; those who understand the business and can *work* at it will do well; those that don't better let it alone, unless one wants to have the "ops" as the "Bee-men" did. Those who plant Hop ground should secure their plants early, and have them in early.

Mountain Orchards and Vineyards.—No. 4

DOWNIEVILLE.

Mountain Scenery—Stage Roads—Their Safety—Pleasures of an Outside Seat.

> "You peaks are beautiful, ye Appenines,
> In the soft light of your serenest skies;
> From the broad highland regions, dark with pines,
> Fair as the hills of Paradise, ye rise!"

To every lover of the beautiful, there is a peculiar feeling of pleasure enjoyed when traveling among lofty mountain peaks where the eye can wander from one towering summit to another as they rise higher and higher, with all their changing forms and hues.

How little do the dwellers of our cities who have never visited the Sierra range of mountains, know of the grand or beautiful! One of the most interesting routes in our State for a traveler is found in a trip from Marysville to Downieville, by way of San Juan and Forest City. In this route all the various plans of mining employed in California can be seen,—from the *cradle* up to the *Quartz Mill*. And when at Downieville, with the additional trip to the Sierra Valley, the most complete, the most gigantic, and the richest mills can be seen, of which we shall speak before we have concluded our sketches.

The stage route from Forest City to Downieville, a distance of twelve miles, is still a better road than any previous to it; being a completed hard road like the national macadamised road over the Alleghany mountains. It is really a grand, smooth road, and pleasant to travel. The constant windings of this ascending way (for it is all a continuous ascent till you reach the Mountain House), feeds the sight with its changing scenery, always beautiful. The road being cut out of the sides of the mountains, the stage-coach will often pass along the precipitous way where the traveler can look down from the coach window into the gorges, often almost perpendicular, a distance of five hundred to twenty-five hundred feet; and down, down, down, into the deep dark gorges from one thousand to five thousand feet, or from one-quarter of a mile to a mile steadily down. Those of weak nerves may sometimes feel "top-heavy"—they had better loll back on the "back seat," for all is perfectly safe. The finest coaches, the best trained horses in the world, and the best drivers; and however "skittish" such traveling may seem to some, there is an exhilirating influence about it that inspires.

We noticed several clearings on this route,—some fine valley slopes that had been prosperously cultivated by Frenchmen. The last season in this high-up region the "frost was severe," and the cultivator was "nipped" of his harvest.

Our trip being in the pleasant month for the mountains (August), the weather was delightful; our ride being also from Forest City from 6 P. M., to 9½ P. M.; the scenery at twilight was more than usually beautiful, and all the ascending part of it gave to our vision the glorious golden hues sent from the God of day as he sank beyond the tall pines of the loftiest peaks of the snow-capped mountains. It was at the moment of these his last gleamings upon the very highest peaks, and just as the golden tints were turned into their pale and paler, soft and softer tints, that we arrived at the Summit House, to give a breathing to our noble horses; refresh them with a drink of ice water, and light the coach lamps as guides for the well-trained horses who are accustomed to wheel around these fearful yet grand "winding ways" which now form the descent, into the fairest, most romantic, and really the most picturesque place in all California.

Downieville can be truly classed among the wonders of the Pacific Coast; there is no place like it, none so "hard to reach" in early times, and none that has accomplished more for the grand enterprises of our mountaineers.

Downieville is the "Gate of Paradise" to the wealth that is yet to be revealed from the mountains around it. She is also the great gate to the "Beckwith Pass" that leads on to Washoe, to Virginia City, and to the silver fields whose unbounded wealth will yet load ships with the treasures still hidden in mother earth.

The lamps lighted, and the horses refreshed, away the horses flew; it seemed as if it were impossible for four horses to go with such speed around the steep bends with safety; yet the well-trained horses and the skillful drivers dispels all fear; and the easy, yet rapid descent keeps the mind alive with the wild beauty of the scenery around.

> "He who first met the highlands swelling blue,
> Will love each peak that shows a kindred hue;
> Hail in each crag a friend's familiar face,
> And clasp the mountains in his mind's embrace."

But we must refer to the sober realities of our mountain trip. We omitted to say the Mountain, or Summit House is a very large and spacious hotel, upon the very lofty summit, with stables and yard,—a truly picturesque place, like the eyrie of some great eagle perched in the mightiest tree, overlooking everything, so looked the Summit House to us.

Now it is down, down, down, and round, round, round, and visitors of the Summit House could say as the stage and passengers leave, as they watch them depart, "I see them on their winding way." The route is a grand one, and after an hour and-a-half of continued changing from one grand scene to another, now upon the light side of the mountain, and now upon the dark side, we at a sudden turn came upon one of the once famous mining localities, "Goodyear's Bar." It lies in a gorge of the mountains, an opening of some extent, and capable of great improvement. Already there are several prosperous orchards and gardens from which the owners have realized a handsome sum. We passed on to return again to this spot, of which we shall speak particularly.

Ho for Downieville! this had absorbed our particular thoughts for the time, and so after the horses were watered, a crack of the whip and on to Downieville. One hour more along the same winding and precipitous way with all its exciting scenery we were carried on until at another turn we look down into a deep valley, and there like a myriad of stars clustering in the blue vault above, so lay Downieville, hidden in a great deep dark valley, entirely surrounded by huge mountains, which casting their sombre hues over the valley like a vail, made the lights peeping from the dwellings thus hidden down in the valley, appear like stars from a cloudy sky. We wished at that moment we were a painter, and had the skill of "Vance," that we might have caught a view of Downieville as it met our vision that night, so we might keep the picture forever.

Downieville is one of the pioneer mountain mining towns, and its inhabitants are among the most enterprising and hardy in our State.

We saw the picture of Downieville, then nestling or cradled among the lights that gleamed up from its depths below, and remembering all the strange stories of the manner in which the descent was made in early days, how goods, furniture, etc., was laid upon drags and drawn down by means of trees, brush foremost, down the almost perpendicular descent, and now a fine smooth road cut upon the mountain side. All this is the result of the energy and perseverance of the hardy miners, who opened the way for the civilization and refinement that follows.

We entered Downieville by night, and our first views were consequently of the lights and shades that are cast upon it from the wild surroundings. We made our temporaay home at "Henry's Exchange," a good hotel—the "pioneer" among hotels, and the stage house of the California Stage Company. Mr. Henry is a working man, and ever attentive to the wants of his patrons.

Our first call was upon our old friends Langton & Co., the Pioneer Express of all the mountain region. The name of "Sam Langton" is as familiar in these mountains as that of a "strike," and a "lead," and Sam has made a strike often for his friends, and given many a friend a "lucky lead" by his kind aid and information. We were most kindly welcomed, and enjoyed the attentions and courtesies shown, and was kindly assisted to all the needed information for our mountain trip.

We enjoyed also our visit to his very beautiful home on the mountain-side, where we found a fine Orchard and Garden, with all the Fruits of the season, and a pretty Flower-Garden. We have before said that Sam Langton was one of the earliest, if not the very first, to introduce Trees, Plants, and Flowers, into Downieville, and thus give an impetus to "beautifying homes."

Mr. Langton's residence is about one hundred feet above the Main street of Downieville, upon the mountain-side. We were surprised at the extent and numbers of his collection. A goodly number of acres terraced, and more in preparation, will in a short time make a Garden like those famed beauty-spots to which our correspondent alludes on the "Banks of the Rhine." Mr. Langton is the proprietor of the Mountain Waterworks, which bring a supply of pure cold water from high up above his home, and over all his grounds of many acres, and supplies Downieville with a deluge of the mountain nectar. By the use of water brought from Coyoteville in 8-inch pipes, the city of Downieville needs no Fire-Engines. Fountains are placed at different parts of the city, and with hose-companies they can supply all parts and throw an abundance of water over all the buildings. This is the best Water Company we know of. The pressure from above gives a great power.

Langton's Garden is most creditable to his energy and taste. We noticed back of his residence, high up the mountain, a huge mass of lava-looking rock, with all the appearance of having been thrown up by some convulsion of Nature. We hope no more upheavings will occur there to injure this Garden-spot.

A. T. Langton, the brother, has in embryo a Garden and Orchard upon a steep cliff outside of Downieville. This can be made a prosperous spot, if only properly terraced and cared for. This kind of work needs constant attention; it will not do to neglect what is once begun. We hope Mr. Langton will persevere, and make an example for others to make the "rough places smooth."

We visited Hardy's Ranch, across the river. Here were 200 Apple-trees, 150 Peach-trees, and other Fruits, some Vines, and a number of the Mountain-Plum trees, heavy laden with their handsome fruit. This Plum should be cultivated with us; it is really one of the most beautiful and showy kinds. Mr. H. has a beautiful location, but sickness and other circumstances have prevented his giving the attention he desired, and his crop is not what it otherwise would have been, by reason of neglect.

Mr. H. had some grape-vines, but they had not received much attention, and had produced a heavy crop. This place can be made to produce abundantly.

We noticed four hives of bees at this place, and learned that the first swarm appeared 13th May. One week later a second swarm; at that time the bees in the original hive were making thirteen pounds per week. The first swarm gave another swarm in forty days; and the first and second weeks these gave thirteen pounds of honey per week; then fell off to three pounds, then to half a pound, and none since of any account. A snow-storm was experienced on the 20th, and another on the 28th May. Mr. H. we found a hard-working industrious man, from whom we received attention, and eat some splendid apples grown by him. We hope a better health and fortune may await his labors in future.

Our visits to other Gardens will be continued next week.

◆

FRUITFUL VINES.—Anthony Gaffaneschè has in his Vineyard, near Sacramento, the Bee says, a variety of Vines brought from the Ionian Isles, which this year—the first of their bearing—have offered him five crops. The first crop is ripe and excellent; the second nearly full-sized, partridge-colored, and eatable; the third half-grown; the fourth as large as peas; and the fifth in bloom. Having lost the label, he does not know the name, but the Grape is very large, in color blue, and is a fine table and raisin-Grape. He has sent to Europe for a few more of the same sort, and when they arrive will ascertain what they are called.

The World's Fair in London, 1862.

WE have been much surprised at the apathy of our people relative to the value and importance of this Exhibition in London, and the good that might have accrued to our State if a just and proper attention had been given to it at an early period, so that California could have been represented in her Agricultural, Manufacturing, Mechanical, Artistic, and Mineral departments.

Had the subject been received as it ought to have been last winter in the Legislature, and proper committees appointed to canvass the State, and make such arrangements and secure such contributions as California could have shown, then it would have been for the credit of our State that a Deputation should have been appointed to have visited London, and there properly presented and explained the capabilities and vast resources of California. But, alas! the golden opportunity has been lost, and a little reflection will convince any candid mind that *California is altogether* TOO LATE to do herself justice. It is now only about *three months* to the period when entries will be refused—barely time to forward the articles, were they ready—but where are the proud products of our soil? Where the splendid specimens of our manufactures? Where the evidences of the genius of our mechanics? and where the rich specimens of our thousand mineral deposits?

Nothing has as yet been prepared, and it is utterly beyond the power of human means to canvass our State, and collect such specimens as would at all represent California in any of the named branches of our important interests.

We are surprised that men whose names have appeared on the circulars sent forth should not have reflected upon this subject in season to have accomplished something for our State; but it would only bring reproach and disgrace to send a meager show, and such only as could by any possibility be made ready in season.

It would have been our greatest pride to have had the pleasure to have heralded the successful dispatching of valuable contributions to the World's Fair of 1862; but we love California and her interests too well to encourage, by word or deed, any plan that would bring reproach upon our State. We are satisfied from our personal knowledge of the manner in which such Fairs are conducted in Europe that any contributions meager, or hastily prepared, or arriving late would be rejected, and all the trouble and cost would be lost; besides, should there be a small collection prepared hastily, does it require the labor, presence, or expense of *three commissioners* to present these interests? The great State of Ohio sends one delegate; Massachusetts sends one; other mighty States send one, and their manufactures and other products are on their way thither.

We speak from a desire to save our State from the mortification she would receive by a rejection of her contributions, for it should be borne in mind that in the great city of London a Fair is not managed as they are conducted here, or at San Jose, Santa Rosa, or Alameda. Nothing can be admitted that is not of the highest merit, and ready there by the time appointed, so that catalogues, perfect in all their details, shall be made by committees qualified for that duty. A *promise* of *list of goods* to be there *probably*, will not suffice—the goods must be there to be entered on the catalogues, and it requires *months* to prepare these catalogues.

We are fully convinced that it is utterly impossible to have a collection prepared that would result to the credit of the State; and, surely, when so much depends upon being justly represented, it were better not to be represented at all than poorly represented. No one in our State can regret this more than ourselves, but we have been convinced from the outset of this movement that we had not the ability to carry out the plan as proposed. Our Legislature last winter rejected the plan, and individuals are not patriotic enough to go to London on their own cost; therefore it must be a struggle for the "post of honor," and in this struggle the work of collection of materials, the most important part of it, was neglected, for surely no person could feel much interest about it unless he was a *Commissioner*, and his interest could only be fully awakened after his appointment, and now it is too late to make the collection.

As the case now stands, the only way to save our State from defeat, will be to pass the thing by, unless some patriotic spirit volunteer to go, as they do every where else, at their own expense, when appointed.

◆

Lectures before the Mechanics' Institute.

THE excellent course of Lectures now being delivered before the Mechanics' Institute merit a true appreciation of our citizens. Such Lectures accomplish great good; we wish there were Lectures upon scientific subjects *every night in the week*, for there are hundreds and thousands of young men, apprentices, clerks, and business men who have leisure hours in the evenings that are too often thoughtlessly thrown away at our too numerous *imitation* theatres and show places, that would be spent at courses of lectures thus given.

The first Lecture before the Mechanics' Institute was given on Thursday evening of last week, by Rev. T. Starr King, to a large and intelligent audience; his subject, "The Nobleness of the Mechanic Arts," was handled in the speaker's usual masterly style, as was evidenced by repeated outbursts of applause. The Speaker justly rebuked the folly of having the Industrial Interests and Industrial Fairs managed or represented by those who were not of the "Craft," paid a just tribute of praise to the truly educated mechanic, and placing him as a working man with working men in all industrial interest, where they should be, in the front rank.

We would bespeak a more earnest interest for these Lectures by our citizens, and by all our friends from the country who may be in the city when Lectures are delivered. The next Lecture of the course will be delivered on Thursday evening, Oct. 24, by Nathan Porter, Esq.

◆

DON'T forget to look at our Special Advertisements for the sale of Houses, Land, and all kinds of Stock, which we can offer on the most reasonable terms.

STATE SUMMARY.

MORE than 600 convicts are now confined in the State Prison. They are well clothed, and their general health is excellent.

PETER DONAHUE of San Francisco, recently shipped to Mexico $11,000 worth of new machinery, comprising engines, batteries, amalgamators, etc.

TOBACCO seems to grow well in Tulare county. The Visalia Sun says that a five-acre plantation of tobacco near that town cannot be excelled by any Virginia or Kentucky tobacco field.

TEN thousand boxes of fruit have been preserved this year at Sonoma by M. Nathanson, most of them fruits from M. G. Vallejo's orchards. The fruits preserved are apples, pears, peaches, nectarines and grapes.

A panther, or California lion, was killed at Skelton's ranch, Mariposa, last week. The animal had caught a hog, which he was proceeding to dispose of, when he was set upon by a number of dogs, and forced to take to a tree, from whence he was brought to the ground by the unerring rifle. He weighed 110 pounds.

BRIGADIER GENERAL SUMNER having received orders to report himself immediately to head-quarters, will leave on the steamer of the 21st for the East. Col. Wright, now at Los Angeles, will temporarily fill the vacancy, until relieved by Brigadier-General Denver, and will then go East. Companies of the Second Artillery and Sixth Infantry will accompany General Sumner.

THE weather signs are ominous of the approach of the rainy season, but as yet no rain has fallen in this portion of the State. We have all sorts of weather though—some days very warm, then regular "summer" winds and fogs, rendering thick clothing if not fires necessary for comfort. An occasional southerly wind and the dampness of the air signify that the rain will not be long deferred.

SINCE the withdrawal of some 10,000 men from placer gold mines to fill up the demand for labor in the silver mines of Western Utah, and the taking away of some six or seven thousand more for the army, we hear of almost universal prosperity throughout the placer mines, says the Stockton Independent. About Knight's Ferry, Mokelumne Hill, in the Kern river country, on the Calaveras, and in many other places thought to have been long since exhausted, according to the newspaper reports, times were never more lively, or money more abundant than now.

THE furnaces of the Pioneer Quicksilver Company, near the Geysers, were ready to fire up several days since. A large quantity of ore has been mined and delivered at the furnaces. We may, therefore, hope shortly to announce these mines being vigorously and successfully worked. In addition to the rich deposits of mercury found in the rock in that locality, we are also informed that gold in considerable quantity has been discovered. Some of the croppings from the Pioneer Company's claim, upon being assayed, yielded at the rate of $115 of gold to the ton. So says the Sonoma Journal.

THE refining of sulphur has been commenced as a business in Santa Barbara county. Twenty miles southeast of the town of Santa Barbara, and a few miles from the sea shore, there is a vast bed of native sulphur. Sulphur springs and warm springs are numerous in that vicinity, and the county bears strong marks of volcanic action. About half a dozen men are now at work at the mines, and several tuns have been shipped to this city. The sulphur deposits are so abundant and easy of access in this State that it must soon become an important article of production, and will eventually afford employment to many men.

FROM THE EAST, we have any quantity of sensation dispatches and startling rumors, on which not much reliance can be placed. Fremont has left St. Louis, to advance upon the large rebel army lately at Lexington. The rebels are invading Kentucky, and stirring news may soon be expected from that quarter. On the Potamac, not much is known of intended movements, but of course some important ones are expected soon to occur. The naval expeditions are still actively fitting out at New York, and leaving for some Southern destination, and important news for the cause of the Union is soon expected from them.

OF "Diggers" and Potatoes in Sonoma county, the Santa Rosa Democrat, says: The potato crop is ready for gathering, and we notice that the farmers generally are preparing to secure it. The Digger Indian, always a valuable auxiliary in harvest time, when obtainable, finds in the digging of potatoes an exceedingly congenial employment. The farmers, we observe, give them commendable encouragement, as a considerable number of them are thus employed. Potatoes will, in all probability meet with a ready sale, at remunerative prices, as there will be an unprecedented demand for them for export; this—together with the fact that the farmers heeded, to an extent, in the planting season what then looked like a reasonable warning, not to devote as many acres as usual to potatoes—precludes the glutting of the market. The wholesale prices at San Francisco, as reported, are $1 60 to $1 85 per 100 lbs.

THE CAMELS IN WASHOE.—The Enterprise says that the Camels brought to the Territory some time since, are used in packing salt from the mines. They get along well over sandy ground, but cannot travel among rocks.

The Riding School.

PARENTS may expend thousands of dollars upon the education of their daughters; they may have them ever so much accomplished, be familiar with the French, German, and Italian languages may be proficient on the harp, the guitar and the piano—may draw, paint, and embroider—but what would all this avail, if in the pursuit of these *Health* is undermined and gone; and that in an intense pursuit for an intellectual culture, the great foundation of all, the physical health, has been neglected.

An education of the intellectual powers, to the neglect of the physical, will certainly produce the same sad catastrophe as has been witnessed in the *fall of the Occidental Hotel*, which brought ruin and death—it was a fair outside, but the foundation was not sound; the underpinning and the supports were not able to hold up the upper parts of the building, nor was the cement and mortar of that sound character which insured safety; so those who would cultivate the intellectual without the physical, will find that in a brief time, bone, muscle, sinew, and blood yield to the crushing weight of the "upper story"—the brain, and ruin and death ensue.

To avoid this, a sound and well developed body, made so by physical culture, tends to the security of body and mind; true physical culture gives vigor to the understanding, brilliancy to the intellect, and joy to all the senses.

To insure such a result, one of the best means now on hand is the Riding School of Orrick Johnson, Esq., in his new Rotunda on Montgomery street. This establishment is complete in all its arrangements: fine Horses, easy saddles, dresses at hand, an excellent teacher, and safety in all circumstances; and what is of importance to all, *very moderate charges*. Having examined each of the departments of this fine School, we are authorized to say that where three or four lady-friends can join and make a class, a liberal discount will be made from the usual terms, as the teacher can superintend a class as easy as one pupil.

Teachers of Schools, friends of children of age to learn, and Parents, can secure classes of Ten Lessons to a pupil for $7 50.

We were pleased to know that already during the present month, *twenty* lady scholars have been added to the School.

It is of the greatest moment that girls and women should secure health, and no better or more agreeable plan for pleasure or health than to enjoy the benefits of this excellent School.

Our friends from the country should call on Mr. Johnson, and see his excellent School, and take advantage of the opportunity when in the city to improve their riding. What we say of girls and women, should not prevent youths and men from this excellent accomplishment also. Mr. Johnson has done much and deserves much, and is worthy of a liberal patronage.

Benicia Improving.

BENICIA is surely and steadily "going ahead." We spent a few hours by "moonlight" at Benicia the present week, and was much pleased to see the evidences of real permanancy. Several new buildings, some of brick, others, neat cottage residences, have been erected. Some of the old waste lands are now occupied and improved, and the whole appearance of the streets evidence a decided "better state of things."

In the few hours we were there, we counted *six steamers* land passengers at the wharf; a large number of troops arrived, making merry times. Benicia, too, is the Literary Metropolis, or rather the "Academic" Land, having three Colleges, well known to fame; besides, Benicians are a great reading people, as will be seen by the abundance of newspapers and periodicals scattered daily by that pioneer and veteran-dealer, J.W. Sanborn, from whom everybody should buy, on account of his prompt and regular delivery of his papers, and his kindness and obliging manner to all his patrons.

There are some few gardens at Benicia, and room for hundreds more. The fine gardens of Capt. Walsh and of Judge Hastings are "beauty spots" upon the hill sides. D. N. Hastings, Esq., and several other citizens, have well-cultivated grounds.

It is a pleasant trip to Benicia now, for one can go up at evening, at 4 P.M., returning by Stockton steamer at 10 P. M., a pleasant moonlight trip, giving time for a beautiful promenade over the place. The Hotels are now well patronized. The American has been much improved, having 45 rooms, and now has about 90 guests, Capt. Swain, our most excellent harbor-master and his family are resident at this Hotel. This was always the home of Gen. Wool and suite, when here.

We passed the famous windmill of Mr. Tustin going and coming, one of the finest windmills in our State. Our trip up on the Antelope and down on the Bragdon by moonlight, was a very pleasant one, leaving "pleasant memories."

◆

Thanks! Thanks!!

THE Editress would return most grateful thanks to Dr. Strentzel, of Alhambra Valley, for a basket of very liberal dimensions, filled with choicest of fruits; a peep beneath the cover revealed—

> "Where Peaches glow with sunny dye,
> Like maiden's cheeks when blushes vie;
> Where with huge Figs the branches bend,
> Where clusters from the Vine distend."

For the delicious figs, the magnificent purple grapes, and the superb "Bartlett Pears," remarkable in size and season, the pomegrantes, quinces, and other abundant supply, our warmest thanks are tendered. May Dame Nature and the fair Goddess Pomona whisper kind words to the trees of Alhambra, and bid them bear abundantly on every return of the season.

◆

Full-Blood Durham Stock.

Purchasers of very choice Durham Stock will do well to call and see our Lists of Stock for sale. We have some for sale as fine as can be found in this country.

We have a number of Full-Blood Durham and also Devon Stock, of perfect pedigrees, worthy the attention of those who desire to find the very best blood. The pedigrees we can show, and give full particulars.

Also, about twenty fine Grade animals, of superior stock and parentage, to which we invite particular attention.

Good Bread.

"If a man ask Bread, will you give him a Stone?"

PROBABLY every *tenth* loaf of Bread that is eaten by humans is fit to eat, and the balance, in part or wholly, indigestible and injurious, producing Dyspepsia and other degrees of suffering.

The cause of so much bad Bread is not wholly the fault of the Miller or the Baker; a goodly portion of the evil, however, can be laid at the door of the Miller, for a poor cook has a better chance of good Bread with good Flour, than with poor Flour.

We are sometimes amused and sometimes vexed at what we see as we travel over the State. Sometimes we find a Miller that would make a good Blacksmith, and a Baker that would make a good Brickmaker, the same as we find Committee-men at Fairs in *their* qualifications, not knowing the first letters of the alphabet of the business they have in hand.

To have good Bread—first-rate Bread: *good Wheat*, well ground, rightly bolted, then placed in the hands of those who understand mixing, kneading, and baking. Then we may expect Bread fit to eat.

It is now one of the good signs of the times that we see the Millers purchasing the *highest quality* of Wheat. This looks well. From such purchasers and such Mills we may look for good Flour; and we think it would be a "feather in the caps" of those Millers who purchase the *best Wheat*, if they should have their purchases made public. By such a step the public would know where to find the *best Flour*. And every Miller that buys poor, smutty Wheat, should be known, also. This would settle the question with the public, *where* the pure Flour was most likely to be found.

In order to try some experiments for ourselves, we secured the sample-bags of the two Mills that contended for the premium at the Alameda county Fair—the Oakland Mills, at Oakland, Blanchard & Plummer, proprietors, and the Clinton Mills, at Brooklyn, L. D. Bostwick & Co., proprietors. These we shall have tried most thoroughly and carefully, and the result shall be given in our columns. We intend, as we have before said, to make several scientific experiments with Flour of the different Mills, and as we have no "ax to grind," we shall experiment for the good of those who desire to know where they can buy Flour that will make "good Bread."

◆

Capturing the Pacific Steamers.

THERE has been more or less said about the privateers of the Jeff Davis Confederacy capturing the Pacific steamers, with their "treasures," from here to New York. It is to be hoped that if they intend doing so, they will make their first effort on the Orizaba, that leaves here on Monday next. This steamer will take one million of dollars, and as Gen. Sumner and Staff, and a good bevy of true and brave officers of our Army are on board, and *ten thousand* good muskets extra, the Orizaba can, under the command of Gen. Sumner, give the *pirates* a warm reception. We really hope that if an attack was ever seriously intended, this steamer may be the one. We should glory in knowing that the California steamer had entered the port of New York, bearing as trophies a *pirate bark* and *pirate crew!* It might, however, happen that the voice of the commander and passengers would order the pirates "aloft," to dance at the end of the "yard-arm," soon after their capture; thus showing the opinions held of traitors by those who hail from the Golden State.

◆

A GOOD SUGGESTION.—The Stockton Independent suggests that next year, Fair Managers shall offer premiums for the best hogshead of Tobacco, the best bale of Cotton, and the best barrel of Sugar, of California product The premiums should be large enough to stimulate competition.

This is what we have urged many a time and oft, and we are glad to have assistance in the good work. This suggestion is also made in good time, when there is ample opportunity for its consideration by our incoming Legislators, who will find it for the good of the State to strengthen the hands of our "Fair Managers."

American Ewes Wanted.

One Thousand or Fifteen Hundred fine American Ewes wanted immediately. If graded with fine-wooled Sheep, so much the better. Inquire of Editor of Farmer.

Another Herd of Noble Stock for Sale.

We can offer to those who want the best kind of Blood-Stock, the following:

A Full-Blood Devon Bull; pedigree perfect.

Several Calves, Full-Blood, and cross of same.

Several extra fine Dairy Cows; very superior.

A noble Draft Stallion, sired by a high-blood English Draft Stallion, from a Vermont Morgan Mare.

Several Mares and Colts of high grades.

All the above will be sold at a bargain. Inquire of Editor of Farmer. 5

Lad Wanted.

A young lad of active habits, one who is a good scholar, can write well, good at figures, and exemplary in all his habits, and can bring the best of recommendations, can hear of a permanent situation by applying at this Office, in the afternoon *only*, from 4 to 5 o'clock. 5

Leicester and Cotswold Rams.

Six very splendid Leicester and Cotswold Rams Full-Blood, and in very superior order, three of each, for sale at a bargain. Inquire of Editor of Farmer.

LARGE WASHING-MACHINE.

A LARGE WASHING-MACHINE, WITH HEATER and Boiler attached, one of the "New Patents," suitable for a large Hotel or Boarding-House, can be had at a bargain, by calling at this Office, where it can be seen.

LIZZIE WILEY WARREN, M D.....EDITRESS.

WHAT I LOVE YOU FOR.

TO D. H——.

I love you not because your voice
Is musical and sweet;
I love you not because your brows
Like heaven's arches meet;
I love you not because your lips
Are like the scented rose,
Which always in the morn of youth
With peerless beauty glows.

I love you not because you dwell
Within a princely home,
The walls of which are all bedecked
With antiquities of Rome!
Nor do I love you most when most
With gems you are arrayed,
For I worship not the things
Which fleeting time can fade.

I love you not because your neck
Is white as driven snow;
I love you not because your hair
So gracefully does flow.
For this I love you in my soul—
Your heart is true and kind;
And I—I love you solely for
The riches of your mind.

E. M. T.

◆

Disobedience to Parents the Origin of Secession.

Were we to look for the *first cause* of all the calamities which must result from this lamentable civil war, this rebellion in our own National household, we should find that it began originally in the Family Circle—in Disobedience to Parents.

The first origin of what is now termed Secession was beheld in the "Prodigal Son." Disliking Parental Control and Home Government, he became a "Seceder," and the *results* of his secession will prove true in some particulars in the present instance. Poverty and Want, Famine and Pestilence, follow in the train of War.

Disobedience to Parents ends oftentimes in open rebellion; and this is Secession. There can be no question that in all communities, even to States and Nations, where there is little or no attention paid to the government of children, there will always be more or less rebellion, secession, and treason, against the powers that be, whether it be the family circle, the little community or neighborhood, or the State. Take the history of all rioters, Sabbath-breakers, and peace-disturbers of all kinds, they are never men who were exemplary as *sons*. They are those who set at naught the laws of the Parent at home *first*, next those of the neighborhood, then the State. As proof of this, read the records of criminals in our jails and prisons, and the dying confessions of criminals who expiate their crimes on the gallows. They confess Disobedience to Parents as their *first crime*. And were we to scrutinize the early career of those who are now leading the Rebels, those who are *prime-movers* in this unholy, fratricidal, and treasonable rebellion against the best Government on earth, we should not find one whose early life was that of a quiet, loving, docile, and obedient son!

Sacred and Profane History in all its records is full of the very proofs of what we assert, that Disobedience to Parental Control is the seed of Rebellion, and the real spirit and essence of Secession. To the present generation of mothers, then, we must appeal, as the only hope of crushing this Hydra-headed monster by infusing into this and all later generations a better and wiser Home Government, so that all children, becoming obedient at home, will be sure to be good citizens, obedient to the Laws and Government under which they live. For it surely depends upon the Mothers in a great degree whether their sons shall be Statesmen and Patriots, or Rebels and Traitors.

◆

"Consider the Lilies of the Field."

Our Savior was sitting on the side of one of the hills near the western shore of the Sea of Galilee. These hills were on the southern border of a broad and fertile meadow, stretching inland for more than a mile. The red and purple lilies were well known there, as Pliny has told us, and they readily suggested, by their colors, the robes which in those days were a part of the insignia of monarchs; whence the fitness of the allusion to the apparel of "Solomon in all his glory." There could have been no flower more appropriately "considered," none more forcibly associated with Solomon and the times of his "glory." It was at once a royal and a sacred flower. It has been wrought upon the molten sea, and carved upon the two noted pillars of the temple porch. It was the favorite in the flower imagery of the Song of Solomon, and how these lilies were blooming upon the plains and fields before them. Their grace and beauty were the more remarkable that they grew so freely. They sprang up upon every field, shedding their fragrance upon every passing breeze, decorating the thorn as well as the olive, indebted to no one's care but God's, to his sunshine and his rains alone, for their existence and their beauty. They had survived the rending apart of the kingdom. They had remained upon the fields, and had been "clothed" and renewed in their weakness, while strong ones had been carried into captivity, or scourged by sword and by pestilence. "Consider the lilies of the fields." In all this, every lily had its duty to perform—its place to fill in the cycles of the Creator's great and various purposes. Every lily-stalk was gifted with its minute channels up which it drew the life-sap God had provided—it opened its petals in due season, and lavishly gave to the passing breeze its grateful incense of fragrance, or it smiled in its beauty under the warm rays of a spring-time sun. There it stood, quietly working out its duty and its history—"toiling not nor spinning"—a never-failing witness to God's condescending care and mysterious providence—a picture of a sublime truth enfolded in its petal, that God's eternal power may be felt and known in a leaf as in a world, and that the footprints of God's loving presence may be very near us, while to find them we are wandering far away.—[Osborn.

◆

The Young Wife.—The marriage of middle age is companionship; the second marriage of maturity, perhaps the reparation of a mistake, perhaps the pallid transcript of a buried joy; but the marriage of the loving young is by the direct blessing of God, and is the realization of the complete ideal of a lovely human life. Let those who have found that pearl hold it fast and keep it safe. Within the doors where love dwells no evil thing should enter; and the loving bride who would be the happy wife must specially guard against her own impatience and despair when the lover is merging into the husband, the flatterer into the friend.

A Modern Arab Feast.

"Hadji," the Eastern correspondent of the Boston Traveler, writes this account of a feast among the Arabs:

It is not to be supposed that the readers of the Traveler are altogether of the sterner sex; I will, therefore, place before its lady readers a few of the dishes and some of the chit-chat of an Arab feast I lately attended.

As my sister and myself were passing through the bazaars the other day, we were accosted by the venerable head of a large household, and almost by force, taken into his house. He did not tell us that a feast was going on, but as soon as we entered the court we knew it by the number of slippers, shoes, and clogs, before the doors of the different chambers. Our crinolined selves with difficulty found room to sit down on entering the principal apartment, and played sad havoc among an army of narghilehes standing before the guests. We were immediately the subject of conversation, carried on in so low a tone that they imagined we could not hear them, and after a while they were so bold as to ask me why I wore a veil which did not hide my face? Then came the coffee, and sherbet, and sweetmeats, the latter in great variety, and the lady who presided was not satisfied until I had tasted of each. And now, having accomplished this ordeal, I examined the gay costume of the ladies and their countenances, too, wondering how they could be happy without books to read, and passing away their existence listening to the soft bubbling of their narghilehes. I can't say their costumes were pretty, for the immense coarse Arab pins confining bunches of flowers on the top and sides of their heads were as conspicuous as the flowers themselves; some of their jackets of dark cloth were sewed with white thread, and the neatness of their appearance was rather interfered with from the fact that their under-skirts were much too short for their outer robes of thinned flowered muslin. Ah! fair Occidental reader, your notions of taste would indeed receive a shock could you behold some of your Oriental sisters, in whose dress there is but too evident an effort to copy Frank style, and as their effort is never successful, their appearance is often ludicrous. I have actually seen a princess from Mount Lebanon, who, after remaining in Beirut awhile, adopted hoops, and this lady called on me once with crinoline in a most dilapidated state, which, instead of giving her robe an expansive and round appearance, the broken steel caused it to project here and there in points and angles. Her stays were also a failure, and the poor lady had made up her robe, from Paris, with imitation-flounces the wrong way. Her head was covered with pearls and diamonds, but the effect of these was spoiled by an admixture of faded French flowers.

As this will serve as a description of the dress of most of the ladies at the feast, I will now turn to the baby. What baby? Why, the little blushing baby, a month old, up there in the corner of the room, in honor of whose birth the feast was given, this being one of the customs of the country. There the little martyr lay in a narrow cradle of fantastic construction, on a hard little pink cushion, its head on a hard frilled pillow—in short, everything done to make it uncomfortable. I say "martyr," because it could move no part of its body but its head, for bands of cloth tightly strained it to the cradle, being wound firmly over the child and around the cradle.

We were after a while summoned to the upper part of the court, where a table was spread with, first, pounded boiled rice sweetened, and a variety of nuts spread over it, green almonds, pistachio-nuts, snobse, nuts called the "berry of the friend," and a transparent pastry twisted into different shapes and colored pink. Afterwards I saw the process of cooking them, which was by pouring the water-like sheets of pastry into boiling zeritch, the latter being cheaper than olive-oil. As it is impossible to give Arab dishes a name, or discover of what they are made, I shall not enter upon the task, but only add that it required no little amiability on the part of the guests to submit to one ceremony considered indispensable by the lady of the house. Souse. So determined was she that each guest should do justice to the fare, that she held in her hands a large wooden spoon, with which she would herself feed each one who did not with sufficient industry diminish the contents of the bowl placed before her. The hospitable lady did not once take a seat, but stood on duty the whole time, and had mercy on none; for although the most vehement protestations were made against her persecutions, with the cry that enough had been eaten, desist she would not, but continued the use of her instrument of cruelty with the most unmerciful persistency, until the countenance of each indicated the greatest distress, and showed that the inner man was rebeling against this unnatural mode of procedure. Unable to endure any longer the persecutions of the wooden spoon, we left much sooner than our Arab friends, and were not sorry when we found ourselves at home.

◆

The fruit struck to the earth before its ripeness, the glowing life and goodly purpose dissolved away in sudden death; the words half spoken, choked upon the lips with clay forever, or, stranger than all, the whole majesty of humanity raised to its fullness at a given moment, centered in one man, and all this perfected blessing permitted to be refused, perverted, crushed, cast aside by those who need it most, the city which is not set on a hill, the candle that giveth light to none that are in the house—these are the heaviest mysteries of this strange world, and it seems to me those which mark its course the most.

Instead of teaching daughters how to squander fortunes, mothers should instruct them in habits of economy, frugality, and self-discipline; it should be their chief study to impress upon their children's minds that the only real happiness of life is constituted by the cultivation of the home affections. Great mansions, many horses, and splendid equipages are not necessary for that.

Show your Ears, Ladies.—An English hairdresser denounces the custom of ladies covering their ears with their hair. He says it is productive of diseases of the ear, preventing the circulation of air essential to its healthy action.

Cheerfulness is the ever-singing cricket of the soul's hearthstone.

A woman is twenty-seven at seventeen; and just twenty-nine when she is forty.

The prettiest bonnet in the world is the cause of infinite uncharitableness. There is a wasp in every rose of it.

An oath from a womans lips is unnatural and incredible. We would as soon expect a bullet from a rosebud.

"You are a fool," said a coxcomb to a clown. "You partly say true," said the clown. "If I hain't a fool, I be very near one."

To Whiten Linen.—Stains occasioned by fruit, iron rust, and similar causes, may be removed by applying to the parts injured a weak solution of the chloride of lime—the cloth having been previously well washed—or of soda, oxalic acid or salts of lemon, in warm water. The parts subjected to this operation should be subsequently well rinsed in soft, clear, warm water, without soap, and be immediately dried in the sun.

CIRCULATION OF THE FARMER ABROAD.

We have often urged the friends of our State, to aid us in the Circulation of our Journal in the Old States, and Europe, so that we might be more instrumental of good, and help to increase the population of California, and thus make the State more prosperous.

We have often published strong Letters, from various States, proving the good our Journal is doing in making our State truly known in all her vast resources. We now ask of all who feel a desire to have our State double her population, to this work.

We append a Proposition, and hope the Friends of this Journal and the cause it pleads, and all who wish to carry out the desires expressed by our excellent Citizen, in Paris, will coöperate with us. We will make liberal terms to all Societies for Emigration, or Clubs, and Commercial Houses.

With a desire to make the Resources of California known abroad as widely as possible, we feel confident that if we could Circulate the California Farmer in all the Older States, it would be the means of showing the great Masses of the People, that California is the place for them to settle in; and we believe we could greatly benefit all the interests of our State, by Circulating our Journal extensively abroad,

With such views, we ask the coöperation of our Merchants, and Business Men, and all who desire to make California truly and widely known, to aid us in the Circulation of the Farmer.

Wishing to place the Farmer at so low a price, as to enable all to send it to their friends, we offer the following Terms for all Clubs to send to the Old States, and in Europe:

For eight Copies	$25
" ten "	30
(Each Copy to be mailed separately, if so desired).	
For three Copies	10
" six "	20
" single Copy	4

◆

MRS. LIZZIE W. WARREN, M.D.,

ELECTRICIAN AND HYDROPATHIST,

Corner Mason and Pacific streets.....San Francisco.

Mrs. Warren proposes to teach her patrons the means of attaining and preserving health, rather than the usual practice of physicians, of *doctoring the sick*. Believing in the old adage: "An ounce of prevention is worth a pound of cure," and also that the remedies used to eradicate disease are more deleterious to the human organization than the diseases themselves; therefore she dispenses with the use of drugs, relying on the curative power within the living organism and the supplying such conditions as the natural remedial agents afford The natural remedies: Air, Diet, Exercise, Water and Electricity. The beneficial effects of water, properly used, are now generally understood, but the remedial effects of electricity are comparatively unknown. By the knowledge and application of a certain law, which recognizes hitherto unknown relations of the positive and negative forces to the functions of life, electricians are enabled to make a beneficial application to disturbed physical equilibrium, thereby rendering electricity the most powerful therapeutic agent; the most potent and all-pervading element which can be used, as it approximates to the principle of life, apparently identical with vitality. Its therapeutic uses are *reasonable* and *wise*, and may be relied upon whenever a cure or improvement is possible.

Mrs. Warren will be pleased to make arrangements by the year, with families requiring a better knowledge of the laws of health and the means of its preservation, as well as medical attendance and advice.

Having devoted many years in study and preparation for this profession, and having received ample testimonials from the College where she graduated, feels confident she will be able to prove her ability to attend to the claims of WOMEN and CHILDREN. To this practice she will give her *Exclusive Attention*.

As an ACCOUCHEUSE she claims to be eminently successful, and can produce ample testimonials of success in many difficult cases.

Those wishing to avail themselves of Mrs. Warren's advice will find her at her residence, on the south-east corner of Mason and Pacific streets.

☞ Arrangements have been made by which a few Patienst can be accommodated with Rooms and Board

Pulu! The Wonderful!

Another cargo still, is just received
At SCHREIBER'S Depot! 't is believed
There is a charm about the Pulu crop,
It comes, and goes,—the sale will never stop;
For everybody wants a PULU BED,
So easy to the body, so cooling to the head;
Another charm, too, in the PULU found—
Where PULU is, no Insects come around.

PULU! the famous PULU, now is known
As *BEST FOR BEDS*, and it has grown
So much in favor that the People go
Always to SCHREIBER'S great PULU Depot;
'Twas Schreiber had the first 'twas ever sold,
And then it almost cost its weight in gold;
But now, his ships, they come so thick and fast,
It sells so quick, a cargo does not last
A month or more, and then, it is so low
That all who want good Beds should surely go
Direct to SCHREIBER'S STORE on Sansome street,
There they will find a stock complete,
ALL KINDS OF BEDDING, everything that's wanted,
There too, the best accommodation granted.

Now don't forget the Number, 'tis 406;
Another fact upon your memory fix—
That Schreiber's is THE DEPOT OF PULU,
And HE the PIONEER IMPORTER TOO;
The man who first this luxury gave,
Then surely he *the best of trade should have*.

Now go and make your purchases complete,
At SCHREIBER'S, 406, on Sansome street. 1

PRICE REDUCED!

PATENT

HYDRAULIC HOSE

MANUFACTORY.

HOSE

SEWED WITH FOUR SEAMS,

For 15 Cents per Yard,

GUARANTEED TO STAND THE PRESSURE OF ONE HUNDRED FEET FALL AND LAST AS LONG AS THE DUCK, WITHOUT RIPPING.

EDUCATIONAL.

STOCKTON Female Seminary.

The EIGHTH SESSION OF THIS INSTITUTION UNDER the charge of Dr. CYRUS COLLINS and Lady, assisted by competent Teachers, will commence on

Wednesday, September 25, 1861,

And continue FIVE MONTHS.

—TERMS:—

For Board and Tuition, in common English Branches, per session	$150
For Tuition in Music, per session	50
For Tuition in Painting or Drawing	25
For Tuition in Ancient or Modern Languages, each	25
Washing per dozen	$1 50
Payable Quarterly in advance.	
For Tuition and Board per annum, in advance	250

☞ Pupils received at any time, and charged until the end of the session.

COURSE OF STUDY:

The first aim of this Institution is thoroughness; and although any plan proposed can only be disciplinary, yet we have chosen that course which will be the most practical, involving those sciences most available in common life. Beginning with fundamental principles, the student is carried by natural and easy graduations, through a course of study, calculated to strengthen and invigorate the mind, and prepare it for healthful action.

Our course of study comprises Two Departments, a Preparatory of two, and an Academic of three years.

THE STUDIES OF THE PREPARATORY COURSE.

FIRST YEAR.

Reading, Writing, Orthography, Arithmetic (Thompson's Rudiments), Primary Geography, Grammar, and Composition.

SECOND YEAR.

Rhetorical Reading, Arithmetic, Book-Keeping, Geography, History, Grammar, Penmanship, and Composition.

THE STUDIES OF THE ACADEMIC COURSE.

FIRST YEAR.

Algebra, Geometry, Natural Philosophy, Physiology, Rhetoric, Physical Geography, and Composition.

SECOND YEAR.

Trigonometry, Astronomy, Natural History, Botany, Logic, Intellectual Philosophy, and Composition.

THIRD YEAR.

Political Economy, Moral Philosophy, Evidences of Christianity, Belles-Lettres, and Composition.

The Ancient and Modern Languages, Music (Instrumental and Vocal), Drawing, Painting, and Ornamental Needlework, optionary through the whole course.

Pupils can omit, with the consent of parents or guardians, any of the above studies, but none will be entitled to the Diploma of Graduation who have not completed the whole course.

All young Ladies from abroad will be expected to board with the Principal.

Classical School FOR BOYS.

We have established a Department for Boys. The course of study the same as in the Female Department. Particular attention paid to those preparing for College.

☞ Terms the same as in the Female Department.

Dr. CYRUS COLLINS, A.B., Principal.

7

SANTA CLARA COLLEGE.

The TENTH ANNUAL SESSION OF THIS INstitution will commence on MONDAY, August 20th. The plan of instruction embraces two regular Courses—the Classical and the Commercial, besides a Preparatory Department.

TERMS.

Entrance, to be paid but once	$ 15
Board and Tuition per session	335
Washing and mending of articles washed, per session	45
Stationery, per session	10
Medical attendance and medicines (unless it be preferred to pay the bill in case of sickness), per session	10
Vacations, if spent at the College	35

N. B.—When there are more than two brothers, each one over two pays only half price.

Use of Instruments in Chemistry and Natural Philosophy, Vocal Music, Piano, Violin, and Drawing, form extra charges. School Books are furnished at store prices. No extra charge for any of the languages. Payments to be made half a session in advance.

For further information apply to the President of Santa Clara College, Santa Clara, Cal., or to Rev. A. Maraschi, S. J., St. Ignatius' Church, Market street, between Fourth and Fifth. San Francisco. 2

HUNTER'S GRAIN SEPARATOR!

The GRAIN-GROWERS OF THE PACIFIC COAST have now an opportunity never before offered them of cleaning their Wheat in the most perfect manner.

The undersigned would offer them his

NEW GRAIN SEPARATOR,

Patented April 9th, 1861,

As one of the best Implements ever invented. Mustard, Radish, Chess, Barley, and all other impurities, are separated entirely, leaving the Wheat in a pure and clean condition.

The importance of this Implement can be seen at once, as the

INCREASED VALUE

OF

Well-Cleaned Wheat

Will be more than sufficient to every Grain-Grower of any amount

TO PAY FOR A MACHINE.

The Patentee will visit all the principal cities and Farming districts to appoint agents at each place, and exhibit one of his Machines.

He feels confident that every Grain-Grower

WILL BE CONVINCED OF THEIR VALUE

The moment an opportunity is presented to see them work.

A. HUNTER,
Inventor and Patentee.

LIE UP NEARER, BROTHER.

[THE New England Diadem gives its readers the following beautiful stanzas, which were suggested by hearing read an extract of a letter from Capt. Chase, giving an account of the sickness and death of a brother-in-law, Mr. Brown Owen, who died on his passage to California.]

LIE up nearer, brother, nearer,
For my limbs are growing cold,
And thy presence seemeth dearer,
When thy arms around me fold.
I am dying, brother, dying;
Soon you'll miss me in your berth,
For my form will soon be lying
'Neath the ocean's briny surf.

Hearken to me, brother, hearken,
I have something I would say,
Ere the vail my vision darken,
And I go from hence away.
I am going, surely going,
But my hope in God is strong,
I am willing, brother, knowing
That He doing nothing wrong.

Tell my father when you greet him,
That in death I prayed for him;
Prayed that I one day may meet him
In a world that's free from sin.
Tell my mother (God assist her,
Now that she is growing old),
Tell, her child would glad have kissed her,
When his lips grew pale and cold.

Listen, brother, catch each whisper,
'Tis my wife I'd speak of now;
Tell, oh, tell her, how I missed her,
When the fever burnt my brow;
Tell her, brother (closely listen,
Don't forget a single word),
That in death my eyes did glisten,
With the tears her memory stirred.

Tell her she must kiss my children,
Like the kiss I last impressed;
Hold them, as when last I held them,
Folded closely to my breast;
Give them early to their Maker,
Putting all her trust in God,
And He never will forsake her,
For He said so in His Word.

Oh, my children! Heaven bless them!
They were all my life to me;
Would I could once more caress them,
Ere I sink beneath the sea!
'Twas for them I crossed the ocean,
What my hopes were I'll not tell,
But I've gained an orphan's portion—
Yet He doeth all things well.

Tell my sisters I remember
Every kindly parting word,
And my heart has been kept tender,
As the thoughts their mem'ry stirred;
Tell them I ne'er reached the haven
Where I sought the "precious dust,"
But I've gained a port called Heaven,
Where the gold will never rust.

Urge them to secure an entrance,
For they'll find their brother there;
Faith in Jesus, and repentance
Will secure for each a share—
Hark! I hear my Savior speaking!
'Tis; I know His voice so well.
When I'm gone, oh! don't be weeping—
Brother, here's my LAST FAREWELL.

◆

Mountain Homes.

THE following account of what has been done in improving a rural home up among the tall timber and abrupt hills that surround Grass Valley, is given by the Grass Valley Journal:

A few days since we visited the fruit garden of Marshall, at Grass Valley. It is proper that we should make a notice of what we saw, for the encouragement of others to go and do as Marshall has done.

Three years ago he went upon one of the dryest hills that overlook Grass Valley, and commenced the foundation of a home. The ground was overgrown with young pines, as all the hills about Grass Valley are. It was full of shafts sunk by miners. The timber had been cut down and the best part hauled away for use, leaving the tops and the stumps on the ground. The soil was rocky. Marshall filled up the pits, cleared up the land, removed the rocks, and fenced and planted twenty acres.

We saw tuns of grapes of numerous varieties just reaching perfection; apples, pears, peaches, figs, and almost every sort of fruit, and all of excellent quality. The varieties of the White Muscat flourish on the grounds of Mr. Marshall without protection from the cold in winter. He has twenty-five varieties of grapes, all seeming to do well. A portion of the crop will be made into wine.

When the experiment of cultivating the soil of the hill was about to be made, many laughed at the enterprise and predicted a failure. Let them look at the vines loaded with grapes in the garden of Mr. Marshall, and learn a lesson. He has demonstrated that every red hill in this region is more valuable for cultivation than the best soil has been for gold, and that the great business of California in the future will be wine-growing, as it has been gold-digging in the past, and if any one is so lucky as to test the Muscats of Marshal, he will rejoice at the change, and say, God speed the day.

What is so happily described above, remarks the Stockton Independent, is becoming quite a common sight all through the mountain counties of this State. We could mention over thirty such farms in the county of Calaveras, nearly all of which have been created (if the expression be allowable) from nothing. Places, where four years ago the horrid scars which the early miner had left upon the face of nature, made the primitive desolation doubly repulsive, but now green with the plants, trees, and vines, of every clime, affording the most healthful and profitable homes to families, each year growing more and more attached to the mountains which yield them a living. But for these, the mountain counties would have long since been almost entirely abandoned by the American residents.

◆

Pay Us Through the Mail.

We are often inquired of by our subscribers, "How can we send our dues?" We answer: Send by Mail. Money is always safe in the Mail. We have agents in many important places, but distant subscribers can always send by Mail safely.

Information of the Wool Markets.

We have now completed an extensive correspondence with all the various Wool Markets of importance in the world, and can keep Wool-Growers well posted upon these matters. To these reports we refer our readers; they will find them important.

Four Hundred and Fifty Acres Rich Land.

A valuable tract of rich Land, of the extent named, in a beautiful location. Will be sold a bargain if applied for soon. Title perfect. Inquire of Editor of the Farmer. 14

A Grand Opportunity for a Home.

For sale in one of the Interior Mountain Towns, a good House and Garden, with outbuildings, including a Smoke-House in successful use, being capable of realizing a good income.

The buildings are good. The Orchard is in full bearing, with Peaches, Plums, Apples, Grapes, etc., and small Fruits. There are also on the estate several small tenements, which bring in an income of about $50 a month. The Fruit sold from the Garden, together with the certain income, will pay in two years or less the price now required for the estate. It is offered low for an immediate Cash sale, as the owner desires to locate in a different part of the State, where he has other property which requires his attention.

For particulars inquire of Editor of Farmer. 24

Electricity as a Remedial Agent.

DISEASES CURED

Without the Use of Medicines,

AT THE

Electropathic Institute,

625 Washington street,

Between Montgomery and Kearny streets,

SAN FRANCISCO.

When it was promulgated that disease could be entirely eradicated from the system without the use of poisonous drugs, the unthinking, or those who do not look deeply into cause and effect, scouted the assertion as chimerical, and adduced strong evidence of its utter impossibility. Long articles, replete with arguments, seemingly unanswerable, of the position that only through the digestive system could the blood be purged of the accumulation of the poisons which constitute the disease. A great cry went up from those interested in the continued supremacy of the old system of one poison to cure another; that electricity, as a curative agent, had been tried and proved to be of but little if any value—thinking, poor souls, that the world of science stood at the same point it occupied one hundred years ago. They were wrong, while those old fogies were content if they cured one in every five patients, there were those who were diving deep into the science of electricity, and finally it was discovered that the trouble was in the instruments used. From that time to the present, improvements have rapidly advanced, until every disease in the catalogue of human ills has been either cured altogether, or checked so as to enable the sufferer to seek those changes of climate which ultimately perform a perfect cure. Diseases hitherto considered incurable, have been cured, and those diseases which took months, and even years, to cure by medical process, are now cured in a few weeks; and all by the improved instruments of DR. J. H. JOSSELYN, Resident Physician at the Electropathic Institute, New No. 645 Washington street, between Kearny and Montgomery streets, San Francisco. It is astonishing to see the number of patients and diversity of diseases that have been relieved by the Electropathic system. From early morn till late at night his instrument is engaged, imparting health and strength to all who have the good fortune to obtain his services. The charges, too, are not as heavy as by the old system, besides there is no medicine to pay for, let alone the unpleasantness of swallowing the nauseous stuff. During the time that the Institute has been in operation, there has been more benefit to the human family derived from the system than from all other systems combined during the same period. Among the most troublesome diseases to which Californians have been exposed, is Rheumatism; none have given the honorable practitioner more trouble to relieve, and none have pretended to cure (if we except known empirics) permanently. But this subtle disease gives way before the Electropathic system in a very short time, enabling the sufferer to go about his business without pain or the fear and dread of relapse. And so with most other diseases, considered incurable. We mention Rheumatism because of its abundance, but we could enumerate many other diseases full as troublesome, and some far more fatal in their results.

To the nervous, the Directors would say, that you can be entirely relieved from those dreadful feelings of evil-foreboding, and your system strengthened so that nothing can disturb the current of your life. Several cases of insanity, arising from a disarrangement of the nervous system, have been permanently cured by this system. The Directors, in stating these things, do so in the hope that it may be the means of awakening the public who have not studied into such things, to a sense of their duties, and if possible, prevent those who have the care of the rising generation from poisoning their young charges with vile drugs, thereby entailing upon them troubles which in after life may cause them to curse their origin.

It is unnecessary to enumerate all the diseases in the catalogue, for that would be occupying space to no purpose. Every disease has been under treatment by this system, and there are none but have received benefit either in this State or at the East.

There are at present but few instruments in the world that can be depended upon. A good instrument costs very heavy, and must be manufactured to order, and there are very few who are able to manufacture them, for want of knowledge of the healing principle. The only instrument to be depended upon in this State is at the Electropathic Institute.

Connected with this system are the renowned Electro-Magnetic Baths. Here let us caution the public against the numerous impostors in the bathing line. The pure magnetic baths is one of the most effective aids in the removal of disease from the system, but if given at the wrong time, are likely to aggravate trouble, and cases have been known where the patient has been injured so badly as to require months to remove the injury. Persons in quest of this bath should be careful and not apply to a place where there is no physician to judge of the necessity of the remedy. In fact, the only place where they can be obtained in all their purity is at the Institute, where the Resident Physician will always be happy to examine and see that they are not unseasonably administered, and if not necessary, advise the requisite remedy.

Below will be found a list of the cases which have been successfully treated by the Electropathic system, at the Institute, during the first year of its establishment. The record is good, and challenges the admiration of the world:

Name of Disease.	*No.*
Rheumatism	421
Neuralgia	368
Dyspepsia	297
General and Sexual Debility	240
Asthma	220
Bronchial Affections	187
Fever and Ague	183
Female Irregularities	161
Mercurial Affections	130
Diseases of the Eye	85
Paralysis	78
Scrofula (long standing)	30
Catarrh of the Lungs	27
Catarrh of the Head	21
Liver Complaints	20
Deafness	18
Panama Fever	10
Consumption	7
All others, among which is almost every nameable disease	123
Total	2626

The above shows what can be accomplished by combined energy when it has truth and science upon its side. The Electropathic Institute was started amid the cry of interested charlatans, who used all the power their riches and the prejudices of the public gave them, to prevent its success. It has risen to a position that is beyond their baffled malice, and will be honored in the scientific world when they are forgotten, or only remembered for their crimes and impositions. A thinking public are fast consigning them to that oblivion their works merit.

Persons seeking remedial assistance may wish to know something of the system by which diseases are so rapidly removed from the body. Electricity is a fluid of so subtle a nature that it can only bestudied by its results. We know by its action it forces everything of a foreign nature in the body from the center to the surface by its energy; while the vitality which it imparts fills up the vacuum, preventing thereby the subtle poisons from returning to the hitherto diseased parts; and here let it be understood that the Bath should never be administered until the disease has been forced to the surface, except, perhaps, in cases of cold where fever has not set in. Its action upon Mercurial Diseases is peculiar. The best authorities are of the opinion that it liquifies the mercury, which, when in a liquid state, by its own specific gravity, forces itself out of the body. This result has been arrived at by testing the water after an Electro-Magnetic Bath. After such tests have been found in the water, the patient is not troubled any more with those pains peculiar with the diseases. In all other cases it forces to the surface and is washed off by the Bath. The whole system, in its application, is a LUXURY, there being no pain or inconvenience attending upon it, but the reverse is the case, being one continued pleasure. Try it, you that are suffering either from disease or the injudicious use of poisonous drugs, and you will be made to rejoice that you have had the courage to strike out from the beaten path.

Below are a few certificates from patients that have been cured at the Institute:

CERTIFICATES OF CURES:

SAN FRANCISCO, April 18th, 1861.

This is to certify that I have been under the treatment of Dr. Josselyn, at the Electropathic Institute, and that he has cured me. My disease was mercurial, accompanied by chills. I applied to him on the 11th day of this month. I recommend all afflicted to employ him. He has cured me without medicine, by the use of his Electropathic Instrument.

JOHN CALLAGHAN.

State of California, City and County of San Francisco, ss.

Subscribed and sworn to before me, this 18th day of April, A. D., 1860. P. BARRY, Notary Public.

HORNITOS, Nov. 1st, 1860.

Well, Doctor, I am at home, and have been to work in the water for several days, and there is no return of the Rheumatism, as I call it, and mercurial pains, as you stated them to be. I feel as gay as a lark, no pain or bad feelings, no stiffness, but perfectly well, and all done by you in three weeks, without one drop of medicine. You had hard work to make me believe before you commenced that you could cure me, but now I find it very easy to believe. Although my friends look rather incredulous, but they cannot doubt my sober earnestness. Doctor, you have my thanks, and I will benefit you all I can by spreading your fame up in these parts.

Respectfully yours, GEO. PERKINSON, Jr.

To J. H. Josselyn, M. D., Resident Physician at the Electropathic Institute.

CAUTION.

The public are informed that I cannot be seen at any other place in the State except at the Electropathic Institute (179, old No.) 645 new No., Washington street, south side, a few doors below Kearny. The reason of this caution is, certain Quacks have placed my name upon their doors, and have deceived strangers who wished my services.

19 J. H. JOSSELYN, M. D.

THE VERMONT

SEED-SOWER AND REVOLVING HARROW!

FARMERS, ATTENTION!

With this machine, any person that can manage a pair of horses, can perform the operation of

Seeding and Harrowing at the same Time.

It is adapted to the sowing of ALL KINDS OF GRAIN, and is regulated by the guage to DISTRIBUTE EVENLY OVER THE SURFACE, any desired number of pounds of Grain per acre, covering the Seed immediately, so that NONE OF IT IS LEFT IN SIGHT FOR THE BIRDS TO DESTROY.

IT IS SIMPLE IN CONSTRUCTION, STRONG, AND DURABLE,

Just the mplement the Farmer needs at the present time, to enable him to raise Grain profitably at the prevailing low prices.

It now makes its first appearance on the Pacific Coast. For sale by

KNAPP, BURRELL & CO.,
310 Washington street.

PATENT RIGHTS FOR SALE.

The following Patent Rights of very new and valuable inventions (of which we h ave models to show their value, are now offered for sale. We hold the rights for the States of California and Oregon, and Utah and Washington Territories.

A Fortune for a Mechanic.

We have the PATENT RIGHT for the whole Pacific Coast for the best and most celebrated HORSE HAY-RAKE known.

ALSO—A CIDER-MILL and PRESS of the most approved construction.

A fortune can be made with either of these machines, by an energetic mechanic. The models may be seen at our office.

No. 1. A New Rotary Subsoil Plow.

Patented April 6, 1858.

This invention completely pulverizes the soil after lifting it. a very valuable implement, and one which will receive universall commendation.

No. 2. A Corn Cultivator.

Patent now pending; papers expected.

With this implement the soil is first thoroughly plowed and deeply pulverized, and upon the return it smoothly and perfectly hills up and harrows the ground between the rows A very new and valuable implement.

No. 3. An Improved Clothes Reel and Bar.

Patented January 3, 1860.

This valuable domestic piece of furniture can be used in the Laundery, the Kitchen, the Nursery or Chamber, and can be made plain or ornamental; standing in the same relation as a piece of important furniture as does Wheeler & Wilson's Sewing Machines; neat when used and ornamental when no in use.

No. 4. The Mechanic's Spirit Level.

Patented September 13, 1859.

This implement will be of great value to Contractor and Builders, being one of the most valuable inventions yet out. 2000 were ordered for the New York market just before the sailing of the steamer. Builders will do well to examine this model.

No. 5. A Musketo Bar.

This will be much wanted in California. It is simple in its contrivance, perfect in its working, and can be affixed very cheap to all styles of bedsteads. Hotels, public houses and private families will find it a useful invention.

Also, Hyde's Patent Post-Driver,

A most excellent labor and money saving machine, for which we offer rights, as will be seen by a card in our columns.

Holding the rights to all these new inventions, we invite the public to call and see the models. All persons who may be desirous to purchase either County, City, Town, or Individual Rights, can do so on application to

2 COL. WARREN, Editor Farmer.

Saddle-Horse For Sale.

A FINE SADDLE-HORSE, FOUR YEARS old, got by Imp Lawyer; is well broken, and can run a mile in 1:55, when in racing order. Is just fifteen hands high, bright bay, with a star and white hind foot; a perfect gentleman's horse. The owner wishes to sell him for want of use for him. Apply to

T. B. MERRY,
21 Farmer Office.

THE CATARACT

Washing Machine

AND WRINGER.

Rubbing and Wringing Done Away!

THIS MACHINE IS REMARKABLE FOR THE FOLLOWING QUALITIES WHICH IT IS WARRANTED TO POSSESS:

It will wash and rinse the finest Lace Collar, or the largest Bed-Quilt.
It washes Flannels without shrinking them.
It does not wear the Clothes and never breaks a button.
It is perfectly simple, very strong and durable, and cannot get out of repair.

A common hand can with ease and perfect safety to the Clothing, wash FASTER and BETTER than FOUR Washer-women can by hand.

WRINGING IS DONE FIVE TIMES AS FAST as Clothes can be wrung by hand, and removes the water so thoroughly that the CLOTHES DRY IN HALF THE TIME.

☞ The Machines can be seen in operation at our store. Always for sale by

JOHN G. ILS,
176 (old number) Washington street,
16 Next Maguire's Opera House. *SAN FRANCISCO.*

Colby's Patent Improved

CLOTHES WRINGER

THIS MACHINE IS ATTACHED TO A TUB WHEN IN operation. It consists of a pair of India Rubber Rollers, hung in a framework of galvanized malleable iron of peculiar form, held together by a single rod, or tie, which forms a joint in the frame, by means of which the rollers are held in their proper place, and the Machine clamps itself firmly to the tub or box.

I give seven good reasons why every family should have a Machine of some kind for this purpose; and if we allow each reason given to make a saving or be worth but two cents per week, you will have the price of the Machine in one year, and it will last a lifetime.

1st—It will save time, which is money.
2d—It will save strength, which cannot be bought.
3d—It will save the clothes, which cost money.
4th—Any man, boy, or girl, can use it, who could not wring clothes by hand.
5th—It helps to wash the clothes, and by running them a few times through the Machine, out of hot suds, it will clean them as well as half the Washing-Machines in use.
6th—It leaves the clothes in a better condition to dry.
7th—It helps to make Washing-Day more pleasant.

It will be seen by the above that no family can afford to be without such a Machine.

I can give many excellent recommendations, if necessary

For sale by
T. M. CHAPMAN, Petaluma.
TREADWELL & CO., Sacramento.
W. HODGES, Sacramento street,
2-3m San Francisco.

BAILEY'S PATENT

COMBINED

WASHING AND WRINGING MACHINE.

Patented April 5th, 1859; and March 27th, 1860.

THIS MACHINE IS ADAPTED TO ALL KINDS OF Clothes, from a pocket handkerchief to a bed-quilt. You can wring your clothes in less than one quarter of the time, and so much dryer that they will dry in one half the time, and not injure your clothes one half as much as when twisted by hand. This Machine is formed with

TWO SPRING ROLLS COVERED WITH RUBBER,

And so constructed as to run together with great pressure, and turn fast and easy. The springs in the rolls are so constructed as to yield the most in the center, where the bulk of the clothes are conducted as they pass between them. By this means the springs with the rubber close so tight around the clothes that they come through

NEARLY DRY ENOUGH TO IRON.

However uneven the garment may be, it receives an equal amount of pressure. It is also sufficiently strong and so arranged that it can be run by power for LAUNDRIES, FACTORIES, LARGE HOTELS, &c. Although it is a small and simple Machine, it is able to do a large amount of work in a short time.

This Machine has been thoroughly tested for sixteen months past, and found to do everything that it was designed to do. And after any one buys one of them, and finds it will not do what I claim for it, they can return it and have their money, as all my agents are authorized to do this. So there is no chance for you to get humbugged by giving them a fair trial, and it may be just the thing you want.

To wash with this Machine, put your clothes to soak for about twenty minutes in strong soap-suds and warm water, then run them through the rolls five or six times back and forth into the suds, when they will require no rubbing excepting the very dirtiest parts, such as collars and wristbands, which will require but a slight rub with the hands. By this process you will be able to do your washing in less than half the time you can by hand, or any other Machine in use, and much easier, and no wear or tear to your clothes, like the rubbing-board and twisting to get the water from them—as you can see the principle of my Machine is to squeeze instead of rub and twist, which evades all friction.

CHAS. T. DARROW, San Francisco.
General Agent for California and Oregon.

A Machine will be on exhibition at F. D. Cottle's Carpenter Shop, Pine street, below Sansome.

Price—20 to 25 Dollars.

Wholesale Produce Report.

This represents the prices paid by the dealer to the producer

[Corrected weekly, by A. H. TODD & Co., No. 42 Clay Street.] Oct. 17.

OUR Wheat market continues firm. Buyers for export seem to have reached their limit for the present, at $1 90, but lots suitable for Bakers' extra Flour have found sale at $1 97½ and $2.

The price of Flour keeps pace with the advance in Wheat, and good brands of our city mills' extra Flour job at $6 50 to $7 ₱ bbl.

The receipts of Wheat during the past week show a willingness on the part of producers to take advantage of the present rise, and sell at the current rates. In view of the deficiency in the grain crops reported in various parts of Europe, and the consequent necessity of their being supplied with large amounts of Breadstuffs from abroad, taken in connection with the supposed deficiency in our own crop compared with that of last year, we are under the impression that the present remunerative prices of Wheat will be maintained during the remainder of this year.

Our latest Eastern news from the New York and Liverpool markets is encouraging, and confirms previous advices.

By the British ship Nimroud, which arrived on the 11th instant, we have reports of the Australian markets, to the effect that Flour and Wheat were dull, but Oats had materially advanced in price.

Per steamer Orizaba, of yesterday, Valparaiso dates to the 12th of Sept. were received. The market for Flour and Wheat is reported stagnant, and Barley had experienced a rapid decline, with heavy stock and no demand.

Since our last, the ship Franklin Haven sailed for Liverpool with 32,700 sacks of Wheat, and 20 casks of Tallow—valued at $70,000; and the bark Camilla, for Melbourne, with 6816 qr sks Flour, 1397 sks Barley, and 1544 sks Oats—valued at $12,000. The bark Glimpse for Sydney has completed her loading, carrying 1500 hf sks Flour, 6700 sks Oats, 1636 sks Barley, and 1300 sks Chevalier Barley—valued at $15,000. The ship Winged Racer, for Liverpool, is fully laden, carrying about 31,000 sks of Wheat.

The ship Galatea will sail in a few days for the same port (Liverpool), with a cargo comprising about 26,000 sks of Wheat, and 900 sks Barley—valued at over $40,000.

The British bark Isle of France is loading for Sydney, with about 400 tuns of Flour and Wheat. The following vessels have also been chartered within the past few days: the British ship Nimroud, for Sydney, with Oats, etc.; the French bark St. Anne, to load Breadstuffs for France; and the American ship George Peabody, to load with Wheat for Liverpool.

Barley and Oats have been doing better during the past week, the latter grain doubtless owing to the late favorable advices from Australia, but with no improvement to note in price. Choice Barley now commands 90 cents, and a shade above. Corn, Rye, and Buckwheat are also inquired for to some extent. Potatoes are active, prices ranging from $1 65 to $1 87½. There have been large receipts of Beans lately, and the market rather favors the buyer; a considerable amount has been bought on Government account.

The receipts of Produce for the past week have been as follows: Flour, 9900 qr sks; Wheat, 67,298 sks; Barley, 14,430 sks; Oats, 6250 sks; Corn, 1295 sks; Cornmeal, 350 sks; Oatmeal, 59 sks; Bran, 1,878 sks; Middlings, 158 sks; Beans, 2467 sks; Onions, 750 sks; Potatoes, 6352 sks; Salt, 4195 sks; Wool, 408 bales; Hay, 416 tuns.

Which are most Profitable Sheep?

Discussion at the Ohio Agricultural Convention, December, 1860.

MR. TOWNSHEND, of Lorain, said he was not prepared to settle this question. It was not settled in his own mind. My father's flock of sheep were formerly Leicesters, but are now mostly Cotswolds. Of late, however, we are getting back to Leicesters again. Land with us is too high to devote to wool-growing, hence we raise meat and grain for market. Our flock averages about six pounds of wool per head, and this sells at from twenty-five to forty cents per pound—perhaps averages thirty-three. We sell our wethers at from two to three years old, and have received as much as $16 per head for those that would dress forty pounds to the quarter, when it was worth ten cents per pound in New York. Frequently sell from $5 to $10. The wool brings about as much per fleece as fine wool. Leicester sheep make excellent mutton. The Lincolns and Cotswolds are rather large and coarse-fleshed. My opinion is that for northern Ohio the Leicesters are better than any other. Southdowns give fine mutton, but less of it and less wool. No sheep keep well on hay alone, but all sheep pay for shelter and grain in winter.

Chester Palmer, of Geauga county, said he had an experience of twenty-seven years in wool-growing. He commenced with the Spanish Merino sheep, descended from the Wells and Dickinson flock, and goes on the principle of raising the sheep that will give the greatest yield of fine wool to the acre. I selected my first flock of ewes with particular reference to their constitutional vigor, and crossed them with pure Silesian bucks. The result was they yielded me four pounds two ounces per head of clean wool. I raise no other. It is not fair to sell dirt for wool, and then say your sheep averaged so much wool. This year I sheared four hundred sheep, that yielded five pounds, worth fifty cents per pound. Large sheep cannot be herded in such numbers as small ones, without deteriorating in size. His experience with the French Merino sheep has satisfied him that they are not the most profitable sheep. His Spanish and Silesian sheep gave twenty-five per cent more profit than sheep raised from his largest sheep crossed with one of Mr. Bingham's best French Merino bucks. He is decidedly in favor of the fine wool, and of a cross between Silesian and Spanish Merinos.

Mr. Chamberlain, of Clark county, said he had been breeding Spanish Merinos for a number of years, and claims that they have more constitution, will bear more exposure, and flock together better than any other breed. He had flocked the Longwools and the French Merinos with the Spanish, and found the latter always the best. His sixty head average six and three-fourth pounds per head. He sowed rye to pasture his ewes on at the season of lambing, and likes the practice.

Mr. Quinn, of Columbiana. Fine wool with him had proved a failure. Had kept the Spanish and Cotswold breeds, and the latter took on three pounds of flesh to one for the former. They are very quiet, eat and lie down, while the fine wools roam about the fields to see what they can find, and thus work off their food. Gets about twice as much for a Cotswold wether as he can for a Merino, and is not insulted when he takes them to market. At five months old his long wool lambs weigh more than fine wool sheep ever weigh. Mr. Palmer asked if he can keep as many to the acre as of fine wool, to which he replied in the affirmative.

Mr. Palmer thinks he can keep three fine wool sheep where he could but keep one coarse wool.

Mr. Quinn thinks coarse wool is worth more than farmers usually get for it. He usually sells his for forty-five cents. He summed up by expressing the opinion that coarse wool sheep are twice as profitable as the fine.

Mr. Easton, of Huron county, says that those who can make most by raising wool, should grow fine wool sheep. Those who can make most by mutton should raise the coarse wool. This depends partly on nearness to market, and partly on the character of the country. On hilly land, fine wool sheep do best; but he thinks in a level country the coarse wools are preferable.

Dr. Townshend remarked that more fine wool sheep could be kept on an acre, but the difference was not in proportion, to their weight. A wether that weighs two hundred or three hundred pounds, will eat but little more than a small one. The Spanish Merino sheep is very active in its habits, runs about a great deal, and thus requires more food than if it was quiet. The coarse breeds of sheep have good digestion. I think that three coarse wooled sheep will eat about the same as four fine.—[Ohio Farmer.

Broom-Corn.

A few years since, and the first Broom-Corn raised in California was made into brooms, and exhibited at the Sacramento State Fair. This was in 1855. These were by G. W. Armes, and were very beautiful. We then received sample-brooms, sent them with other goods and products to Boston, and had them exhibited there for the benefit of California. These brooms attracted much attention. Since then we have numberless Broom-factories all over the State. In almost every section more or less Broom-Corn is raised, and brooms are made; so much so as to stop the importation. Messrs. Armes & Co. raise all their own stock per contract. Mr. Ward does a large business; and we notice that Mr. R. E. Wood, of Napa, has been very successful in raising Broom-Corn, and will make nearly one thousand dozen the present year. We received a sample of his brooms at our Office. They are most excellent, and "sweep clean." We have tried the "Armes" broom, and the "Ward" broom, also, and they are all a credit to our State. Most truly, we are rejoice at the success of all our Home-Manufactures.

Valuable Breeding-Stock.

THOSE who have valuable Breeding-Stock should be careto make that stock known through our columns by their regula advertisements. This is the only way to extend the informa tion so as to make it known over the whole State.

May We Have Your Aid!

WE wish to place our journal in every county of every State where it can be mailed among the old States of our glorious Union. This will make known the resources of our rich State, and no more acceptable newspaper can be sent abroad than our journal. Now, we ask our friends to aid us in this work. See our new Prospectus, and the reduced prices.

The Turf.

San Jose Races.

FIRST DAY.

THE Fall Racing Meeting of the Santa Clara Jockey Club was inaugurated on Monday with a fine race between the three-year-olds in their Sweepstake, at mile-heats, for $100 each, with $150 added by the proprietors, Messrs. Smith & Williamson.

There was considerable betting as soon as it was authentically announced that Mr. Williamson's colt, the sumptuous Gladiator, had paid forfeit. Lady Belle, being the best known, of course had many friends, while Conflict, an own-brother to the honest Dashaway, was not without admirers. The actual winner of the race, Jack Trimble, was scarcely thought of, and a ranker outsider never won a race. The race was tolerably well contested, Lady Belle winning the first heat in 1:53½, with Conflict close by, and Jack laying up. The second heat was a fine struggle, the bay stallion poking his nose in ahead of the Lady just at the finish, and distancing Conflict in 1:52½. The deciding heat was a very cool trick for Jack, who won in a canter in 1:58¾.

SUMMARY:

SAN JOSE COURSE, Oct. 14th, 1861.—Sweepstakes for 3 year-olds, of $100 each, with $150 added—mile-heats—colts 86℔s, fillies 83℔s.

The Paddock.

Cavalry Horses.

DURING the course of the present struggle for Law and Union, we have frequently been asked why cavalry had been dispensed with in the Federal ranks. Our answer is, that we believe there are so few cavalry horses in the Northern States that it would be impossible to thoroughly equip three regiments. For the past fifteen years, in those States, the demand has been entirely for harness-horses, and driving has usurped the place of riding, so that fine saddle-horses are, comparatively, a drug in the Northern markets. The Thoroughbred Horse has fallen into disuse as a sire, and has been supplanted by mongrels, produced by crossing the Normans, Cleaveland Bays, Canadian Ponies, and Flemish Carters, promiscuously together. That they are good animals in their proper spheres, we never did pretend to deny; but that they are without equal in every use and degree, we must be allowed to dispute.

The rebellious States, however, have not been so exclusive in their style of horse-breeding, for they have kept up their stud of Thoroughbreds, and yet, at the same time, bought largely of these Northern-bred Roadsters to test their merits. They are now possessed of many a thousand of the finest saddle-horses in the world—animals fit for the cavalry service, because they have the bone and muscle to go the pace, and the blood to stay the distance. The advantage of their cavalry on all occasions where they meet our troops is apparent, and brave must our infantry be to contend successfully against such odds. We are of the opinion that in five years time no State in our glorious Union will surpass California in the production of horses for the cavalry, if the present systems of breeding are adhered to; and we may, ere long, expect to see the California Chasseurs the pride of the American Army.

JOB-WORK.—Of every description, done with promptness, at fair rates; orders will be faithfully attended to.

Mountain Orchards and Vineyards—No. 5.

In our last we were among the young orchards and gardens of Downieville, had been across the river to Mr. Hardy's, and in returning we hastily looked into the old diggings called Slate Castle Ravine, now about abandoned. We believe there is an abundance of gold there if the hydraulic system could be applied, and the hillsides washed down. *There must be rich deposits.*

We found a very interesting spot on our return, at Bailey's Garden. This is one of the early gardens of Downieville, having been cultivated about five years. It is a large orchard containing several hundred trees, all in excellent health, and bearing full, and yielding a fine increase. This orchard is an evidence that fruit can be most successfully grown in the mountains. Apples, plums and peaches were the principal trees; they all bear early. This orchard was irrigated instead of being cultivated. We think the fruit would be richer and better with the latter system. When irrigation is relied on, cultivation is so much neglected that the earth becomes hard, yet by means of the water weeds will grow, and they suck the nourishment from the earth that belongs to the trees. Water produces weeds, cultivation destroys them; irrigation alone makes the fruit cold and tasteless; cultivation gives color and richness to the fruit.

It pays to *grow fruit* in Downieville, and in all the mountain towns, as the cost of hauling fruit from below is equal to a good price. In August and September the price of fruit was for peaches, 25 cents per pound; plums, 37½ to 50 cents; apples, 25 to 37½ cents per pound. A basket of peaches could be had at Sacramento for the same price as one pound at Downieville.

Mr. Bailey, we think, will cultivate more and irrigate less hereafter, as the superiority of this system is evident; he will cultivate grapes also. We saw currants, gooseberries, and strawberries; these all paid well in their season.

Mr. Clark, near Mr. Bailey's, has an orchard of a few trees. If attention could be given to this spot and others on that side of the hill, a great income could be derived. *Fruit* will always pay; vegetables pay well also; tomatoes sell at 12½ to 15 cents per pound; potatoes, squashes, cucumbers, cabbages, all pay big prices.

We made brief calls at the gardens of Mr. Steel, Mr. Lynch, and at Dr. Bryant's. Geo. Schiner has a garden well cultivated; been at work eight years; grows vegetables for the market, and has fruit trees and vines doing well.

The Downieville Garden, by Frank Schitz, was planted in 1856; peaches late, ripen in September, and bring a good price; grows the grape, and will have a good crop, and they pay well.

There is one truly beautiful spot we found called "Jersey Flat," which is the great retreat of several of the business and professional men of Downieville. There is really something very picturesque in this spot; it is one of *the* places in this wonderful town. It lays across the stream beyond the Postoffice, and on the route of the great mountain trail, so that goers out and comers in from the great Sierra Valley pass it. A pretty street all by itself containing eight or ten dwellings, all of pretty style, and all surrounded with pretty gardens, shade trees, vines, etc. In the same street is the Universalist Church, the Rev. Mr. Pond, and the Methodist Church, the Rev. Mr. Urmy, and the Hospital.

On this street, which is straight, are the residences of Dr. Kibbee, Col. Fletcher, Col. Wood, Judge Smith, Mr. J. S. Day, Mr. Clemens, Mr. Purdy, Mr. Hirschfelder, and Judge Taylor. There is the right spirit here to make this street beautiful. Dr. Kibbee has a very fine garden which is filled with the choicest trees, plants and vines, and being a lover of the beautiful he lives in his garden. Each resident has more or less of a garden; a pleasant call at their beautiful places afforded us much true satisfaction.

A call on Judge Taylor gave us unusual pleasure, as in this dignitary of the law we found our old friend the poet Editor, once of the Marysville Herald,—then known as Bob Taylor, the happy humorist, who made everybody joyous with his wit and song, happily surrounded with a lovely and increasing family. Our brother Editor was among his volumes, Coke and Littleton, Chitty on Pleading, etc; but for a little time we bade him put away law books and talk of other important things. Our visit was an hour that we shall long remember, and we trust our old friend will grow and prosper, and be truly a patriarch in that delightful spot. We found several old friends in this beautiful place, and the "pleasant memories" we place in the cabinet of our heart there to shine forever. The dwellers of Quincy Flat have reason to be proud of their favorite spot. One of the finest views we had of Downieville from within the place was from this point; the lofty mountains rising all around, up to the very sky, like great folds of somber drapery, and this little town seemed to swing within its folds, and be suspended there.

The "Italian Gardens" of Downieville are as great a wonder and curiosity as we have in all the Agricultural phenomena of California. They are situated back of Downieville, high up on the steep hillside, where the earth has to be terraced by walls of heavy rocks, from three to eight feet high, according to the place, and from twenty to fifty feet long. These gardens are some three or four hundred feet above the main street of Downieville, and covering some six acres of ground, cultivated with the spade and digger or pronged hoe entirely. The walls are built very strong, and the earth terraced down to meet them, and cultivated finely. The manure from Downieville is brought up in bags or panniers upon the backs of donkeys, and often by men on their shoulders; and heavy rocks brought by handbarrows from a distance to build the walls. The enterprising gardener, Mr. Costa, an Italian, is the owner of this beautiful garden, and by his indefatigable labors has made a little paradise of this spot, turning every nook and corner, every inch of ground to good account; even upon the face of the walls appear strawberry plants, and their luscious fruits which ripen in midwinter by reason of the heat reflected from the stone wall, the roots running between the stones into the rich earth back of the stones. The whole face of the walls being thus covered presents a bouquet of the flowers and fruit of the strawberry and their shining leaves.

We spent considerable time in viewing this interesting spot. Here high up above Downieville it commanded a view of great extent and beauty, and it gave evidence of the great labor that had been bestowed upon the place. From this place the very best fruits and vegetables are taken daily to market in bags and baskets, by donkeys or men, carried down the steep hillside. We saw fruit trees of all kinds, excellent vegetables, and all in a very high state of cultivation; as there was an abundance of water still higher up in the mountains above, they had the means to irrigate and to shower, and thus keep everything fresh and green. This garden was commenced some six or seven years ago, and although thousands of dollars has been expended, it has now become a source of great revenue. We should "guess" by what we saw that it was easy to have an income of at least *a hundred dollars per week, clear income*, above expenses, and this from a little spot once a barren crag, so steep that only the goats could play upon it, but now a beautiful garden yielding an income of *a thousand pounds sterling* per annum. Who says "mountain cultivation don't pay?"

The Italian Gardens of Downieville are the resort of many visitors on a Sunday, to enjoy the "strawberries and cream" and other fruits grown there, and the beautiful view unequaled in all that vicinity; and with such a grand view, we were surprised that many of the [illegible] Downieville had never been this high up [illegible] mountain side. We hope the citizens of Downieville will not longer delay the enjoyment of so delightful a prospect.

There are several other bright spots around Downieville, where a good and wise cultivation has done much to redeem waste ground.

Rev. Mr. Pond has a neat cottage residence, and is beautifying his home. Another spot redeemed is that of Judge Vancliffe, situated upon the edge of the water, and upon what was finished miners' ground, composed of rocky bowlders only. The Judge has leveled off and covered these boulders with good earth, built a neat cottage, planted a garden, and made a pleasant rural retreat indeed, and having all the benefits of a good drainage, of a stone foundation, and a good surface, he is now enabled to make a perfect garden, and by his taste and that of his excellent lady, a little time only, and it will "bud and blossom with the rose." We thought the Judge was a little too fond of playing with the "hydraulic hose," and showering his pet garden. Too much water is as bad as none at all Judge. *Cultivate* a good deal and shower occasionally, is *better* than *shower* a good deal and *cultivate* occasionally.

Downieville is bound to be a good business place always, as it is the gateway to the rich valley beyond, and soon to open a wagon road thither if the citizens are only wise for their own interests.

Downieville has about three thousand inhabitants, and all the materials of wealth if properly improved. A new hotel was being built by Handraw & Co., to be occupied, says report, by mine host of the Exchange. The new hotel is forty by thirty-eight feet, with wing—two-storied; dining room twenty-two by fifty-seven feet; is substantially built by the owners, and all hard finished, costing about $12,000.

The Downey hotel is a large hotel, a pioneer hotel, kept by Mr. Downey. It contains fifty rooms; can lodge sixty persons, and feed sixty at one sitting. It can always feed two hundred persons. We went over this pioneer hotel and can say that the kitchen, pantry and closets, pastry rooms, bake house, and vegetable rooms, will vie for neatness and order with any hotel in the State. We do love order, and as we saw the order throughout, even to the wash-rooms and wood-house. We accord to the Downey Hotel the premium for order, neatness, and cheapness of living; a good bath-house, free to boarders; the water for the hotel brought from the very top of the mountains above,—a great convenience, luxury, and safeguard against fire. We cheerfully commend this hotel to all travelers to Downieville.

Downieville should be aroused to the importance of a wagon road to Sierra Valley; it is of great moment to them, and another year should not pass without that road being secured.

There is still another hotel called Andrews' Hotel, kept by Mr. Andrews, on English restaurant plan, open all night, and food at all times for travelers. Mr. A. is an old pioneer of ten years, and has kept this hotel four years.

Downieville has also good stables, of which Reticker & Morrison is the principal one; a large and fine stable and well provided with extra horses and mules for the mountain trails, and for Washoe. There are several other good stables, so that travelers can always be provided for at short notice; and as the Washoe fever runs high it is proper there should be ample means to accommodate all, and Downieville is one of the best routes for Washoe.

We should not forget to tell our readers that gold is found in Downieville in the streams, under the buildings, and in all the hillsides; gold is everywhere. We saw gold diggers undermining Uncle Sam's Postoffice, which is now supported on props, the miners at work under it. There is river washing and fluming to a very large extent. The waterwheels are as thick on the river as butterflies among the buttercups in the meadows. Gold is everywhere; there is a quartz mill, and the quartz brought from the hillside near by. Wheeler's Mill of eight stamps crushes twelve tuns per day, and pays well. Oh gold, how busy are thy votaries. Gold must be had even if the mountains fall.

Drain Your Lands.

WE are the advocates of all the plans to improve farming-lands that can be devised, and one of the best is "under-drains," and we hope Farmers will give attention to it.

Mr. Cottrell, of Napa (Brown's Valley), has recently made some successful experiments in under-draining. He has made three-quarters of a mile of drains around and across a fifty-acre lot of land that recently was wet till late in the season, and full of coarse weeds. Now it is in fine order, and can be plowed shortly after a rain. Portions of it, formerly weedy and worthless, have yielded a fine crop of Hay. So pleased is he with the experiment, that he will continue it very extensively. Fifteen thousand feet of lumber has thus been used with profit.

Mr. Cottrell adopted the plan of "French on Drainage;" a work Farmers should have.

Prepare for Orchard Planting.

THE Autumn is the time to make Orchards and Vineyards, and the earlier Orchards and Vineyards are planted the better. When so planted, the roots become settled, make new roots, and grow considerably during the Autumn, and are ready for an early start in the Spring. The chance for a Tree or Vine doing well is more than 33⅓ per cent greater when planted in the Autumn, than when delayed till Spring. Let any person prepare the ground and try the experiment. Plant one row in the Autumn, and leave a space for one to be planted in the Spring; take the same kind of Tree or Vine—the same in kind, quality, and size—and they will be so well convinced as always afterwards to plant in the Autumn.

HOW TO MAKE A BARN YARD.—The best way, in my opinion, to form a barnyard for the preservation of manure, without its becoming muddy, where the ground is higher than some of its surrounding parts, is to plow and scrape from the center to the outside, making a gradual descent from the outside to the center. Let the fall be one-half foot in ten, and falling a little more as you near the center. Dig a drain from the center to some suitable place without the yard, where you can construct a vat to put in leaves, sods, muck, etc., that will absorb and retain the liquid from the yard. The bottom and sides may be formed by plank, or may be more substantially built of stone and mortar. The top of the vat should be made so as to guard against rains and surface water as much as possible. The drain should fall considerably, and should be made of plank, eight inches high and one foot wide inside. The head of the drain should be covered over with a strong iron grate. The yard ought to be well paved with cobble stone, and with a little pains you can always have a dry yard. The water from the barns and sheds should never be allowed to run into the yard, but should be carried by good eave-troughs to a large cistern for the purpose of watering stock.—[Rural New Yorker.

Corn and Cob meal for Animals.

A writer in the Louisville (Ky.) Journal—a great corn region—takes issue with the rest of mankind on the long debated question whether corn or cob meal was or was not injurious to animals. A dozen years ago, it was a very common practice with nearly all our principal farmers to have their corn ground on the cob, as food especially for their cattle, sheep, and swine; but of late years the practice has very much diminished from the pretty general belief that it was injurious to the animals. We have never held any decided opinion upon the question, having neither experimented with it ourself nor been convinced by the experiments of others. The writer, whose article is copied below, speaks very confidently on the negative side of the question.

For several years past there has been much said and written, favorably and unfavorably, on grinding corn in the ear as food for stock. I have been both amused and disgusted at the recital of stories told and read by individuals.

I have fed corn and cob meal, more or less, to horses, cattle, sheep, and hogs, in various forms, at all seasons of the year, for some six years, and have never seen any evil effects resulting therefrom. But, on the contrary, have found it to be a saving of about one-half of the grain fed in the ordinary way, and more, if properly cooked and care be taken in feeding. I have fattened cattle, hogs, and sheep in half the time I could on whole corn, and frequently in the coldest weather, when whole corn would not more than keep them in living order. When ground fine, I consider it better for stock that meal ground from shelled corn. It lies looser in the animal's stomach, and will not sour, as pure corn meal will. I will give one illustration to suffice for many, showing the fallacy of the danger of feeding corn and cob meal. Five years ago this winter, I put up a poor, old work ox; fed him until spring; he was fat, but as I could not sell him for what I thought he was worth, I summered him over to the next fall, put him up again and fed him as before with corn and cob meal; killed him the beginning of January following. A healthier animal I never saw, and as for fatness, there was not a single half-pound of flesh but what was streaked with fat. He was not a large animal, yet brought me nearly $100 in Mount Gilead market. I will give you his gross and net weight the day he was butchered. His gross weight was only a few pounds over 1800. The meat, after the kidney tallow was taken out, weighed 1000 pounds; the hide weighed 137 pounds; the whole of the tallow, after being well tried out, weighed 220 lbs. So you see that the meat, tallow, and hide weighed 1357 pounds, leaving a waste of only 443 lbs., not quite one-fourth. If Mr. Todd or his neighbors can beat the above, through any other process of feeding, we would like to hear from them. I will close by stating that I have horses in my possession that have been fed more or less on the above kind of food from three to five years, and my neighbors will bear me witness that few horses in the country have performed more hard service.

Making Cheese.

THE process of making cheese in Herkimer Co., N. Y., is admirable for its simplicity and dispatch, as compared with that practiced in Cheshire and other districts in England. The night's milk is placed in the cheese-vat, and kept as cool as possible. After the morning's milk is added, the whole is raised to the proper temperature—either by heating a portion of the morning's milk, or, what is better, by applying steam to the bottom of the tin milk-vat. Sufficient rennet is then added to set the cheese in about forty minutes. When the cheese is set, the coagulated curd is cut into small pieces with a long four-bladed steel knife, which crushes the curd much less than the old-fashioned breakers, and is thus not so liable to press out the butter.

The curd is then "scalded." This is done either by heating a portion of the whey (which should not be heated to the boiling point), and pouring it into the vat till the whole is raised to the desired temperature; or when steam can be applied to the vat, it is heated in this way. The temperature varies somewhat in different dairies, from 102 to 108 degrees.

After the scalding, the curd is allowed to stand in the heated whey about forty minutes, and the whey and curd is then poured on to a cloth placed on a shallow wooden vessel, with a hole in the bottom, which allows the strained whey to run off. The curd is then broken up fine and salted to suit the taste—say a teacupful to each ten or twelve cows. The curd is then placed in the vat and put under the press, where it remains till the next morning.

Those acquainted with the English method of making cheese will see in what respect the two processes differ. The method so imperfectly and inadequately described above, is not half as much labor as the Cheshire or Gloucestershire process. The method of heating the milk by the application of steam to the cheese-vat is a great improvement. Then the method of separating the curd from the whey by straining it through a cloth is much more expeditious. In Cheshire the whey is removed by pressing down a flat-bottomed pan gently on the curd in the cheese-tub and allowing it to fill. When the curd is thus partially freed from the whey, the curd is again gently broken and allowed to settle and separate, and the whey is baled out slowly, the curd being placed on one side of the tub, which is slightly raised, and a board is placed on the curd with heavy weights on top to press out the whey.

The curd is then cut into pieces six or eight inches square, and again pressed with heavier weights.

WALKER VALLEY.—The Silver Age says: The finest crop outside of Washoe and Pleasant Valleys that we have seen this season is at Lobdell's ranch, Walker Valley. The corn appeared to be very thrifty, while the turnips, potatoes, etc., were not only large, but of superior flavor. Two crops of corn can be raised there in one season, and the yield of most vegetables is prodigious.

Road Horses.

THE hard times have had a marked effect upon our most noted roads. The prominent stopping-places that last year were crowded on each fine afternoon with hundreds of pleasure-seekers, and lovers of the Horse, are now silent and neglected, and the "solitary horseman" oftentimes is obliged to cast his eye in all directions, and attentively to listen for a footstep of speed with which he may try the mettle of his horse. Most of the fast teams and single flyers that were wont to give the prominent drives a gay appearance, if not actually disposed of, have been economically turned out to wait a change for the better in the once-filled pockets of their owners. Some of these pets will doubtless be retained, and still lead their life of comparative ease, while by far the greater number will by necessity be brought to the hammer, and commence their downward career. The first will be in the livery-stable, where, for a time, he will be hired only to some favorite friend who is esteemed a good whip, and doubtless formerly owned fine horses himself. Great care is bestowed upon this new addition to the stable; he is skillfully groomed by a picked man, and great scrutiny exercised in the quality and quantity of his food; he is by far too costly a piece of horse-flesh to be neglected, has beauty of form, and all the requisite points that denote speed and endurance—points that, a year or two before, caused him to be so much admired, and almost coveted, as with a slashing gait he whirled his owner past the group of horsemen who habitually lined the piazzas of the hotels on Harlem Lane and the other well-kept roads leading to the Dam and trotting-grounds of Manhattan Island. But he was purchased for his speed, and for that quality an extra price is paid for a drive behind so noted a roadster. Such being the case, both the driver and horse have a reputation at stake, thus the slightest opportunity for a brush must not be neglected, and, of course, each hostelry must be passed at full speed, and ere the excited rider is aware of the fact, miles of the road have been traversed, and the gallant horse stands neglected and panting, turned over, perhaps, without a word of caution or admonition, to the tender mercies of the shed-boy, who knows little, and cares less, about the gallant animals committed to his charge, providing his customary fee, for the hasty sponging out, is promptly paid. Thus begins the livery-stable ordeal of the fine horse, and his downward course is rapid indeed, through the various grades of fast young men, who will not be passed so long as the rack of bones will anywise respond to the lash, till at last failing in this, broken-hearted, broken-winded, and entirely unstrung, the high-mettled road-horse is transformed to a huckster-cart, where he finally yields up his life, and all that is left of his framework disposed of by the offal-contractor to the man who manufactures glue from the remains of the once-petted and much-coveted pride of the road. How many fine horses will commence their livery-stable career during the present Fall? is the question we ask ourselves as we miss some favorite horse from the road, and upon inquiry we learn that circumstances have compelled his owner to forego his accustomed recreation.—[Porter's Spirit.

How to Choose a Farm-Horse.

THE Farmer requires a Horse that can take him to market and around his Farm, on which he can occasionally ride for pleasure, and which he must sometimes use for the plow and harrow.

First to notice is the eye, which should be well examined. Clearness of the eye is a sure indication of goodness; but this is not all—the eyelids, eyebrows, and all other appendages, must be considered—for many Horses whose eyes appear clear and brilliant, go blind at an early age; therefore, be careful to observe whether the part between the eyelids and eyebrows are swollen, for this indicates that the eye will not last.

When the eyes are remarkably flat, sunk within their orbits, it is a bad sign. The iris or circle that surrounds the sight of the eye, should be distinct, and of a pale, variegated, cinnamon-color, for this is a sure sign of a good eye. The eyes of a Horse are never too large.

The head should be of good size, broad between the eyes, large nostrils, red within, for large nostrils betoken good wind.

The feet and legs should be regarded, for a Horse with bad feet is like a house with a weak foundation, and will do little service. The feet should be of a middle size and smooth; the heels should be firm, and not spongy and rotten.

The limbs should be free from blemishes of all kinds, the knees straight, the back sinews strong and well braced, the pastern-joints should be clean and clear of swellings of all kinds, and come near the ground, for such never have the ring-bone. Fleshy legged Horses are generally subject to the grease and other infirmities of that kind, and therefore should not be chosen.

The body should be of good size, the back straight, or nearly so, and have only a small sinking below the withers; the barrel round, and the ribs coming close to the hip-joints. Shoulders should run back, but not too heavy, for a Horse with heavy shoulders seldom moves well; chest and arms large.

A Horse weighing from 1300 to 1400 pounds is large enough for a cart-horse; from 1000 to 1200 is large enough for a Farmer's Horse; from 1000 to 1100 is heavy enough for a carriage-horse.

I should advise every one to get some experimental knowledge of a Horse before purchasing.—[JOHN BRANSON, in Ohio Cultivator.

THERE is a coal mine in Cheshire, England, which is 2504 feet deep. There is a copper mine in Cornwall 2180 feet deep. Engines of several hundred horse-power are required to lift the minerals and pump such mines.

IT is estimated that in this State there are 150,000 sheep. The wool clip of the present year will not fall much short of five millions pounds.

California Notes.

BY ALEX. S. TAYLOR.

THE INDIANOLOGY OF CALIFORNIA
THIRD SERIES.

No. 60 of whole Series; continued from Farmer of Oct. 18, 1861.

XI.—K.
Miscellaneous.

THE GEOLOGY OF CALIFORNIA.

The San Francisco Bulletin of July, 1861, contains a condensed report of the lecture of our old friend, Prof. W. P. Blake, on the Geological Arcana of our State, recently delivered under the patronage of the Mercantile Library Association of this city.

The lecturer, after several years' residence in our State, in connection with the Pacific Railroad and other Government surveys in California, has recently returned to this coast after four or five years dissatisfied continuance at the East, only to find his well warmed seat occupied by strangers.

This eminent California *savan* is thoroughly acquainted with the Physical Arcana of our Pacific domain, and is well competent to be one of the instructors of our people; and it is highly desirable that he should be encouraged to devote his entire time to such valuable pursuits. His lecture confirms the hints and suggestions of dynamic changes noted in the Indianology, and is well deserving a place in our papers in connection with the subject.

The Mountain Ranges — Diamonds in the Secret Caverns.

As the anatomist first disposes of the bony system of his subject, so the lecturer first considered the mountains of California. They are naturally separated into five groups—the Sierra Nevada, the Coast Mountains, the Bernardino Mountains, the Peninsula Mountains, and the Mountains of the Great Basin. The Sierra Nevada, extending nearly 600 miles, from the northern boundary to the head of the Tulare Valley, has no well-defined towering summit-line, but two or more parallel ranges of nearly equal altitude, forming a double summit; at the north these summit ranges are usually some twenty miles apart, with elevated valleys between. Magnificent Shasta, at the sources of the Sacramento, is the most prominent peak, rising into the region of perpetual snows, 15,000 to 17,000 feet above the level of the sea. It is an extinct volcano, and appears to belong rather to the Cascade Range than to the Sierra Nevada. Geologically, this chain, whose western face slopes long and gradually to the valley, but on the east slopes abruptly to the Great Basin, consists of granitic and metamorphic rock. The leading crests are a compact gray syenitic granite, flanked on the west by gneiss and slates down to the foot of the slope. These slates are the prevailing rock after descending from the higher parts of the Sierra. They are very ancient Palæozoic sedementary beds, which have been uplifted from the bottom of former seas, and crumpled like so many leaves of a book, till their broad flat surfaces stand on edge, and the hot vapors escaping from below have filled the cracks with quartz and gold. The lecturer paused to correct the absurd opinion that prevails so widely, that the geological character of the country differs totally from that of any other region. Within the past month he had found high up on the slope of the Sierra, the outcrop of *a sand-stone, which is known the world over as characteristic of gold and diamond-bearing regions—a peculiar rock which has been found in the Brazils, in the Urals, in India, and in the Atlantic States, and under the lee of which diamonds are almost invariably found.* The more modern strata of the Sierra have already been identified as of the same age as those of the East—and the conclusion has been reached, that in the Tertiary times the *Pacific and Atlantic Oceans were connected north of the tropic zone.* Many of the Eocene or early Tertiary species of mollusks, found fossil at the southern end of the Sierra Nevada, are identical with those that existed at the same period on the former shores of the Apalachian.

A much more modern system of mountains are the Coast Range or Ranges, for they are not one chief ridge, as formerly supposed, but several, lying parallel with each other, with a series of long parallel valleys between. In our latitude there are three ridges, the western, on which our city is enthroned, the central, or Contra Costa Range, and the eastern, or Diablo Range. There is a similar series at Monterey. The breadth of country occupied by the Coast Ridges and their valleys, varies from 40 to 100 miles. Here and there we find a granitic axis and volcanic rocks, but their principal substance is composed of the tertiary and secondary formations. The strata are disposed in great wave-like flexures, and abound in fossils. They are the very Paradise of Palæontologists. Here the lecturer diverted from his course to read the story that the new-found coal-beds tell of the time when the Sierra Nevada fronted on the Pacific; when there was no Coast Range like a great sea-wall outlying them, when the rivers from the Nevada slope emptied directly into the sea, forming great deltas that supported luxuriant forests now compacted and transmuted into coal; and such he thought probably were the conditions of our region until the period of the Pliocene Tertiary.

The characteristics of the Bernardino Range—the southern rim of the Great Basin—more modern than the Sierras, yet far older than the Coast Ranges, and of the Peninsular Mountains that abut almost at right-angles upon the Bernardino, and lift one perpetual ridge of jagged outlines, until at Cape St. Lucas they sink into the sea, were dispatched more briefly. The mountains of the Great Basin are all in parallelism with the Sierra, as are the Rocky Mountains. To the geologist, they seem only like a succession of folds in the strata—or, as one might say, petrified wrinkles in the earth's hide.

The Coast Shores.

Mr. Blake next called attention to the connection between the direction of the mountain chains and the form and extent of the coast-line. The rocky ranges, lying broadside to the sea, preclude it from cutting harbors into the coast, yet it is remarkable, the absence of those deep precipitous inlets so characteristic of rock-bound coasts in high latitudes. To the fact that there is one notable exception we owe our matchless harbor. The Golden Gate, though not a fiord, is one of the most noteworthy breaks in a coast-range known. *There does not appear to be any dislocation, or sliding, or "fault" of the strata, but the Gate has more the appearance of a fissure widened by the currents.* By the map he clearly showed by what a happy arrangement the Bay of Monterey was formed between the end of one long range and the side of another; and again, at San Luis Obispo, how the Pacific excavates inland between the diverging ranges; how the Islands that lie parallel to the Sierra Inez range of the Bernardino are the peaks of a submerged range, while the Santa Barbara Channel occupies the subaqueous valley; how the seven Farallones, all in one straight line, twenty miles off the Heads, are the crest-points of a range that takes to the water off Monterey. So the bottom of our Pacific sea, off many a mile, is all mountain and valley—not like the Atlantic submarine slope, which falls off gently from the flat shore to the deep-sea soundings.

The Upheavals and Depressions.

To round more perfectly our idea of the hydrography of the coast, Prof. Blake pictured it as it would look lifted 300 above its present level. Then the Farallones would stand out the peaks of a continuous range of mountains, on the eastern side of which would lie the harbor of Monterey. New Islands would appear, the Bay of San Francisco would be drained, and the great rivers be prolonged through it and the Gate seaward. Then he sketched the vision that would be presented if the whole region were sunk 500 feet below its present level. The Pacific would flood the Sacramento, San Joaquin, and Tulare valleys. The hills of San Francisco would be submerged. The Golden Gate would be widened two or three miles, with an occasional Island rising here and there. The San José Valley would be flooded, and the waters connecting with those of the Bay of Monterey would leave the Santa Cruz and San Francisco Mountains as Islands lying parallel to the Contra Costa and Diablo Ranges. Los Angeles would go under, and the Gulf of California—Cortez's Vermilion Sea—would push 200 miles further north. *But this, instead of being a fancy sketch, was probably a true picture of California as it existed not long since*—speaking after the manner of geologists. That it was so is shown in many places, but nowhere so distinctly perhaps as at the upper end of the Tulare Valley, where hills of horizontal strata are now strewn with the *teeth of sharks, of ten or twelve different species, all of which are believed to be still living in the adjoining Ocean.* The first recognition of the existence of the mackeral family in the Pacific was by Agassiz, from their teeth [which, we may add, the lecturer collected on these hills eight years ago]. Since then, the fishermen have brought in living specimens.

The Plains and Valleys.

The mountains settled, Prof. Blake next took his audience to the valleys, which he disposed in four groups—the low and broad valleys, whose extent makes plains of them, the elevated mountain valleys, the plateaux of the Great Basin, and the river valleys or cañons. Among the first group is the great valley lying between the Sierra Nevada and the Coast Range, its area over 16,000 square miles, more than the combined areas of Massachusetts, Rhode Island, and Connecticut. We cannot stop to reproduce even "in little," the lecturer's graphic picture of this valley, in which so much of New England might be cradled without cramping; a valley that, except along the courses of the streams, and where its slope up the foot of the hills may be shaded with oaks, is treeless, and even shrubless, its surface in the dry season parched and free from grass, its temperature by day rising often from 100° to 110°, and the mirage constantly deluding the traveler along it.

The Colorado Desert, and its recent Dynamic Changes.

But his sketch of the Colorado Desert, which he included in his first group of valleys, we must not pass without remark. He pronounced it as fine a specimen of the desert as that of Lybia or Sahara. It extends from the base of San Bernardino southwesterly 180 miles, part of its surface being below our boundary-line in Sonora. Its area is some 9000 square miles, and excepting the Colorado, which cuts across its lower end, is without river or lake. It stretches off to the horizon on all sides without one glimpse of vegetation or life. Its surface is ashy and parched; its frame of mountains rise in rugged pinnacles of black rock, bare even of soil. Words are unequal to the task of describing its apparent expanses, the purity of its air, the silence of its night, the brilliancy of the stars that overhang it, the tints of the mountains at daybreak, the looming up of those beyond the horizon, the glare of the midday sun, the violence of its local storms of dust and sand. Parts are entirely destitute even of sand, being smooth, compact, sun-baked clay; other parts are covered with heaps of sand, disposed like snow-drifts in waves of 50 or 80 feet in hight. Near the mountains along the Colorado there is a terrace as flat as a floor, and paved with pebbles of nearly uniform size, of porphyry, jasper, quartz, cornelian, and agate, all rounded by the action of water, and polished till they glisten, by the driving sand. In this respect, again, the porch of our Great Desert is like that which outlies the Lybian Desert. Doubtless the northern part of the Desert is the dry bed of an ancient lake of fresh water, whose beach-lines are strongly marked. Probably, at a comparatively recent period, the waters of the California Gulf covered all the clay surface of the desert. It lies below their level now, and if a channel were cut through the natural embankment of the Colorado, it would doubtless be covered again with water. *It was very probable that the Colorado Desert region was was uplifted within historic times.* Earthquakes occasionally agitate its surface, and in 1852 there were eruptions of mud and hot water in the central parts of the valley.

The Death's Valley and Dead Sea of California.

Next were rehearsed the characteristics of the Great Basin, so named by Fremont, and of the newly-discovered "Death's Valley," east of Owen's Lake, which by the barometrical readings lies at least 377 *feet below the level of the sea*—the bed of a dried-up lake covered with layers of salt from one to three feet in depth, while all the water about it is bitter and nauseating—an American Dead Sea, whereof the sea has died out literally.

The Climate of California.

Then the lecturer came to consider the climate of California; which is distributed in zones that lie parallel, not to the equator, but to the coast, following the trendings of the mountains. To account for it, he described first the climatal characteristics of the land, and then the great currents of the Pacific. California has no *one* climate, but several; as a whole, it nearer approaches that of Spain than of any other portion of Northern Europe. The air over the great valley, being heated by the sun, rushes up along the slope of the Sierra as in a mighty chimney; and to supply this current, air is drawn inland through the breaks in the coast ranges, as through a blower. The Golden Gate, being the broadest depression in the range, and leading directly to the interior, is the great draft-channel for the valley furnace. The air thus drawn in comes to us chilled by contact with the cold waters of the north, and laden with their mists. The fury with which it is drawn inland around the barriers that, both north and south of us, force it to seek the Gate, raises the sand of the ocean-beach, and piles it in wave-like hills over the site of our city. But this beautiful phenomenon we need not describe, as every day, at this season, we see it repeated. The climate of the California Desert is peculiar to itself, and finds no counterpart this side the Deserts of Africa and Asia. Here, as in the Sacramento Valley, the hot air rising between the mountain barriers, sucks in through the San Bernardino Pass another such a gale as is always, of a summer day, rushing through the Golden Gate. The sand that the gale bears along cuts deep grooves in the granite, and polishes its surface. Striking against a vertical granite wall, it wears away the minerals of which it is composed with different speed, according to their varying hardness. The soft feldspar succumbs first, then the quartz, and the garnets last of all. So the projecting masses that face the wind all stand tipped with garnets that point like jeweled fingers to the source of the wind. The hottest place known in the United States is Fort Yuma, at the junction of the Gila and Colorado, where the thermometer frequently ranges at 117° in the shade.

Prof. Blake argued the reasons of the bracing effect of the coast climate, which permits so much greater amount of physical and mental exertion without fatigue than any other region known; and queried whether it was not due to the unobstructed "actinic rays" of the sunbeams reaching us through a dry cloudless atmosphere. The abundance of actinic rays he held to account for the unusual brilliancy of the flowers, and to be proved by the general absence of clouds, and the reflection of the parched light-colored soil during the dry season.

[TO BE CONTINUED.]

The Management of Swine.

FRAMLINGTON FARMERS' CLUB.

[THE following address and pleasant discussion upon the management of Swine we copy from our European exchange the Irish Country Gentleman's Newspaper. It will be found to be very interesting, as it contains an abundance of practical truths that can be made available; there will be found information, wit and pleasure that will repay a careful reading. Its length compels us to make two parts of it.]

THE fame of Mr. Stearn's pigs is the chief honor of the pleasant little village of Brandeston; and in undertaking to read a paper before the members of the Framlingham Farmers' Club, on the management of Swine, he determined to perform the task thoroughly, and so surrounded himself with the pigs on which his reputation rests. It must not be supposed that Mr. Stearn's pigs came led with a string tied to their leg, or covered with a net in a dealer's cart. The pigs would scorn such treatment. A short time before the discussion there was a great commotion in the town. A procession of cars, tastefully trimmed with flags, evergreens, and flowers passed through, the horses mounted by postillions in scarlet jackets and blue caps with scarlet tassels. The procession was received with cheers and much popular ovation. The occupants of these triumphant carriages were Mr. Stearn's pigs, come to take their part in the discussion at the Farmers' Club. This was held in the Corn Exchange, at the Crown Hotel; John Pierson, Esq., in the chair. There were nearly a hundred members of the Club and their friends present, many of whom came from a considerable distance. Among the latter was Mr. Sexton, of Cockfield Hall, Essex, Mr. Stearn's rival at the last Agricultural Show.

The Chairman, in opening the subject of the meeting, said the object of this Club had always been the advancement and diffusion of agricultural knowledge; and as their good friend Mr. Stearn had more than once shown pigs equal to any in England, the members of the Club had invited him to come and tell them the practical kind of breed he recommended, in which he had been so successful, and the mode of breeding them, that they might profit by his superior knowledge on the subject. Mr. Stearn, without a moment's hesitation, said that anything he could do to add to the usefulness of this Club, which had been in existence twenty-two years, would give him the greatest pleasure. He was much pleased to see so large an attendance. Mr. Stearn would introduce the subject and allow them to discuss it afterward. They might not all agree with Mr. Stearn, but they all had one object, which was to make pigs profitable. They were all aware that breeding was an important point, but feeding also had an important bearing. He had yet to learn the problem of making pigs, or any other kind of cattle, fat without putting his hand in his pocket; he was informed the pigs at Brandeston cost nothing for feeding, owing to the excellent management of Mr. Stearn. (Cheers and laughter.)

Mr. Stearn: I am called upon this evening to bring forward as a subject the management of Swine. I suppose it includes breeding, rearing, and feeding. I will try to make a few remarks which, perhaps, will be a benefit to some of my neighbors. Now, in bringing this subject forward, I wish it to be understood that I have no secret, but shall be most happy to answer any question put to me to the best of my judgment. This class of the domesticated animals of this country is fast becoming one of the most important in the community. The inhabitants of Great Britain and Ireland are great consumers of the flesh of the pig, in all its varied forms of conversion into meat. The consumption of pork, fresh or salted; of bacon dried or smoked; of hams, etc., is immensely great, and renders the progressive improvement in the breeding and general management of the pigs of great importance to the public; and, in my opinion, the keeping of swine is fast becoming something more than a mere means of disposing of the refuse of the farm, which would otherwise be wasted. I find this class of animals begins to be acknowledged amongst large breeders and graziers, instead of being thought beneath their notice; still, I am often surprised to see what a disgraceful lot of pigs are kept by many farmers, such as I am positive, if kept to any great extent, will ruin any man, for they eat an enormous quantity of food, but will neither grow nor fatten upon it. Our friend Mr. Bond stated at the last meeting, our population had doubled in the last fifty years, and that we want to find some means of producing more meat at the least possible cost to supply it with. Now, I am convinced that in swine alone, if the farmers would pay proper attention to the breeding, rearing, and feeding, there can be double the meat raised at little more than the present cost. I have had experience in the management of pigs a good many years, as many in this room are aware. I exhibited a sow and pigs at the Framlington show as long back as 1847, and gained the prize; they were then considered to be superior to anything that had been seen in this neighborhood, and many said I should never produce another lot so good. But, as Mr. Bond says, "We keep progressing," for at the Framlington show last year I exceeded the former very much in weight at the same age. The same remark was then made again, but the two lots I showed at Birmingham and Smithfield were heavier still at the age; and now, I suppose, I may make up my mind I have got to the furthest in that point, as I have raised between fourteen and fifteen stone, fourteen pounds to the stone, at the age of between five and six months, dead weight; and between eight and nine stone, fourteen pounds to the stone, live weight, at between twelve and thirteen weeks old; and I think I have now, in the breeding of that animal, arrived as nearly at perfection as I could reasonably hope. But it is difficult to know where to stop, for even improvement has a limit, and crossing when carried beyond a certain point will generally end in deterioration. I think, however, to cross occasionally as far distant as possible is beneficial. There is no doubt that we derive our many varieties of the pig from the wild animal of the forest. The wild hog has been found everywhere, or nearly so, throughout the world. The contrast between the coarse denizen of the forest and the many sleek and beautiful specimens of our improved breeds is very manifest, and affords another proof of what may be achieved by the skill and care of the breeder. To give an extended outline of the original species, or of the various breeds and innumerable crosses and varieties of pigs, would occupy too much time, therefore I shall just describe our own Suffolk pig. In pursuing the subject further, I shall endeavor to show the great importance it is to the community at large that the stock of pigs should be duly kept up, and every encouragement and inducement held out to breeders and feeders for that purpose. It is certain that none of our domesticated animals will afford such a large amount of food for human sustenance as the pig, in proportion to the readiness and expense with which it is raised, and the time necessary for raising it. According to all accounts, the numbers now reared are exceedingly great, and yearly increasing; there is no class of animals equally prolific that are of any great value to man. It is this view of the subject that so highly enhances the importance of the breeding, rearing, and feeding, and general management of pigs, and which I will now endeavor to describe as fully and as briefly as possible in accordance with the importance of the subject. I find that the profit or loss of the pig rests on the quality of the stock, and it must be kept in mind for what purpose the animal is intended, whether for bacon or pork; if for bacon flitches, you must choose a large kind; but if for pork, the small kind is most desirable, such as the Suffolk or Leicester, which are very similar animals; and every judicious breeder will have to take into consideration many circumstances in choosing a breed of pigs. The intent and purpose of breeding is profit. To insure the greatest amount of profit, it would be well to consider the position in life of the population resident near one's own locality; his proximity to a good market, and a kind and quality of meat necessary for its supply. Formerly farmers had no means of conveying swine to a favorable market, except the tedious one of driving them, or the expensive one of conveying them in carts. I have named as a matter for consideration the locality of the breeder; this is, however, in reality becoming of little importance, for communication by railway is now become so general throughout the country, and the means of transit so cheap and so easy of accomplishment, that any breeder will ultimately take this into account and the advantages of it. He can send to whatever market is best suited to his purpose. There is a pig called the Improved Black Suffolk, which many prefer to white, thinking they are more hardy; but I have fairly tested the thing of late (which I suppose most present have been eye-witness to), and proved that the white will exceed the black as far as early maturity is concerned, and of course early maturity is where the profit is gained; and I find the better the quality of breed, the more lucrative it becomes, much less food being required. Now, for our White Suffolk breed. In choosing the sow and boar the chief points are—a smallish head, with short snout, wide chaps, the ears rather small and thin, ends sharp, pendulous and pointing a little forward, broad and deep chest, round ribs, long in the body and short in the leg, the haunch or thigh dropped almost to the hock, back broad, straight or slightly curved, shoulders and hams thick, and the neck to rise well behind the ears, small bones in proportion to the flesh, the hair to be long, thin, and silky, tail small and curled. Strict attention to these points in selection cannot fail of perpetuating good stock. Here I must add my surprise how careless breeders are in selecting the boar for their sows; if there happens to be a good animal within a short distance, for the going to which half-a-crown is charged, they will often send double the distance to a thoroughly bad-bred ugly brute for the sake of the gain of a shilling; whilst this apparently paltry gain is so much looked after, improvement is out of the question. But, gentlemen, instead of trying further to explain what the animals ought to be, I shall have great pleasure in showing you a specimen or two; and to show the contrast between a well-bred pig and a bad-bred pig, I have brought one from a neighbor's, about the same age as mine, as a breeding sow, from the opposite side of the road to my farm. You can, therefore, be your own judges, whether I have fixed on the right breed or not, for I do not like preaching without practicing. As to the time for breeding, the sow should be from ten to twelve months old, and the boar from eight to twelve months. I, however, find that very few people will breed them so long, but breed them much earlier, which very often prevents them growing to the proper size, or acquiring sufficient strength for breeding. I think good-sized sows are best for breeding, and more likely to have a good number of pigs. Great care should be taken not to have one with less than twelve paps, for it is observed each pig selects a teat for itself. I consider twelve good pigs to be sufficient for any sow to bring up. The sow I exhibited at Framlingham and Canterbury last summer, has brought up fifty-one pigs in four litter without losing one. As far as my experience goes, the time of gestation averages about 113 days, or sixteen weeks and one day. Two good litters in a year is all we ought to expect. When a sow is in pig, she ought to have liberty and plenty of exercise. The boars kept for stock should be confined in a shed with a roomy yard; if allowed to roam about, you are likely to get wrong in your breed. In managing the sow at the time of farrowing, my practice is as follows: To have a man with her to attend her; for it is absurd to have all the trouble and expense of keeping a sow, then, at the most particular time to leave her alone to take her chance. In my idea, there is not sufficient attention paid to the construction of piggeries; I have seldom seen one which I did not consider too small, except, perhaps, just for fat pigs, which, of course, do not so much signify, for the less a pig put up for fatting moves the better. But the farrowing pen ought to be large, to allow the sow plenty of room, and likewise to admit of rails being placed round the sides, so fixed as to prevent the sow lying on the young ones. These rails should be made to shift according to the size of the sow, I think in hight from ten to twelve inches, having the supports sloping up from the side, instead of straight up from the floor, like a model I have brought with me; then when the sow lies down, there will be no likelihood of her squeezing the pigs, as there is plenty of space left for them to pass between her and the wall, for nine times out of ten that is where the mischief is done, as sows invariably like to lean against something when they lie down. I have recently had a hundred pigs, without losing one from being crushed. Several gentlemen have told me lately that they have lost a great number from that cause; but if they will take my advice with respect to the rails, I feel satisfied they will not have to complain of losing pigs from being lain on again. Each place ought to be, at least, from eight to ten feet square, and the best floor, I consider, is asphalte. No damp or scent can rise from that; I tried boards, bricks, and almost everything in the way of floors; most persons would say boards are best, but I think I can convince you to the contrary. If you will consider, for only one minute, they cannot be healthy; for, if the boards be placed close, of course the moisture will stand, and the boards become saturated; and if a space is left, the refuse litter will go between, so it will become one putrid matter underneath, quite level with the floor, whatever the depth may be; for what passes through will absorb the urine, and is likely to bring on many diseases. But I think it is well, in the cold weather, to lay down a false lattice floor on the asphate, so it can be taken up once a week, and everything swept from under. For two or three weeks, when the pigs are very young, I have the beds attended to and fresh litter every morning, for I find the cleaner the place is kept, the better the pigs thrive. The floor being washed once or twice a week, everything runs off, and the asphalte dries in a very short time. There is another great advantage; it does not take more than two-thirds the straw it requires for any other floor; for the moisture appears to run under the litter without wetting it so much, as it is laid a little on the slope; what is taken from the inside serves as litter for the pounds outside, which ought to be paved in some way to hinder the pigs from rooting. By following this plan the manure is made very regular and good. A tank should be made just outside, to receive the drainage from the pounds; the buildings to be troughed to take off the rain water, to prevent the manure being washed. The pens ought to be so constructed as to be closed up in cold weather, and well-ventilated in warm. At the time of farrowing I allow a very small quantity of litter cut short, and have a hamper placed in the pen, with a little straw at the bottom, and also an old blanket. I put a slip or partition, about two feet and a half high, across the pen to prevent the sow getting to the hamper; as the pigs come forth, put them into it, and cover them up, until the sow has done farrowing, after which I put them to her and let suck. When done, put them back in the hamper, give the sow a little warm milk and bran; and whilst she is eating this, have the bed attended to, by removing all the wet straw, etc. Add a little fresh litter short cut; then when the sow lies down, let the pigs go to her again; by pursuing this plan there is very little danger of losing them, for I believe one-third are lost for want of proper attention. I always give the man sixpence per head for all the pigs he can bring up to a fortnight old. I find this much the cheapest plan, for then there is no fear but he will see to them properly, and attend to them in the first instance, as well in the night as the day. How often do we hear people complain of the sow eating her own young. Therefore, steps ought to be taken to prevent her doing so; for when once a sow does that, she is very little use for breeding purposes. If you allow me, I will explain what I have found to be the cause. In some litters the side teeth are much longer and sharper than in others; when this is the case, and the pigs begin to suck, they bite and scratch the paps, and punish and irritate the sow to such a degree that it brings on inflammation, and the sow becomes mad with rage, she throws some one way and some another. At last she bites them, and if she once draws blood, she will begin to eat them. Now, the way to prevent this: When the pigs are a few hours old, I have them taken away in a hamper, so the sow cannot hear them, and nip those teeth out with a pair of pincers. I should have lost a lot of thirteen some time since, if I had not pursued this plan, for the sow was as near mad as possible; she threw the pigs all over the place, and I had great difficulty in taking them away, for she would not allow any one to approach her. As soon as I had drawn the teeth, and put the pigs back, she was as kind to them as possible, and perfectly docile. I think about eight weeks old is a good time for weaning the pigs, and I like to have them operated upon a short time previous. As far as the feeding of my pigs is concerned, it appears the public know more about it than I do myself. Some say I give them sugared milk; some, when they think my back is turned, put their hands into the troughs and taste the food, and say they are sure it is physic; others have stolen some of the food to have it analyzed. Now, I will try to explain how I feed. I begin to feed the young pigs at five or six days old with warm milk, mixed with a very little fine sharps, and a small quantity of white maize, out of troughs that I will show you presently. For the first few weeks after being weaned, I have the boy feed them very often, but give them very little food at a time, so they will clear the troughs out. In the winter I feed all with warm food, but not in the summer. I give them a great variety of meal, such as wheat, maize, barley, oats, and whatever is most convenient to mix together. I just wet it with cold water, and then scald it with boiling water, and sprinkle it with salt; between meals, I give them whole maize and mangel-wurzel or Swedes cut small; and once or twice a day a little coal, but not too much, as it will be likely to do them harm. I allow them plenty of clean water; and there is one point I am very particular about, not to give them any more food than they will clean up at a time. When pigs are put up fatting, it will be found very beneficial to wash them at least once a week; this is quickly done by experienced hands, and will amply repay any one for the trouble. I also like to have then very often brushed. If you will only try the experiment between this and the common mode of treatment, you will be surprised at the difference. I have no doubt many will say, "What a trouble!" But how can we succeed in anything without trouble? I am certain the cottagers will find their pigs fatten a good deal faster, if they would wash and brush them, and feed them with warm food, instead of giving it to them all like ice. This would be a very easy thing, for most can keep a kettle by the side of the fire all day; they would find themselves well paid for the little extra trouble it might be. Store pigs ought to have their liberty as far as convenient, such as to range in large yards in winter, and the run of a piece of pasture in the summer. They should also be fed two or three times a day. Good bred and well fed store pigs will always consume the refuse from the farm and dairy, when a bad bred one will refuse. I have never known mine refuse anything, in the way of pig food yet, that was offered them, not even the prize animals. In my opinion the generality of pig-troughs are very badly constructed, so as to waste a great deal of the food, and soil it by allowing the pigs to get their fore-feet in. I have tried a great many different sorts, and find those I have brought here to-night to be the best kind I have seen, to prevent both spoiling and soiling; and they are called the light iron Norfolk troughs. They cannot be too flat, according to the size of the pigs, to prevent their getting deformed. Their shape is very often injured through not using a suitable trough. I have a great many sizes, and use them to suit the animal. And now, gentlemen, if any of you would like to see my places and animals at any time, I shall be very happy to show them to you; but I can't say I wish to see you all at one time. I have had as many as sixty or seventy in a day, and this is rather too much of a good thing. (Prolonged cheering.)

[TO BE CONTINUED.]

FRENCH VINTAGE.—The accounts from the wine-producing districts are satisfactory. In many vineyards the vines afford a prospect of an abundant vintage. Should the weather continue to favor their maturity the quality of the wine of this year will be first-rate. Accounts from Nantes state that the progress of the vines to maturity is most satisfactory. Should the present fine weather continue the vintage will commence there from the 10th to the 15th of September. In other districts the owners of vineyards complain that the produce will be diminished from a quarter to a fifth by the excessive heat. A rise has, consequently, taken place in the price of wine.

MELONS are more than usually abundant this year at Marseilles. One small commune, Cavaillon, in the Vaucluse, supplied the Marseilles market with 528,093 red melons, 1,914,776 green melons, and 84,000 water melons. These melons, amounting in number altogether to 5,437,896, were sold on an average at 2fr. 50c. the dozen, representing a round sum of 1,200,000fr. A magnificent revenue, when one considers how small a surface such a crop covers. Some gardeners boast of having already realised 25,000fr. by their melons, and the season is not yet expired.

PATRIOTIC POEM.

[The following beautiful patriotic Poem was read at the Commencement Exercises at Brown University, Providence, R. I., held the first week in September. There is beauty in every line, and a soul-stiring patriotism in every thought. The Poem was by Rev. Dr. Smith of Newton Centre, Mass.]

Fling out the banner on the breeze,
Shake out each starry fold;
Summon the stalwart soldiers forth,
The mighty and the bold;
The bell of freedom from its tower
Its solemn call has tolled.

The sound sweeps wildly o'er the land,
Sweeps o'er the bounding sea;
It echoes from each mountain-top
The anthem of the free;
It snaps the chain which sin has forged;
It sings for liberty.

Marshal the legions for the fight,
The youthful and the brave,
Stand for the noble and the right,
The glorious Union save;
Stand for the cause for which their blood
Our patriot-fathers gave.

Dread not the angry foeman's rage,
Dread not the tempest's crash;
Dread not the billows, though the cliffs
Along the shore they lash;
Dread not the awful thunder's roar,
Nor lightning's piercing flash.

Above the clouds the brilliant sky
Shines in immortal blue;
And light, like Heaven's approving smile,
Streams, in its glory, through;
Be patient, till the strife is o'er;
Have faith to dare and do.

With willing heart Heaven's high behest
Fulfill without alarm;
The foe has planted for our hand
And nursed the conqueror's palm;
And He that bade the sea "Be still,"
The stormy waves will calm.

Then fling the banner to the wind,
The emblem of the free;
Strike the sweet harp-notes that proclaim
The reign of liberty;
And bid the melody rebound
From every trembling key.

And count each star that studs the blue,
Whate'er the past has been,
A wayward wanderer, welcomed back,
To fill its place again;
A loving band of sister-lights,
Just like the old thirteen.

Strike not one jewel from the crest
The loving mother wore,
Re-set the gems upon her breast,
Each where it stood before;
Clasp in the glorious cynosure
The entire dear thirty-four.

◆

Royal Agricultural Society of England.

The monthly Council meeting was held on Wednesday, May 1st, Earl Powis, President, in the chair. Thirty-seven new members were elected.

Finances.—The Hon. Col. Hood presented the report, from which it appeared that the Secretary's receipts during the past month had been duly examined and found correct. The balance in the hands of the bankers on the 30th April was £3374 15s. 7d.

Journal.—The report of this committee was presented by Mr. Thompson, M. P., the chairman. The Judges of Essays had awarded the prize of £10 to Messrs. W. & H. Raynbird, of Hackwood Park, Basingstoke, for their paper on the Adulteration of Seeds. The essays in classes six and nine for 1860 were not considered worthy of the prize.

Chemical.—Mr. Wren Hoskyns, the chairman of the committee, presented the report, which stated that Professor Voelcker would deliver a lecture on the Manufacture of Cheese, on Wednesday, the 8th May, at twelve o'clock. For this lecture the Professor is preparing two papers, giving the results of the experiments which he has been making on the growth of turnips. The Professor had lately received specimens of a new description of cattle food made from the refuse of the palm nut, and stated to contain 22 per cent of oil. It is now being made of at the Royal Agricultural College at Cirencester, and the Professor hopes to be able to make a detailed analysis of its qualities. This report was adopted. The names of the Earl of Macclesfield and Mr. Humbleston, M. P., were added to the list of the committee.

General, Leeds.—The report of this committee was presented by Lord Walsingham, the chairman, recommending that the time for entries of flax for the Leeds meeting be extended to June 1. Arrangements have been made for procuring a supply of the best hay and forage for the use of the horses in the showyard.

Metropolitan Meeting of 1862.—A deputation, consisting of the Duke of Marlborough, the Earl of Powis, Lord Walsingham, Sir John Shelly, Bart., M. P., and Mr. Brandreth Gibbs, was appointed to wait on the First Commissioner of her Majesty's Works to confer on the proposed metropolitan meeting.

The President brought forward his motion that it will not be expedient for the Society to hold a dinner in London, in connexion with the show of 1862, which was agreed to.

On the motion of Mr. Thompson, M. P., seconded by the Hon. Colonel Hood, Earl Cathcart was unanimously elected a member of council in the room of Lord Feversham, elected a trustee.

House List.—Agreeable with the by-laws, the Council arranged by ballot an election list, to be recommended by them for adoption at the ensuing general meeting on the 22d inst.

A committee was appointed on the motion of Mr. Fisher Hobbs, seconded by Mr. Thompson, M. P., to re-arrange the districts of England and Wales, where the Society should hold their country meetings.

On the motion of Mr. Brandreth Gibbs, seconded by Mr. Milward, a committee was appointed to consider and recommend what shall be the privileges of the press at the country meetings of the Society—in reference to time of admittance to the yard, and of being furnished with catalogues, and with the awards of the judges.

Mr. Holland, M. P., brought forward his motion, which was seconded by Mr. Fisher Hobbs, that the lecture lately delivered by Professor Simonds, on the Nature and Causes of the Disease known as the Rot of Sheep, should be published in the form of a pamphlet, which was agreed to, the details being referred to the Journal Committee.

The Council then adjourned.

◆

Broom-Corn.—Mr. R. E. Wood, at Napa, the Reporter states, has raised a fine crop of broom-corn the present year on Cornwell's Addition. Each acre yields 800 pounds of "brush" (i. e., of the upper section of the stalk cut to the proper length for brooms) and 2000 pounds of seed. The brush in its unmanufactured state, readily brings from 6½ to 8 cents a pound, and the seed $20 a tun. It is however the intention of Mr. Wood to work up his stock at home, and he expects from the yield of twelve acres to make 10,000 brooms.

A train of cars recently passed through Rochester, N. Y., bound to Buffalo, to be loaded with Western produce, which was one mile and-a-quarter and thirty rods in length, and was drawn by five locomotives.

Bee Management for August.

With this month, in most sections, the Honey season closes. The Bees continue to expel the drones, and during this period the colonies should be carefully supervised. Those which retain their drones longer than their neighbors, should be marked as suspicious, and an early occasion taken to examine them, to ascertain their condition, so that if found queenless, the proper means may be seasonably used to provide a remedy, by supplying them with a reserve queen, or uniting them with some weak stock known to be sound. Care must also be taken to prevent robbing, to which Bees are much prone at this time. The removal of surplus Honey, or giving additional supplies to such as have insufficient stores for the Winter, should be undertaken only early in the morning or late in the evening, or on some cool day; and should be performed with all possible expedition. Honey-combs must not be placed in exposed situations, nor should the brooding-chamber of movable-comb hives be uncovered for prolonged operations during the hours when Bees are flying briskly. If colonies require to be fed, it should be done only at night, and the feeding-boxes should be removed only in the morning, to avoid attracting Bees by the odor of Honey. The entrances of the hives should likewise be contracted, to enable the Bees the more effectually to defend themselves and their stores in case of attack. All cracks and crevices in old box or basket-hives, through which a Bee might creep, must be closed with soft clay or putty. The greater the number of hives in an apiary, and the more deficient the pasturage, the more diligent must the Bee-keeper be to guard against robbing.

But, in districts where Buckwheat is cultivated, the Bees have usually renewed and abundant pasturage during a part of this month, of which they avail themselves with great eagerness. Where the supply of nectar is ample, and the weather is favorable for gathering, it is well to remove the greater portion of the sealed Honey, to afford the Bees room for storing; and if they can, at the same time, be furnished with empty combs in good condition, they will be greatly aided in their work. Movable-comb hives enable the Bee-keeper to perform this operation with great facility; and if the empty comb be inserted between two full ones, the refilling will proceed still more rapidly. Where buckwheat pasturage can be confidently expected, an increased amount of Honey will be secured, if the queens be confined or removed about three weeks in advance, so as to check the production of brood and consumption of Honey, and also providing an increased number of empty cells. But this process must be cautiously availed of in colonies intended to be wintered, because if the queens are kept in confinement too long, the hives will contain an inadequate number of young and vigorous Bees in the fall. On the other hand, it may be freely used, and with great advantage, in colonies intended to be broke up or united with others.—[American Bee Journal.

◆

Intelligence of the Lark.—A pair of larks had built their nest in a grass-field, where they hatched a brood of young. Very soon after the young were out of their nest, the owner of the field was forced to set the mowers to work, the state of the weather forcing him to cut his grass sooner than usual. As the laborers approached the nest the parent birds seemed to take alarm, and at last the mother laid herself flat upon the ground with outspread wings and tail, while the male bird took one of her young out of the nest, and by dint of pushing and pulling got it on its mother's back. She then flew with her young one over the fields, and soon returned for another. This time the father took his turn to carry one of the offspring, being assisted by the mother in getting it firmly on his back; and in this manner they carried off the whole brood before the mowers had reached their nest.—[Routledge's Ill. Nat. His.

CIRCULATION OF THE FARMER ABROAD.

We have often urged the friends of our State, to aid us in the Circulation of our Journal in the Old States, and Europe, so that we might be more instrumental of good, and help to increase the population of California, and thus make the State more prosperous.

We have often published strong Letters, from various States, proving the good our Journal is doing in making our State truly known in all her vast resources. We now ask of all who feel a desire to have our State double her population, to this work.

We append a Proposition, and hope the Friends of this Journal and the cause it pleads, and all who wish to carry out the desires expressed by our excellent Citizen, in Paris, will coöperate with us. We will make liberal terms to all Societies for Emigration, or Clubs, and Commercial Houses.

With a desire to make the Resources of California known abroad as widely as possible, we feel confident that if we could Circulate the California Farmer in all the Older States, it would be the means of showing the great Masses of the People, that California is the place for them to settle in; and we believe we could greatly benefit all the interests of our State, by Circulating our Journal extensively abroad.

With such views, we ask the coöperation of our Merchants, and Business Men, and all who desire to make California truly and widely known, to aid us in the Circulation of the Farmer.

Wishing to place the Farmer at so low a price, as to enable all to send it to their friends, we offer the following Terms for all Clubs to send to the Old States, and in Europe:

For eight Copies	$25
" ten "	30
(Each Copy to be mailed separately, if so desired).	
For three Copies	10
" six "	20

CALIFORNIA WINE!
CARD.

Lake Vineyard, Los Angeles Co., Cal.,
March 21, 1861.

Being often applied to by acquaintances throughout the State for my WINE in small quantities, I hereby notify them, as well as the public generally, that I have appointed

Messrs. HOBBS, GILMORE & Co.,
SAN FRANCISCO,
My Sole and Exclusive Agents

With the Improved Instruments of For the State of California, for the sale of all the different classes of WINE manufactured by me at LAKE VINEYARD (and that they cannot be obtained of any other parties), giving the assurance that they will obtain from them the same article in every respect as I have in my cellars.
B. D. WILSON.

NOTICE.

In conformity with the above card, the public are informed that we, the subscribers, have for sale at our

Wine Cellars,
Southeast Corner of Market and Beale streets
Nearly opposite the Railroad Depot,
PURE WINES!
CONSISTING OF
Port, Angelica, and White Wines
ALL WARRANTED TO BE THE PURE JUICE OF THE GRAPE,

Which we will sell in quantities to suit purchasers, put up in shipping packages or otherwise.
HOBBS, GILMORE & CO.,
17 Market street, opposite the Railroad Depot.

The Plaza Stable,
DOWNIEVILLE.
RETICKER & MORRISON.

The proprietors of this Stable ask the attention of the public to their establishment. It needs for us only to say that we are at all times prepared to furnish HORSES and MULES, for the single day or longer period, and Horses and Mules for Exploring Expeditions for all the Interior. Our Stock is all trained for mountain travel, sure-footed, and well-broken to the trail. Charges always reasonable.

We have a Stage and Passenger-train running from Downieville to Virginia City, leaving Downieville Mondays and Thursdays, and leaving Virginia City same days, making the trip in two days. Price $15.
24-3m

GARDEN-ENGINE FOR SALE.

A fine garden-engine, of capacity to throw a good stream of water 50 or 60 feet, can be had at a bargain on application at the Farmer Office.

Notice.

The copartnership heretofore existing between A. H. TODD and JAS. R. RICHARDS, under the firm of TODD & RICHARDS, is hereby dissolved by mutual consent. Either partner will sign in liquidation of the business of the late firm.
A. H. TODD,
JAS. R. RICHARDS.
October 3d, 1861.

The undersigned will continue the business of PRODUCE AND GRAIN BROKERS AND COMMISSION MERCHANTS, at the old stand, No. 42 Clay street, near East, under the firm-name of A. H. TODD & CO.
A. H. TODD & CO.
San Francisco, Oct. 3d, 1861.
4

A. H. TODD & CO.,
Produce Grain Brokers,
AND
COMMISSION MERCHANTS,
No. 42 Clay street, near East.

Have for years been engaged in selling Grain and Produce in this market and in Oregon, have extensive acquaintance, and possess advantages unsurpassed for buying or selling.

We have permission to refer to many of our most substantial Merchants and Business Houses in this city and Oregon. Also, to a large number of Farmers in every part of the State.

Our terms for buying or Selling Grain and Produce: For amounts under $5000, 2½ per cent.; for $5000 and over, 2 per cent. Highest market-rates and prompt returns guaranteed.

Cash advances made on Grain in warehouse. 14

PACIFIC
FRUIT MARKET.

OUR ARRANGEMENTS ARE NOW COMPLETED to supply our customers with the choicest Fruit of California production. We receive consignments daily from

OAK KNOLL, NAPA.
SU COL, NAPA.
FERNSIDE, ALAMEDA.
WASHINGTON NURSERY, SACRAMENTO.
SANTA CLARA NURSERY, SANTA CLARA.

And many other Orchards, embracing Fruits of every variety and flavor.

OUR JOBBING DEPARTMENT
Will meet the wants of families.
OUR WHOLESALE DEPARTMENT
The requisitions of buyers through the State.

The superior manner in which most of our Fruit is packed renders it very desirable for shipping purposes.

WINE!

OUR CELLAR IS ADMITTED to be the best in our State for the Storage of Wine, and is capable of holding 200,000 gallons.
We are now ready to
RECEIVE WINE ON STORAGE,
OR FOR SALE,
And offer facilities to all Wine-Makers with whom we may make business arrangements.
24 GRAVES, WILLIAMS & BUCKLEY.

SEED, PLANTS, ETC.

To the Seed Trade!

J. M. THORBURN & CO.,
15 John street,
NEW YORK,
GROWERS AND IMPORTERS OF
VEGETABLE,
Flower, Field, Fruit,
AND
TREE SEEDS,

Offer of the growth of the present year, and of the purest Stock, their usual very extensive assortment, comprising every tested desirable variety known in the several departments.

By reason of the abundant crops, generally, this season, we are prepared to offer unusual inducements to WHOLESALE PURCHASERS OF

First-Class Seeds.

For further particulars and Trade-Catalogues, address as above, or to
THOS. DAY,
2 No. 732 Montgomery street, San Francisco.

SEED WAREHOUSE,
S. W. MOORE,
IMPORTER,
WHOLESALE AND RETAIL DEALER IN
Farm, Garden, Fruit, Tree,
AND AGRICULTURAL SEEDS,
OF ALL KINDS.
—Also—
French Peonies, Hyacinths, Gladiolas, Lilies, Tulips, and other Flowering Plants,
No. 110 California street,
Between Sansome and Montgomery streets,
11-6m SAN FRANCISCO.

Breeding-Mares Wanted.

A party wanting a few MARES of good quality, would like to exchange Real Estate of improving value for the same. A band of twenty or thirty MARES is wanted. The Real Estate is in Sacramento. 18

Machine for Making Wine.

☞ Several Valuable MACHINES for WINE-MAKING, including a Machine for stripping the Grapes from the bunches, with presses, etc., capable of making Wine in the best and most rapid manner, can be had on application to this office.

HOTELS.

UNION HOUSE!
Corner of Main and Center streets,
MOKELUMNE HILL,
Henry Atwood, Proprietor.

THIS SPLENDID THREE-STORY STONE Building, long acknowledged(equal, if not superior, to the best Hotels in the Mountains, has been thoroughly renovated and greatly improved and a

SPLENDID BILLIARD TABLE ADDED.

The Dining-room has been divided into a Family Dining-room and Restaurant, both hard-finished, and newly and elegantly furnished. The former will be for regular boarders who may prefer it; the Restaurant will be open at all hours, and be supplied with the best products of the market.

The parlors and chambers have all been thoroughly renovated and elegantly furnished, and will accommodate seventy-five persons.

The Stages all arrive and depart from the "UNION," and for the accommodation of travelers the House is kept open all night.

The proprietor avails himself of this occasion to say to travelers *en route* to the various places of recreation in the Eastern portions of Calaveras county, that no pains will be spared to make their sojourn at the Union pleasant and agreeable.
HENRY ATWOOD.
Mokelumne Hill, May 11th, 1860. 20-3m

DOWNIE HOTEL,
South End of Durgan Bridge,
Nevada street, Downieville.
W. M. DOWNEY, Proprietor.

WITH INCREASED BUSINESS, I HAVE enlarged facilities for accommodating my guests.

The Hotel has just been painted, papered, and carpeted, from top to bottom; and a large number of sleeping apartments, well furnished and ventilated, added to the usual number.

18 Proprietors.

Warm Springs Hotel!
Near the Mission San Jose,
28 MILES FROM OAKLAND.

THIS BEAUTIFUL PLACE OF RESORT is now open for the season for the reception of private families, tourists, invalids, and general visitors.

The Warm Springs are so widely and generally celebrated throughout California, that it is unnecessary here to recapitulate their various qualities. To invalids, they offer the greatest advantages; their medicinal virtues being unsurpassed even by those of the Rhine, so extensively patronized from all parts of Europe and America.

The buildings are now and extensive, affording accommodation for a great number of guests, and containing every requisite usually appertaining to a fashionable Watering-place.

The assistants are the best that can be procured in the State, and being under the immediate supervision of the proprietor, visitors may rely that every attention will be paid to their comforts.

The Table is supplied with every delicacy which can be procured in the State.

Fine hunting grounds and trout-fishing within a short drive the Springs.
14-6m LEWIS BRADY, Proprietor.

Union Hotel, Sonoma.

EBENHARDT & GLASSEN, HAVING purchased the UNION HOTEL, of the late proprietor, Mr. A. G. Oakes, are prepared to give the best accommodations to the traveling public. 115-3m

SPERRY'S HOTEL.
Murphy's Camp.

THE COMMODIOUS FIRE-PROOF BUILDING, lately erected by the subscribers, at Murphy's, has been elegantly furnished throughout, after the most approved style, and is now ready for the reception of guests. Parlors and suites of rooms for the use of ladies exclusively, and parties visiting the "BIG TREES," or other natural curiosities in the vicinity.

The management of the Domestic Department is confided to Mrs. Perry, a lady of experience.

The Bar is stocked with fine WINES, and the larder daily supplied with seasonable delicacies.

Stages arrive and depart daily for Mokelumne Hill, Sacramento, Stockton, Sonora, and Columbia.

Parties of pleasure and transient guests will find every accommodation for their comfort.
20-3m SPERRY & PERRY.

PRESTON'S PLACE
Tomales Bay, Marin Co.

I WISH TO INFORM MY FRIENDS AND the public, that the demand for a house of entertainment at this place has been such as to induce me to fit up my house for that purpose. To parties wishing to pass a few days pleasantly in the country, this locality has few equals. Boat-Sailing, Fishing, Hunting, and gathering Shells on the Bay and Ocean-Beach, are among the pastimes; and then all have "a claim" in the Clam-Beds free of charge. The place is situated 18 miles westward from Petaluma, and is a nice drive, over a good road, through a fine farming country. It will be a pleasure to endeavor to make your visits agreeable.
21 R. J. PRESTON.

Jebb's Patent Churn.

This new patent churn is now ready to be seen and tried. It is beyond question one of the best and simplest constructed Churns ever invented, and Dairymen should call and examine it.

By the action of the crank, three distinct currents are made which moves the cream with such rapidity that Butter is made in from three to five minutes with ease.

This Churn can be seen at the Farmer Office.

Patent-Rights can be had for all the counties in the State, and any experienced carpenter can make a fortune easier by these Churns than by gold digging. They only need to be seen to be approved. 12

The California Farmer.

SAN FRANCISCO:
FRIDAY..............................NOV. 1, 1861.

THE "LADIES' DEPARTMENT" of this Journal, under the charge of Mrs. Lizzie Wiley Warren, M. D., will be found on the sixth page, and to which we call especial attention.

Look to Our Special Advertisements.

Our readers will always find important advertisements in our Special Advertising columns. We have at this time Stock-Farms, Orchards, Saw-Mills, and Property to Exchange or for Sale, all worthy Special notice.

Who Grows Flax?

Growers of Flax can have the highest price paid for their crop by applying to this Office, or sending samples of their crop and the quantity for sale.

Advertise Your Trees Early!

Those Nurserymen who have Fruit-Trees, and Grape-Vines, and Garden-Stock, for sale, should by all means make known what they have for sale at an early day.

It is now a well established fact that Orchards and Vineyards should be prepared early in the Autumn, and those who are about to plant wish to know where they can purchase on the best terms. It is therefore for the interest of all who have this kind of Stock for sale to make it known early. By this means they secure the first and best customers.

Our wide circulation will enable all sellers to make known their plans over the whole State.

Durham and Devon Cattle, Blood Horses, Leicester and Cotswold Sheep, American Ewes and Lambs, and other Stock, for sale. See advertisements in the Special column.

Sales of Grain and Wool.

Those who desire to realize the very highest price for their Grain and Wool, can be informed of the best chances in our city, where, on all special occasions, they can realize high prices without delay. Samples sent to us from the country, with particulars, will be responded to.

Ten Reasons why every Farmer and Stock-Raiser Should take the California Farmer.

1st. EVERY Farmer and Stock-raiser should be a reader of the Journal connected with the interests of his own profession in his own State.

2d. Every such person should give his sanction and support, generously and voluntarily, to a Journal that advances his own particular business in his own State.

3d. Every such person is *benefited* by the publication of such a Journal, and is in justice bound to reciprocate such labors.

4th. No person engaged in these employments can be without such a Journal without the loss of many times its cost annually.

5th. The Farmer and Stock-raiser will always be better advised of the markets, and that kind of information so important to his interests by the constant access to a Home Journal.

6th. The CALIFORNIA FARMER has faithfully advocated the best interests of the Farmer and Stock-raiser for eight years, and is the ONLY AGRICULTURAL JOURNAL IN CALIFORNIA.

7th. The CALIFORNIA FARMER contains the most important information relative to their interests in every branch of Agricultural science.

8th. The CALIFORNIA FARMER contains the announcement of all New Seeds, Grains, Grasses, etc., together with all New Implements that will advance the cause of the cultivators of the soil.

9th. The CALIFORNIA FARMER contains the arrival and introduction of all the best Stock of all kinds as soon as known, together with the full Market Reports of all the interests appertaining to Ariculture.

10th. The CALIFORNIA FARMER is now the *only paper* on the Pacific Coast that is continued by its *original Editor and Proprietor*, commencing at the time this Journal commenced; and having been constant in its efforts for the good of these interests, deserves the cheerful patronage of all good men.

Wine-Making in Napa.

JOHN Patchett, Esq., of Napa, has been very successful the present year in making Wine, having made between three thousand and four thousand gallons. Mr. Pellet is the Gardener and Wine-Maker, and his system of fermenting through water by means of a siphon is the true one, as it secures the aroma to the Wine. His Wine sells readily at $1 a gallon by the cask, and $1 50 in small quantities, Brandy $5. Mr. Patchett has an excellent Vineyard, a good Wine-cellar, and is yearly making improvements.

A Big Grape-Vine.

AT one of the prettiest Cottage-Homes—a quiet and beautiful retreat, right under the brow of the mountain—at the head of Brown's Valley, Napa, we found a Grape-Vine trained over a frame in the yard. The Grapes hung in great clusters, a beautiful sight, the crop on this one Vine being over one thousand pounds! This was at the residence of Mr. Bassford, a truly beautiful spot, having all the surroundings of a fruitful Orchard and Garden, and beautiful scenery from every point.

A Good Vineyard.

DR. G. B. Crane, of St. Helena, has a very fine young Vineyard of thirty-two acres of California Grapes, and five acres of Foreign Grapes. He adopts the system of close pruning. He cultivates the ground well, keeps all weeds down, and makes his Vineyard speak to his credit. We take pleasure in noticing a well cared-for Vineyard. Others who plant will do well to imitate a good example.

Another Good Vineyard.

MR. Larrimer, near Napa, out in the hollow of one of the pretty little mountains, has a very choice Vineyard, his Vines yielding a very excellent crop of Grapes of very superior quality. There is no mistake but these hillsides and hilltops around Napa will prove to be superior for the Vine.

THE remainder of the course of lectures advertised by the Mechanics' Institute, has been postponed until further notice. Supposed cause, the slim attendance at those delivered.

The City of Napa.

THE city of Napa, with all her fine farms and goodly business men, together with a host of the sturdy yeomanry, hard-working, industrious farmers as is found in any county, with all these means of prosperity, yet it is admitted that it is "hard times" in Napa. Money scarce and business dull; and yet we can perceive, we think, the cause of this depression.

The *great wealth of Napa* is her Wheat crop, and although many suppose that crop is mostly sold, yet we *guess* that there is at this moment in the Public Warehouses, Mills, and Private Granaries, from twelve to fifteen million pounds of Wheat, worth more than a quarter of a million dollars. Now, as all branches of trade and business depends chiefly upon *money* to move the wheels, would not the sale of one-half of this amount make things lively? We only ask for information, and *guess*, for our part, that it would be so, and that Farmers would find a great relief in every department if such results should be accomplished. We visited the Mills and Warehouses, and some of the principal Farms, and are satisfied that Napa, dull as it may be, has plenty of wealth, though some of the experimenting farmers may have been unfortunate in their speculations.

In Sage's Warehouse, there is now about 20,000 sacks Wheat. No Barley or Oats. We examined several parcels, to see if Farmers had improved upon former years in cleaning their grain. One lot raised by D. McLelland, on the Shultye Farm, was a lot of very superior Chile Wheat, finely cleaned, and highly creditable for its excellence. Another lot of extra wheat by Mr. Colman, but badly broken by the cleaning mill. One lot from the "Glassford" Farm very fine Red Australian. This was in part in hemp sacks. (Farmers should always remember that hemp sacks breed rats and mice sure, they should never put Wheat in hemp sacks.) There was one lot by J. Pinkerton of extra Chile Wheat, its excellent condition was highly honorable to him as a grower.

Capt. Phillips' Warehouse has now about 35,000 sacks Wheat. In this Warehouse we found a fine lot of Wheat raised by Mr. Sacket, a truly creditable lot—fair, plump berry, well-cleaned and bright Chile Wheat. Several other parcels of excellent Wheat.

In Lawley's Warehouse we found 20,000 sacks; several parcels very fine.

At Matthew & Clark's we did not obtain particulars; probably about as much as at Mr. Lawley's. Thus, in these four Warehouses we found ninety thousand sacks Wheat, and in private store about two-thirds the quantity, making something like fifteen million pounds, approximating to *seven thousand tons.* Well done, Napa. This, too, after large sales have been already made. This is from known parcels; besides, there are probably many small lots, whose aggregate would make two or three million pounds.

There are two Flouring Mills in Napa. The Napa Mills, by Cornell & Co.; they have three runs of stones, two for Wheat and one for Feed, and turn out fifty-five barrels of flour per day—fifteen hours. They buy the lower priced Wheat, from $1 50 to $1 65, and clean it, and have in store 2000 sacks.

The Vernon Mills have recently been removed so as to be upon the banks of the creek, to secure an excellent *water front*, and thus save a great expense on receiving Wheat and Shipping Flour, which can now be passed directly upon schooners on the stream from the Mill. The Vernon Mills are owned by Messrs. Heald, Cooper & Kesler, all practical working men. Mr. Heald, a millwright; Mr. Cooper, a miller; and Mr. Kesler, the business man, to receive grain and ship flour; thus, by a division of labor, a system complete is effected, which results in great good as well as a pecuniary benefit.

The Vernon Mills buy the very purest and best Wheat only, and having a grand cleaner attached to their mill they are enabled to make the very best of Flour, which has now obtained great favor and commands quick sales at extra rates. The mill has three run stones, two for Wheat, one for feed, and they turn out every twelve hours eighty to ninety barrels of Flour.

This mill has one of the best cleaners in the country, and cleaned last year 20,000 sacks. This year they inform us that the farmers generally have better and cleaner Wheat, yet they are cleaning large quantities for shipping abroad, and double-cleaning quantities for *seed wheat,* for planting. This new cleaner of the Vernon Mills throws off the refuse in three lots: First, the mixed grain—barley, oats, and other grain; second, the smaller grain and broken grain for chicken feed; and third, chaff. The whole apparatus works to a charm. *Every farmer should have his Seed Wheat cleaned at this Mill.*

This mill is large and spacious, and with an excellent engine of five-horse motive power, moves all the machinery well. The foundation of the mill is of stone, four feet deep and two feet thick. Ingham's improved smut mill, their own invented cleaner, and the best gearing causes the mill to move finely, quietly, and well.

The burr mill-stones were once used in the old mill on "Telegraph Hill." The Vernon Mills have some of the finest samples of Wheat we have seen in this State; this made into Flour under their careful supervision, secures to this mill a high reputation for the best Flour.

We saw samples of superb Wheat from Mr. Eggleston's farm; also, a lot of beautiful Seed Wheat, samples of which are at our office.

Some idea may be had of the farming of Napa when we say we found the following crops where we called: One farm 3500 sacks, one 3000, another 1500, several 1000, and many 500 to 1000 each, and the greater part of it fully cleaned and in good sacks, a vast improvement from former years.

Napa has done well and nobly as a producing county.

THE corner stone of the new Dashaway Hall, to be erected on Post street, near Dupont, will be laid with due ceremony on Tuesday, November 5th. In the evening there will be a grand ball, the proceeds of which will go to the building fund.

Goodyear's Bar.

THIS place has been famous in the years past as a mining town, and "great strikes" have been made. Goodyear's is about seven miles from Downieville; quite a picturesque place—a few stores, restaurant, and lodgings; stage stable and lots of mining, carried on, however, mostly now by those gleaners for gold, the Chinese. Cultivation has got a foot hold, to show what can be done here high up in the Sierras. The principal garden here is that of Mr. Clapp, which is some thirty acres, commenced in '56-57. There are between 350 to 400 trees, which were all loaded heavily with fine fruit; some of the trees (apple) had fruit that would realize $50 per tree. A few grape-vines were full of fruit; in fact, all the trees were overladen and propped up. This orchard was too much irrigated and too little cultivated, and vegetables grown among trees, which is injurious to the tree, and the produce is never so good; vegetables raised under trees receive little or no sun, are not ripe, therefore unhealthy. This garden of only thirty acres produced in '60 about $2400 in fruit, as all good fruit brings high prices in the mountains. There is a good smoke-house on this place, where fine bacon-sides and hams are cured. The place is a pretty spot—a neat cottage and buildings, and all the materials for a pleasant home.

Dr. Kenlieff has a garden and some fine fruit trees; a spot which is susceptible of great improvement, and a good income. There were several other spots where by and by good gardens will be made. Higher up on the creek are several gardens and orchards, each and all constantly being improved; we had not time to visit them, which we regretted. These belonged to Messrs. Cooper, Kuders, W. Shine, Geo. Duncan, Campbell, and Mr. Beauchamp. There is a confidence in mountain cultivation, and soon all the miners' cabins will have little gardens, each miner giving an hour or two to his home garden, and enjoying the fruit by his own hands.

The drive and the scenery to and from Goodyear's to Downieville is a grand one—wild, precipitous, and exciting; like goats skipping from crag to crag on the mountain side, so appears the traveling at a distance, as they wind around the steep mountain sides. There is a kind of charm to us in this wild scenery, where the mountains shut out the sun at mid-day—and thus it appears here. Our visit repaid us well for any danger or fatigue experienced. We were greatly indebted to Mr. and Mrs. Clapp for courteous hospitality which made our trip more agreeable. Visitors to Downieville should spend a little time at Goodyear's and vicinity, there is much to be seen.

Freedom of Speech and Freedom of the Press.

THESE are the two great anchors of our liberties, and while we advocate them, we would not for a moment have them abused. Both should be well tempered with a love for Right, for Truth, and Human Progress.

Our journal is *not* a political paper, and we never allow ourselves or our correspondents to present subjects that will infringe upon the rights of others, in feelings or sentiments; yet at the same time we claim to publish an *independent journal,* and above all things else we claim the *right* to plead the cause of our common country. We wish at all times and under all circumstances to be known as a true American citizen, loving and living for that glorious Constitution, and that bright starry flag, the best and brightest that was ever made for or floated over human beings!

Some time since, in our number of August 30th, we published the following words. We felt them to be true then; we feel them to be true now; but it so happened that these words touched a tender spot upon some of our readers. A few have sent us their *compliments* in various forms. We copy one of the epistles; here is the language:

> "I suppose you have a bill against me. * * * If you will send that bill I will settle up, and I wish you to discontinue my paper. * * * I suppose you stand in need of the money to pay to be in company with such an *intelligent audience* as assemble to hear Starr King's Lectures!"

The following is the article alluded to:

> WHO IS RIGHT?—Let any one go upon the stage in front of an audience like the one assembled at Starr King's Lecture, then go before one opposed to the Union, and the question will be decided Who is right? if the intelligent countenance of Men can speak, or the presence of intelligent Women is any proof.

Now we have simply, plainly, and kindly to say: What is there in that paragraph to find fault with? We must judge a cause by those who assemble to sustain it, and we appeal to all candid minds if the figure we made is not a true one? However, in this case we have the pleasure to say: *we received payment for one and a-half year's back dues.* Some good came to us; and we say to all who entertain the same feelings to us because *we speak for our Country, its Constitution, and its Flag,* let them do the same thing, *Pay up! Pay up!* and we should receive considerable means that we have long been waiting for, so that we might do more for our Country, its Constitution, and the Flag! to which we shall cling, and for which we will labor, write, and speak—kindly, firmly, truthfully, but fearlessly—while God gives us life and strength.

All such letters as the one alluded to we shall preserve. They are at the service of all our patrons. The original can be seen at our Office. It would serve no good purpose if we should publish the name and county.

A Large Vineyard.

MESSRS. Sigrist & Brothers, about four miles from Napa, out on the rising ground, have a fine vineyard of sixty acres, yet young, but in a fine growing condition, having made a very excellent growth this year. It is now second year from cuttings. They will plant one hundred acres more. They also intend to build a fine Wine Cellar and Wine Press. Their attention has been abstracted by their herds of cattle which they are now selling, when they will give all their time to vine-growing and wine-making. We wish them much success.

New Cinnabar Mine in Napa County.

THERE has been recently opened an extensive Cinnabar vein in Pope's Valley, Napa county, which promises to be rich. This was discovered by Mr. John Newman, of Pope's Valley. The Cinnabar was discovered by means of the fires which are made to burn off the chaparral. This exposed the outcroppings of the Cinnabar.

A Company has been formed with an incorporated capital of $192,000, being 192 shares of $1000 each. A Board of Directors has been chosen as follows: J. Newman, J. Butler, J. S. Stark, F. P. Gilmore, and J. B. Sharp; Mr. J. Newman is President of the Board. Some ten tuns of the ore has been dug out, and promises well, and samples of picked ore are now being tested, preparatory to an immediate working of the mine on a large scale. Quite an interest is felt in the enterprise. We have samples sent us that appear well.

Napa Pottery.

WE made a visit to the Napa Pottery at Brown's Valley, Napa, the present week, and was pleased to see such a work under so good headway. B. Dennison & Co., are the proprietors. Clay of most excellent quality is found near the factory. This pottery was commenced a year since, and has turned out some very excellent ware; all kinds of ware for the dairy and household use and all kinds for trade. Churns, milk pans, butter pots, bowls, mugs, jugs, pitchers, and the new bean pots. Much of this ware is the glazed or enameled ware, and very fine. This factory has made about $2000 worth the past year from one wheel. They hope to increase their business largely this year. Flower pots are also made. Farmers and Ranchmen should remember and patronize their own "home-ware." Messrs. Dennison & Co., should be careful about *Butter Pots,* it is so difficult to make these that will not leak. Messrs. Gilmore & Blain, Napa, sell this ware.

COMPLETION OF THE OVERLAND TELEGRAPH.—The Overland Telegraph was completed through and announced as ready for business on the 24th October, thus forming a continuous line of wire from San Francisco to New York. The completion of this gigantic enterprise is an event that may well be considered of the greatest importance in our history, and deserving of commemoration. Any great public demonstration on the occasion, however, was repressed by the mournful news, among the first that came through, announcing the death of Col. E. D. Baker (who fell while gallantly leading his troops), which cast a gloom over our community. The papers of Friday morning last, for the first time published dispatches from New York and other Eastern cities, dated the day previous. Congratulations on the completion of the great enterprise were exchanged over the wires between the prominent officials, as well as the officers of the Telegraph Company. Communication has since been somewhat interrupted, owing to the destruction of the line in Missouri by the rebels. But this will soon be remedied, and daily dispatches be received from the East.

RICH GOLD MINES IN OREGON.—Rich gold mines are reported to have been discovered in Oregon. They are in the Nez Perces District, on Salmon river, east of the Cascade Mountains. The Oregon papers publish long accounts, apparently reliable, from those who have visited and worked them, and as well as can be judged, there appears to be no humbug about the matter. The amount of gold taken out, however, in a short time, seems to be almost fabulous, being as high as $25 from a pan of dirt, or anywhere from $50 to $500 a day to the hand, with rockers. These rich mines were first discovered in a small valley by a party of prospectors, who had camped to hunt game. As miners rushed in, rich strikes were made in other places, and the area of the mines is about 50 by 30 miles. The reports from these mines were generally credited in Oregon, and large numbers were on their way to them. There would seem to be no reason why rich placers should not exist in Oregon as well as California, and these reports seem to establish such a fact.

THE PIONEER WOOLEN FACTORY BURNED.—We regret to chronicle the destruction of this establishment by fire, which occurred on the 24th. It was located at Black Point, close to the water and near the city, but as it was not accessible to fire-engines, nothing could be done to save it. The fire commenced in the engine-room. It was the property of Messrs. Heyneman, Pick & Co., in prime working order, an expenditure of $10,000 having recently been made upon it, and doing a large and profitable business. The loss is estimated at $100,000, and the insurance stated to be $40,000. The proprietors are to commence rebuilding immediately.

TELEGRAPH RATES.—At present the Telegraph Company are charging the following rates for dispatches overland: From San Francisco to St. Louis, for the first words, $5; for each additional word, 45 cents. From San Francisco to New York or Washington, for the first ten words, $6 75; for every additional word, 52 cents. Contrary to all precedent, the new regulations include the date of the dispatch. This should be changed.

THE HARP STOVE.—No stove now manufactured is so generally esteemed as the beautiful "Harp Stove," patented by Barstow, of Providence, R. I., and sold by A. G. Ernest, Stockton, who is agent for the Pacific coast. J. G. Ils, Washington street, in this city, has them for sale. We know their worth, and can bespeak for them a favorable reception—they are the handsomest finished stoves known.

STALLIONS AT AUCTION.—We would call attention to the advertisement of the sale of the valuable stallions BayState Champion and St. Lawrence, which takes place at Fish's Black Hawk Stable, Pine street, near Sansome, on Friday, Nov. 1st, at eleven A. M. They are really fine animals, with good pedigrees, and will no doubt command considerable attention.

San Joaquin Agricultural Society.

A meeting of the Executive Board of the San Joaquin Valley Agricultural Society was held on Tuesday week, the business under consideration being the printing of the Annual Report, making provision for the payment of the expenses attending the late Exhibition, and matters in general connected with the financial affairs of the Society. It argues to the credit of the Board in a very important particular, that the cash premiums, with the exception of $48, have all been promptly paid, and the diplomas, with the exception of fourteen, have all been delivered. This is an improvement over the time occupied last year, and one which will have its good effect in promoting an increase of exhibitors at the Fair of 1862. The total cost of the grounds and building of the Society has reached the sum of $17,000. The improvements at the Cattle-Grounds and Race-Track have involved an expenditure of about $1500. There is left an indebtedness upon the hands of the Society amounting to about $12,000. The estimated value of the entire property is $32,000. Among the expenditures of the present year is about $2000, being a balance remaining unpaid on the expenses of the Exhibition of 1860. The profits of the Society from the proceeds of the Fair of 1861 amount to nearly $5000. No aid has yet been received from the city or county, although the former has agreed to submit to a vote of the people at the next Special or General Election, a proposition to appropriate one thousand dollars to the benefit of the Society. The county could not appropriate a less sum with any degree of grace. The people of Sacramento have willingly submitted to a direct taxation for the support of the "State" Agricultural Society, and more than reaped an equivalent through the receipt of the vast amount of money required to meet the expenses of the thousands who thronged that city during the late State Fair. With regard to the influence of our Home-Fairs towards the advancement of the interests of this District, we may be permitted to state (and there is no excuse for blindness to the fact) that within the past eighteen months, and since the organization of the Society, the importation of blood-stock into San Joaquin county alone, has exceeded in value the sum of fifty thousand dollars. The benefits otherwise derived are too well and generally recognized any longer to be regarded as a subject of question.—[Stockton Independent.

CALIFORNIA COTTON.—Several experiments in Cotton-growing are reported by the California press, as well as some by the Utah papers. The California Cotton is the best. The Visalia Sun mentions a fine specimen of "Silk-Cotton," raised in Tulare county, in the Kings River and Four Creeks country, from Texas seed. It was grown on sandy soil, containing no alkali, of which there are tens of thousands of acres lying unimproved in the county. The Cotton was planted in May, and the bolls sent were picked in September, but the plant is still in bloom. The stalks are about five feet high, and they cannot sustain the weight of the Cotton. Want of facilities prevents its being irrigated sufficiently early, and even under untoward circumstances the stalks produced an average of 126 bolls each. It requires to be irrigated about four times during the season, including once in September, and will continue to bloom until stopped by the frosts, which in this section hold off until November. The Sun says Tulare county would produce more than enough to supply the demand for home consumption in this State.

CHINESE SUGAR-CANE IN NAPA COUNTY.—The Napa Reporter of the 19th, makes this mention of Sorghum sirup and the cane crop in Napa county: We yesterday tasted a sample of sirup made from the Chinese sugar-cane, by Mr. Teal, of Hot Spring Township. It appeared to us to be fully equal in flavor to the best brands of sirup from the East. Mr. Teal has about twelve acres of cane, and thinks from results thus far, that the yield will be from 160 to 180 gallons to the acre. Several others in this county have planted more or less ground in cane this year, and we shall be pleased to learn what the result is in detail; whether profitable or otherwise. We are inclined to the belief that in a few years we shall be independent of the East for our supply of sirup. A large sum is sent out of the State annually for this article, but if the experimental crop of the present year prove remunerative, we shall undoubtedly be able to keep a corresponding amount of our gold at home.

TREATING SUGAR-CANE AND BEET-ROOT JUICE.—The French papers describe, in glowing terms, a discovery in sugar making lately brought before the Parisians by M. Rosseau. The saccharine juice, when first extracted from plants is colorless, but it has such an affinity for oxygen after leaving the cells of the plant that it very soon becomes dark in color and changed in character by exposure to the atmosphere. To prevent this chemical action—principally due to the albumine of the juice—the sulphate of lime, sulphur and various substances have been used. Rosseau's process consists in removing the albumine in the juice by mixing a very small quantity of sulphate of lime with the juice immediately when extracted, heating it up to 212° in a boiler, when the albumine rises to the surface and is skimmed off. About eight per cent of hydrated protoxyde of iron is now stirred in, and this, it is said, neutralizes all the changeable part of the juice and leaves it colorless. The juice is now simply evaporated to obtain beautiful crystals, without the usual tedious and expensive operations of filtration through animal charcoal, etc.

SAN JOAQUIN AGRICULTURAL SOCIETY.—This Society has elected the following Vice and Honorary Vice-Presidents: San Joaquin, J. Sarles, W. B. West, Vice Presidents. Honorary Vice Presidents, Calaveras, Dr. W. H. Jones and Harris Garcelon; Tuolumne, E. S. Jarvis, George Gardner; Mariposa, Dr. Burkhalter, L. A. Holmes; Tulare, Nathan Baker, Peter Goodhue; Merced, G. W. Halstead, Samuel Scott; Stanislaus, I. D. Morley, S. M. Gallup; Fresno, A. C. Bulloch, Charles Lewis.

SEEDING WITH CLOVER AFTER CORN.—W. J. Pettee, in the Country Countryman says: The writer has been in the habit for several consecutive seasons, immediately after the last hoeing of corn (which has been cultivated as level as practicable), of sowing clover seed, by going between each row one way, and carefully scattering the seeds under the leaves and stalks at the rate of 15 pounds to the acre, and usually with good success. The corn seems to shade the seed sufficiently to protect it from the too powerful heat of the sun, and if the land is in good tilth, a good catch is secured for pasturing or plowing under.

A NEW VEGETABLE.—There has lately been exhibited, at several meetings of the Royal Horticultural Society, a new vegetable, which promises to become a permanent institution among kitchen garden crops. It is a cabbage in the form of Brussels sprouts. The stem is about a foot high, bearing on its summit a good-size hearted cabbage, of the ordinary character; but the stem is covered with small cabbages about the size of a small dessert apple, and these, when cooked, form an excellent dish, partaking of the flavor of a nice summer cabbage, and without the strong Savoy flavor which distinguishes the Brussels sprouts.

STATE SUMMARY.

The Postmaster of Sacramento has received authority to make a contract for carrying the mail by land direct from Sacramento to Napa, and from thence to Petaluma.

The Mountain Messenger brags that mountain potatoes are the best raised in California—never diseased and always mealy.

Silver ore has been discovered in Contra Costa county, near Martinez, and there is thought to be an abundant quantity, of a quality to pay.

A new vein of coal has been recently discovered in Contra Costa county, a few miles from the town of San Pablo. The coal seems to be bituminous.

Wherever received in this State the news of Col. Baker's death excited profound sorrow, and repressed the contemplated rejoicings over the completion of the overland telegraph.

The Sunday law is said to be observed to the letter by every business house in Weaverville. In San Francisco, we should say from our observations, that the law is "more honored in the breach than the observance."

The first wine made in Tulare county was on the ranch of James Persian, and yielded 1200 gallons to the acre; it was pronounced by good judges equal to the best wine raised in California.

The Marysville Appeal and Marysville Democrat, the former a Republican paper, and the latter Union Democratic, have united their destinies. The editorial control of the paper will be under the editors of the Appeal.

The County Surveyor of Contra Costa is engaged in surveying the tracts of tule land lying on the San Joaquin river, in that county. There is a large quantity of this kind of land in Contra Costa which must be of great value, so soon as properly reclaimed.

The weather, says the Marysville Appeal, has been delicious during the present month—neither too hot nor too cold. The singular exemption from rain is a subject of general comment. For twelve years before there has invariably been at least a sprinkle in this valley, during October. About same here.

The Odd Fellows throughout the State are making arrangements to properly commemorate the death of Thomas Wildey, founder of the Order in America, and the first Grand Sire in the Grand Lodge of the United States. His death occurred at Baltimore on the 19th of October.

We see it stated that J. D. Patterson's Emigrant train of six wagons, twenty men and one family, having a drove of 170 rams, and 340 ewes, of French Merino breed, besides 102 head of horses and cattle, is in Plumas county, en route for the Sacramento valley. A portion of the stock has since arrived here.

Col. Wright, now in command of this coast, has received information to the effect that Gen. Mansfield has been ordered here to relieve him. Col. Wright will, upon the arrival of Gen. Mansfield, repair to Oregon. This will relieve the apprehensions of many with regard to Denver's coming here.

The Sportsman's haunt is what the Trinity Journal calls the country between Minersville and Trinity Center, where brown and grizzly bears and deer are plentiful, and elk are seen in droves. One Leach lately killed three bears in one afternoon. They had been slaying his cattle.

The great race between Selaya and Carr, which came off in Alameda county, resulted in the triumph of the latter. The race was 100 yards, Carr having six feet the start, and coming out two feet ahead. Subsequently the Alameda Gazette learns that Selaya, who was beaten in the race had been shot at his ranch by a Mexican, for reasons growing out of the race.

In order to have connection with the railroads now contemplated and in progress in Central California, the Shasta Courier urges the building of one from Oroville to Red Bluff, and thence to Shasta. The distance from Oroville to Red Bluff is sixty-two miles, and from the latter place to Shasta forty miles—total, one hundred and two miles. The entire route is a very favorable one—no hill grading of much difficulty.

A terrific stage accident occurred on the Goodyear Hill road, near Downieville, on 19th Oct. The stage was heavily loaded, and in making a turn in the road, the horses were frightened by some wild animals, and sprang sideways, by which the stage was drawn over the bank and precipitated down the hill about three hundred yards. Three Chinamen were killed, and several Americans badly bruised. Three of the horses were killed.

The boiler of Bassom's steam flouring mill, at San Jose, exploded on Wednesday evening, October 23d. The Mercury says the shock shook the whole city. The building in front of the mill, stored with grain, was blown into complete ruin, and the main building very much damaged. The wreck of the boiler house was scattered in all directions. Several men were in the engine room at the time, yet no one was seriously injured. The guage indicated ninety pounds of steam at the time of the explosion. This was one of the finest flour mills in the State—built at an expense of about $90,000.

◆

From the East.

The first through-dispatch from the East brought the following news of a fight on the Potomac, and the death of Col. Baker. It is dated Washington, Oct. 21:

Gen. Stone crossed the Potomac this morning with a portion of his command, at Edwards' Ferry, and the other at Harrison's Island. Skirmishing began between the enemy in uncertain numbers and a part of Gen. Stone's command as early as 9 o'clock this morning, and continued with much effect until 5 P. M., when large reinforcements of the enemy appeared upon our right, which was commanded by Col. Baker. The Union forces engaged were about 1800, and were attacked by a force supposed to number from 5000 to 6000; at this juncture Col. Baker fell at the head of his brigade, while gallantly cheering on his men. Immediately before he fell, he dispatched Major Young to Gen. Stone to apprise him of the condition of affairs, and Gen. Stone proceeded in person towards the right to take command, but in the confusion created by the fall of Col. Baker, the right wing sustained repulse with considerable loss. Gen. Stone reports that the right wing retired in good order.

Several small engagements in Missouri resulted in victories for the Federals.

A dispatch dated Washington, Oct. 23, says: The success of the movement of Gen. Stone and Gen. Banks across the Potomac is now established, as the enemy did not make further resistance to it yesterday. All accounts agree that our men conducted themselves nobly in the affair of Monday evening. Col. Baker made his will on Saturday last, and deposited it with Col. Webb, and when he left for the field he said to the latter: "I shall participate in battle in 48 hours. If I fall, I request you to take charge of my body." The funeral was to have taken place in Washington on the 23d inst. Great preparations were making for the obsequies. A dispatch to the N. Y. World says: An impression is being created that Gen. Baker exceeded his instructions, and did not retreat as ordered when he found the enemy in overwhelming strength. Capt. Young, of Baker's regiment, says there was no possible retreat save by swimming the Potomac. The only flat by which they got over had been sunk. The disaster is attributable to the want of transportation. The order given by Gen. Stone to Gen. Baker was picked up with his hat, out of which it had fallen, covered with blood and brains. It is in the city. The N. Y. World's dispatch states that only the Rhode Island officers stood by their guns at Edwards' Ferry, the men retreating early in the fray.

The California Regiment went into action with 689 officers and men. The drowned are 50, killed 30, prisoners 300, wounded 125—total 505; safe 184.

On or about the 23d Price was in the vicinity of Springfield with all his force; Sigel with a small force of the Federal army was two days' march north of him at Bolivar; Lane was at Osceola, three days north of Sigel; Hunter and McKinstry were approaching Warsaw, about four days behind Lane; and Fremont, with the main army, was about two days from Lane. The general belief among the officers at Warsaw was that Price could not get away, but must fight or surrender.

A detachment of U. S. cavalry broke up a rebel camp at Buffalo Mills, ten miles from Camp Cole Creek, on Tuesday night, killing 17, wounding a large number, taking 19 prisoners, a number of horses, and 32 wagons.

The Latest News.

Dispatches were published by the Bulletin of last evening, dated Quincy, Ill., October 30, from the reporter of the Associated Press, which say: The advance guard of Fremont's army, under Sigel, entered Springfield on Sunday, the 27th. The remaining division was expected on the day following. It is said Price will make a stand at Sarcoxie, having been reinforced by A. S. Johnston. Fremont will push on south as fast as possible, and give battle. Gen. Lane captured a transportation train of the enemy and several prisoners, in Bates county a few days ago. A body of rebels at Dyer's Mills, had surrendered to Gen. J. B. Hudson, of the State Militia, and on giving up their arms they were allowed to return to their homes.

The Richmond papers contain accounts of the battle near Leesburg. They say they had 15 regiments on the ground, but that only part of them were engaged. They claim a decisive victory, with 400 prisoners, 3 pieces of artillery, 2 flags, and several hundred muskets. They admit a loss of 300. There are now over 50,000 rebels at Leesburg.

The great fleet sailed from Fortress Monroe Oct. 30—the Wabash taking the lead at daylight, when a gun was fired as a signal. The Cahawba brought up the rear. The vessels, about 50 in number, formed in a line a few miles down the Road, and went out between the Capes in splendid style. The Baltic, Ocean Express and Vanderbilt, had in tow the Great Republic, Illinois and Golden Eagle. The morning was most beautiful. The scene was the finest ever witnessed on this Continent.

The case of suspension of the writ of *habeas corpus*, by order of the President, in regard to soldiers of the army more particularly, came up in Court at Washington, Oct. 29. Chief Justice Dunlap delivered an opinion, which is, in substance, that he respectfully protests against the right claimed by the President to interrupt proceedings in this case.

At Philadelphia, Oct. 29, the privateersman Thomas Quigley, David Mullows, and Edward Rodorman, were convicted of piracy.

New York, October 30.—The steamer Columbia arrived here from Havana, brings news that things are quite warlike there. A large fleet was fitting out for Mexico. The English Minister had called on the Rebel Commissioners in full uniform, and presented them to the Captain-General of Cuba. The Captain of the pirate Jeff Davis lately arrived at Havana.

Stocks in New York are quoted as follows: Pacific Mail Steamship Co., 95; California 7's, 81¼.

Reliable information from Virginia confirms the story of discontent and murmuring not only in camp, but among all classes, of the management of affairs by the so-called Southern Government, which subjects them to continued sacrifices and privations, and bestows no advantages in return. It is believed that, but for the overawing presence of the Southern army, Eastern Virginia would now be ready to return to loyalty.

Sir Edward Lytton Bulwer, in his speech at Herts, acknowledged that the European monarchies were jealous of the overshadowing power and influence of the United States, and hence he, with, we presume, others of his class, wishes for the dissolution of the Confederacy.

General Wool has about 9000 troops under his command. Colonel Magruder's threat to take Newport News has been treated only with contempt. They are in expectation of startling news from the Southern coast, at Fortress Monroe, in the course of a few weeks.

Secretary Cameron will insist on General Fremont's instant obedience to all the orders of the President and General Scott, which up to this time Gen. Fremont has disobeyed; he would also insist on the promulgation of the President's modification of Gen. Fremont's proclamation, which has not yet been done.

The English Board of Trade returns for August show that the exports to the United States had fallen off during the month of August over a quarter of a million of pounds sterling in value, when compared with those for the month of August, 1860.

Rains in the Western States.—Recent letters from Illinois give us the information that many of the Western States have suffered from heavy rains during the months of September and October. The abundant harvest of grain has, in many instances, been ruined by the rains which have caused it to sprout, and many stalks have actually become green with the growing blades, while potatoes are rotting in the ground.

North Carolinians Seceding from Secessia.—A dispatch from Washington, Oct. 25th says: The Rev. T. W. Conway, Chaplain of the 9th Regiment New York Volunteers, now at Hatteras Inlet, has been sent by General Wool with information to the Government in reference to the loyal people of Hyde county, North Carolina. He brings with him a declaration of independence, adopted by the leading citizens of that county at Hatteras church, in which they declare themselves free and independent of the Southern Confederacy. It is part of Mr. Conway's mission to select arms for these Union men, who only wait for means, arms, and opportunity to strike a death blow to the despotism with which they have been oppressed. The President has promised to use his best efforts to assist them and provide them with weapons. Mr. Conway brings information that these people are actually starving for the want of food and clothing.

Value of Land in the Interior.—Last week, a tract of 320 acres of land located on the Mokelumne Hill road, near the Fifteen Mile House, was sold at private sale for $20 per acre. A year ago this same land could not have been sold for $10 per acre. It is of an excellent quality, producing immense crops of barley, oats, and wheat, and having a good deal of timber upon it. Whilst on this subject, we may remark that it is singular that the reclaimed lands on the lower Sacramento river readily rent from $20 to $30 per acre, and even as high as $36 per acre annually, when there are tens of thousands of acres of precisely the same kind of lands in the western part of this county, fronting on navigable waters, a good title to which may be obtained at less cost than is paid by western settlers on Government land. We are also assured by gentlemen who own farms in the San Joaquin tule region, that the whole cost of reclamation does not equal the expense of fencing and cross-fencing in the upland country. When once properly ditched and drained, they are more valuable than any other lands in the State—producing the heaviest crops of whatever may be sowed or planted. They are almost exempt from the casualty of drought, and were annually overspread with an alluvial wash, which answers all the purposes of a thorough manuring, and guarantees a soil as inexhaustible as the valley of the Nile.—[Stockton Independent.

Rents of Farm Lands in San Joaquin County. Notwithstanding the cheapness of good grain lands in many localities, farms in San Joaquin county are renting readily at $7 to $10 per acre for a single year. Most of them, it is true, are well fenced, and require no outlay beyond the labor of plowing and sowing.

The Commerce of the Country.—Statistics and estimates gathered and made for the Government show conclusively, remarks a New York journal, that the foreign demand for breadstuffs from this country must largely exceed the demand of any previous year. It is susceptible of positive proof that we must receive for our cereals within the present fiscal year, more money from Europe than we have heretofore received for both food and cotton, and that, supposing we shall not this year sell one pound of cotton to Europe, we shall yet have a large balance in our favor, which will be payable in specie. If our imports decrease as rapidly as they have done, or if but the present rate of importations be continued, the excess of specie importations will be so large as to make this country the great depository of the precious metals. It is the commercial convulsions in England and France, and the great marts of Europe that must speedily be felt, that gives such a tone of bitterness to the business men of those places when considering the rebellion now in progress here. It is the universal testimony of our representatives abroad, that the North is deemed by European business men as in fault for the disasters that threaten European commerce and manufactures, and it is universally desired that the South should be permitted to declare its independence, and to have that independence recognized by the North. They seem unable to get rid of the belief that the South were their great consumers, as they estimate the falling off of our imports as due entirely to the discontinuance of trade between the North and South, never comprehending that the decrease is owing almost entirely to the economy being practiced in the free States, and consequent upon the war.

Invincibility of Freedom.—There can hardly be anything in English literature equal to the following burning sentiment, uttered by the lamented Baker in his address at the American Theater, San Francisco, prior to his departure for Washington as Oregon's Senator:

> As for me, I dare not, will not be false to Freedom. Where the feet of my youth were planted, there, by Freedom, my feet shall ever stand. I will walk beneath her banner; I will glory in her strength. I have watched her in history struck down on a hundred chosen fields of battle. I have seen her friends fly from her; her foes gather around her. I have seen her bound to the stake; I have seen them give her ashes to the winds. But when they turned to exult, I have seen her again meet them face to face, resplendent, in complete steel, brandishing in her right hand the flaming sword, red with insufferable light. I take courage. The people gather around her. The Genius of America will at last lead her sons to Freedom.

The clipper Neptune's Car, partly owned in one of the Rebel States, has been duly libelled, and is now in charge of the United States Marshal. She lately arrived from New York with a full freight.

National Loan.

PURSUANT TO INSTRUCTIONS FROM THE SECretary of the Treasury, a book will be opened on the 14th day of November next, at the Office of the Assistant Treasurer U. S., in this city, at the hour of 9 o'clock, A. M., for subscriptions under my superintendence for Treasury Notes, to be issued under the Act of July 17, 1861. These notes will be issued in sums of fifty dollars, one hundred dollars, five hundred dollars, one thousand dollars, and five thousand dollars each, dated 19th August, 1861, payable three years after date to the order of the subscriber or as directed, and bearing interest at the rate of 7 3-10ths per cent per annum, payable semi-annually; such interest being at the rate of two cents for each day on every hundred dollars. For the convenience of the holder, each note will have coupons attached expressing the several amounts of semi-annual interest, which coupons may be detached and presented for payment separately from the note.

Subscriptions for such Treasury Notes will be received during fifteen days from the day of opening the book as aforesaid. No subscription for less than fifty dollars nor for any fraction of that sum can be received. Subscriptions of fifty dollars or one hundred dollars must be paid in lawful coin of the United States at the time of subscribing. Subscriptions of more than one hundred dollars may be paid at once; or, if preferred, one-tenth at the time of subscribing, and one-third of the whole amount on every twentieth day thereafter until the whole shall be paid. No payment of less than fifty dollars can be accepted, that being the smallest sum for which Treasury Notes can be issued.

Certificates will be granted in duplicate to subscribers for the amounts so paid, the original of which the subscriber will transmit by mail to the Secretary of the Treasury, when Treasury Notes as aforesaid will be issued thereon to such subscriber or his order, carrying interest as expressed in such certificate; but in cases where only a part of the amount subscribed is paid at the time of subscribing, Treasury Notes will be issued only for the payments made subsequently to the first, which will remain until the whole amount subscribed by such person shall be paid, when Treasury Notes will be issued for such first payment also. On payment of each deferred instalment, the subscriber will pay, in addition thereto, a sum equal to the interest accrued thereon from the 19th August to the date of payment, and on final payment like interest on the amount paid on subscription, which payments of interest will be reimbursed to the subscriber in the payment of the first coupon.

The Treasury Notes issued upon such certificates by the Treasury will be sent to the subscribers by mail, or such other mode as may be indicated by them when they transmit their original certificates. The duplicate certificates may be retained by them for their own security.

D. W. CHEESMAN,
Assistant Treasurer U. S., and Subscription Agent.
San Francisco, October 19, 1861. 7

LARGE WASHING-MACHINE.

A LARGE WASHING-MACHINE, WITH HEATER and Boiler attached, one of the "New Patents," suitable for a large Hotel or Boarding-House, can be had at a bargain, by calling at this Office, where it can be seen.

STALLIONS
AT AUCTION!

Friday, Nov. 1st, 1861,
At 11 o'clock, A. M.,
AT BLACK HAWK STABLES, T. A. FISH & CO., PROPRIETORS,
317 Pine street, between Sansome and Montgomery.

We will sell, by order of JOEL MERCHANT, Esq.,
Two Valuable Stallions,
KNOWN AS
BAY STATE CHAMPION,
AND
ST. LAWRENCE.

DESCRIPTION AND PEDIGREE:

Bay State Champion is a beautiful bay, with black points, and without mark, stands fifteen and a quarter hands high, weighs 1164 pounds, and can trot a mile in three minutes to wagon, and for style and action is not surpassed by any horse in the State. Bay State Champion was sired by Old Green Mountain, by Gifford, by Woodbury, by Justin Morgan. He was raised by Silas Hale, Esq., of South Roylston, Massachusetts. His dam, Alice, was by Sherman, by Justin Morgan.

DESCRIPTION AND PEDIGREE:

St. Lawrence is a deep bay, with black points, no marks, stands sixteen and a half hands high, weighs 1250 pounds; was five years old the 14th day of last June. He was raised in Toronto, Canada; was sired by St. Lawrence, who trotted his mile in 2:45 at four years of age; he by the old original St. Lawrence, who trotted his mile in 2:28. His sire was out of the full-blood Norman mare, Lady Simpson, both being descendants of Lady Sirry, the dam of Henry Clay, the sire of Cassius M. Clay, who got the celebrated horse George M. Patchen. His dam was sired by Gifford Morgan, he by Woodbury Morgan, he by Justin Morgan.

—ALSO—
One Collier Stallion,
Four years old, weight 1100 pounds.

—ALSO—
One French Canadian Stallion,
Six years old, weight 1000 pounds,

The above Stock will be sold on account of the departure of the owner. The Stock can be seen at FISH'S STABLE, three days previous to sale.

LIZZIE WILEY WARREN, M. D.....EDITRESS

THE WORTH OF HOURS.

BY R. M. MILNES.

Believe not that your inner eye
Can ever in just measure try
The worth of hours as they go by;

For every man's weak self, alas!
Makes him to see them as they pass,
As through a dim or tinted glass.

But if in earnest care you would
Meet out to each its part of good,
Trust rather to your after mood.

Those surely are not fairly spent,
That leave your spirit bowed and bent
In sad unrest and discontent.

And more: though free from seeming harm,
You rest from toil of mind or arm,
Or slow retire from pleasure's charm;

If then a painful sense comes on,
Of something wholly lost and gone,
Vainly enjoyed or vainly done;

Of something from your being's chain
Broke off, nor to be linked again,
By all mere memory can retain;

Upon your heart this truth will rise,
Nothing that altogether dies,
Suffices man's just destinies.

So should we live that every hour
May die, as dies the natural flower,
A self-reviving thing of power.

That every hour and every deed
May hold within itself the seed
Of future good, or future need;

Esteeming sorrow, whose employ
Is to develop, not destroy,
Far better than a barren joy.

* * *

AN INVITATION.

BY J. T. FIELDS.

The warm wide hills are muffled thick with green,
And fluttering swallows fill the air with song.
Come to our cottage home. Lowly it stands,
Set in a vale of flowers, deep fringed with grass.
The sweetbrier (noiseless herald of the place),
Flies with its odor, meeting all who roam
With welcome footsteps to our small abode.
No splendid care lives here—no barren shows—
Only the twitter of a bird goes by.
The bee makes harbor at our perfumed door,
And hums all day his breezy note of joy.
Come, Oh, my friend! and share our festal month,
And while the west wind walks the leafy woods,
While orchard-blooms are white in all the lanes,
And brooks make music in the deep, cool dells,
Enjoy the golden moments as they pass,
And gain new strength for life's unquiet hours.

[For the California Farmer.]

Literature—No. 6.

William Shakspeare was born at Stratford-upon-Avon, England, in 1564. He received his early education in a free school, and never enjoyed the advantages of College life; neither was he ever well versed in literature. While a mere boy, scarcely eighteen years of age, he married Anne Hathaway, several years older than himself. A story is told of his having participated in deer-stealing, but although some deny it, none seem able to prove him a young man of high moral character; indeed a pure-minded person must grieve to see what mean, debasing sentiments find place in some of Shakspeare's works, even those which contain passages of an exalted character. It is a fine thing to be able to appreciate justly the excellence of such a writer, but it is wrong to bestow indiscriminate praise.

When Shakspeare was about twenty-two years of age, he went to London, and accepted a very humble position in a theater; he subsequently became an actor, and then a writer of dramas. During his dramatic career he acquired some property in the Theater, and he enjoyed the favor of many of the learned and great,—even of Queen Elizabeth and King James I. He excelled in writing both tragedy and comedy; he also wrote admirable sonnets and other poetry. The number of plays written by him is at least thirty-five, among the best of which are Richard II, Merchant of Venice, Hamlet, Macbeth, Henry IV, Richard III, Julius Cæsar, and King Lear. Among the others, some of which are almost equally noted, are The Tempest, Merry Wives of Windsor, Twelfth Night, Measure for Measure, Pericles, Much Ado About Nothing, Love's Labor's Lost, Henry V, Henry VI, Henry VIII, Othello, Coriolanus, Troilus and Cressida, Romeo and Juliet.

The latter part of Shakspeare's life was spent in ease and retirement. Had he written for posterity he would probably have revised his works, but although so superior that the wisest and best of the age do homage to him, very many of them were not even printed during his lifetime. Truth to nature, graphic description, vivid imagination, marked these master-pieces of literature. Shakspeare died in 1616. Mary Merrill.

* * *

Long Dresses.—A day or two since a gentleman in passing along Tremont Row, unintentionally stepped upon a lady's dress which was trailing on the sidewalk. The lady instantly turned, her eyes flashing fire at the gentleman, and spitefully exclaimed, "you impudent puppy!" The gentleman very coolly replied, "Madam, if your dress had not been on the sidewalk which is made for people to walk upon, I should not have stepped on it. I have no apology to make, but would advise you hereafter either to shorten your dress a trifle or adopt some other method to keep it off from the common foot-path." The advice was pertinent. [Boston Cultivator.

A good mother is worth an army of acquaintances, and a true-hearted, noble-minded sister, is more precious than the "dear five hundred friends." The love we experience for domestic blessings, increases our faith, is an infinite goodness, and it is a foretaste of a better world to come. Our homes are the support of the government and the church, and all the associations and organizations that give blessings and vitality to social existence, are herein originated and fostered.

"When will mother be home?" cried a child, bursting into tears. "She will be home after dinner," was the reply. "After dinner! then let us eat dinner now," he returned, growing bright at the overcome difficulty.

Why is it So?—An Exchange says: "Fasten a nail or key to a string, and suspend it from your thumb and finger, and the nail will oscillate like a pendulum. Let some one place his open hand under the nail, and it will change to a circular motion. Then let a third person put his hand upon your shoulder, and the nail becomes in a moment stationary."

The Girl Who Trod on the Bread.

A STORY FOR THE LITTLE FOLKS.

No doubt you have heard of the girl who trod on the bread to keep her shoes from getting soiled. It went hard with her, as every one who is acquainted with her history very well knows.

She was a poor child, but very proud and scornful. Away from home, people cared but little for her. When she was very young, she loved to catch flies and pull off their wings, so that they could creep about like little worms. She would catch grasshoppers, and after sticking needles through them, would lay a large leaf or a piece of paper on them, so that they might try ever so hard but yet could not succeed in getting away.

When she grew up, she became worse, instead of better. But still she was very pretty, and that was her great misfortune.

Her mother said: "When you were a child, you often trod on my dress; and now that you are larger, I fear you will often tread on my heart."

And that is what she really did.

She went out into the city to be a servant for a very wealthy gentleman and his wife. She was treated as one of their own children, and was clothed very handsomely. But her pride spoiled her.

She was a year from home. Then the lady with whom she lived said, "Inger, you have now been from home a year; you can go and make a visit to your parents."

She started off, though it was only to show her father and mother how fine and beautiful she had become since they saw her last. But when Inger came to the village gate, she saw the girls and boys playing at the pond; and as she beheld her mother, who had been off to gather a bundle of wood in the forest, resting herself on a stone by the wayside, she was very much ashamed that a poorly-clad woman, who carried wood, should be her mother. She was so disgusted that she returned to the family where she had been living, without having said a word to her mother.

Six months passed by.

Then the lady again said to her, "You can return home again for a little while to see your aged parents. I will give you a very large loaf of bread which you can take along with you. I know your father and mother will be very glad to see you, and receive a little present."

So Inger put on her best clothes and new shoes. As she went off, she was careful to step where there was no dirt, lest she should soil her beautiful new shoes. But when she came to a place where the path lay through a short piece of wet marshy land, she threw the bread down in the mud, so that she could pass over without getting her shoes soiled. But just as she stepped on the loaf of bread, and was lifting up her other foot, down sank the bread, and she with it, deeper and deeper, until you could see nothing but a black pool of water with bubbles rising to the top of it.

Now, that is the story of the girl who trod on the bread. Where did she go? She went down to the Moor Spirit, who is an aunt of the beautiful Fairies about which so many people sing songs and make pictures. But the only thing that any one knows about the Moor Spirit is, that whenever the fog rises from the meadows in summer-time, it is she who is making beer. Now, Inger sank down into her brewery; but it was not possible for her to stay long there. Every cask smells so badly that it makes people very weak, and so close do they lie together, that there is only one place where you can climb up through them. But it is almost impossible to do that much, on account of the multitudes of frogs and snakes that are swimming about in every direction. Well, it was down into this miserable brewery that Inger sank. She became very cold, and was frightened more and more the deeper she went. But the bread stuck fast to her foot, and drew her down with it.

The Moor Spirit was at home entertaining some friends. You can imagine how glad she was to find as beautiful a girl as Inger coming down into her brewery.

But Inger was not long there. She sank down, down, until she came to another very gloomy-looking house. The first room was very wide, and no matter whether you looked backwards or forwards, you would become very dizzy. Many people were standing there. They were waiting to see what was to be done with them. Great wheels were spinning and weaving nets for their feet, which were to bind them fast like iron chains. When the nets were put on these people, they would become very unhappy. And nothing could quiet them. There was the miser, who was anxious about his money-safe. It was right before him; but it was locked, and he knew that he could never find a key to fit it. Oh! it would be dreadful to tell you all the suffering in this great hall. Inger had to stand as still as a statue. Indeed, she could do nothing else, for the loaf of bread held her fast by the feet.

"This is what I get for wanting to keep my feet clean by treading on a loaf of bread!" said she to herself. "How they stare at me! But I know the reason for it: I have a beautiful face and very handsome clothes!"

But in this she was very much mistaken, though her neck was so stiff that she could hardly see how she looked. She was covered with mud from head to foot. A snake had concealed himself in her hair, and large frogs were sticking between the folds of her dress. When she began to understand her wretched condition she said, "But the others here around me look just as horrible as I." And that seemed to give her a little comfort, for misery loves company.

The greatest trouble that Inger had was her hunger. Couldn't she bend down and break off a piece of the loaf on which she stood? No. Her back was stiff, her arms and hands were stiff, her whole body was like stone. She could turn her eyes a little, and that was all she could do. But the flies crept over her face, and passed backwards and forwards over her eyes. She winked, but she could not scare them away. They could not fly, for their wings had been pulled off. Inger's hunger grew worse and worse. It seemed to her as if all her flesh was dropping away from her body.

"If this is to last much longer, I cannot bear it." So she spoke to herself; but it could not be otherwise, she had to bear it.

There fell a burning tear upon her head, and rolled over her face and down her breast, until it reached the bread. Then there came another tear, and then a shower of them. Who is weeping over Inger? Didn't she have a mother on earth?

The tears of grief which a mother weeps over her child cannot always bring deliverance. They sometimes only burn and make the sorrow greater. Inger's hunger was so great now that she could scarcely endure it any longer. To be so hungry and yet be unable to eat bread that was at her feet! But she trod on it, and that was the cause of all her trouble. At last it appeared to her that she was a thin, hollow reed, so consumed was she by hunger. She could hear all that was said about her on the earth, and many a bad thing did people say of Inger. Her mother wept bitterly, but then she said, "Pride comes before a fall. That was your misfortune, Inger. What grief you have caused your mother!"

Her mother and everybody else on earth knew what sin it was that she had committed—that she had trodden on a loaf of bread—and therefore that she had sank and vanished away. The cow-boy told all about her fate, for he had seen it from the very beginning.

"Oh! what sorrow you have caused me!" said her mother; "but it is no worse than I expected."

"I wish I had never been born!" said Inger to herself. "How much better it would have been for me! But now there is nothing that can help my dear good mother's grief!"

She heard distinctly what the good man and woman who had treated her so well were now saying about her. "She was a bad girl," said they, "for she despised God's gift, and trod on a loaf of bread. Now it will be very difficult for her ever to enter the Gates of Mercy."

"They ought to have trained me better, then!" thought Inger to herself.

She heard people singing a song that had been composed about her. Its title was: "The Proud Girl who Trod on a Loaf of Bread to keep her Shoes Clean." The song was sung in every land on earth.

"How dreadful that so much is said about me, and yet that I must suffer so much, too!" thought she. "Other people should also be punished for their sins. What a martyr I am!"

And she heard mothers telling their children about her, and the little ones were calling her the "Wicked Inger." "She was so proud and so wasteful!" said they; "how she must suffer for her sins!"

Nobody said anything good about her.

But one day, while grief and hunger were consuming her, she heard her name and history told to an innocent little girl. The child broke out into tears at the dreadful story.

"But won't she come up again?" she asked.

And the answer she got was, "Inger can never come to the earth again."

"But if she asks for pardon, won't it be granted to her?"

"But she will not ask for pardon," was the answer.

"Oh! I wish she would!" exclaimed the little girl. "I will give all my dolls, if she will only come on the earth again! How I pity poor Inger!"

These words sank down into Inger's heart. It was the first time that anybody had said "poor Inger!" And to think that it was a little innocent child who spoke so kindly of her, and prayed for her, too!

The unhappy girl would have wept, if she could; but she could not, and was therefore all the more sorrowful.

Upon the earth the years were rolling—below there was no change of time—and Inger heard less and still less said about her. One day she herd some one sighing, "Inger! Inger! how have you grieved me!" It was her mother on her dying-bed.

Sometimes she heard her name mentioned by the lady with whom she had lived long ago. "I wonder," said she, "if I will ever see Inger again? No one seems to know what became of her."

The time seemed long and dreary.

Then Inger heard her name mentioned again, and saw two bright stars shining above her. They were two mild eyes that had closed themselves on earth. It had been many, many years since the little girl had said "poor Inger!" That child had now become an old woman, and the good Lord was about to call her to himself. It was in her dying hour that she remembered the story of Inger, and how she had wept over it. So she said, "Lord! I have often trampled on thy goodness, just as Inger has done, without thinking about it! And I have had proud thoughts, too! But thou didst not let me sink. Therefore, leave me not in this my last hour!"

And as the eyes of the old lady closed to everything around her, they opened upon the future world. As she had thought of Inger just before dying, she now sees her in her deep and gloomy home. As she saw her, she began to weep over her again. Yes, in happiness she was weeping over poor Inger, so much did she pity her. Inger felt the power of it, and just then a ray of light streamed down into the gloomy abyss where she was. It came with greater power than a sunbeam which thaws the snow-man that the boys have made in the garden. And it was much swifter than the snow-flakes that fall on the warm mouth of a child and melt away into drops. It melted Inger's stiff and stone-like body. Just then a little bird flew up to the earth where men live. But it seemed to be in trouble, and flew all about without getting any rest. It became ashamed of itself, and went off into a dark hole in the wall to conceal itself from everybody's eyes. Here it sat and trembled from fear. It could not sing, nor even chatter a little; it had no voice. By and by it looked about and saw some of the beautiful things that were everywhere to be seen. The air was so fresh and mild, the moon shone clear, and the trees and shrubs were blooming forth with lovely flowers. The bird had good thoughts, but it could not sing them out. How it wished to be a cuckoo or nightingale! The good Lord, who hears the silent song of the worm in the path, heard also the inward song of the bird.

Weeks passed by, and the thoughts of the bird became better and better. But it could not sing until it was willing to try its wings by going off to do some good deed.

Christmas-Day was coming on. The good peasant made a stack of hay close beside the old wall, and tied a sheaf of wheat at the top of it, so that all the birds might come there and have a happy Christmas dinner.

When the sun rose on Christmas morning, and shone upon the sheaf of wheat, all the birds in the country flew up around it to have a good meal. From the hole in the wall "chirp! chirp!" was heard. The sounds were a hymn of praise. The bird wanted to do some good, and away it flew from its dark corner. Everybody in heaven knew what bird it was!

The winter was very cold; the waters were all frozen, and the birds had more than they could do to find enough to eat. The little bird flew along the road, and here and there in the sleigh-tracks it found a grain of corn. Before a cottage door it would pick up a crumb or two. But in every case it would eat only a little, but call to all the hungry sparrows and snow-birds to come and get the rest. Wherever it went, in city or in country, when any kind hand would scatter seeds or crumbs from a window, it would take but little for itself, but divide the most with others.

In the course of the winter the bird collected many crumbs, and stored them away for future use. But when he added one more crumb, which made his little treasure just as large as the loaf that Inger had trodden on to keep her shoes clean, its gray wings became white, and spread themselves to fly.

"There is a sea-gull flying over the sea!" said the children who saw the white bird. Now it dipped into the blue waves, and then rose again in the bright sunshine. But nobody could tell how far it went and where it stayed. Some people say its home is in the sun.

An Active Intelligent Young Man is Wanted

To take charge of an important business. A capital of two or three thousand dollars will give him the privilege of a business that will yield him a handsome revenue. Undoubted references will be required, and an entire freedom from all other business connections, as he will have almost entire control of a lucrative and increasing business, in which he can be partaker liberally. Energy, activity, and confidence, are the materials required.

Farms for Sale.

A valuable Farm of about 400 acres of excellent land, well fenced, situated near Petaluma, can be had at a bargain if applied for soon.

ALSO—A valuable Farm with good buildings, an orchard and vineyard, and pleasantly located in the immediate vicinity of Sonoma. Will be exchanged for real estate in the city of San Francisco. 9

MRS. LIZZIE W. WARREN, M. D.,

ELECTRICIAN AND HYDROPATHIST,
Corner Mason and Pacific streets.....San Francisco.

Mrs. Warren proposes to teach her patrons the means of attaining and preserving health, rather than the usual practice of physicians, of *doctoring the sick*. Believing in the old adage: "An ounce of prevention is worth a pound of cure," and also that the remedies used to eradicate disease are more deleterious to the human organization than the diseases them selves; therefore she dispenses with the use of drugs, relying on the curative power within the living organism and the supplying such conditions as the natural remedial agents afford. The natural remedies: Air, Diet, Exercise, Water and Electricity. The beneficial effects of water, properly used, are now generally understood, but the remedial effects of electricity are comparatively unknown. By the knowledge and application of a certain law, which recognizes hitherto unknown relations of the positive and negative forces to the functions of life, electricians are enabled to make a beneficial application to disturbed physical equilibrium, thereby rendering electricity the most powerful therapeutic agent; the most potent and all-pervading element which can be used, as it approximates to the principle of life, apparently identical with vitality. Its therapeutic uses are *reasonable* and *wise*, and may be relied upon whenever a cure or improvement is possible.

Mrs. Warren will be pleased to make arrangements by the year, with families requiring a better knowledge of the laws of health and the means of its preservation, as well as medical attendance and advice.

Having devoted many years in study and preparation for this profession, and having received ample testimonials from the College where she graduated, feels confident she will be able to prove her ability to attend to the claims of WOMEN and CHILDREN. To this practice she will give her *Exclusive Attention*.

As an ACCOUCHEUSE she claims to be eminently successful, and can produce ample testimonials of success in many difficult cases.

Those wishing to avail themselves of Mrs. Warren's advice will find her at her residence, on the south-east corner of Mason and Pacific streets.

☞ Arrangements have been made by which a few Patienst can be accommodated with Rooms and Board

Pulu! The Wonderful!

Another cargo still, is just received
At SCHREIBER'S Depot! 't is believed
There is a charm about the Pulu crop,
It comes, and goes,—the sale will never stop;
For everybody wants a PULU BED,
So easy to the body, so cooling to the head;
Another charm, too, in the PULU found—
Where PULU is, no Insects come around.

PULU! the famous PULU, now is known
As *BEST FOR BEDS*, and it has grown
So much in favor that the People go
Always to SCHREIBER'S great PULU Depot;
'Twas Schreiber had the first 'twas ever sold,
And then it almost cost its weight in gold;
But now, his ships, they come so thick and fast,
It sells so quick, a cargo does not last
A month or more, and then, it is *so low*
That all who want good Beds should surely go
Direct to SCHREIBER'S STORE on Sansome street,
There they will find a stock complete,
ALL KINDS OF BEDDING, everything that's wanted,
There too, the best accommodation granted.

Now don't forget the Number, 'tis 406;
Another fact upon your memory fix—
That Schreiber's is THE DEPOT OF PULU,
And HE the PIONEER IMPORTER TOO;
The man who first this luxury gave,
Then surely he *the best of trade should have.*

Now go and make your purchases complete,
At SCHREIBER'S, 406, on Sansome street. 1

PRICE REDUCED!

PATENT

HYDRAULIC HOSE

MANUFACTORY.

HOSE

SEWED WITH FOUR SEAMS,

For 15 Cents per Yard,

GUARANTEED TO STAND THE PRESSURE OF ONE HUNDRED FEET FALL AND LAST AS LONG AS THE DUCK, WITHOUT RIPPING.

I am also prepared to sell PATENT-RIGHTS for States, Counties, or Townships, as I hold the documents from the Patent Office at Washington City, with the Seal stamped upon them.

Miners and others interested will please address

BOX No. 353 AT THE MARYSVILLE POST OFFICE,

or through Wells, Fargo & Co.'s Express. All orders thankfully received and promptly executed.

For those having a disposition to invest a small sum in a safe and profitable business, now is the time. I have made sales to Mr. John Carbold, of North San Juan Township, and to Mr. John T. Allment, of Marysville. From these I have the highest recommendations, and numerous other recommendations relative to the value of this Machine.

S. HOWARD,
Pioneer Hose-Maker.

EDUCATIONAL.

STOCKTON Female Seminary.

THE EIGHTH SESSION OF THIS INSTITUTION, UNDER the charge of Dr. CYRUS COLLINS and Lady, assisted by competent Teachers, will commence on

Wednesday, September 25, 1861,

And continue FIVE MONTHS.

—TERMS:—

For Board and Tuition, in common English Branches, per session	$150
For Tuition in Music, per session	50
For Tuition in Painting or Drawing	25
For Tuition in Ancient or Modern Languages, each	25
Washing per dozen	$1 50
Payable Quarterly in advance.	
For Tuition and Board per annum, in advance	250

☞ Pupils received at any time, and charged until the end of the session.

COURSE OF STUDY:

The first aim of this Institution is thoroughness; and although any plan proposed can only be disciplinary, yet we have chosen that course which will be the most practical, involving those sciences most available in common life. Beginning with fundamental principles, the student is carried by natural and easy graduations, through a course of study, calculated to strengthen and invigorate the mind, and prepare it for healthful action.

Our course of study comprises Two Departments, a Preparatory of two, and an Academic of three years.

THE STUDIES OF THE PREPARATORY COURSE.

FIRST YEAR.

Reading, Writing, Orthography, Arithmetic (Thompson's Rudiments), Primary Geography, Grammar, and Composition.

SECOND YEAR.

Rhetorical Reading, Arithmetic, Book-Keeping, Geography, History, Grammar, Penmanship, and Composition.

THE STUDIES OF THE ACADEMIC COURSE.

FIRST YEAR.

Algebra, Geometry, Natural Philosophy, Physiology, Rhetoric, Physical Geography, and Composition.

SECOND YEAR.

Trigonometry, Astronomy, Natural History, Botany, Logic, Intellectual Philosophy, and Composition.

THIRD YEAR.

Political Economy, Moral Philosophy, Evidences of Christianity, Belles-Lettres, and Composition.

The Ancient and Modern Languages, Music (Instrumental and Vocal), Drawing, Painting, and Ornamental Needlework, optionary through the whole course.

Pupils can omit, with the consent of parents or guardians, any of the above studies, but none will be entitled to the Diploma of Graduation who have not completed the whole course.

All young Ladies from abroad will be expected to board with the Principal.

Classical School FOR BOYS.

We have established a Department for Boys. The course of study the same as in the Female Department. Particular attention paid to those preparing for College.

☞ Terms the same as in the Female Department.
Dr. CYRUS COLLINS, A.B., Principal.
7

SANTA CLARA COLLEGE.

THE TENTH ANNUAL SESSION OF THIS INstitution will commence on MONDAY, August 20th. The plan of instruction embraces two regular Courses—the Classical and the Commercial, besides a Preparatory Department.

TERMS.

Entrance, to be paid but once	$ 15
Board and Tuition per session	335
Washing and mending of articles washed, per session	45
Stationery, per session	10
Medical attendance and medicines (unless it be preferred to pay the bill in case of sickness), per session	10
Vacations, if spent at the College	35

N. B.—When there are more than two brothers, each one over two pays only half price.

Use of Instruments in Chemistry and Natural Philosophy, Vocal Music, Piano, Violin, and Drawing, form extra charges. School Books are furnished at store prices. No extra charge for any of the languages. Payments to be made half a session in advance.

For further information apply to the President of Santa Clara College, Santa Clara, Cal., or to Rev. A. Maraschi, S. J., St. Ignatius' Church, Market street, between Fourth and Fifth, San Francisco. 2

RASCHE & SONS,

No. 190 Washington street, San Francisco,

Dealers IN

PIANOFORTES,

SHEET MUSIC AND BOOKS,

Musical Instruments,

Strings, &c.

Agents for the celebrated manufacturers,

A. H. Gale & Co., New York,
C. Meyer, Philadelphia,
T. Gilbert, Boston,

Whose PIANOS they CONSTANTLY keep on hand,

FOR SALE AND TO RENT.

They have the largest stock of well selected Sheet Music and Bound Books in San Francisco, and it is constantly increased by fresh arrivals with every steamer from the principal publishers in the East. Music copied and arranged for all Instruments; New Music published; Music arranged and bound; Genuine Silver Strings manufactured to order. 13

HUNTER'S GRAIN SEPARATOR!

THE GRAIN-GROWERS OF THE PACIFIC COAST have now an opportunity never before offered them of cleaning their Wheat in the most perfect manner.

The undersigned would offer them his

NEW GRAIN SEPARATOR,

Patented April 9th, 1861,

As one of the best Implements ever invented. Mustard, Radish, Chess, Barley, and all other impurities, are separated entirely, leaving the Wheat in a pure and clean condition.

The importance of this Implement can be seen at once, as the

INCREASED VALUE OF Well-Cleaned Wheat

Will be more than sufficient to every Grain-Grower of any amount

TO PAY FOR A MACHINE.

The Patentee will visit all the principal cities and Farming districts to appoint agents at each place, and exhibit one of his Machines.

He feels confident that every Grain-Grower

WILL BE CONVINCED OF THEIR VALUE

The moment an opportunity is presented to see them work.

A. HUNTER,
Inventor and Patentee.

Agents—J. D. ARTHUR & SON, San Francisco.

FAREWELL, SUMMER.

BY BARRY CORNWALL.

Sounds are in the earth and ether,
Sobs and murmurs half divine;
Blasts beyond man's puny power
Rock the branches of the pine.
The summer past, what dreams are over!
The incense of the air hath fled:
The carpets of the golden meadows
Are torn by tempests, shred by shred:
The rose hath lost her fragrance;
The lily hangs her head,—
Dead,—dead!

Little Kindnesses.

"'Tis sweet to do something for those that we love,
Though the favor be ever so small."

Brothers, sisters, do you ever try the effect which little acts of kindness produce upon that charmed circle we call home? We love to receive little favors ourselves; and how pleasant the repetition of them makes the circle. To draw up the arm-chair and get the slippers for father, to watch if any little service can be rendered to mother, to help brother or assist sister, how pleasant it makes home!

A little boy has a hard lesson given him at school, and his teacher asks him if he thinks he can get it; for a moment the little fellow hangs down his head, but the next he looks brightly up, "I can get my sister to help me," he says. That is right, sister help little brother, and you are binding a tie around his heart that may save him in many an hour of dark temptation.

"I don't know how to do this sum, but my brother will show me," says another little one.

"Sister, I've dropped a stitch in my knitting; I tried to pick it up, but it has run down, and I can't fix it."

The little girl's face is flushed, and she watches her sister with nervous anxiety while she replaces the "naughty stitch."

"Oh, I'm so glad!" she says, as she receives it again from the hands of her sister all nicely arranged; "you are a good girl, Mary."

"Bring it to me sooner next time, and then it won't get so bad," says the gentle voice of Mary; and the little one bounds away with a light heart to finish her task.

If Mary had not helped her, she would have lost her walk in the garden. Surely it is better to do as Mary did than to say, "Oh, go away, and don't trouble me"; or to scold the little one all the time you are performing the trifling favor.

Little acts of kindness, gentle words, loving smiles, they strew the path of life with flowers; they make the sunshine brighter, and the green earth greener; and *He* who bade us "love one another," looks with favor upon the gentle and kind-hearted, and he pronounced the meek blessed.

* * *

MIASM.—On the wings of the viewless winds in September, the sickliest month of the year, there is wafted an agency of disease and death, so ethereal in its nature, so intangible to mortal sense, so insinuating, so all pervading, that no alembic can detect its presence, no prison-bar or palace-gate can prevent its entrance. It is called "Miasm"; it is an emanation from the surface of the earth wherever there is vegetation, moisture, and heat equal to 80°, and is the fruitful cause of many diseases which ravage whole communities at a time, such as agues, fevers, diarrhea, dysentery, cholera, pestilence, and plague. But its laws are known, and its destructive agencies can be averted by avoiding exposure and fatigue in the out-door air for the hours including sunrise and sunset, at which times a hot breakfast and supper should be eaten, by a good fire, in all prairie, flat, water course, and lake and sea-shore situations. If the common people could only be induced to take these simple, easy, practicable, and comprehensible precautions, these diseases would be prevented as epidemics, or arrested in their progress, as certainly as that care can prevent the firing of a town, and that water will put it out. These are the teachings of science, and experiment has demonstrated their truth beyond a cavil. Yet who will take these precautions?—[Hall's Journal.

A WONDERFUL DOG.—At Aldershot camp there is a large spaniel belonging to a serjeant in the Royal Artillery, who has been taught by his master, during tedious days of camp life, to perform tricks that are almost marvelous. The dog is perfect in his drill, marching slow, quick, and at the double, in obedience to the word of command. After he had been put through his paces, his master called him up and asked his opinion of the various regiments on the ground. Were the Plungers the best corps?—no signs of approval. Were the 42nd foot?—silence on the part of the dog. After going over half a dozen names, the master asked, exactly in the same tone as that in which he had put his previous questions, the dog's opinion of the Royal Artillery. He instantly burst out into joyous barking, jumping about and rolling. The serjeant then called for three cheers for the King of Prussia—no sounds; three cheers for the King of Naples—a low growl; three cheers for the Emperor of Austria—silence again; three cheers for the Queen of England—such a volley of resounding barks that echoed again.—[Field.

BEE HARVESTS.—There are for the bee three harvest seasons every year,—spring, summer and autumn. If only one of these yield abundantly, the bees will secure a supply for all of their prospective wants; and so likewise if all three are only moderately good. When they can gather plentifully during two of them, they secure a supply and a surplus; and when all three yield amply there will be a superabundance of stores. As a general rule, destitution or starvation will only occur among bees which are diseased or mismanaged; especially when by improper or excessive pruning in the spring they are constrained to use for comb-building the avails of the early harvest, and the latter ones prove to be meagre.—[American Bee Journal.

DRIED SWEET CORN.—Now is the time to dry sweet corn for winter use; and if dried properly who is there that don't like it. Take the best ears, cut from the cobs, and spread in dishes or tins, and put in the stove oven and beneath the stove. It will dry in a very short time. Don't scald it as some recommend who don't know any better. It is much better without, will dry just as quick.

THE IOWA CROPS.—The wheat crop of Iowa is abundant this season, though scarcely so heavy as last year. It is estimated that the people of Iowa will have a surplus of twenty millions of bushels this season. A gentleman who has traveled some 400 miles through Southern Iowa, describes the crop of wheat as very good, and corn as never having looked better.

THE patriots of the Revolution never uttered a more noble sentiment than Governor Sprague, of Rhode Island, expressed, when he said—"Wealth is useless, unless it promotes the public welfare, and life itself is but a bauble, unless it ministers to the honor and glory of our country."

ABE'S LATEST.—"We must rush the Ship of State along now," said the President excitedly. "Why so?" inquired the calm and dignified Chase. "Because," said Abraham, winking his eye, "since I got that noble dispatch from Prince Gortschakoff, I feel obliged to Rush-her."

IT is thought a dangerous thing to board a man-of-war, but we have known, says Prentice, fifty soldiers, each a man-of-war, boarded by a single landlord—but he was a host.

Electricity as a Remedial Agent.
DISEASES CURED
Without the Use of Medicines,
AT THE
Electropathic Institute,
625 Washington street,
Between Montgomery and Kearny streets,
SAN FRANCISCO.

When it was promulgated that disease could be entirely eradicated from the system without the use of poisonous drugs, the unthinking, or those who do not look deeply into cause and effect, scouted the assertion as chimerical, and adduced strong evidence of its utter impossibility. Long articles, replete with arguments, seemingly unanswerable, of the position that only through the digestive system could the blood be purged of the accumulation of the poisons which constitute the disease. A great cry went up from those interested in the continued supremacy of the old system of one poison to cure another; that electricity, as a curative agent, had been tried and proved to be of but little if any value—thinking, poor souls, that the world of science stood at the same point it occupied one hundred years ago. They were wrong, while those old fogies were content if they cured one in every five patients, there were those who were diving deep into the science of electricity, and finally it was discovered that the trouble was in the instruments used. From that time to the present, improvements have rapidly advanced, until every disease in the catalogue of human ills has been either cured altogether, or checked so as to enable the sufferer to seek those changes of climate which ultimately perform a perfect cure. Diseases hitherto considered incurable, have been cured, and those diseases which took months, and even years, to cure by medical process, are now cured in a few weeks: and all by the improved instruments of DR. J. H. JOSSELYN, Resident Physician at the Electropathic Institute, New No. 645 Washington street, between Kearny and Montgomery streets, San Francisco. It is astonishing to see the number of patients and diversity of diseases that have been relieved by the Electropathic system. From early morn till late at night his instrument is engaged, imparting health and strength to all who have the good fortune to obtain his services. The charges, too, are not as heavy as by the old system, besides there is no medicine to pay for, let alone the unpleasantness of swallowing the nauseous stuff. During the time that the Institute has been in operation, there has been more benefit to the human family derived from the system than from all other systems combined during the same period. Among the most troublesome diseases to which Californians have been exposed, is Rheumatism; none have given the honorable practitioner more trouble to relieve, and none have pretended to cure (if we except known empirics) permanently. But this subtle disease gives way before the Electropathic system in a very short time, enabling the sufferer to go about his business without pain or the fear and dread of relapse. And so with most other diseases, considered incurable. We mention Rheumatism because of its abundance, but we could enumerate many other diseases full as troublesome, and some far more fatal in their results.

To the nervous, the Directors would say, that you can be entirely relieved from those dreadful feelings of evil-foreboding, and your system strengthened so that nothing can disturb the current of your life. Several cases of insanity, arising from a disarrangement of the nervous system, have been permanently cured by this system. The Directors, in stating these things, do so in the hope that it may be the means of awakening the public who have not studied into such things, to a sense of their duties, and if possible, prevent those who have the care of the rising generation from poisoning their young charges with vile drugs, thereby entailing upon them troubles which in after life may cause them to curse their origin.

It is unnecessary to enumerate all the diseases in the catalogue, for that would be occupying space to no purpose. Every disease has been under treatment by this system, and there are none but have received benefit either in this State or at the East.

There are at present but few instruments in the world that can be depended upon. A good instrument costs very heavy, and must be manufactured to order, and there are very few who are able to manufacture them, for want of knowledge of the healing principle. The only instrument to be depended upon in this State is at the Electropathic Institute.

Connected with this system are the renowned Electro-Magnetic Baths. Here let us caution the public against the numerous impostors in the bathing line. The pure magnetic bath is one of the most effective aids in the removal of disease from the system, but if given at the wrong time, are likely to aggravate trouble, and cases have been known where the patient has been injured so badly as to require months to remove the injury. Persons in quest of this bath should be careful and not apply to a place where there is no physician to judge of the necessity of the remedy. In fact, the only place where they can be obtained in all their purity is at the Institute, where the Resident Physician will always be happy to examine and see that they are not unseasonably administered, and if not necessary, advise the requisite remedy.

Below will be found a list of the cases which have been successfully treated by the Electropathic system, at the Institute, during the first year of its establishment. The record is good, and challenges the admiration of the world:

Name of Disease.	*No.*
Rheumatism	421
Neuralgia	368
Dyspepsia	297
General and Sexual Debility	240
Asthma	220
Bronchial Affections	187
Fever and Ague	183
Female Irregularities	161
Mercurial Affections	130
Diseases of the Eye	85
Paralysis	78
Scrofula (long standing)	30
Catarrh of the Lungs	27
Catarrh of the Head	21
Liver Complaints	20
Deafness	18
Panama Fever	10
Consumption	7
All others, among which is almost every nameable disease	128
Total	2626

The above shows what can be accomplished by combined energy when it has truth and science upon its side. The Electropathic Institute was started amid the cry of interested charlatans, who used all the power their riches and the prejudices of the public gave them, to prevent its success. It has risen to a position that is beyond their baffled malice, and will be honored in the scientific world when they are forgotten, or only remembered for their crimes and impositions. A thinking public are fast consigning them to that oblivion their works merit.

Persons seeking remedial assistance may wish to know something of the system by which diseases are so rapidly removed from the body. Electricity is a fluid of so subtle a nature that it can only be studied by its results. We know by its action it forces everything of a foreign nature in the body from the center to the surface by its energy; while the vitality which it imparts fills up the vacuum, preventing thereby the subtle poisons from returning to the hitherto diseased parts; and here let it be understood that the Bath should never be administered until the disease has been forced to the surface, except, perhaps, in cases of cold where fever has not set in. Its action upon Mercurial Diseases is peculiar. The best authorities are of the opinion that it liquifies the mercury, which, when in a liquid state, by its own specific gravity, forces itself out of the body. This result has been arrived at by testing the water after an Electro-Magnetic Bath. After such tests have been found in the water, the patient is not troubled any more with those pains peculiar with the diseases. In all other cases it forces to the surface and is washed off by the Bath. The whole system, in its application, is a LUXURY, there being no pain or inconvenience attending upon it, but the reverse is the case, being one continued pleasure. Try it, you that are suffering either from disease or the injudicious use of poisonous drugs, and you will be made to rejoice that you have had the courage to strike out from the beaten path.

Below are a few certificates from patients that have been cured at the Institute:

CERTIFICATES OF CURES:

SAN FRANCISCO, April 18th, 1861.

This is to certify that I have been under the treatment of Dr. Josselyn, at the Electropathic Institute, and that he has cured me. My disease was mercurial, accompanied by chills. I applied to him on the 11th day of this month. I recommend all afflicted to employ him. He has cured me without medicine, by the use of his Electropathic Instrument.
JOHN CALLAGHAN.

State of California, City and County of San Francisco, ss.
Subscribed and sworn to before me, this 18th day of April, A. D., 1860. P. BARRY, Notary Public.

HORNITOS, Nov. 1st, 1860.

Well, Doctor, I am at home, and have been to work in the water for several days, and there is no return of the Rheumatism, as I call it, and mercurial pains, as you stated them to be. I feel as gay as a lark no pain or bad feelings, no stiffness, but perfectly well, and all done by you in three weeks, without one drop of medicine. You had hard work to make me believe before you commenced that you could cure me, but now I find it very easy to believe. Although my friends look rather incredulous, but they cannot doubt my sober earnestness. Doctor, you have my thanks, and I will benefit you all I can by spreading your fame up in these parts.
Respectfully yours, GEO. PERKINSON, Jr.
To J. H. Josselyn, M. D., Resident Physician at the Electropathic Institute.

CAUTION.

The public are informed that I cannot be seen at any other place in the State except at the Electropathic Institute (179, old No.) 645 new No., Washington street, south side, a few doors below Kearny. The reason of this caution is, certain Quacks have placed my name upon their doors, and have deceived strangers who wished my services.
19 J. H. JOSSELYN, M. D.

THE VERMONT
SEED-SOWER AND REVOLVING HARROW!
FARMERS, ATTENTION!
With this machine, any person that can manage a pair of horses, can perform the operation of
Seeding and Harrowing at the same Time.
It is adapted to the sowing of ALL KINDS OF GRAIN, and is regulated by the guage to DISTRIBUTE EVENLY OVER THE SURFACE any desired number of pounds of Grain per acre, covering the Seed immediately, so that NONE OF IT IS LEFT IN SIGHT FOR THE BIRDS TO DESTROY.
IT IS SIMPLE IN CONSTRUCTION, STRONG, AND DURABLE,
Just the implement the Farmer needs at the present time, to enable him to raise Grain profitably at the prevailing low prices.
It now makes its first appearance on the Pacific Coast. For sale by
KNAPP, BURRELL & CO.,
310 Washington street.

PATENT RIGHTS FOR SALE.

The following Patent Rights of very new and valuable inventions (of which we have models to show their value), are now offered for sale. We hold the rights for the States of California and Oregon, and Utah and Washington Territories.

A Fortune for a Mechanic.

We have the PATENT RIGHT for the whole Pacific Coast for the best and most celebrated HORSE HAY-RAKE known.

ALSO—A CIDER-MILL and PRESS of the most approved construction.

A fortune can be made with either of these machines, by an energetic mechanic. The models may be seen at our office.

No. 1. A New Rotary Subsoil Plow.
Patented April 6, 1858.
This invention completely pulverizes the soil after lifting it, a very valuable implement, and one which will receive universal commendation.

No. 2. A Corn Cultivator.
Patent now pending; papers expected.
With this implement the soil is first thoroughly plowed and deeply pulverized, and upon the return it smoothly and perfectly hills up and harrows the ground between the rows. A very new and valuable implement.

No. 3. An Improved Clothes Reel and Bar.
Patented January 3, 1860.
This valuable domestic piece of furniture can be used in the Laundry, the Kitchen, the Nursery or Chamber, and can be made plain or ornamental; standing in the same relation as a piece of important furniture as does Wheeler & Wilson's Sewing Machines; neat when used and ornamental when not in use.

No. 4. The Mechanic's Spirit Level.
Patented September 13, 1859.
This implement will be of great value to Contractor and Builders, being one of the most valuable inventions yet out. 2000 were ordered for the New York market just before the sailing of the steamer. Builders will do well to examine this model.

No. 5. A Musketo Bar.
This will be much wanted in California. It is simple in its contrivance, perfect in its working, and can be affixed very cheap to all styles of bedsteads. Hotels, public houses and private families will find it a useful invention.

Also, Hyde's Patent Post-Driver,
A most excellent labor and money-saving machine, for which we offer rights, as will be seen by a card in our columns.
Holding the rights to all these new inventions, we invite the public to call and see the models. All persons who may be desirous to purchase either County, City, Town, or Individual Rights, can do so on application to
2 COL. WARREN, Editor Farmer.

Saddle-Horse For Sale.

A FINE SADDLE-HORSE, FOUR YEARS old, got by Imp Lawyer; is well broken, and can run a mile in 1:55, when in racing order. Is just fifteen hands high, bright bay, with a star and white hind foot; a perfect gentleman's horse. The owner wishes to sell him for want of use for him. Apply to T. B. MERRY,
21 Farmer Office.

THE CATARACT
Washing Machine
AND WRINGER.
Rubbing and Wringing Done Away!

THIS MACHINE IS REMARKABLE FOR THE FOLLOWING QUALITIES WHICH IT IS WARRANTED TO POSSESS:

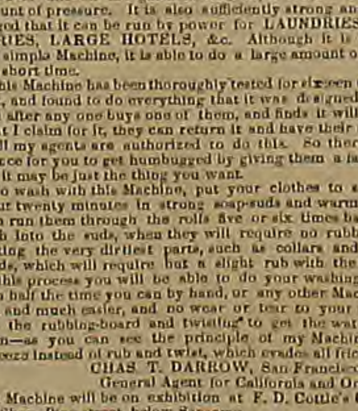
It will wash and rinse the finest Lace Collar, or the largest Bed-Quilt.
It washes Flannels without shrinking them.
It does not wear the Clothes and never breaks a button.
It is perfectly simple, very strong and durable, and cannot get out of repair.
A common hand can with ease and perfect safety to the Clothing, wash FASTER and BETTER than FOUR Washer-women can by hand.
WRINGING IS DONE FIVE TIMES AS FAST as Clothes can be wrung by hand, and removes the water so thoroughly that the CLOTHES DRY IN HALF THE TIME.
☞ The Machines can be seen in operation at our store. Always for sale by
JOHN G. ILS,
176 (old number) Washington street,
16 Next Maguire's Opera House. SAN FRANCISCO.

Colby's Patent Improved
CLOTHES WRINGER

THIS MACHINE IS ATTACHED TO A TUB WHEN IN operation. It consists of a pair of India Rubber Rollers, hung in a framework of galvanized malleable iron of peculiar form, held together by a single rod, or tie, which forms a joint in the frame, by means of which the rollers are held in their proper place, and the Machine clamps itself firmly to the tub or box.

I give seven good reasons why every family should have a Machine of some kind for this purpose; and if we allow each reason given to make a saving or be worth but two cents per week, you will have the price of the Machine in one year, and it will last a lifetime.
1st—It will save time, which is money.
2d—It will save strength, which cannot be bought.
3d—It will save the clothes, which cost money.
4th—Any man, boy, or girl, can use it, who could not wring clothes by hand.
5th—It helps to wash the clothes, and by running them a few times through the Machine, out of hot suds, it will clean them as well as half the Washing-Machines in use.
6th—It leaves the clothes in a better condition to dry.
7th—It helps to make Washing-Day more pleasant.
It will be seen by the above that no family can afford to be without such a Machine.
I can give many excellent recommendations, if necessary.
For sale by T. M. CHAPMAN, Petaluma.
TREADWELL & CO., Sacramento.
W. HODGES, Sacramento street,
2-3m San Francisco.

BAILEY'S PATENT
COMBINED
WASHING AND WRINGING
MACHINE.



Patented April 5th, 1859; and March 27th, 1860.

THIS MACHINE IS ADAPTED TO ALL KINDS OF Clothes, from a pocket handkerchief to a bed-quilt. You can wring your clothes in less than one quarter of the time, and so much dryer that they will dry in one half the time, and not injure your clothes one half as much as when twisted by hand. This Machine is formed with
TWO SPRING ROLLS COVERED WITH RUBBER,
And so constructed as to run together with great pressure, and turn fast and easy. The springs in the rolls are so constructed as to yield the most in the center, where the bulk of the clothes are conducted as they pass between them. By this means the springs with the rubber close so tight around the clothes that they come through
NEARLY DRY ENOUGH TO IRON.
However uneven the garment may be, it receives an equal amount of pressure. It is also sufficiently strong and so arranged that it can be run by power for LAUNDRIES, FACTORIES, LARGE HOTELS, &c. Although it is a small and simple Machine, it is able to do a large amount of work in a short time.

This Machine has been thoroughly tested for sixteen months past, and found to do everything that it was designed to do. And after any one buys one of them, and finds it will not do what I claim for it, they can return it and have their money, as all my agents are authorized to do this. So there is no chance for you to get humbugged by giving them a fair trial, and it may be just the thing you want.

To wash with this Machine, put your clothes to soak for about twenty minutes in strong soap-suds and warm water, then run them through the rolls five or six times back and forth into the suds, when they will require no rubbing excepting the very dirtiest parts, such as collars and wristbands, which will require but a slight rub with the hands. By this process you will be able to do your washing in less than half the time you can by hand, or any other Machine in use, and much easier, and no wear or tear to your clothes, like the rubbing-board and twisting to get the water from them—as you can see the principle of my Machine is to squeeze instead of rub and twist, which evades all friction.
CHAS. T. DARROW, San Francisco,
General Agent for California and Oregon.
A Machine will be on exhibition at F. D. Cottle's Carpenter Shop, Pine street, below Sansome.
Price—20 to 25 Dollars.

Wholesale Produce Report.

This represents the prices paid by the dealer to the producer.

(Corrected weekly, by A. H. TODD & Co., No. 42 Clay Street.) Oct. 31.

SINCE our last report, our Wheat market experienced a slight depression, and prices for export have declined to $1 75@$1 80, being a reduction from previous rates of from five to ten cents ⅌ 100 ℔s. The withdrawal of one of the leading shippers from the market was the only cause assigned for this depression and consequent decline in prices. The remaining shippers have arbitrarily fixed their limits at the prices above quoted, and notwithstanding the favorable advices lately received per Pony Express and Trans-continental Telegraph from the New York and European Grain Markets, stubbornly refuse to advance beyond those figures in their purchases of Wheat for export. Our city millers have continued to buy such parcels of Wheat suitable for Baker's extra Flour, that arrived during this period, at the highest rates obtainable previous to the depression.

The receipts of Wheat have fallen off considerably during the past week, holders preferring to bide their time until prices advance to such figures as may suit their views. Shippers will have to advance to obtain the Wheat. The advices per Pony Express, show that in the New York market, "Breadstuffs are in active request for export at full prices, and Wheat had advanced two cents to four cents per bushel." The Foreign news received at New York, fully confirms previous accounts of the deficiency in the present harvest in France, it being represented as "the very worst which that country had suffered for a long time." It is estimated that France will require to import ten millions hectolitres (equal to fifteen millions bushels), of foreign Wheat, previous to the next harvest. The prices of Wheat and Flour in the French markets continue to advance materially. American samples continued in good demand, and California Wheat was in good favor. It is also pretty generally conceded that the war "at home" must have the effect to raise the prices of breadstuffs, and that we shall consequently experience an increased demand for our Grain crops of this and the next year, so as to meet the call which will be made upon us to supply Breadstuffs to meet an increased consumption in our own State, as well as what will be required for export. California Farmers can grow Wheat for a year or two in full confidence of receiving remunerative prices.

Barley is also reported active in the New York market, and has advanced 3@5 cents ⅌ bushel. Hides and Wool, two more of our staples, are reported active, with a material advance in prices.

Our market has during the past fortnight, notwithstanding the decline in Wheat above noted, been steady, with a good trade existing both for home and abroad sufficient to consume all our receipts.

Barley is growing in favor at improved prices; quite a large amount having been bought on speculation.

Oats are in request, but there is no material change to note in prices.

Indian Corn of the new crop, has come in freely during the past few days, and prices have declined a little. Much of the new Corn is soft, owing to its being shelled when too green, which injures its sale materially.

Potatoes, owing to the large receipts lately, are dull of sale, at prices ranging according to quality at from $1 00 to $1 50.

Onions are becoming scarce, and sell at higher figures.

Buckwheat and Rye are in demand at good prices.

The following vessels have cleared since our last report: Ship Herald of the Morning, for Liverpool, with 28,546 sacks wheat, 90 casks tallow, 500 flasks quicksilver, 506 logs rosewood, and 50 bags silver ore—cargo valued at $25,713; ship Winged Racer, for Liverpool, with 30,244 sacks wheat, 95 packages silver ore, and 3 cases books—valued at $66,667; ship Noonday, for London, with 5000 qr-sacks flour, 24,027 sacks wheat, 103 bales wool, 103 casks tallow, 356 logs rosewood, 2 casks furs, and 1 engine—valued at $65,045; ship Western Star, for Liverpool, with 1500 hf-sacks flour, 25,679 sacks wheat, 38 casks tallow, and 374 casks silver ore—valued at $61,898; and the bark Isle of France, for Sydney, with 7175 qr-sacks flour, 3289 sacks wheat, 1630 sacks oats, 6000 feet lumber, and 40 bbls salmon—valued at $18,500.

The ship Winged Racer, for Liverpool, while beating down the Bay on the 28th inst., struck on a sunken rock near Alcatraz Island. She made water rapidly, and was towed as soon as possible to North Point Dock, where a steam pump was set to work upon her. She was afterwards discharged at Vallejo street wharf. Both vessel and freight were fully insured. About one-half of her cargo of Grain was damaged, and will be sold at public auction to-day. The ship will be repaired in a few days, and re-loaded.

The following vessels have been chartered: ship Nabob, to load Breadstuffs for Cork and orders; ship Avon, to load Grain for Sydney, and the David Crockett for New York.

The receipts of produce for the past fortnight have been as follows: Flour, 22,893 qr-sacks; Wheat, 102,631 sacks; Barley, 23,758 sacks; Oats, 9,977 sacks; Corn, 1875 sacks; Cornmeal, 180 sacks; Bran, 5210 sacks; Middlings, 338 sacks; Beans, 3028 sacks; Onions, 1100 sacks; Potatoes, 19,114 sacks; salt, 3850 sacks; Wool, 727 bales; Hay, 1295 tons.

Wool at the East.

THE N. Y. Monthly Wool Circular, for October, says throughout the interior and West, as well as in the Eastern markets, the previous activity in the lower and medium grades of Wool has rapidly increased, and during the last half of the month has extended to the finer qualities, which, though not much required for immediate use, have nevertheless been sought after by manufacturers and dealers, many of whom have had sufficient confidence in the future to go forward and lay in supplies at the prevailing low prices. This course has created a brisk competition, and at the present writing, from the best information we can gather, almost the entire clip has passed out of the growers' hands, or is held by them at prices quite up to the ruling market rates.

Low and medium Wools are still worth quite as much as fine, and while the demand for army-goods continues, are likely to maintain this relative value; as, however, there are now some evidences of returning vitality in general business, we think fine Wools will before long assume their proportionate and natural position in the scale of prices. The advance within the past fortnight has been more rapid than the present necessities of the trade would seem to justify, but when buyers decide to invest their means in Wool, the upward course of the article is regulated solely by the degree of competition. It is now moving with an impetus that may within a few weeks carry it to the point which, in the regular course of supply and demand, it would have been months in attaining.

Nearly all the mills in the country are at the present moment, and will be for the next two or three months, running to their full capacity on blue-goods for the army and navy, and at the expiration of their contracts, the stock of low and medium Wools will probably be quite exhausted, notwithstanding large quantities of foreign Wools may in the meantime be brought into the market. Dealers in Woolens will by that time greatly need an assortment of new styles, and we may then look for a brisk trade in fine fleeces adapted to Spring cassimeres.

Pulled Wools, of qualities most desired, have advanced quite as much as fleece, and the markets are thoroughly gleaned.

California Wools have been eagerly taken at greatly advanced rates, and some invoices sold to arrive at very remunerative prices; the Wools being admirably adapted to the present wants of consumers.

English Wool Market.

JOHN L. BOWES & BRO.'s Monthly Wool Circular, dated Liverpool, 31st August, says:

Under the influence of fine weather, which has insured us an average grain harvest, combined with a cheap and easy money market, the Wool trade now shows less depression than it has done for some time past, and, although consumption is yet materially restricted, there is more tone, and in many cases prices are the turn dearer.

During the past month 150 bags United States fine fleeces have been sold at 17d. and 20½d. per lb. The excessive wastiness of the Wool, and the fault of stuffing the dirt locks into the middle of the fleeces—thus forcing a man to buy what he does not require—are the only reasons why this Wool does not meet with, in Europe, the extended competition which the character of the Wool intrinsically merits. If clean washed and honestly packed, there is no reason why a portion of the United States clip should not become a regular article of import to this country to exchange for other Wools of which we may have a superabundance.

RAW-HIDE—TO USE.—Here is what a writer in an Eastern paper says on the above: How few persons know the value of Rawhide. It seems almost strange to see them sell all of their "deacon" skins for the small sum of thirty or forty cents. Take a strip of well-tanned rawhide an inch wide, and a horse can hardly break it by pulling back—two of them he cannot break any way. Cut into narrow strips and shave the hair off with a sharp knife, to use for bag-strings; the strings will out-last two sets of bags. Farmers know how perplexing it is to lend bags and have them returned minus strings. It will out-last hoop iron (common) in any shape, and is stronger. It is good to wrap around a broken thill—better than iron. Two sets of rawhide halters will last a man's life-time—(if he don't live too long.) In some places the Spaniards use rawhide log-chains to work cattle with, cut into narrow strips and twisted together hawser fashion. It can be tanned so it will be soft and pliable like harness leather. Save a cow and "deacon pelt" and try it.

A RAT-PROOF CORN HOUSE.—A correspondent of the Ohio Cultivator gives the following directions how to build one: Get stone pillars for the foundation, one foot square, and to stand thirty inches high, and for the top a piece of sheet iron eight inches wider than the top of the stone, and paint it to prevent rusting. Then build your house the size to suit you. Mine is twenty-four by twenty-six feet; the door at the end, and a bin on each side to within four feet of the back end, which is for wheat and oats, is divided by partitions. The wheat and oat bins hold 400 bushels each, corn bins 500, and there is room enough left, in which I have a work-bench and fanning mill. The floor should be as high as the bottom of a wagon bed, which is easy for unloading, and if the ground is rising in front of the building, it is easy to back to the door.

Information of the Wool Markets.

We have now completed an extensive correspondence with all the various Wool Markets of importance in the world, and can keep Wool-Growers well posted upon these matters. To these reports we refer our readers; they will find them important.

Four Hundred and Fifty Acres Rich Land.

A valuable tract of rich Land, of the extent named, in a beautiful location. Will be sold a bargain if applied for soon. Title perfect. Inquire of Editor of the Farmer. 14

A Grand Opportunity for a Home.

For sale in one of the interior Mountain Towns, a good House and Garden, with outbuildings, including a Smoke-House in successful use, being capable of realizing a good income.

The buildings are good. The Orchard is in full bearing, with Peaches, Plums, Apples, Grapes, etc., and small Fruits. There are also on the estate several small tenements, which bring in an income of about $50 a month. The Fruit sold from the Garden, together with the certain income, will pay in two years or less the price now required for the estate. It is offered low for an immediate Cash sale, as the owner desires to locate in a different part of the State, where he has other property which requires his attention.

For particulars inquire of Editor of Farmer. 24

Full-Blood Durham Stock.

Purchasers of very choice Durham Stock will do well to call and see our Lists of Stock for sale. We have some for sale as fine as can be found in this country.

We have a number of Full-Blood Durham and also Devon Stock, of perfect pedigrees, worthy the attention of those who desire to find the very best blood. The pedigrees we can show, and give full particulars.

Also, about twenty fine Grade animals, of superior stock and parentage, to which we invite particular attention.

American Ewes Wanted.

One Thousand or Fifteen Hundred fine American Ewes wanted immediately. If graded with fine-wooled Sheep, so much the better. Inquire of Editor of Farmer.

Another Herd of Noble-Stock for Sale.

We can offer to those who want the best kind of Blood-Stock, the following:

A Full-Blood Devon Bull; pedigree perfect.

Several Calves, Full-Blood, and cross of same.

Several extra fine Dairy Cows; very superior.

A noble Draft Stallion, sired by a high-blood English Draft Stallion, from a Vermont Morgan Mare.

Several Mares and Colts of high grades.

All the above will be sold at a bargain. Inquire of Editor of Farmer. 5

Lad Wanted.

A young lad of active habits, one who is a good scholar, can write well, good at figures, and exemplary in all his habits, and can bring the best of recommendations, can hear of a permanent situation by applying at this Office, in the afternoon *only*, from 4 to 5 o'clock. 5

Leicester and Cotswold Rams.

Six very splendid Leicester and Cotswold Rams Full-Blood, and in very superior order, three of each, for sale at a bargain. Inquire of Editor of Farmer.

Valuable Blood-Stock For Sale.

We would invite all who desire Dairy-Stock of the very highest character, to call on us, or write to us, as we have for sale about twenty-five head of as choice Durham Stock as there is for sale in the State, as follows:

One Full-Blood Durham Bull, 2 years old, of the highest pedigree, and as handsome an animal as has ever been offered in this or any other country.

One young Full-Blood Calf, 8 months, a perfect picture.

Several younger Blood Calves.

About twenty Cows and Calves, Durham, Devon, and Ayrshire, with Calves by their sides.

Among the Cows are some of the very best milkers in the State. Inquire at the Farmer Office. 18

A Grand Chance for a Homestead

A valuable tract of very rich land, comprising 300 acres, situated in one of the most delightful valleys in our State, upon which there are 2000 Fruit-trees in bearing, a neat House and small buildings, and a Young Nursery, to continue the Orchards and Vineyard. A fine large stream of water runs through the grounds continually. The whole is under fence of the best kind. The Fruit the present year will bring $2000. This Ranch will be sold a great bargain for Cash. Title Perfect. Inquire of Editor of the Farmer. 14

THE VINE AND WINE IN EUROPE.

From Our Regular Correspondent.

Letter Number VI.

We have again the pleasure to lay before our readers another very interesting Letter from our regular correspondent in France.

The singular, yet original, Wine-Press will interest and amuse. We would in this connection call the attention of Vintners to the excellent Wine-Presses on wheels offered for sale by Mons. Delmas, of San José. It is a very large Press, and will crush and make from the Grapes 12,000 gallons a day.

We hope if the mechanical eyes of our readers will only *improve* upon the Wine-Press so well described, it is probable that California can invent a Machine that *cannot be beaten.*

The Letters of our valued correspondent will be read with interest:

Monpellier—One of the Wine-Presses.

Montpellier, 13 Sept. 1861.

Editor Farmer: Every person knows that Monpellier is in the South of France; some few know that it was anciently famed for its Brandy; and many know that it now produces very bad Brandy. This afternoon, walking through the streets to see what was worthy of notice, I was attracted by the shouts of joy coming from a number of little children who seemed to be in the highest glee. As I love children very much, I directed myself that way, to see what made them so merry. I soon knew the cause of their joy: there was in the street a Wine-Press, and the workmen who were pressing had let some of the children put their hands into the tub and dip out as much as their little palms could hold. While the men strained every nerve to press out the juice, the children danced round them with that glee and light-heartedness which they only can feel in the happy innocence of youth!

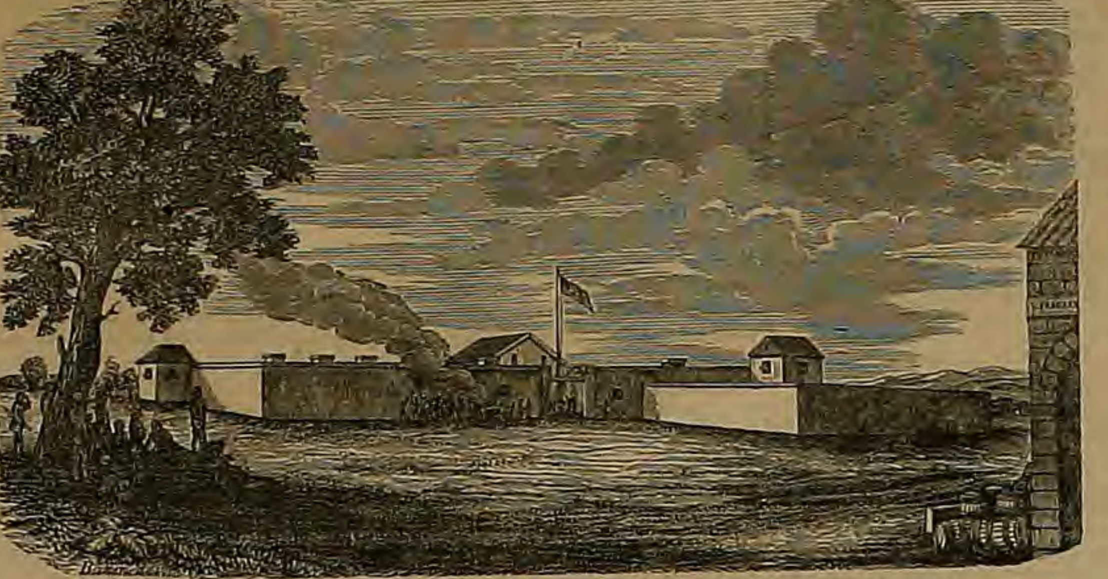
My attention was attracted to the Press, which really seems to be the most original invented. It consisted in a beam, resting on axle-trees, supported by four wheels of equal size, being about three feet in diameter. The length of the axle-trees was, it may be, a little less than in an ordinary wagon. The beam, which was solidly fixed to the axle-trees, was twelve feet long, eighteen inches wide, and twelve inches thick.

Perpendicular to this beam, and firmly placed upon it, eight feet apart, were two wooden screws, eight or nine inches in diameter, and about seven feet in hight above the beam. Between these two screws, on the beam, there is a platform or flat trough, about four feet square. Parallel to the first beam, and of the same dimensions, there is a second one, which slides up and down the screws by means of holes pierced in it. To this beam, underneath, is attached a second platform of the same dimensions as the first. It is between these two platforms that the matter to be pressed is placed.

Upon the screws, above the upper beam, is the knot of each screw. They are about two feet long and one wide. On top and near each end of the knots is placed a strong spike. It is between this spike and the screw that the end of a long spoke of some ten or more feet is placed, and with which the knot is forced to turn either downwards or upwards. It is only an application of the common lever, which every schoolboy knows, the point to be moved being between the resting-point and the moving force. The lower platform or trough is but two inches deep, which is quite sufficient for the small amount of matter pressed, as the Wine immediately runs off into tubs. To prevent the stems and residue matter from falling while being pressed, they coil four or five times around the heap a large rope, which is firmly tightened. It takes five men to work this instrument; they first turn the knot of one screw, then that of the other, until the Wine ceases to run. Their work here ceases, and they proceed to the next place, themselves pulling their Press.

Such was the curious Machine. I give you a description of it, not as a model, but as a curious thing which interested me, and which might interest you. By means of this, small proprietors of Vineyards need not go to the expense of having a press, and all inhabitants of towns are able, in buying a few pounds of Grapes, to make their own Wine. The Machine is rather primitive, but the idea is good, and above all very practicable.

Yours truly, Arpad Haraszthy.



SUTTER'S FORT IN 1848 AND 1849, WHEN GOLD WAS FIRST DISCOVERED.

Sutter's Fort in 1849.

We present in this number the cut of this memorable fort, once formidable, and a proud and happy home, abounding with generous deeds from the proprietor, whose gates stood open to receive the stranger, to feed the hungry, and shelter the wayfarer.

Sutter's Fort no longer exists but in history; the walls are broken down, not a vestige remains save the main building, and that dilapidated; the ownership has passed into other hands, and its marks and bounds are lost, save where rank weeds grow luxuriantly on the old foundation. He who once stood at the portal-gate to welcome all, now lies ill; "hope long deferred made his heart sick;" and now as the sad news comes of tardy justice, he turns his mind back o'er the past—

And scenes long past, of joy and pain,
Come wildering o'er his aged brain.

And should kind Providence spare his life, that he may yet find some reward for past suffering, how will the old pioneer feel when he visits that Fort, once so dear to him; and should he ask where is my once happy home? history will write:

He tore away some *weeds*, 'tis true,
But all the *flowers* were ravished too.

And memory shall sicken as the scenes are reviewed; but troops of gathering friends will *now* come, as fortune smiles, and they shall gather thickly, and with

The power of words, and soothing sounds, appease
The raging pain, and lessen the disease.

The above were the words we uttered some years since; how much more appropriate now? The desolation of the Fort is greater, the site nearly obliterated, and the venerable pioneer through whose instrumentality, Sutter's Fort and Sutter's mill-race, the world was made mad for gold, and the current of population from all parts of the world sent hither—now, the good old man is showing his age; his locks are whitening, and yet where is the just reward for what he has really done for thousands, when his purse was full, and what he has been indirectly instrumental in doing by his settlement. For years he has suffered by the law's delays, and his heart rent by hope deferred. It cannot be long ere he will be missed from his home; but for all the thousands he has fed and clothed in his prosperous days, he will assuredly be rewarded by Him who never allows a good deed to go unrewarded.

◆

"No Money About the House."

There is probably no one class of citizens in our State so completely "flat broke," as it regards Money, as are the "Cultivators of the Soil;" and yet they are at the same time the most "Independent" and the most "Wealthy."

A person unacquainted with the singular and unwise management of the great majority of Farmers, would suppose they were all as poor as a "Church-mouse;" and no doubt there are many that are *really* poor by reason of misfortunes, and some also (from a shiftless management) deserve to be poor, because they abuse their blessings.

There are hundreds of Farmers that are ever speaking of "hard times," of "low prices of Grain," of the "ruin of the Farmers," that there is "no money," etc.; and it is a notorious fact *they do not have money*, but run in debt for every necessary of life, go miserably dressed, themselves and children in many cases wanting the comforts of life; the wife, even, never touching a dime of money, suffering for many needed and deserved comforts, and yet "No Money in the House!"

We have even seen their daughters going barefoot; and yet with all these "signs of poverty," the same Farmer would have 500, 1000, 1500, perhaps 2000, bags of Wheat in the Granary, "waiting a rise," while his family and himself wanted the comforts and necessaries of life. The wife, too, who has toiled all the season, often beyond her strength, hoping "harvest-time" would bring comfort and ease; alas! poor woman! the "Grain is not sold," and you and the storekeeper must wait, children go barefoot, the smile leaving your brow, and probably some creditor, tired of waiting, will, Shylock-like, strip the Farm and Homestead, and leave you all to the cold pity of an unfeeling world. And this because of that shiftless, miserable, wicked, plan of holding on to the crop, which should always be sold to pay the debts incurred while maturing it.

If our Farmers would adopt the *Cash System*, and buy and sell only for cash, they would find that in a little time joy would be in the household, and their own joy would prove to them that they had discovered Aladdin's Lamp.

◆

The Mission Woolen-Mill.

The Woolen-Mill at the Mission is now on the high road to prosperity, if we can judge by the immense amount of work done, all of which must pay well.

At the present time there are employed in the Factory itself one hundred and sixty men. These are divided into the First and Second Watches. The Mill runs night and day, and therefore it requires eighty men each. In addition to this, the Mill keeps sixty of Wheeler & Wilson's Sewing-Machines at work constantly. These are at San Quentin, worked by the convicts. These Machines require one hundred men, sixty to the Machines, and forty as pressers and finishers.

We learn also that the Wheeler & Wilson Machine works very admirably upon the thick Woolen cloth, of which large quantities are being made up. The sewers upon these Machines had hardly conceived it possible that the Machine could work so easily upon the heavy cloth; but there is no difficulty at all in doing excellent work with ease. So much satisfaction is given, that twenty more of these Machines are ordered, making eighty Wheeler & Wilsons in this one place.

This Mill also employs from fourteen to twenty-eight men, averaging about twenty to twenty-five, at work at the Wool-House, sorting, picking, and preparing the Wool for the Factory. Thus it is seen that there are two hundred and eighty men in constant employment.

The amount of Wool now used daily is 4000lbs, or equal to nearly 1,500,000lbs a year—nearly *one-third* of our whole crop.

Here is an example of what can be done by the energy of one ruling spirit. The proprietor being a glorious good Working-Man, he oversees all the works, and keeps the wheels and spindles going merrily.

This Woolen Mill is an honor to our State, for when our troops were being mustered, we had the means to manufacture our own Wool into cloth, and then make the cloth into uniforms for our soldiers, and thus make a great saving of time and expense, instead of sending abroad for the same.

The Mission Woolen-Mill is now manufacturing as fine goods of the kind as are made in any country. The Blankets are splendid, the Shawls are equal to the English or Scotch, and the Tweeds and Flannels as good as are needed.

This is the way to build up a State; and if our citizens and Merchants will but give their countenance and support to our own "Home-Made Goods," we shall soon be a prosperous State.

◆

No Records of the Farm or Farming.

One of the most valuabe aids to a Farmer in his plans and labors will be found in a *Record Book*, wherein he shall put down the labors of every day, keeping a correct account of the farming operations in all the details. How important it is that a Farmer should record the time he commenced plowing, time of seeding his land, quantity of seed planted, time of harvesting his crops. To these should be added the number of men and teams employed, the expense also, so that he can be able to tell exactly the cost of all the products of his farm. A Record also should be kept of the cash received and cash paid out. If Farmers would only keep an account of the way the money goes, we think upon a review of one year's expenditure they would curtail largely the next year.

We do not believe one Farmer in twenty ever keep an account of the receipts and expenditures of the farm, or of the family expenses either, both of which are of great importance as showing the way to a "better time coming."

◆

A Splendid Clip of Wool.

Yes! Who can beat this? We give the following enormous clip of Wool from the "Brannan Ranch," on the Sacramento. This is from the flocks known and managed by A. L. Bingham, Esq., the well-known sheep-breeder from Vermont, whose skill and care in raising sheep, and in producing the right kind of sheep for wool is unsurpassed in our State, as these facts verify.

Nicolaus, Nov. 1, 1861.

Editor Farmer: I noticed in a late number of your Journal a detailed acccount of the weight of a few selected fleeces from several Spanish flocks of sheep in Vermont, which I am personally acquainted with. Perhaps it would not be improper for me, in comparing French fleeces with Spanish, to give you the weight of a few selected from my flock, which I imported in 1859 to this coast, seven bucks and five ewes, the ewes having raised lambs this last spring:

BUCKS.

No. 1.	25½	pounds.	Aggregate weight of carcass of Bucks 138½ lbs, one year's growth wool.
" 2.	27	"	
" 3.	29½	"	
" 4.	24	"	
" 5.	26	"	
" 6.	28¾	"	
" 7.	24¾	"	

EWES.

No. 1.	22¼	pounds.	Weight of body of Ewes, 76 lbs, one year's growth wool. All, both Ewes and Bucks, three years old.
" 2.	23½	"	
" 3.	25	"	
" 4.	23¼	"	
" 5.	22	"	

Making an averaged weight of fleece of the Bucks 26 pounds 9 ounces, and the Ewes 23 pounds 3 ounces per head. Who can beat it?

I will give you an account of my half and three-quarter bloods soon.

Yours respectfully, A. L. Bingham.

◆

Prevention of Mildew in Grapes.

The experimenting on the mildew in Grapes published in this Journal last Spring, was tried by Mr. Pellet at his vineyard with complete success. Mr. P. gathered the fine dust on the road by the cart load, that had been ground to a fine powder, and then sifting it so as to take out any loose pebbles, he put it in bags and carted it into the vineyard, and leaving the bags at a proper distance, took a dredging box (such as is used in families, only large enough to hold two quarts) made on purpose, filled it with dust, and then passing to and fro along the rows of vines; with one hand move away the vines so as to come at the grapes, and then sifted the dust upon them freely. The result was, the dust absorbed the fungus or mildew, and it pealed off, leaving the grape uninjured, and thus saved the crop. Mr. P. says it worked to a charm, for he left some rows undusted, to see the effect, and they were utterly destroyed.

The dusting process is done early in the morning when the dew is on the vines and grapes. A man can dust an acre easily in three hours. Mr. Pellet has charge of Mr. Patchett's vineyard at Napa, of which we spoke last week.

◆

Grasshoppers Love Grape-Vines.

O. W. Craig, of Sonoma, had a vineyard of 13,000 California and 9000 foreign grapes. They were all doing finely and gave great promise, but unhappily the grasshoppers came July 1st, and reveled in the vineyard, and spent the summer there, not leaving it till October 1st, utterly taking off all the living part of it, and destroying it for this season. The grasshopper has been very destructive in many parts of the State this season. We would recommend that all land that has been infested with the grasshopper this year should have repeated plowings, so as to break up the deposits of their eggs. It should be borne in mind, however, that the egg will only be deposited in very dry land, so that the eggs would probably be laid upon some ground high and dry; yet every spot they have visited should be plowed this winter; this would break up and eradicate them by destroying their progeny.

◆

Plant Early! Plant Early!

We have always advocated planting early; and as the rains are near at hand, it is important that our Farmers should be preparing for early planting.

Seed Planting is one of the most important duties of the Farmer, and the kind of seeds is important too. One of the great drawbacks to the success of the grower is procuring *cheap seeds. Never buy any but the best*, and always go to head-quarters.

We can refer our readers the present year to the large warehouse of S. W. Moore, Esq., on California-street, who has been in the business since 1850. He is now opening all kinds of seeds for the farm, garden, and orchard, and we call their attention to this house with pleasure as the head-quarters for seeds.

◆

Importation of Butter.

By the record of the arrivals from New York it will be seen that there are large importations of Butter by clippers and by every steamer, and the rise in prices here will always flood our market from abroad. Why is it that the dairymen of California are not preparing to stop this large importation by increasing our "home supply." There is no reason in the world why California should not produce Butter enough for "home use," and enough also for the outfit of all our steamers, and packet ships, and coast trade. Let farmers raise green crops, and soil their dairy stock; let them improve their dairy stock by the Durham and Devon, the Ayrshire and other fine breeds; then thirty cows will produce more milk, and make more butter than one hundred now produce at many of our dairy farms.

◆

Napa Wheat, Etc.

In our report the last week we had not (as we then said) received the report of Messrs. Matthews & Clark; it has since been kindly furnished, and is as follows:

Wheat,	780	tons.
Barley,	110	"
Oats,	24	"
Corn,	14	"
Rye,	4	"
Total,	928	tons.

Supposing each bag of grain to weigh 100 pounds—wheat generally is 105 and 110 pounds—the total would be about the amount we stated last week, 20,000 bags, as Barley, Oats, and Rye, are not of equal weight. We return thanks to gentlemen of various warehouses for their kindness in sending their schedules, and will always be glad to receive from any source.

◆

The Grain Crop of 1861.

There has been much speculation in regard to the Grain Crop of 1861, some believing the crop will fall short of that of 1860, by twenty to thirty-three per cent. The Wheat crop of the present year is much larger than such persons can believe, and it will not fall short of '60 more than twelve and a half per cent, if it does any at all.

Many persons seems to think also that the bulk of the crop has passed from the producers hands, yet, while we know that many farmers have sold early in order to relieve themselves from debt, there are many of our largest farmers *hold their grain*, and intend to do so until Spring, believing they will realize two and a half cents per pound.

We are always glad to know that the *producer* realizes the highest rates, for when this is the case, the country receives the benefit; but when it falls into the hands of mere speculators, it seems to do no one any good, and our State is rarely benefited thereby.

◆

Raising Broom-Corn Profitable to the Farmer. When at Napa, the past week, we called at the Broom Factory of Mr. R. E. Wood, at Napa, and found Mr. Wood and son busy in making brooms. We gathered the following items of important information: They raise their own corn upon a strip of land along the margin of the creek, land not valuable, but the result has proved for them over 800 pounds corn to the acre, worth seven-and-a-half to eight cents per pound, and one ton seed worth twenty dollars per ton for feed. They estimate the net profit, after all expense of raising and harvesting the corn, will be about sixty dollars per acre, or equal to *thirty sacks of wheat per acre, at two dollars per one hundred pounds*. This is the *net profit*. Who says, does farming pay?

Large Crop of Artichokes.—Mr. J. F. Brown, above St. Helena, informed us when there that he raised twelve bushels of fine Artichokes (pink-eyes) upon a strip twenty-four feet long by four feet wide, and in addition the gophers and squirrels consumed a large quantity besides. This we call a large yield.

Stable Brooms.—Our Broom-makers are now making strong and heavy Corn-Brooms for Stables, and also fine hazel-brush, with handles like a common Broom; an excellent article for barns and all out-buildings.

California Notes.

BY ALEX. S. TAYLOR.

THE INDIANOLOGY OF CALIFORNIA

THIRD SERIES.

No. 61 of whole Series; continued from Farmer of Nov. 1, 1861.

XI.—K.

Miscellaneous.

The Wonderful Country of the Volcanic Upheavals East of the Sierra Nevada—The Remnants of the Half-Civilized Indians Thereof.

The San Francisco Evening Bulletin correspondence of July, 1861, dating from Irving's Creek, Mono county, contains the following memoranda of the Indians of the Coso country and the vicinity of Owens' Lake, which country is an extension westward of the colonies and settlements of the 1540 Pueblo clans of New Mexico, and doubtless cognates and *afiliés* of those of the river San Juan and Colorado Chiquito, a hundred miles east of the Coso districts. As described by the correspondent, their *morale* is a counterpart of the Zuni and Moqui Indians, who live directly south-east of them.

This account of the correspondent of the Bulletin is of great interest and historic value as connected with the remnants of the Pueblo Indians of De Mezas and Coronado's explorations of 1537-1542; they also may be remnants of the Christian Indians who were partially conquered and civilized by the Franciscan Friars of New Mexico between 1570 and 1670. The meager chronicles of New Mexico are conspicuous of one great fact ante 1700, to wit: the furious revolt of the Indians of the Missionary settlements, scattered over a great district of country east and west, and doubtless gradually absorbing all the populations of the Pueblo Indian settlements from the Valley of the Rio Grande del Norte to the eastern bases of the Sierra Nevada and the confines of the Colorado Valley.

Since that period the history of these singular Indians has been lost to the literary world, and it is only since 1840 that facts have been accumulating from American travelers and European *litteraires*, to prove the truth of the accounts of the first Spanish explorers under Coronado and others. The few proofs collected in this matter have been immensely added to since the advent of the Golden Epoch of 1848, and every day develops new facts of great historic and scientific value. For the most of these we are indebted to the writers of the California press of the last ten years, who have diligently searched out the hidden secrets of the strange lands of the Pacific Indiads. When the "madness which rules the hour" has passed, and the country settles down under a firm and solid government of progress and power, California will then begin to shine forth as the fountain-head of Literature, Art, and Science, to the nations of the world, and the Kings of the East and the West come to worship in her temples and to sit in the congregations of her wisdom. We are but the pioneers and workers of the nations of the posterity, and therein we must content ourselves.

The correspondent of the Bulletin is mistaken in accrediting the civilization of these Indians to the Jesuits—a very common error in American writers. The Jesuits had *no Missions in any part of New Mexico, Alta California, or Texas*; none north of the Gila or Lower California. The Franciscan Friars occupied all the Missions of Texas, New Mexico, and Alta California, to the exclusion of other orders of the Roman Catholic Church. It is a very remarkable fact, capable of copious proof, that the Missionary Friars of this Church adopted nearly the same plans in Christianizing and civilizing the Indians of Spanish America as the old Monks of Western Europe adopted in subduing the English, Irish, Scotch, French, German, and other Gentile nations of the Eastern Hemisphere between the Mediterranean and the Baltic.

It is highly desirable that all intelligent observers settled in the Silver districts of the Eastern Confines of California and adjacent New Mexico should make notes of all facts relating to the Indiada of those parts, and particularly as to their historical traditions in social life, and of the recent changes in the earth's surface of their country from volcanic and earthquake phenomena. It seems to us apparent that wonderful earth-revolutions have occurred in these Eastern Confines between 1550 and 1750, which have not been within the compass of the notice of the European races. Before these Indians are absorbed by the white man, vocabularies and grammars of his language should be made, and his intellectual *status* exploited. The collection of such material is highly creditable to explorers and discoverers, and of the greatest practical value to literary and scientific men; above all, this redounds greatly to the honor and glory of our adopted State of California. For all her sons must remember in prosperity and adversity this mother of multiplicitous and overflowing love; that we must crown her brows with a halo of filial tributes; that every day may extend among men the beneficence of her maternal counsels, and that the reign of her empire will be the greatest and wisest and the most enduring in the history of all human empires.

Here then follows the notations of "our own correspondent;" it were a pity not to be fuller and detailed on other points open to his observation:

The Owens' Lake Country.

There are two bodies of water bearing the name of Owen or Owens' Lake—a fact that has led to some confusion as to the relative position of the Coso mines. One of these is known as the Big and the other as the Little Lake. The former is 16 miles long and 8 wide; the latter, lying 25 miles further south, is but one mile long and half a mile wide. The two are separated by a series of low hills, and have no connection with each other. The water of the Big lake is alkaline and unfit for use. From the flatness of the shores it is supposed to occupy a shallow basin. It contains no fish, but, like Mono, generates near its banks multitudes of larvæ, which, becoming winged, float on the water and finally drift ashore, when they are fed upon by the wild-fowl and the Indians. The lake is surrounded by an alkali beach, outside of which is a belt of coarse grass, with a barren sage-plain beyond, sloping gently from the foot of the mountains, some three or four miles distant.

To the east of the Owen Range the country is literally a desert, and, withal, so broken as to render travel over it very toilsome. Yet there are mines there, and it is said, evidences of their having been worked at a former day. One of the company mentioned had penetrated this region some distance, coming across reservoirs, and other remains, evidently the work of civilized men, probably the Jesuits, who are known to have extended their labors far among the wild tribes in that direction. Trails, as of pack-animals, were also met with, being deeply worn but long since disused, and clearly not produced by Indians. Indeed, it is noticeable that, as compared with California, very few trails are to be seen on this side of the mountains; a circumstance attributable, no doubt, to the small number of Indians and wild animals found here.

What adds to the difficulty of finding water, is a practice the Indians have of covering up or filling in the springs, in order to drive the game to particular spots, where they are prepared to take it. Yet by following what few trails there are, parties are sure to arrive at water. The grass in this region is poor and coarse, and in many places so incrusted with saline efflorescence as to break as if frozen. Here the cabbage-cactus, so called from its shape, growing 15 or 20 feet high, first begins to show itself; a stunted kind being seen about Esmeralda. These abortions of the vegetable world, the progeny of heat and drought, when attaining this monstrous size, may be regarded as a sign of extreme aridity.

An Indian Paradise—Manners and Customs of the Natives.

Having given up my intended trip to Coso (a word which signifies fire in their language), I struck across Owens' Valley to the west side, and passed up along the foot of the mountains to this point. The valley at the point where I crossed it is about 17 miles wide. It is, for the most part, a mere heath—producing nothing but the wild sage and greasewood, with some little bunch-grass. The river here is small, and winding through a grassy bottom of no great extent, with its willow-fringed banks strongly resembling the Carson near Genoa. With the exception of the willow and some diminutive cotton-wood, there is no timber in the valley.

Skirting the foot of the Sierra Nevada, from the point where I struck, thence to Mono Lake is a beautiful region, the home of several small Indian tribes, and seemingly one of their favorite places of abode. A reservation has here been set apart for their use; a portion of which, at least, should be faithfully preserved to them as a permanent home. Numerous creeks come down from the mountains, flowing with a rapid current over white gravelly bottoms. The water is always icy cold and clear as crystal. A line of pine timber follows many of these streams far into the plain. There is also willow, with a few scattering poplars, along their banks. Some of them are large, forming branches of the river; others, mere rills, losing themselves in the dry and porous earth, irrigating a considerable patch about the place where they disappear. Most of these streams are shallow, and after leaving the mountain-ravines, have banks but a foot or two high. This admits of their being easily turned aside for irrigation, a purpose to which they are extensively applied by the Indians. These tribes cultivate a small white root of an oval shape, and the size of a cherry. It grows like the onion, sending up three blades that bear a blue lily-shaped flower. When roasted, it looks and tastes like the yam, being very palatable and nutritious. It strongly resembles the root so much in use among the Indians of Oregon and British Columbia, called the *Camass*. Besides this, these Indians have a species of wild-onion (amole), with a variety of other roots which they cultivate for food. In irrigating they conduct the water some distance through ditches and little aqueducts made of dirt. The surplus water flowing over the land below these patches of roots has caused much grass to grow along these creeks, consisting of clover, blue-joint, and bunch-grass. Cattle are very fond of these, and fatten upon them rapidly. There is also a coarse reed-like grass growing here from which the natives press the juice and boil it down into sugar (or panoche).

These tribes are attached to the whites, and serve them with the greatest readiness. They will follow a party all day for the sake of camping with them at night. The chief has authority to give away the grown-up children, which he will do for a trifle to persons whom he thinks will use them well. The boys are bright little fellows, and go cheerfully with those to whom they are given. The only animals owned by these people are a few small ponies, which they ride without saddle or bridle, and generally two at a time. They are diminutive, but tough and docile creatures, and are principally used for moving camp and packing game, their owners being no great riders. Of game there is here a good deal—chiefly hare, with some sage-hens, and a few deer and sheep in the mountains. The hare are mostly caught in nets, and by other devices common among the Indians. They have but few guns, the usual implement of the chase being the bow and arrow, in the use of which they are much more expert than that of firearms. For warlike purposes they have very little need of weapons of any kind, being apparently not at all given to these pursuits. More harmless and quiet beings I have never seen. They are also honest and industrious, never attempting to steal or purloin the least trifle, while they engage in any kind of work required of them with the greatest alacrity. They have a deep regard, almost awe, for the whites, curiously inspecting everything appertaining to them, and desiring to learn their mode of doing things. The men are well behaved, and the women modest and shy of strangers. They dress mostly in rabbit-skins, a sufficient number of which are sewn together to make a cloak or blanket-like robe, their chief article of apparel. Of late they have got to using the cast-off clothing of the whites, and the males can be seen attired in every species of garb known to civilization—the same being in every style of fashion and stage of dilapidation.

The savage nature of these tribes has evidently been tempered by intercourse with Christianized men at some former period. That these were the Catholic Missionaries before spoken of, is shown by the use they make of Spanish terms. They call themselves Indianos, and designate the leading man amongst themselves or the whites, Capitan. Comprehending what we were after, with that wish to ingratiate themselves with the white man common to all inferior races, they assured us that there was mucho plata, bastante oro, etc., in the mountains to the west. Knowing how much these assurances might have sprung from a mere desire to please us, and how apt these people, in recurring to past observation, are to mistake mica, pyrites, or other substances having a metallic luster, for the precious metals themselves, we declined to undertake a journey of exploration in the direction indicated. In crossing several of the streams, however, we found small prospects of gold, justifying the belief that more extensive deposits might exist higher up—possibly in sufficient quantity to warrant working. Quartz veins are said to be abundant in the mountains, and parties report finding gold there, though it is not probable any careful examination has ever been made.

The Coso Mines — An Active Volcano — Sulphur Streams, etc.

Joel H. Brooks arrived at Los Angeles on the 23d of August, 1861, from Coso and its vicinity. He brought a specimen of pure brimstone, which he picked up on the desert, having discovered an active volcano, pouring forth a stream of sulphur. This is rather a curiosity in the way of volcanoes. There is no distinct crater, though almost an infinite number of pipes, probably 10,000. Hot steam and sulphur are discharged, the latter of which, congealing, forms the pure brimstone of commerce. Alum is also found pure, and in great abundance. It appears that as the sulphur congeals, it throws out a coating of alum, the brimstone forming around the flues. These sulphur-springs cover about two acres of ground. They are situated on the side of a volcanic hill, about 300 feet above the level of the plain, twenty miles south of Coso, and fifteen miles northeast of Little Owens' Lake.

These springs have been claimed by the discoverers, Messrs. Brooks and Hart, for the purposes of trade. By fastening a yeast-powder box to a willow pole, they dipped up the boiling sulphur. The steam issuing from the pipes is so hot as to immediately blister the hand in coming in contact with it. The ground is generally so soft and hot that planks have to be used in crossing it.

Quartz operations are being carried on with great spirit and enterprise at Coso. There are about twenty arastras at work in the vicinity. One quartz-lead, twelve miles east of Coso, worked by arastras, turns out $210 to the ton.

New Road to Coso.

A short and good road to Coso has long been a desideratum. This has at last been discovered. Brooks succeeded in finding an opening through a range of hills—which he considered would, on exploration, be found—which shortens the road to Coso fifty miles.

This is a matter of great importance to business-men in Los Angeles, and it is still more desirable for the miners of Coso, as they can ship their ore and import their necessaries by the way of San Pedro and San Francisco, much cheaper than by by the present long land-system carriage. The following is the line of travel by the newly discovered opening in the mountains from Los Angeles: From Elizabeth Lake, take the Tehachape road to Oak creek; thence to Willow Springs at western end of Salt Lake; thence due north, up a broad arroyo, through some low hills, seven miles to the Plains, making eighteen miles in all, to mouth of Walker's Pass from Willow Springs. It is a good road all the way, with but little sand and no rocks, and is very favorable for oxen. There is grass and water sufficient, after leaving the settlements—the longest stretch without water being twenty miles. By this new road, the distance from here to Coso is shortened fifty miles.—[Los Angeles Star.

◆

The Management of Swine.

FRAMLINGHAM FARMERS' CLUB.

(CONCLUDED.)

The Secretary, at the request of Mr. Stearn, then read several letters from gentlemen to whom Mr. Stearn had sold pigs, in proof of the statements he had made. Earl St. Vincent, of Godmersham Park, Canterbury, said the pig he had purchased of Mr. Stearn had grown into a very handsome sow, and had now a litter of pigs, and everybody who saw her admired her. Taking her as a specimen of Mr. Stearn's breed of pigs, it would be difficult to find any to surpass them. Mr. Gladding, of Hoath Court, Chislett, near Canterbury, said with respect to the pigs he bought of Mr. Stearn, at Canterbury, at the Royal Agricultural Show, last July, he had been much afraid the good condition they were in would, in taking them to his common feeding, soon give proof of their having been kept on better food; but to his surprise they not only kept their own, but improved on very low diet. They had given him the utmost satisfaction. A letter from Mr. Baker, of Beverley St. Stephen's, Canterbury, said the pigs he had of Mr. Stearn were unquestionably superior to any he had bred before. His bailiff, a man of seventy years' experience, was fearful, as they fatted so fast on common food, they would be fit only for fatting; but he had been agreeably surprised by the young sow producing eight fine pigs on her first farrow. A letter from Mr. George Turner, of Ipswich, was to the same satisfactory effect.

Some extraordinary specimens of Mr. Stearn's success in the breeding and rearing of pigs were then brought into the room, and engaged the attention of the meeting for more than half an hour. The first animal produced was a breeding sow belonging to a neighbor of Mr. Stearn, which was produced as a contrast to his own. When this animal was placed side by side with one of Mr. Stearn's, the contrast produced a great deal of merriment, but we were informed by those competent to speak on the subject, that the unhappy pig which was produced as a foil on this occasion was not an unfair sample of the run of young breeding sows. Its age was about nine months, as was also that of one of Mr. Stearn's, placed beside it; the former weighed four stone, the latter sixteen or seventeen stone. Mr. Stearn also showed three white Suffolk sows in pig, of remarkable weight and proportions. The last specimen shown was a young boar from the Framlingham and Canterbury prize sow. Mr. Stearn also showed one of the light Norfolk troughs he uses, along the top of which he had added a bar to prevent the pigs from attempting to leap over, in doing which he said they would often break their legs. He also produced a specimen of the wedge-shaped lattice he uses, which has the effect of fending the sow from the wall when she lies down, and so leaves room for the young to escape uncrushed. These contrivances were simple and excellent, and served, no less than the wonderful specimens of the pig tribe which he exhibited, to convey an idea of his great care, perseverance, and skill in the work in which he takes so much delight.

The Chairman said that whatever opinion the meeting might entertain of the merits of the pigs, there could be but one opinion as to the thanks that were due to Mr. Stearn for the able paper he had read. It appeared to him there were but few objections to be raised. The matters were mainly such as they all believed to be necessary for the proper management of pigs, but they often flinched at the trouble. Cleanliness, warmth, and feeding—they all agreed that those were excellent things, but Mr. Stearn carried into practice what many agreed to only in theory, and did not take the trouble to carry out. Mr. Stearn had alluded to the early maturity of the white pig. Now he knew there were many black pig-men in the room; and if they still stuck to the black pigs after what Mr. Stearn had said, he hoped they would get up and state their reasons. The specimens which had been brought into the room were certainly such as they seldom saw. And then the crates Mr. Stearn used were worth their attention; he (the Chairman) had been told there were many in that room who had tried some of the things Mr. Stearn recommended, and would testify to their efficacy. He did not know what some of them would say to the scrubbing-brush. (Laughter.) He had no doubt the cleanliness, the washing, and the scrubbing, made the feed go much further. He should be glad to hear something on the question of black pigs.

Mr. W. Jeaffreson acknowledged the obligations of the meeting to Mr. Stearn, and said he wished to ask one question as he was a bit of a pig-man himself. One of Mr. Stearn's observations was that coal was advantageous to a certain extent, but not too much. What was the quantity of coal that ought to be given to a pig?

Mr. Stearn said, that not being situated as Mr. Jeaffreson, not being acquainted with the properties of coal, he had had to be guided by experience, and in gaining that experience he had been very near losing many of his pigs. He used coal as an astringent, and it acted almost immediately; but in two or three cases he had given too much, and had been near losing the pigs. They must be guided by the age of the pig in using the coal; he never allowed anybody to give it but himself. To a pig from seven to nine months, he should give, if the animal required anything of the sort, about as much coal as would lie in the palm of his hand, twice a-day.

Mr. J. Mann offered some remarks from his experience of the breeding and rearing of pigs. He said he scrubbed his pigs, but not every day; he rubbed them every day with a dry horse-brush. For lung disease he gave linseed meal, and he found they recovered upon it. He had examined the lungs of pigs after they were killed, that had been affected with lung disease, and he could mark how the oily matter of the linseed had arrested the disease. He believed cleanliness to be one of the greatest points in reference to the growth of pigs; his sties were always washed down clean, and the manure taken away every day. If he had the means he would carry out Mr. Stearn's plans; he was convinced it would pay. To put the growth of well-managed pigs in figures, the heaviest pig would average a growth of one pound per day, and one stone over in seven months.

Mr. Stearn said that one of his stock, not of his own breeding, at twenty-eight weeks old, weighed 16st. 8lb. dead weight.

The Chairman—Mr. Mann, were yours black or white pigs?

Mr. Mann said his were not pure stock; some were white; some blue and white, and some black and white; but he cordially agreed with Mr. Stearn that the better the breed the better the growth.

The Chairman asked Mr. Stearn whether he put his pigs on young clover?

Mr. Stearn said the hide of any white pig would crack upon young clover.

Mr. W. Jeaffreson asked Mr. Stearn whether it was his custom to endeavor to reduce the fattening qualities of the sow while breeding?

Mr. Stearn—I assure you that these very pigs are fed as common as we can feed them to keep them alive. (Laughter.) I am perfectly aware that none of you will believe me, but these two animals have been kept as low as possible for breeding purposes.

The Chairman said he bought a pig of Mr. Stearn, one of his prize litter; he put it in the yard, and asked his man to reduce her for breeding, but it was of no use; they kept her as low as possible to keep her alive, but she was almost as fat as ever. But if Mr. Stearn said they bred just as well, there was no occasion to bring them down.

Mr. Stearn said his sows, notwithstanding their fatness, would bring up twelve or fourteen pigs, and after the first litter, they would average ten at every time.

Mr. H. Bloomfield said he had been waiting to hear some practical farmer ask some questions which he should like to have answered. The observations of Mr. Stearn reminded him of an anecdote of a farmer who had made himself remarkable for his fine team of horses, and was questioned as to what he fed them on, when his reply was that they had nothing but a little chaff and bean-straw, but the bean-straw was only half thrashed. (Laughter.) Now, it seemed to him to be quite impossible to imagine that any animal could be in that uncomfortable state of obesity in which these pigs were, unless they consumed a large quantity of food of some kind. There was an immense quantity of adipose substance in them, they were enormously fat, and to suppose that they could be brought almost to suffering, as they were, without an immense portion of food of some kind, was absurd. It could not be done with those doses of coal. He believed Mr. Stearn had accomplished, perhaps, more than any man now in this part of the country. The animals before them must be taken as evidence of the most extraordinary industry and perseverance in stuffing that any man could possibly conceive. It appeared that from the very earliest moment, at the sixth day after they were born, they were taken from the care of the mother, and fed with a little milk and sharps, and perhaps with a little sugar. Was there any sugar?

Mr. Stearn—Certainly.

Mr. Bloomfield said he received that candid statement with a great deal of satisfaction and delight, and he hoped that any observation that he might make would not be supposed to arise from impertinence. (Hear, hear.) Any more important subject he conceived they would hardly entertain, and, therefore, it was most important to know the kind and breed of animals that would produce the largest quantity of fat on the smallest possible quantity of corn, and he thought certainly that very little fault could be found with the breed of the animals before them. But he believed a challenge had been offered by Mr. Stearn, and he offered this a proof that there was so much in the management, that he would sell some of his best animals, and then that he would beat the best animal he had parted with. It was not too much to say that Mr. Stearn has surpassed every breeder and fattener in this county, and he hoped he would be prepared to tell them the kind of feed the animals consumed, for instance, in the first six, seven, or eight months. When he had done that, he (Mr. Bloomfield) should have no hesitation in pronouncing Mr. Stearn to be a very prince of pig breeders and fatteners. He hoped Mr. Stearn would give them some information on that point.

Mr. Stearn—I will tell you what I will do; I will allow any one to take that pig, and the club shall employ a competent person to feed and take care of him for a week, or two months, or what period you like; and I will engage to say that that very pig will consume less food than any pig of half the weight in the country, and you shall feed him on anything you think proper.

Mr. George Ling, of Bedfield, near Wickham Market, said Mr. Bloomfield seemed to discredit what Mr. Stearn had stated. He was not going to tell the meeting what Mr. Stearn's pigs ate; he only knew that when Mr. Stearn had decided to lay the floors of his piggeries with asphalte he employed him (Mr. Ling) to do the work. When the men came home he asked them how the pigs had got on; and the men said the pigs got on they did not know how, for they did not seem to eat anything. The men were there all day long, and were surprised at how little the pigs ate. He was glad to find Mr. Stearn was satisfied with the asphalte. He hoped Mr. Stearn would advise everybody to let him lay their piggeries with asphalte. (Laughter.)

Mr. Stearn—I should very much like to have some competent person feed one of those young breeding sows for two or three weeks. I think he would feed her so that she could not rise at all, and think he was going to starve her too. We can't give her little enough. I have not kept her up to bring her here.

The Chairman—May I venture to ask a kind friend who has come a long journey from Essex (Mr. H. Sexton, of Cockfield Hall), whether he has heard any argument to induce him to change his blacks for whites? I know Mr. Sexton and Mr. Stearn are good friends, and are glad to meet each other; but I know Mr. Stearn is more afraid to meet him in competition than to meet any other man in England.

Mr. Sexton said he had not been in the black pig line long, but he was still of opinion that they were hardier than white. Mr. Stearn said his pigs could not stand young clover; now the black ones would, and their coats did not crack. The blacks did not want so much scrubbing; not more than once in three months. He did not feed them with coals; they did not require it. He could not afford coals. He thought the blacks were the hardiest, quite as good breeders, and fat as quick. They were certainly first-rate pigs Mr. Stearn had showed them; but he hoped he should meet Mr. Stearn in competition again some day, and he would endeavor to beat him.

Mr. Stearn—Mr. Sexton speaks of my scrubbing, and does not agree with using so much soap. I don't think it costs so much as rose oil which I saw him use. (Loud laughter.) We don't wash them more than once a month.

Mr. Sexton said he was glad to learn that Mr. Stearn had begun to do a little in the black pig line.

Mr. Stearn—Mr. Sexton seems to beat everybody in black; I can beat him in white, and I am determined to beat him in black. Mr. Sexton's are certainly the best black pigs I ever saw in my life.

The Chairman said if no gentleman had any other practical question to ask, he thought it his duty to return, in Mr. Stearn's name, and in the name of the club, their thanks to Mr. Sexton for coming so far to visit them this evening. It was no little honor that they had in their club-room at that discussion the two most celebrated pig-breeders in England. They might go into the discussion-room of a hundred farmers' clubs, and they could not say what we could say this evening. These two gentlemen went to the Royal Agricultural Society's meetings anywhere in England, and stood at the head of the list. They returned their thanks to Mr. Sexton, and if ever they had another agricultural show in Framlingham, they would guarantee him the very best accommodation to show his pigs, and a well-aired bed for himself. They also thanked Mr. Stearn for a sound practical lecture in a short compass.

Some further conversation arose, in the course of which

The Chairman asked Mr. Sexton what he gave his pigs, and whether he gave the food warm or cold?

Mr. Sexton said as soon as the pigs would eat, he gave them a little meal or oats; the oats whole. He never gave them any peas till they got twelve or fourteen weeks old; he found it cramped them.

Mr. Stearn said he never gave peas at all.

Mr. Sexton said lentils and oats were the principal food. He ground the lentils, and after a time he ground the oats, and gave them wet with a few sharps and middlings. When the pigs were over three months old he gave them barley, and a little before that time, but not much; he also gave a small proportion of maize. He gave everything cold, in winter and summer. He found that if he gave warm victuals when the pigs got eight or ten weeks old, their lungs were gone. He sold his pigs for London, at between four and five months old, at about five stone. He generally killed them at from forty to seventy pounds weight. He got the young pigs to eat as soon as they would. He could get them to eat a little at six or seven days old. He did not agree with keeping the sows over well.

The Chairman said the secret seemed to be, oats instead of barley; and making the pigs eat early.

◆

Artificial Hoofs for Horses.—It is impossible to calculate the various useful purposes to which gutta percha may be applied. One of the most ingenious applications recently made of this valuable substance is that of making artificial hoofs for horses' feet. Many ingenious devices have been resorted to, to attain this result, but the adoption of gutta percha will, doubtless, supersede all others, as its efficacy becomes recognized. What is required by the veterinary surgeon is a substance possessing the consistence of horn, to retain the nails of the shoe; that will readily soften by heat, so as to mould itself to the required form; that it be indissoluble in water, seeing that the horses' hoof is generally in contact with moisture; and, lastly, that it be capable of uniting perfectly with the hoof. No known substance possesses all these qualities except gutta percha. For the purpose under consideration, it is prepared by being cut into fragments the size of a nut and softened in hot water; the pieces are then mixed with half their weight of powdered sal-ammoniac, and melted together in a tinned saucepan over a gentle fire, keeping the mass well stirred; the mixture should assume a chocolate color. When required for use, it should be melted in a glue-pot; the surface of the hoof must be scraped clean, and the gutta percha applied as required. The application may be facilitated by the use of a glazier's knife, warmed, by which also the surface of the artificial hoof may be smoothed and polished. In this manner many a valuable horse may be rendered useful, which, otherwise, only remain fit for slaughter. On the score of humanity, also, this application of gutta percha is to be welcomed.—[Eng. Paper.

◆

Product of Milch Cows.—A dairyman somewhat noted for producing a large amount of cheese annually from his dairy, said to us in a recent conversation, that one of the secrets of his success in this respect was the careful manner in which he treated his herd. His cows were driven to the stables leisurely. No dogs were used for the purpose of driving the cows, and persons in his employ who were caught striking or in any way abusing a cow, were discharged on the instant. Let the cows have an abundance of food, and take their time in coming to the barn, especially in hot weather, milk clean and regularly, and from fifty to a hundred pounds more cheese can be made to each cow, during the season, than when the animals are dogged out of the field night and morning, or kicked and pounded and frightened for every little mistake they are supposed to make. Some people make a great mistake in overstocking, and too little attention is given to the treatment of stock, summer and winter. The dairyman should consider a moment whether thirty cows yielding 600 pounds of cheese per cow, are not as profitable as forty cows whose annual produce is 400 pounds per cow; and yet hundreds of dairymen seldom if ever think of this matter, but go on after the old manner, trusting to luck for an increase in dairy products over that former years.—[Dairy Farmer.

Failures as well as Successes.—Some one has lately raised the query, whether in speaking of crops, it is not duty, to tell of failures as well as successes in cultivation. I say not. Every lazy fellow can find enough of this knowledge, within the limits of his own experience. To speak of successful culture and how it is brought about is the kind of teaching that is most commendable. Instance the Indian of two hundred years ago, who, living mainly on the fish taken from the stream, knew that by inserting a kernel of corn in the earth, a plant would spring up, from which, perhaps in nine cases out of ten, an ear might be expected. But he had not learned to prepare the earth, so that ten stalks might grow where but one grew before; and that each of these stalks might yield two or more ears, full and complete, instead of one, pinched and shriveled. Such carpings on useful communications show a narrow mind and perhaps a disappointed ambition. Let us have the story of all full crops, and how they are made so; and let those who have hitherto neglected to learn, profit by the instruction.

Granaries.—We refer to these again, with the simple intimation that they should be thoroughly cleansed before storing the grain in them. A favorite method of purifying them is that originally adopted by Mr. Carmichael. It is as follows: When the granaries are cleaned and swept, place powdered brimstone in an earthen jar on a bed of sand in the center of the granary floor, set fire to the sulphur, and close the doors and windows. The fumes of the sulphur effectually rids the granary of weevil, either by destroying them or driving them off.

Farming.

There appears to have been a general waking up lately among the Rip Van Winkle's of the press on the subject of Agriculture, and some writers have been a good deal exercised in regard to conducting farming operations, judging from the many articles that have been published in the daily papers with the apparent design of enlightening the public on the subject. The Mercantile Gazette in an article on the subject of Farming, comments in a sensible way on a series of communications which have appeared, and its remarks so correspond with our own views, that we are pleased to copy the article. We have watched with much interest the drift of the several letters on Farming, each and all seeming to place all *the cost of farming* upon the *crop of cereals*, making no allowance for the value of teams or machinery for other uses, or the income of the farm for other crops, which is or should be blended in these calculations, for oftentimes the teams and machinery purchased for the grain crop are a source of income by work done on other farms, while the wear, tear, and interest of their value are charged to the home farm. The orchard, vineyard, and garden, are tilled by the cattle, plows, and harness, whose cost or interest, wear and tear, are also charged to the grain crop. But the article referred so well points out the fallacy of throwing the whole cost upon the cereal crop that we need say no more now. We keep an eye upon the writers' wholesale calculations, and in due time shall show many of their errors. We are truly glad to see this awakening over our whole State. It will be remembered, that this Journal has for years urged the importance of diversity of crops, as well as Legislative aid for the cultivation of new products suited to our State, and among them of tea, sugar, rice, cotton, tobacco, etc; all these in due time will be among the crops of California. The Gazette says:

A leading thought of the writer of these articles, a point prominently dwelt upon, is, that a greater diversity of culture is essential to the success of the farming interest in California. The productiveness of the soil, he thinks, has been so greatly abridged in many portions of the State by successive cropping without rotation or fertilizing appliances, that the yield of cereal grains in ordinary seasons has fallen below the paying standard. Hence the necessity of adopting some measure by which either its fecundity shall be restored, or its application to the culture of other products shall be made more remunerative and satisfactory; and both these objects, the writer thinks, can be accomplished by thorough tillage, rotation and diversity of crops.

We have neither time nor space, nor is it our province to write essays upon Agriculture, and yet so great is our interest in the matter that we cannot forbear a few passing remarks. The cereal grains, and especially wheat, have been the great staples of California husbandry. Of corn and rye, we raise but little, our soil and climate, perhaps, not being generally adapted. Of oats and barley, we can produce any quantity, but the market for them is comparatively limited, and beyond a certain point, which the farmer can well judge of, the production is no object. Wheat is the standard crop, and with a yield of any dimensions, all we have to spare, probably for some years to come, can find a ready market in other lands.

A good crop of wheat, in some portions of the State, depends almost entirely upon the culture. Any kind of a season will suffice, and the yield will be abundant. Farmers in these districts, with no unusual labor, raise forty to sixty or more bushels to the acre, and as a matter of course become rich and independent. In other regions a good season as well as good culture is essential to a good crop. The soil is fertile enough, but dry. Abundant and seasonable rains are necessary to a full and satisfactory harvest. It is the small product of these lands in ordinary and dry seasons which reduces the average of the State to 20 or 25 bushels per acre. They of course fall as much below the average as others rise above it, and while the proprietor of the latter is growing rich, and all would do well at the average, they are growing poor, and must speedily wind up with insolvency or turn their attention to something else. It is evident that the owner of an upland or dry farm cannot at the present prices make money by confining his operations to the culture of wheat. His true policy is to cultivate no one large crop of any kind, but to make up by variety what he lacks in magnitude, so that if one crop fails, he may have the others to fall back upon. Some will stand the drought better than others. All will do well when the season favors. For him to keep on cultivating wheat as an almost exclusive crop, is like playing at a game with at least four chances against him to one in his favor; and especially is this so if he hires his labor. But we are acquainted with a farmer who has attained to very comfortable circumstances—independence in fact—upon one of these dry upland places. Himself and his boys do the work. They are industrious and frugal. Their grain crops are put in early and well, and almost invariably give fair returns—not the highest, of course, but remunerative. Besides the tillage of a portion of the farm, this man derives a considerable revenue from his stock. He began by renting or hiring milch cows, and with the aid of a wife perfectly versed in all the mysteries of the dairy, and the general economy of the farm, he was in a few years possessed of an herd which furnished ten to fifteen milkers. This man and his family are not the strongest or healthiest people in the neighborhood—not above the average. They suffer as much from sickness, accident and losses as the people around them; but they are intelligent, do their own work, live prudently, though comfortably, and are enabled to add to their improvements from year to year. In this way comparatively dry farms can be made profitable, as well as in other ways to which we have not time now to allude.

The writer referred to expresses the opinion that our export limit for cereals has, for a time, been reached. We trust it is only for a short time. Our export this year will doubtless be less than it was last, owing to the unpropitious nature of the season, but the aggregate value will not be proportionally less, for the price is better. Another year we hope to see the crop of wheat in California at least ten millions of bushels. We have no apprehension as to prices. The idea that two or three millions of bushels, more or less, in this State will affect the price of wheat all over the world, is idle. The product of the world is nearly a thousand millions of bushels. Our surplus, whether more or less, will scarcely be enhanced in value by its littleness, or depreciated by its largeness—so vast is the aggregate with which it must mingle. If, then, about the present range of prices can be realized, or even a little less, the more we have of it the better. But farmers who are in debt, and have large interest to pay, and are compelled to market their crops at inopportune periods, or who cultivate land that produces only fifteen or eighteen bushels to the acre, and perhaps hire help for that, and confine their tillage to wheat-raising—will make no money.

This incessant cropping, too, without replenishing the soil, must give place to a better system of husbandry. It is only by keeping up the yield, that with our higher rates of labor, and great distance from market, we can compete with the grain-growers of other countries. The average product of the great northwestern grainfields of the United States is less than 20 bushels per acre. That of Illinois is only 10 bushels; of Ohio still less. The average product of England, with the most perfect and thorough system of tillage in the world, is only about 21 bushels per acre; that of France is about 14 bushels. Our superiority in this respect must be entirely due to soil and climate; for as to tillage, we certainly cannot boast. But shiftless culture will tell in due time. As the soil becomes impoverished, the yield will diminish, and the farmer will inevitably become as poor as his land is unproductive.

The writer whose views we are considering, estimates the expense of raising wheat and placing it in the market, including storage, weighing and shipping charges, and full allowance for loss of time in repairs, and rainy weather, at $20 per acre paying wages. Another very intelligent writer in the Bulletin of the 21st ult., estimates the expense at about $15 per acre, the farmer doing his own work, and making no allowance for wages. Both these writers detail their items with great precision, and evidently "speak by the card." Now, if the farmer's business is exclusively wheat-raising, and he is compelled to pay all his expenses out of the proceeds of his crop, he makes $3 per acre wages for himself and team, upon a yield of 20 bushels to the acre, at $1 50 per 100 pounds. Allowing two days to be the time required per acre, his pay is $1 50 per day, which is moderate enough. He can make twice that sum during the interval when his crop requires no attention; but then it is much better than going behind-hand.

It appears to us, however, that there is a fallacy in these calculations, arising from the fact that farming in this country is seldom or never confined exclusively to wheat-raising; or, if it is, it ought not to be, and the remedy is easily applied. To arrive at a correct estimate of the profits of farming, the business must be taken as a whole. The segregating of one department from all the rest, and charging it formally with items supplied from or paid for by the farm itself, is delusive. All the departments are carried on concurrently, and with little or no additional expense. The stock, the dairy, the poultry, the orchard, the vineyard, the feed crops and vegetables, and outside labor for himself and teams when not occupied with home work—all these contribute, and pay a large portion of the necessary expense of carrying on the farm, so that the farmer who does his own work, may have the greater part of the proceeds of his wheat crop as a net result of the year's labor. We do not say that this *is* always done; but that it *may* be done, requires no demonstration; the fact is patent. Thrift—good management is essential to prosperity in all kinds of business, and emphatically so in farming.

◆

Cost of Female Help in New York and California.

The following is a true copy of a letter just received by a gentleman in this city from New York. This letter is worthy more than ordinary attention, for while we would always advocate a liberal pay to all who toil, we cannot see the justice or propriety of such a contrast between the cost of female help here and New York; for the cost of clothing is no more, and the risk of sickness less. We hope some effort will be made to remedy the evil resulting from excessive wages:

New York, 9th Month 27th, 1861.

Esteemed Friend: We have a servant girl who has been with us nine years, and has recently expressed a wish to go to San Francisco, with a view of getting higher wages. She has been told that you pay $30 a month, board included, for good help (we pay her $7 per month). She is excellent help. My wife would be sorry to part with her; but we are willing she should go, if it would be to her benefit, as we feel interested for her. She is 24 years old, and a member of the Catholic faith.

My impression is that it would be an *unfortunate move for her.*

When thee writes to us again, please give me thy opinion of such an adventure.

Thine truly, ***

Important Suggestions to Army Surgeons.—In the course of a battle, the gunners, and in fact all engaged, are subject to injuries of the ear, by the heavy and long sustained discharge of powerful artillery. Numerous cases of ruptured membrane, with more or less permanent deafness, will be found among the returning soldiers. In the artillery, the effect of position with reference to the gun is peculiar. Those men who stand nearest the muzzle *feel* the report most, but all who are to the leeward suffer more than those to the windward. Let the medical staff of each regiment keep prepared a quantity of glycerine, mixed with belladonna, say about in the proportion of forty grains of the latter to the ounce of glycerine oil. Let each gunner be provided, before an engagement, with wool or cotton (the former is preferable), saturated with the mixture, to place in his ears. It will not prevent his hearing the word of command or the drum, and will prevent a great deal of injury. The therapeutic of the preventive, medical men will perceive, as it forms a coating over the membrane, which can be easily cleansed by a little warm water, and will effectually prevent the vibration of the air striking injuriously upon it. It would also be useful to those exposed to dampness when camping out at night, the organ in question being extremely sensitive to the night air. By taking this precaution, that deafness to which gunners are now so liable, may be prevented.—[Scientific American.

Warm Springs Hotel!
Near the Mission San Jose,
28 MILES FROM OAKLAND.

THIS BEAUTIFUL PLACE OF RESORT is now open for the season for the reception of private families, tourists, invalids, and general visitors.

The Warm Springs are so widely and generally celebrated throughout California, that it is unnecessary here to recapitulate their various qualities. To invalids, they offer the greatest advantages; their medicinal virtues being unsurpassed even by those of the Rhine, so extensively patronized from all parts of Europe and America.

The buildings are new and extensive, affording accommodation for a great number of guests, and containing every requisite usually appertaining to a fashionable Watering-place.

The assistants are the best that can be procured in the State, and being under the immediate supervision of the proprietor, visitors may rely that every attention will be paid to their comforts.

The Table is supplied with every delicacy which can be procured in the State.

Fine hunting-grounds and trout-fishing within a short drive the Springs.
14-6m LEWIS BRADY, Proprietor.

Union Hotel, Sonoma.

EBENHARDT & GLASSEN, HAVING purchased the UNION HOTEL, of the late proprietor, Mr. A. G. Oakes, are prepared to give the best accommodations to the traveling public. (15-3m

SPERRY'S HOTEL.
Murphy's Camp.

THE COMMODIOUS FIRE-PROOF BUILDING, lately erected by the subscribers, at Murphy's, has been elegantly furnished throughout, after the most approved style, and is now ready for the reception of guests. Parlors and suites of rooms for the use of ladies exclusively, and parties visiting the "BIG TREES," or other natural curiosities in the vicinity.

The management of the Domestic Department is confided to Mrs. Perry, a lady of experience.

The Bar is stocked with fine WINES, and the larder daily supplied with seasonable delicacies.

Stages arrive and depart daily for Mokelumne Hill, Sacramento, Stockton, Sonora, and Columbia.

Parties of pleasure and transient guests will find every accommodation for their comfort.
20-3m SPERRY & PERRY.

PRESTON'S PLACE
Tomales Bay, Marin Co.

I WISH TO INFORM MY FRIENDS AND the public, that the demand for a house of entertainment at this place has been such as to induce me to fit up my house for that purpose. To parties wishing to pass a few days pleasantly in the country, this locality has few equals. Boat-Sailing, Fishing, Hunting, and gathering Shells on the Bay and Ocean-Beach, are among the pastimes; and then all have "a claim" in the Clam-Beds free of charge. The place is situated 18 miles westward from Petaluma, and is a nice drive, over a good road, through a fine farming country. It will be a pleasure to endeavor to make your visits agreeable.
21 R. J. PRESTON.

UNION HOUSE!
Corner of Main and Center streets,
MOKELUMNE HILL.
Henry Atwood, Proprietor.

THIS SPLENDID THREE-STORY STONE Building, long acknowledged (equal, if not superior, to the best Hotels in the Mountains, has been thoroughly renovated and greatly improved and a
SPLENDID BILLIARD TABLE ADDED.

The Dining-room has been divided into a Family Dining-room and Restaurant, both hard-finished, and newly and elegantly furnished. The former will be for regular boarders who may prefer it; the Restaurant will be open at all hours, and be supplied with the best products of the market.

The parlors and chambers have all been thoroughly renovated and elegantly furnished, and will accommodate seventy-five persons.

The Stages all arrive and depart from the "UNION," and for the accommodation of travelers the House is kept open all night.

The proprietor avails himself of this occasion to say to travelers *en route* to the various places of recreation in the Eastern portions of Calaveras county, that no pains will be spared to make their sojourn at the Union pleasant and agreeable.
HENRY ATWOOD.
Mokelumne Hill, May 11th, 1860. 20-3m

Jebb's Patent Churn.

This new patent churn is now ready to be seen and tried. It is beyond question one of the best and simplest constructed Churns ever invented, and Dairymen should call and examine it.

By the action of the crank, three distinct currents are made which moves the cream with such rapidity that Butter is made in from three to five minutes with ease.

This Churn can be seen at the Farmer Office.

Patent-Rights can be had for all the counties in the State, and any experienced carpenter can make a fortune easier by these Churns than by gold digging. They only need to be seen to be approved. 12

The California Farmer.

SAN FRANCISCO:
FRIDAY.................................NOV. 8, 1861.

The "Ladies' Department" of this Journal, under the charge of Mrs. Lizzie Wiley Warren, M. D., will be found on the sixth page, and to which we call especial attention.

◆

Look to Our Special Advertisements.

Our readers will always find important advertisements in our Special Advertising columns. We have at this time Stock-Farms, Orchards, Saw-Mills, and Property to Exchange or for Sale, all worthy Special notice.

Who Grows Flax?

Growers of Flax can have the highest price paid for their crop by applying to this Office, or sending samples of their crop and the quantity for sale.

Advertise Your Trees Early!

Those Nurserymen who have Fruit-Trees, and Grape-Vines, and Garden-Stock, for sale, should by all means make known what they have for sale at an early day.

It is now a well established fact that Orchards and Vineyards should be prepared early in the Autumn, and those who are about to plant wish to know where they can purchase on the best terms. It is therefore for the interest of all who have this kind of Stock for sale to make it known early. By this means they secure the first and best customers.

Our wide circulation will enable all sellers to make known their plans over the whole State.

Durham Cattle.

We invite special notice to the splendid Durham Cattle offered for sale by us in our Special column. Such chances are very seldom given as we now offer.

There is also other valuable Stock offered worthy special notice.

◆

Durham and Devon Cattle, Blood Horses, Leicester and Cotswold Sheep, American Ewes and Lambs, and other Stock, for sale. See advertisements in the Special column.

Sales of Grain and Wool.

Those who desire to realize the very highest price for their Grain and Wool, can be informed of the best chances in our city, where, on all special occasions, they can realize high prices without delay. Samples sent to us from the country, with particulars, will be responded to.

◆

Ten Reasons why every Farmer and Stock-Raiser Should take the California Farmer.

1st. Every Farmer and Stock-raiser should be a reader of the Journal connected with the interests of his own profession in his own State.

2d. Every such person should give his sanction and support, generously and voluntarily, to a Journal that advances his own particular business in his own State.

3d. Every such person is *benefited* by the publication of such a Journal, and is in justice bound to reciprocate such labors.

4th. No person engaged in these employments can be without such a Journal without the loss of many times its cost annually.

5th. The Farmer and Stock-raiser will always be better advised of the markets, and that kind of information so important to his interests by the constant access to a Home Journal.

6th. The California Farmer has faithfully advocated the best interests of the Farmer and Stock-raiser for eight years, and is the only Agricultural Journal in California.

7th. The California Farmer contains the most important information relative to their interests in every branch of Agricultural science.

8th. The California Farmer contains the announcement of all New Seeds, Grains, Grasses, etc., together with all New Implements that will advance the cause of the cultivators of the soil.

9th. The California Farmer contains the arrival and introduction of all the best Stock of all kinds as soon as known, together with the full Market Reports of all the interests appertaining to Ariculture.

10th. The California Farmer is now the *only paper* on the Pacific Coast that is continued by its *original Editor and Proprietor*, commencing at the time this Journal commenced; and having been constant in its efforts for the good of these interests, deserves the cheerful patronage of all good men.

◆

TO CORRESPONDENTS AND READERS.

We call especial attention to our Market Reports; they show our rapid progress as a State by our rapidly increasing products.

We can also call attention to the numerous evidences of our progress as a State by the new developments in every quarter. These facts should be communicated to other States; and this can be done by sending the Farmer to every State in the Union.

The sketch of the Great Sierra Valley appears next week.

◆

It is Not Right.

There are at the present time many thousands of dollars due us by our subscribers. The most of this has been permitted to remain by request. We have been indulgent, but there is a time when such obligations should be cancelled, and we now say that *it is not right* that we should any longer be kept out of our dues. We ask, therefore, that all to whom we have sent bills will at once remit the amount due, and without fail.

No Farmer should be without his Agricultural Journal; but he should have pride and self-respect enough to pay for his newspaper.

◆

Rev. A. H. Myers' Lecture.—We regretted to find so few persons present at Platt's Hall last evening, to listen to the able Address of the Rev. A. H. Myers. His subject, "Our Government—its Vital Forces, Bones, and Sinews," he handled with earnestness and force. Many parts of the Lecture were full of eloquence, and received the approbation of all present. It is hoped that many more tickets were sold than persons present. Although at the Hall there was so little interest, yet a Bull-Fight, a Bear-Fight, a Circus, or some other trifling matter, and thousands flock to see it! But *Our Union*, that is safe, anyhow.

Purchasers of California Wine should always select from those who are known to sell only *pure Wines*. With confidence and pleasure we can refer to the firm of Hobb's Gilmore & Co., as persons who can furnish pure Wines.

Peculiar Condition of our Grain Market.

Speculation, fluctuation, and a sudden rise or fall only tends to the injury of all the great masses of those interested in the Grain Crop of California, as it *unsettles* both buyer and seller. An unstable market is the most dangerous to all parties interested. Those who would send in their crops are induced by a sudden upward movement to hold on a little, this tends to a still higher rate for a brief time, as an indication of scarcity; a certain point reached, then the producers rush to market, the wharves are covered with acres of bags, like a prairie white with sheep, and down goes the market again, and the high-raised hopes of the producer are crushed not only by bitter disappointment, but often by a heavy cost and loss, not realizing as much as could have been realized months previously. We have noticed these effects, and seen the result upon the producer's mind, leading to discouragement, despair, recklessness and ruin. A steady market, a ready market at fair rates is always best; best for the buyer and seller; better for the Grower, the Miller, the Baker, the Shipper, and for every family in the land. We always have said to the producer, sell at "Harvest" *immediately*, if in debt, and relieve that *incubus and nightmare*, that dead-weight upon a man's best energies; and we say to all producers: Keep on selling; keep the markets steady and full, by sending portions of your crop at a time; by this means you will always realize your share of *any* rise that can possibly take place *during the season*, as you will have your share of all the prices, and your average will *always* be better than by any other possible plan. Our markets are *changeable*, up and down, like the bulb of a thermometer—place it in the shade and down it goes; let the sun strike it and up it goes—even in the same true temperature naturally. So the Grain Market; let certain operators who buy for export or for Millers "*withdraw from the market*," as the newspapers say, and down goes the Grain; but let the light of their countenance appear upon the wharf, and like the mercury in the glass, up goes the market, and yet the real market, the absolute condition of quantity, quality and value has not changed a penny; the shade was cast to buy. Stocks *on hand* have *changed hands*, and the *speculator* has the grain instead of the *producer*, and the miller, baker, and shipper pay for it, at the cost of the producer. This is the way it is done, and there are certain men who can cast heat and shade at any time—and it *chills* or *burns* the producers' fingers as they come in contact with these operators.

The producer must make himself conversant with these moves, or he will be surely checkmated. We ask our farmers and producers who refer to the great mass of reports on the grain markets, both at home and abroad, how many of them bear upon their face the evidence of being other than being in the interest of the commercial men instead of the working farmers? How often we notice those *trade marks* "p. t.," meaning private terms, or sales private, or sales not given, or various other forms that conceal the real transactions. How can the real producers or manufacturers know how to act? Let the real producers post themselves fully, and they can avoid many of the losses they will otherwise feel and bear.

Look to the mercury, open your eyes,
And learn the *true market*, it will steadily rise.
True to the wants of our hungry world,
Shall the flag of our markets be ever unfurled;
True as the crop, or those who are fed,
Shall the price of our grain be, and the price of our bread.

◆

European Grain Markets.

It is all-important that our Farmers should understand the true condition of the European markets, for upon them depends whether they are to demand a large importation or not. We shall give to our readers the true state of the case, and shall always advise them truly for their interest. The cause of the good demand for the last few months arose from the fact that France was a large purchaser at the London Corn Exchange. We give briefly the condition of the market at two dates.

From London June 15, our correspondent says: "France is now the place of consumption, for our markets will be cleaned by French purchasers; our price now is 55s. per quarter of 496 pounds, 8 bushels of 62 pounds each, being nearly 2¾c; from this of course the expense of shipment less, leaving over 2½c. This good price could only be maintained by a continued market in France."

Our London date of 28th September we have as follows: "Market quiet; the French market the *only buyer*, but not purchasing now; will probably buy again. If France does not call for Wheat it must fall."

These are the reports from good authorities in London, and our Farmers may rely on it. We ask our grain-growers to read our Editorial on the Grain crop of 1861. It is our desire that the producer should realize the most he can for his crop. This is to the great advantage of the whole State; but we must realize the fact that in the old States they have the largest and best crop ever grown, and the Breadstuffs already shipped the present year to Europe exceeds the enormous sum of *Fifty millions of dollars*.

However great the deficiency the Grain crop of Europe may be, we should remember that the United States, although large shippers of Wheat, yet we cannot begin to supply the deficiency which, report says, and advices confirm it, will be 150,000,000 bushels. It must be borne in mind, however, that there are many other Wheat-growing countries besides Uncle Sam, which can pour into London and Liverpool a thousand cargoes of Wheat, and our Farmers should not risk a *certainty* for an *uncertainty*. Wheat is now selling well, and it is for the interest of the Farmers to keep the markets well supplied all the time.

We repeat, it is better for them to sell their Wheat now at $1 80 to $1 90, than to keep it four months longer and sell it at $2 10, especially if they are paying big interest. We close as we began,—Farmers should understand the European markets, as all depends on that.

◆

Patent Hydraulic Hose.—Miners, and all parties who use hydraulic hose should read the card of S. Howard. He has one of the best machines in the world, and parties can make a little fortune by purchasing one.

Bad Management of Post-Offices.

Unless persons should travel over our State, and notice the manner in which the Post-Offices have been kept for the past few years, they could not possibly conceive of the irregularity and looseness of some in our State. In many of our interior towns, the mail-bags were thrown down upon the counter of some tavern or grog-shop, and the word is given, "Mail has come," and everybody goes and help themselves to their own and their neighbors' too. They volunteer to carry them to their neighbors, and the *newspapers* then stand a chance of being *neighborly read* for some days before they reach their true owner. This is the reason why so many complaints come of the non-receipt of the papers. There is another cause of the *irregular* course of newspapers. They are not cared for much, unless the Postmaster can induce the parties to *take a box*, and thus secure an *extra* emolument. There is no disputing the fact that many of the Post-Offices do not pay the Postmasters, and they are only acting as Postmasters and having the mails come to their taverns and saloons, in order to draw custom, *deriving their pay* from that course, and of course caring little or nothing about the mails. If the Post-master-General could look into some of his Post-Offices of California, he would hardly wish to have the "U. S. A." placed over the door, unless it should be interpreted—*Useless, Scandalous Affair*.

The past is gone, and these past evils are not remediable; but their recurrence can be avoided we hope, and as there is a change generally, it is to be hoped it will be for the better. We have found many offices where the Postmasters would allow persons to take out newspapers directed to other parties long after they had been dead and buried, without notifying the publishers, and other gross cases of neglect also.

We have noticed recently quite a discussion relative to the Napa Post-Office. On a recent visit there, we found a large number of copies of our Journal belonging to our subscribers, many of them persons who had boxes, where there was no excuse for neglect. Yet, by reason of neglect, they had not been delivered. We have a list of thirty-eight subscribers who had papers which had not been delivered, some two, three, four, and five copies. Six of the parties had boxes, and had called for papers and yet not received them; and we ascertained that all newspapers were thrown into a heap, thence laid in a cuddy a few days or a week, thence on the shelf, after which, in a brief time, sold for waste. We were furnished very kindly by the present courteous Postmaster and Assistant with a list of our papers thus neglected, which we have on file, and we have not one solitary paper since the change omitted, and we are assured that pains will always be taken for all subscribers, as much for papers as letters, both being the duty of the Postmaster. We exonerate the *present* Postmaster, and make all allowances for the past, as we were informed that there were *numerous assistants* in that office formerly, so many as to make disorder rather than order, and probably much of the evil was unknown to the real Postmaster. We hope for better things in future.

◆

Departures by Steamer.

By the steamer on Monday Rev. A. H. Myers and Lady leave for the East. Mr. Myers goes on his mission to the "World's Fair" as one of those appointed by the Convention. He bears with him splendid specimens in way of some of the varieties of our wonderf[illegible] other specimens of California products. While we wish him and his lady a very pleasant and prosperous journey, we cannot but regret that there had not been collected such a contribution of our Grains, Grasses, and Cereals, from every county, as would have done honor to our State. We wish also that our mechanics could have been represented there by specimens of their skill; but whatever may be wanting in specimens, we feel sure Rev. Mr. Myers will, by his love of our State, its interests, and his knowledge of its resources, that he will faithfully present it by his earnest and eloquent words.

By the same steamer another able representative goes to the World's Fair, Mrs. P. A. Rogers, so long and so favorably known to this community as the Pioneer Instructress upon the Sewing Machines. Mrs. Rogers has been years connected with the Grover & Baker establishment, and by her courteous and lady-like deportment has won a host of friends, all of whom will wish her great success in her present mission. Mrs. Rogers bears with her a magnificent Banner wrought by her own hands, of white and crimson silk, richly embroidered with gold stars by Mrs. Norcross. This Banner is the glorious Stars and Stripes, which will float over the work of Mrs. Rogers' hand, which she takes to the World's Fair to show what can be done in California.

Success attend all our representatives to the great gathering of a World's Industry.

◆

Installation of Harmony Lodge, G. T.—We received a courteous note enclosing Cards for the public ceremonies at this Lodge, and the Social Entertainments which followed at Platt's Hall. Harmony Lodge is admirably named. The handsome decorations of the Lodge, together with the brilliant Regalia, and the happy feature of "Sisters" of the Lodge, in their bright Regalia, moving around their "Brethren," performing their duties as officers, and partakers of all the pleasing labors, gave the charm to the Lodge, and made it appear to us as the *true Harmony* Lodge. The Installation duties were all performed promptly, and with much satisfaction to all; after which a large company assembled in the Hall, when the "Band" made hundreds of pairs of feet move very lively to keep time to its melody. We only looked in upon the merry folks briefly; *our feet* compelled us to the desk to make record of this and other events, for time and tide wait for no man.

Splendid Crockery.—The famous crockery stock of Mr. J. Genella has been sold to Geo. O. W. Winn, one store, and another to J. Gillespie, Esq., both from Sacramento, and now citizens of our Bay city, with their families. We welcome our old friends to our city, and trust the change will not only be pleasant but profitable every way. These crockery establishments are the largest in our State, and the most splendid wares are always for sale at these stores.

New and Rich Mines.

At Napa City we had the pleasure to meet a gentleman just as he was alighting from his wagon on a return from a long and distant trip among the new discoveries beyond Humboldt city thirty miles. J. N. Bennett, Esq., to whom we allude, resides at St. Helena, showed us twenty-four specimens from different veins, and having full confidence in the statements of Mr. B. he informs us that the mineral territory recently found embraces an area of thirty miles wide by one hundred miles long, and is wonderfully rich—some discoveries fabulous.

Mr. Bennett has been absent several weeks; he speaks of the route as follows: From Sacramento to Placerville, thence to Strawberry, Lake Bigler, Carson Valley, to fourteen miles above Genoa, down Carson River to Ragtown, thence to the sinks of the Humboldt eighty miles, thence thirty miles south of Humboldt City to the Ore Mountains. It is believed that there are mines that will pay ten to twenty thousand dollars per tun. Strange and wonderful as this may seem, Mr. B. feels it to be true. The treasure there seems to be beyond human calculation. The climate is good. There are no mills or working apparatus there yet. Mr. B. intends returning after having made his assays.

It is seldom we call attention to such miraculous stories, and with all the proof of wealth here revealed, we would never recommend any man who has a family and a good business of any kind whereby he is comfortably off, to give up a real home and certainty, even to discover and own a *gold mine*.

All who are "gold mad" should bear in mind, it is one thing to own a rich mine, and quite another thing to be able to work it, or make it available. Men that own the many rich quartz leads are often like the man that *drew the elephant*; so it will prove to many that find rich leads. It would ruin them to undertake to work them.

To young single men out of employment, having no chance or prospect, save like Micawber waiting to see if something "won't turn up," to such we say, go to the mines; go and work there; men can get work at almost any and every trade, and it may be strike a "lucky lead"; but never, we repeat, would we advise a man doing well, to give up a certainty for an uncertainty. Let "well enough" alone.

◆

California Woolen Factory and Sewing Machines.

In our issue of April 15th, 1859, we published the following as our earnest belief:

> "Some time since we published facts in relation to *Wool-growing* in our State, and the almost immediate prospect of converting this wool into flannels for the use of our miners and others, and this would open e great demand for female labor in making up their flannels into shirts and drawers, of which an immense amount is annually imported into our State."

Now there are eighty sewing machines at work work upon the material that has been woven from the fleece of our flocks. Aye, the very flannels, shirts, and drawers of our miners are now made, as we said they would be, for home consumption, besides other goods, all the uniforms for our soldiers, and what is more, the *importation* of the article has nearly ceased.

◆

Public Lectures by Mrs. Fanny Green.

The first of a series (a free lecture) was given last evening, in the South Methodist Church, by Mrs. Green, to a very full house, and by the close attention given (often approved by hearty applause), it was evident the audience was deeply interested. Mrs. Green labors under some difficulty with the voice, and were it not for this, her beautiful thoughts and glowing imagery would give her the fame of an eloquent lecturer, for heart and soul are in the work, and her original style and novel ideas must be interesting to many. The glowing picture of the "Future of California," in its moral and religious, social and physical, civil and literary, scientific and artistic, is really grand, and yet the picture is not too highly colored, for the future greatness of California cannot be conceived.

We would most earnestly commend this course of lectures to our citizens. They will be given every Thursday evening, and are worthy public attention.

◆

The United States Loan.—By a reference to our columns it will be seen that books will be opened on Thursday next, at the Mint (the United States Treasurer's office), at nine o'clock, to receive the subscriptions to the National Loan. Now will California have the opportunity to show her confidence in the permanence of our Government, and the readiness of the citizens to come to the aid of the National Authorities to maintain the Government and to quell rebellion. We believe Californians will respond nobly; it has been said that California should subscribe a *million of dollars*. We will place the amount that will be subscribed at more than *two and a half millions*, for we believe there is a large amount of treasure buried that will now come forth, and has been awaiting for this event. We believe our miners will show their hands with more than one million. It will be an interesting day to witness those who shall go with their gold to uphold the Government.

New Furniture.—Messrs. Selling, Marx & Co., Furniture warehouse on Washington street, have just received by late arrivals, superb new patterns of parlor sets, and chamber sets, very rich work tables, a new pattern, secretaries and book cases; wardrobes, with easy chairs, library tables, and other furniture of the most finished style. They have also superb parlor and chamber sets of furniture made here by their own workmen.

Apple-Paring and Drying.—We saw the apple-pearers and corers at work at the orchard of P. E. Kellogg, Esq., above St. Helena. The machine takes out the core and peels the apples clean, leaving it in form, yet like a coil when dried (like the Chile peaches) and doing the work at the rate of forty pounds per hour, or say five hundred pounds per day. The work is admirably done.

The Temple of Temperance.

We were the recipients of an invitation to be present at the laying of the corner stone of the Temple of the Dashaways on Post street, on Tuesday last, at 1½ P. M. This was an interesting ceremony, and will prove a valuable epoch in the history of California. This is to be the "Home of the Inebriate." To this "Temple" shall the poor unfortunate drunkard be borne; taken from his fallen condition, restored and saved, and sent forth disenthralled, redeemed. This is a God-like work, and we rejoice that such a "home" is soon to be made ready; a noble building worthy the cause,—an honor to those who have labored so long and so faithfully in this cause of humanity. A large assemblage was present; at the appointed hour Gov. Wainwright, the noble President of the Dashaways, announced the object of the meeting in a brief and appropriate address, after which music, and singing a Temperance song, then Mr. Lacy was introduced who offered prayer. Gov. Downey was then announced to lay the corner stone; previous to which the Secretary read over a list of the articles prepared to be deposited in the box, which was to be placed in the orifice between the stones, as follows: full records of the Dashaway Society, the list of officers, etc., song books, list of all their meetings and festivals, and their present excellent condition as a society, various coins with many curious emblems, and the morning and evening papers of the city. We felt it to be proper to prepare and have here deposited the following articles to show to posterity what was the condition of the Agricultural interest in 1861. There was placed in the box from our office several copies of the California Farmer, with plates of Agricultural Hall, and other public buildings; a bottle hermetically sealed with the wheat raised by Major Bidwell of Chico, 1859—splendid samples, seventy bushels to the acre; a sample of the fleece of the Cashmere Goat—a future great staple of California; also samples of Flax-Cotton, another great staple of the future. We believe that if in one hundred years hence these records shall be opened and read, manufactures both of Flax-Cotton and Cashmere Wool will have been found to have existed more than *ninety years* of the hundred. The Governor was then offered the new silver trowel, the box having been deposited, and handling the trowel very readily and manfully like a workman, soon announced that the work was well and faithfully done.

Hon. Nathan Porter was then presented by the President, who delivered an eloquent and impressive address, one alike honorable to his head and heart, doing justice to the Society and the cause, and our State. The exercises then closed with another song, and the Benediction by Rev. A. Williams.

A social gathering was held in Platt's Hall in the evening, which was well attended. Heaven prosper so goodly a work as the saving fallen man from a drunkard's life, and a drunkard's grave.

◆

Obituary.

"Death loves a shining mark."

The whirlwind and the storm sweep over the fair and beautiful garden that has been the work of years. Roses, fragrant and bright, that in the morning were bursting forth to gladden every heart, are now scattered upon the ground—stripped from their parent stem, they lie withered and dead—their present beauty gone, their fragrance scattered.

So it is with Death. It sometimes comes like the whirlwind and sweeps over the home around which are gathered parents and children, whose hearts are linked together by chords that Death even cannot sever; yet, alas, into the fairest, brightest, happiest home, Death comes to blight earthly hopes; to rend hearts, and to scatter desolation where once all was joy and beauty.

When the storm destroys the old trees, we say their day of ripeness and fruiting has past; but, when the young and thrifty are swept down and broken, we lament, for we had hoped to gather luscious fruit therefrom. So, when Death takes away the aged and the infirm, we say it is time; but, when the young, the vigorous, and the joyous are suddenly torn away, we mourn, for we had looked to them for much of joy to come.

The death of children in our State has sent forth many a wail of sorrow. Tears have flowed, until the fountains were dry. Fathers have stood at the bier of their loved ones that in the morning are playing merrily at their feet, but now at evening they lay in the shroud, and the manly heart feels the shock of rent affections. Mothers have sung a sweet lullaby, and kissed their loved ones to sleep in rosy health, but ere another day's sun has gone, their loved ones sleep the "sleep that knows no waking;" and mourning, lamentation, and weeping are the only sounds of the late "Happy Home." Oh! Death! how relentless art thou!

The recent afflictions that have fallen upon the "Home" of Mr. D. N. Hawley, of this city, in the loss of two beautiful and bright little boys is one of these cases where Death sought out to find a "shining mark," and where in his relentless wrath he could scatter great sorrow. In the space of *two weeks* two beautiful children were consigned to the grave, torn from devotedly fond and affectionate parents; and surrounded by all that was beautiful and joyous, death came suddenly and bore away the loved from the loving.

"Ah! it is sad when those thus linked departs!
When Death, that mighty severer of true hearts,
Sweeps through the halls so lately loud with mirth,
And leaves pale sorrow weeping by the hearth!"

But, while we can tender to these deeply bereaved parents all that human sympathy can offer, we know they feel that although their precious children have been borne away from their vision here, these young unopened *buds* are not lost forever—they are only

—— Transplanted to a better soil;
Transplanted is not dead.
Like little "buds" upon the parent stem,
So a brief time these little ones were given
To tarry here; just *loaned*, not given them,
These early "buds" are blooming now in Heaven.

◆

The steamer Julia arrived at Portland on the 25th of Oct., from the Cascades, bringing $100,000 in gold dust.

STATE SUMMARY.

Thanksgiving-Day has been appointed by Gov-Downey for the 28th inst., and a Proclamation issued to that effect.

The proprietors of the Mercury, at San José, commenced the publication of a daily on the 5th. Their enterprise should be sustained.

On Tuesday, October 29th, Nevada was visited with a fine shower of rain. It commenced raining about noon, and continued for an hour or more, when it held up.

A ledge of white andand transparent marble, with the grain fine enough for the sculptor, has been found on Santa Ana river, Los Angeles county, in the vicinity of coal and gypsum veins.

It is stated, after careful examination, that upwards of 4000 large wagons are now engaged in the Washoe trade. Three years ago the trade of that section was conducted by one man on snow-shoes.

The Los Angeles Star says the vintage of Anaheim is closed, the season being somewhat earlier than in this locality. About 75,000 gallons of Wine of excellent quality were made.

A lucky man is Mr. A. F. Grigsby, of Napa. He is said to have won $10,000 by his horse Dashaway, at the late races over the Centerville Course, Sacramento; and also $2000 at the San José Races. Wonder who lost?

The vessels intended for the whaling business upon our coast are being fitted up at San Pedro. It is expected that whaleships will arrive in this latitude about December, and our firshermen are preparing for their suitable reception.

The Sacramento river now has unimpeded navigation from Sacramento to a point ten miles south of the town of Shasta. The shallowest places in the river, at its lowest stage, is three feet. Boats will soon be running to the point mentioned.

The first through-trip from Lincoln to Sacramento, over the Central and Sacramento Railroads, was made Oct. 31, distance about 44 miles. The fare from Lincoln to Folsom is $1 50, and through-tickets to Sacramento are $3. The fare over the Valley road, from Folsom to Sacramento, is $2.

The rain has held off so long that the grass in the cattle-ranges is used up, and doubtless many cattle over the State will be starved. We have been looking in vain till lately for the sure preliminary to a rain: cool weather and frost. The papers report frost and ice in Sacramento a few nights since, and the rain will doubtless soon come.

The auction of Bay State Champion, St. Lawrence, etc., belonging to Joel Merchant, of Petaluma, took place at Fish's Stables, last Friday, according to announcement. The attendance was good, and the prices realized were: for Bay State Champion, $1800; St. Lawrence, $700; a four-year-old Stallion by Collier, $300; a three-year-old Canadian Stallion, $175.

Some Farmers have commenced to sow Grain, and they are all preparing to cultivate so soon as the rains shall mellow the earth. Those who have begun this work already, sow upon the old stubble, and either plow the seed down or stir the ground with a cultivator, so as to cover it; and by this latter mode, which is speedy, good crops may doubtless be raised in many localities. But all fields are not suited to such culture.

The Monterey Union says a Mr. James has established Oil-Works about twelve miles from Watsonville, near the Pajaro river, where he manufactures from asphaltum found on a ranch belonging to Sargent & Carlisle, a peculiar quality of Oil, named "Sargent Oil." It is said to produce a stronger light than Camphene, can be used in Camphene-lamps, is not explosive, and can be furnished at cheap rates.

The cattle between Stockton and the Merced, says the Argus, are remarked as being in such poor condition as to make it appear impossible that they can stand the Winter until the springing up of the grass. So poor are they now that they have the appearance of being mere skin and bones, apparently unable to raise their heads in many instances. They seek with avidity the dung of horses on the road.

The schooner Anglo-Saxon, inward bound, was wrecked on the eastern side of Tomales Point about ten days since, and was almost a total loss, being disposed of for the sum of $50. On Thursday last the schooner Marin, outward bound, and freighted with Grain and Potatoes, was wrecked on the Bar, and drifted ashore at Smith's Point. The Bar is generally rough and dangerous at this season of the year.

◆

From the East.

By the Overland Telegraph, dispatches are published by the daily papers, giving the events of the previous day at the East, though some interruptions have occurred, and which were to be expected in getting the line in perfect working order everywhere in its long stretch of thousands of miles over wilderness and desert. Among the important news received is the formal retirement of the old veteran and hero, Gen. Scott, from active service, and the succession of Gen. McClellan to the post of Commander-in-Chief. Below is Gen. Scott's letter, and the action of the Cabinet:

Headquarters, October 31.

The Hon. Simon Cameron—*Sir:* For more than three years I have been unable, from a hurt, to mount a horse, or to walk more than a few paces at a time, and that with pain—other and new infirmities, dropsy and vertigo—admonish me that repose of mind and body, with the appliances of surgery and medicine, are necessary to add a little more to a life already protracted much beyond the usual span of man's. It is under such circumstances, made doubly painful by the unnatural and unjust rebellion now raging in the Southern States of our so lately prosperous and happy Union, that I am compelled to request that my name be placed on the list of army officers retired from active service. As this request is founded on an absolute right granted by a recent Act of Congress, I am entirely at liberty to say it is with deep regret that I withdraw myself, in these momentous times, from the orders of a President who has treated me with much distinguished kindness and courtesy, whom I know, upon much personal intercourse, to be a patriot without sectional partiality and prejudices—to be highly conscious of the performance of every duty, and of unequaled activity and perseverance. And to you, Mr. Secretary, whom I now officially address for the last time, I beg to acknowledge my many obligations for the uniform high consideration I have received at your hands, and have the honor to remain, sir, with high respect,

Winfield Scott.

A Special Cabinet Council was convened on Friday morning to take the subject into consideration. It was decided that Gen. Scott's request, under the circumstances of his advanced age and infirmities, could not be declined. Gen. McClellan was thereupon, with the unanimous agreement of the Cabinet, notified that the command of the army would be devolved upon him. At four o'clock in the afternoon the Cabinet again waited on the President, and attended him to the residence of Gen. Scott. Being seated, the President read to the General the following order:

On the 1st of November, 1861, upon his own application to the President of the United States, Brevet Lieutenant-General Winfield Scott is ordered to be placed upon the list of retired officers of the army of the United States, without reduction in his current pay, subsistence, or allowance. The American people will hear with sadness and deep emotion that Gen. Scott has withdrawn from the active control of the army, while the President and unanimous Cabinet express their own and the nation's sympathy in his personal afflictions, and their profound sense of the important public services rendered by him in his long and brilliant career, among which will ever gratefully distinguished his faithful devotion to the Constitution and the Union and the Flag, when assailed by paricidal rebellion.

Abraham Lincoln.

Gen. Scott then arose and addressed the President and Cabinet, who had also arisen, as follows:

"Mr. President: This honor overwhelms me. It overpays all services I have attempted to render my country. If I had any claims before, they are all obliterated by an expression of approval by the President, with the unanimous support of his Cabinet. Well I know that the country has placed its interest in this trying crisis in safekeeping. Their counsels are wise, their labors are as untiring as they are loyal, and their course the right one. Mr. President, you must excuse me; I am unable to stand longer to give utterance to the feelings of gratitude which oppress me. In my retirement I shall offer my prayer to God for this Administration and for my country. I shall pray for it with confidence for its success over all enemies, and that speedily."

The President then took leave of Gen. Scott, giving him his hand, and saying he hoped soon to write him a private letter expressive of his gratitude and affection.

Fremont has been removed from command of the Army of the West, to be succeeded temporarily by Gen. Hunter. A dispatch from Springfield, Mo., Nov. 2, says preparations were making to attack an advance force of rebels, 3000 strong, twelve miles distant, when Fremont received the order from Washington relieving him at once from command. Some disaffection was manifested by the army, when Fremont urged them, in taking leave, to be true to their allegiance. A battle was momentarily expected.

News from the Naval Expedition was received at Fortress Monroe, on the 4th of Nov. It had been delayed by a storm, but had entered Bull Bay. A Norfolk paper says the destination of the fleet is known to be Port Royal, which is about fifty miles south of Charleston.

Gen. Halleck has arrived at Washington, and been introduced to the President.

Gen. Wool is reported to have resigned.

The details of a skirmish at Saratoga, Linn county, Mo., are given, between two companies of rebel infantry and cavalry and 200 Union troops. The rebels were taken by surprise, their captains, Wilcox and Drake, killed, with ten to twenty others, forty prisoners taken, with sixty-eight guns, two wagons, provisions, and 80 or 90 horses. The victory was complete.

In Western Virginia, the latest accounts report some fighting. A dispatch from Rosenkrans says Floyd made an attack on him, but was repulsed with great loss. He expected to surround Floyd and capture his entire command.

Paris papers announce that England, France, and Spain had arrived at a complete understanding relative to Mexico. The Convention will be signed in eight days. The expedition will start at the beginning of November.

◆

Industry Has Its Sure Reward.—When at Brown's Valley, in Napa county, we found a quiet spot across the Ravine, where on the banks stood a pretty Cottage, Garden, and Orchard, and to these, also, was added a small but excellent Dairy of 45 fine Cows, 35 milking at the present time. The neatness, and order, and the promptness with which the work was done, pleased us. A milk-wagon takes 30 gallons to Napa per day, realizing 40 cents a gallon; this, with 20 pounds of Butter, at 62½ cents a pound, yields a sure and safe income. The quality and purity of the Milk secures ready customers and full prices. The Milk we feasted on was *Cream*, and the bright sweet cans gave an extra relish to the feast. There was a favorite can sent daily with the wagon, it was the rich Milk of a pet Cow, and it was specially designed for the mother's little angel—"wee bit of a baby!" The care bestowed on that can! Oh, we admit that our friend, G. F. Reeves, shall have the Premium. Such care and industry shall have its reward surely.

LECTURE.

MRS. FANNY GREEN,

Of Providence, R. I., proposes to the citizens of San Francisco to give a series of THIRTEEN LECTURES, in the following spirit and order: First,

A FREE INTRODUCTORY LECTURE,

Entitled

The City of Golden Gates!

With a prophetic view of the Power and Destiny of California, as the Central Magnet of the World, from which are to flow forth new streams of Refinement and Civilization, that will finally encompass and enlighten the whole earth.

This will be followed by a complete Course of TWELVE LECTURES, entitled

Incarnations of Divine Truth;

Embracing not only the Mythology, Philosophy, and Poetry, of the Ancients, but the peculiar Power of the Present, and the Hope and Spirit of the Future. It is, in fact, a synopsis of the Religious History of the World.

The grand object here to be shown is, that the Religious Principle is, everywhere, essentially the same—the natural aspiration of the Human Soul toward something higher, stronger, purer, than itself, from which it instinctively craves protection, and unto which it spontaneously pours forth praise.

Thus are we irresistibly led to the conclusion, that in order to co-operate with Divine Wisdom, in any essential and practical good to Mankind, we must be prepared to Meet and Welcome each other, on the broad ground of Humanity itself.

TERMS:

For the Entire Course - - - - - -	$4 00
For Half-Course - - - - - - - -	2 50
Single Ticket - - - - - - - -	50

Each Ticket will admit Two.

The Introductory Lecture will be given on

Thursday Evening, Nov. 7th,

At the SOUTH METHODIST CHURCH, on Pine street. Doors opened at 7 o'clock.

Tickets to be had at the principal Drug and Book Stores in the city. 8

1000 Acres of Land,

120 COWS,

AND

A Good Milk and Dairy Business,

For Sale at a Great Bargain.

A SPLENDID OPPORTUNITY IS NOW OFFERED to a man or men with a moderate amount of cash to secure one of the greatest chances in the Dairy Business ever offered in our State. The location is near Suisun City, within five miles. There is 960 acres good Land, well fenced, which can be had at $10 per acre, and 120 select COWS for $20 each, together with Engine and Boiler for feeding Stock, Cheese-Presses, Butter-Churns, Cans, Pans, Tools, etc., valued at $1000. All these implements will go to the purchaser without cost.

The Title to the Land and Property is undoubted. There are also 1000 acres of good Land adjoining leased for two years at $1 per acre; this goes also, and the lease can be renewed.

To a good and responsible party this property will be sold on the most liberal terms—say ONE-THIRD CASH, balance on such time as will be satisfactory. Persons wishing to buy will please call on or address COL. WARREN, Editor California Farmer, who will furnish all needed information.

Ladies' Department.

LIZZIE WILEY WARREN, M. D.....EDITRESS.

[For the California Farmer.]

TO MY MOTHER IN HEAVEN.

'Tis thy "Birth-Day," dearest Mother,
And I love to think of thee:
For thy love is like no other—
None on earth so dear to me.

How oft in early childhood
Have I sought for early flowers,
And brought them from the wildwood
To the home of childhood's hours!

And then those fragrant blossoms
Made my Mother's bright bouquet;
When, resting on her bosom,
I oft have heard her say:

"How sweet, my child, this offering!
Prompted by *love* 'tis given;
'Tis like the angels' proffering,
They speak a love from Heaven!"

And often have I clambered,
High o'er the hill-tops bright,
From early morn I wandered,
To carry home at night

To thee, "beloved Mother,"
The early fruits of Spring;
Always the first I'd gather,
And to "dearest Mother" bring.

But thou hast gone and left me,
Yet thy spirit soars above;
Though thy *earthly* love's bereft me,
I feel thy *Heavenly* love.

And when I'm bowed in sorrow,
I can always bid it flee,
For I know where I can borrow
Thoughts of *Joy, of Heaven, and Thee.*

ELLIOT.

The Right Sort of Religion.

We want a religion that goes into the family, and keeps the husband from being spiteful when the dinner is late, and keeps the dinner from being late—keeps the wife from fretting when the husband tracks the newly washed floor with his muddy boots, and makes the husband mindful of the scraper and the door mat—keeps the mother patient when the baby is cross, and keeps the baby pleasant—amuses the children as well as instructs them—wins as well as governs—projects the honeymoon into the harvest moon, and makes the happy hours like the eastern fig-tree, bearing in its bosom at once the beauty of the tender blossom, and the glory of the ripened fruit. We want a religion that bears heavily, not on the "exceeding sinfulness of sin" but on the exceeding rascality of lying and stealing—a religion that banishes small measures from the counters, small baskets from the stalls, pebbles from the cotton bags, clay from paper, sand from sugar, chicory from coffee, otter from butter, beet juice from vinegar, alum from bread, strychnine from wine, water from milkcans, and buttons from the contribution box. The religion that is to save the world, will not put all the big strawberries at the top, and all the bad ones at the bottom. It will not offer more baskets of foreign wines, than the vineyards ever produced bottles, and more barrels of Genesee flour than all the wheat fields of New York grow, and all her mills grind. It will not make one half a pair of shoes of good leather and the other of poor leather, so that the first shall redound to the makers credit, and the second to his cash. It will not put Gonvin's stamp on Jenkin's kid gloves, nor make Paris bonnets in the back room of a Boston milliner's shop, nor let a piece of velvet that professes to measure twelve yards, come to an untimely end in the tenth, or a spool of sewing silk that vouches for twenty yards, be nipped in the bud at fourteen and-a-half, nor the cotton thread spool break to the yard-stick fifty of the two hundred yards of promise that was given to the eye, nor yard wide cloth measure less than thirty-six inches from selvedge to selvedge, nor all-wool delaines and all-linen handkerchiefs be amalgamized with clandestine cotton, nor coats made of woolen rags pressed together, be sold to the unsuspecting public for legal broadcloth. It does not put bricks at five dollars per thousand into chimneys it contracted to build of seven dollar materials, nor smuggle white pine floors that have paid for hard pine, nor leave yawning cracks in closets where boards ought to join, nor daub ceilings that ought to be smoothly plastered, nor make window blinds of slats that cannot stand the wind, and paint that cannot stand the sun, and fastenings that may be looked at but are on no account to be touched. The religion that is to sanctify the world, pays its debts. It does not consider that forty cents returned for one hundred cents given, is according to gospel, though it may be according to law. It looks upon a man who has failed in trade, and who continues to live in luxury, as a thief. It looks upon a man who promises to pay fifty dollars on demand with interest, and who neglects to pay it on demand, with or without interest, as a liar.—[Congregationalist.

We copied the above for our first issue, and alluded to it in our leading article, as the kind of religion we approved, but the printer accidentally omitted it. We copy it for this issue and ask if any one can object to it. And yet we lost *one whole dollar* for alluding to the subject.

A lady who saw the first Number liked it but dared not subscribe lest "the *right* kind of religion" should prove to be the *wrong*, and infidel in its tendency.

This reminds us of the following anecdote. At a business men's prayer meeting a certain brother while praying thus, "O Lord, forgive us our national sin," was called to order. Again he repeated "O Lord, forgive us our national sin," and was again called to order. Calling on the presiding officer for an explanation, he was informed, that it was an established rule to have no controverted subject introduced into the meetings. "But I was referring to our national sin of profanity, and was not aware that that was a controverted subject." "Ah, that alters the case. I thought *of course* you referred to slavery," was the reply.

Query.—Is any sin too heinous to be mentioned in the prayers of business men?—[Sanitarium.

* * *

A CURIOUS WAY OF GETTING RESTED.—It is a custom in Berwickshire, England, among women workers in the field, when their backs become much tired by bowing low down while singling turnips with short shanked hoes, to lie down upon their faces to the ground, allowing others to step across the lower part of their backs on the lumbar region, with one foot, several times, until the pain of fatigue is removed. Burton in his "First Footsteps in East Africa," narrates a very similar custom of females who lead the camels, who, on feeling fatigued, "lie at full length, prone, standing upon each other's back, trampling and kneading with their toes, and rise like giants refreshed." This custom is called "fogsi," in Africa, in our country it is straightening the back.—[Notes and Queries.

THE influence of woman, either for good or evil, on the heart and mind of man is omnipotent. Vain are the struggles to resist it. In misfortune it tempers the energies; in prosperity, adds grace to them.

THE violet grows low, and covers itself with its own tears, and of all flowers yields the sweetest fragrance. Such is humility.

Conflict and Coronation of the Art-Discoverer.

LIKE the history of all other arts, the history of pottery has not escaped the blending with it of a large amount of apocryphal anecdote and romance. Perhaps pottery—the art of molding and hardening clay—may claim to be the mother of all the arts. Necessity would soon prompt the attempted manufacture of a vessel to hold liquids; for neither of the methods of satisfying thirst adopted by Gideon's men would long suffice. Convenience and refinement would alike urge an improvement; and the first foot-mark in the clay, hardened by a Mesopotamian sun, would suggest the material and manner of its construction; and from Eve's first rude pipkin to the latest production of Wedgewood or Copeland, it would simply be a series of improvements. Thus to draw upon the apocrypha of pottery, a servant boils brawn in an earthern pipkin, and carelessly permitting it to boil over the fierce fire, the alkali combines with the earthenware, and the result is a vitreous surface—the first specimen of glass-glazing. The first historic records of fictile clay are the bricks of Babel; the next the brick-making of the Israelites, indicating an advanced and systemtic art. The inventor of pottery, artistically so called, was Corœbus of Athens, in whose honor the æsthetic Greeks struck models and erected statues. Phidias himself designed vases for the Athenian potters. Dibutades of Sicyon, observed upon a wall the profile of his daughter's lover, traced by her from the outline of his shadow. He filled it with clay, which he hardened with fire, and this was the first specimen of modeling in relief. Talus of Athens is said to have invented the potter's wheel, and so to have provoked thereby the jealousy of Dædalus, that he threw him from the Acropolis and killed him. The Egyptians were at a very early period acquainted with the art. Little figures, covered with fine deep blue glaze, and numerous vases, specimens of which may be seen in the British Museum, were deposited with their mummies. Representations of earthen vessels, closely resembling those made in Egypt at present, are found in Egyptian paintings. The next in antiquity to Egyptian vases are in Etruscan, familiar to you all by their black figures and red clay ground. They are found in northern and central Italy, especially in tombs, where they were probably deposited as the most precious things of their owners, or to contain their ashes, or the wine and milk offered to their manes; and in such myriads that if the Etruscans were what Napoleon said we were, "a nation of shopkeepers," almost every shop must have been consecrated to earthenware. The Romans come next; and, as in every other artistic excellence, they imitated the Greeks without equaling them; and when the empire fell, the already degraded art was buried in its ruins.

But the most remarkable development of the art pertains to those queer, incarnate types of antiquity, the Chinese. While the art of tempering and glazing was disappearing in Europe, the Chinese, and their neighbors, the Japanese, had been for centuries making that peculiar porcelain with which, in its grotesque determination to put down all tyrannical laws of proportion and perspective, our readers are all familiar. How many thousands of myriads of years, according to Chinese chronology, they have been manufacturing porcelain it is impossible to say; it it an institution of the empire, and, of course, therefore, like all its other institutions.

The first reappearance in Europe of the lost art of pottery, was in the fourteenth century, when glazed earthenware was used in the pavement of the Alhambra, and in the Moorish mosques in Spain; and this was the condition of the art a few years before Palissy lent his genius and his labor to it, when a Florentine sculptor, Lucca della Robbia, the first of European potters, became famous for his terra cotta productions. Like Palissy, he was the discoverer of his own enamel. "He studied," says Vasari, "with so much zeal, that when his feet were often frozen with cold in the night time, he kept them in a basket of shavings to warm them, that he might not be compelled to discontinue his drawings;" another instance of the way in which men are made. After years of patient experiment he produced a beautiful white enamel, "which gave almost eternal durability" to his terra cotta figures, and became so famous that it laid the foundation of the commercial greatness of Florence. His secret, however, died with him, and only his productions remained, a specimen of which, as we have seen, fell into Palissy's hands, and stimulated his inquisitive genius.

When, therefore, Palissy was mending painted windows at Saintes, Europe was without porcelain. Every dust-heap now contains fragments that would then have been treasured in cabinets. The shilling China mug which, as its inscription deponeth, you purchase as "a present for Elizabeth," would have been a fitting present for Gloriana herself, and such was indeed the actual gift of a princely subject. China was hermetically sealed against Europeans, who were in such a state of social barbarism, as to be ignorant even of the existence of tea; so that the very idea of a teacup was wanting to the mental philosophy of Europe. The only pottery, therefore, that French art could achieve, was a common earthenware; and all that Palissy achieved was to him pure discovery.

To discover Lucca della Robbia's enamel, therefore, was henceforth the purpose for which he lived, and to which he consecrated all his labor and substance, and sacrificed many years of peace. "Had I employed," he says, "a thousand reams of paper in writing for you all the accidents that have occurred to me upon my search, you may assure yourself that, however clever you might be, there would occur to you a thousand other crosses, which could not be taught by letters, and which, even if you had them written, you would not believe, till you should have been thrust by experience among a thousand troubles."

The problem with Palissy was, how to discoaer enamel without either teacher or knowledge of its ingredients; how to discover, amid icebergs and polar frosts, a north-west passage. Here, then, began his trial; the pursuit of the enamel involved the neglect of his surveying, and the consequent destitution of his family. The possible stood in opposition to the certain—the ideal to the real; the filling of his furnace involved the emptiness of his cupboard. His new and fervent love provoked the not unnatural jealousy of the old. The wife was neglected, and the children cried for bread; domestic upbraiding took the place of domestic endearment; the enamel of conjugal love—politeness and delicate ministration—was roughly scratched and broken. "Poverty raised the latch, and Love flew out of the window." Victorine lost all faith, both in his genius and his love. No doubt, if discovered, the enamel would make them rich; but how was *he*, ignoramus that he was, to discover it? There was not a potter in France who would not have laughed at his best attempt to make a pipkin, and yet, forsooth, he will emulate Lucca della Robbia! A sad, hair-brained notion, this! And even should he ultimately succeed, how were they to obtain support in the meanwhile? "while the grass was growing the horse would starve."

But let us listen to Palissy. "Without having heard of what materials the said enamels were composed, I pounded in those days all the substances which I could suppose likely to make anything; and, having pounded and ground them, I bought a quantity of earthen pots, and after having broken them in pieces, I put some of the materials that I had ground upon them; and, having marked them, I set apart, in writing, what drugs I had put upon each, as a memorandum; then, having made a furnace to my fancy, I set the fragments down to bake, that I might see whether my drugs were able to produce any whitish color; for I sought only after white enamel, because I had heard it said that white enamel was the basis of all others. Then, because I had never seen earth baked, nor could I tell by what degree of heat the said enamel should be melted, it was impossible for me to get any result in this way, though my chemicals should have been right; because, at one time, the mass might have been heated too much, at another time too little; and when the said materials were baked too little or burnt, I could not at all tell the reason why I met with no success, but would throw blame on the materials, which sometimes, perhaps, were the right ones, or at least could have afforded me some hint for the accomplishment of my intentions, if I had been able to manage the fire in the way that my materials required. But, again, in working thus I committed a fault still grosser than that above named: for in putting my trial-pieces in the furnace, I arranged them without consideration, so that if the materials had been the best in the world, and the fire also the fittest, it was impossible for any good result to follow. Thus having blundered several times, at a great expense, and through much labor, I was every day pounding and grinding new materials, and constructing new furnaces, which cost much money, and consumed my wood and my time."

Here, then, was failure the first. Palissy had built his furnace, broken up his pottery, provided his chemicals, exhausted his resources, and failed! No one of his accidental combinations turned out to be the white enamel for which he sought; but he was not the man to give in at a first failure. He pulled down his furnaces, and reconstructed them; he bought new chemicals, and broke fresh pots, undeterred by an empty purse, an empty cupboard, and a remonstrant wife. And these were the first "provocations of Madame Palissy."

"When," says he, "I had fooled away several years thus imprudently, with sorrows and sighs, because I could not at all arrive at my intention, and, remembering the money spent, I resolved, in order to avoid such large expenditures, to send the chemicals that I would test to the kiln of some potter; and, having settled this within my mind, I purchased afresh several earthen vessels, and having broken them in pieces, as was my custom, I covered three or four hundred of the fragments with enamel, and sent them to a pottery, distant a league and-a-half from my dwelling, with a request to the potters that they would please to permit those trials to be baked within some of their vessels. This they did willingly."

And so, with good-natured pity, and good-humored *badinage*, the potters put this strange batch of powders into their furnace; and our poor friend Palissy, with a throbbing heart and care-worn countenance, sat down to watch the result. It was his last desperate experiment—at present the extreme limit of enthusiasm, beyond which it would become fanaticism, perhaps sin. And so the potters made merry; and Palissy sickened at heart over these three hundred potsherds. Hour after hour he watched, till the time arrived when they were to be taken from the furnace. And with an incredulous curiosity on the part of the potters, and a deadly intensity of feeling on the part of Palissy, which was neither hope nor despair, but the insupportable feeling which comes of both, the potsherds were drawn forth.

"But, when they had baked their batch, and come to take out my trial-pieces, I received nothing but shame and loss, because they turned out good for nothing; for the fire used by the potters was not hot enough, and my trials were not put into the furnace in the required manner, and according to my science." And thus, in addition to his own bitter disappointment, he became the butt of their rude wit. What, then, will he do next? Try again. "Because I had at that time no knowledge of the reason why my experience had not succeeded, I threw the blame—as I before said—upon my materials; and, beginning afresh, I made a number of compounds, and sent them to the same potters to do with as before; so I continued to do several times, always with great cost, loss of time, confusion, and sorrow." Meanwhile the necessities of his family had become too urgent, and Madame Palissy too clamorous, to be further disregarded, and he gave in for a while. Like all brave men, he knew when he was beaten, and he proclaimed an armistice. Thus stood the matter. There was a thing to be done; he could not mistake the whispering genius that told him he could do it. But, then, God did not show him the way to do it. His family had claims upon him; and greatly, therefore, as he has dared, he will now as greatly forbear. "When I saw that I could not at all, in this way, come at my intention, I took relaxation for a time, occupying myself in my art of painting and glass-working, and comported myself *as if* I were not zealous to dive any more into the secret of enamels." The immediate result was, the suspension of curtain lectures; health and happiness returned; and thus, after three years of fruitless experiment, Palissy became a reasonable husband and father, and betook himself again to glass-painting and surveying.

[TO BE CONTINUED.]

* * *

A vendor of hoop-skirts was recently extolling his wares in presence of a customer's husband. "No lady should be without one of these skirts," said the storekeeper. "Well, of course not," responded the husband, who was something of a wag; "she should be within it."

IT is a vulgar notion that politeness is only required towards superiors. The truth is every man ought to regard his fellow man or friend as his equal, and treat him accordingly. This is the very soul of good manners. Such feelings the real gentleman always has.

THE heart is a city surrounded by many gates, and the Devil knoweth it right well. We shut, bar, and lock him out at one entrance, and forthwith he makes his appearance at another. Let us then be vigilant, for if he enters one gate, he is master of all.

LET jealousy once find a lodgment in the mind, and like the sea polipus it extends its thousand feelers on every side for anything they can lay hold of, and the smallest particle afloat in the ocean of conjecture cannot escape from their grasp.

THE pleasantest things in the world are pleasant thoughts; and the greatest art in life is to have as many of them as possible.

To vex another is to teach him to vex us again; injuries awaken revenge, and even an ant can sting, and a fly trouble our patience.

LEARN in childhood, if you can, that happiness is not outside, but inside. A good heart and a clear conscience bring happiness, which no riches and no circumstances alone ever do.

As the moon, whether visible or invisible, has power over over the tides of the ocean, so the face of the loved one, whether present or absent, controls the tides of the soul.

A coquette may be compared to tinder which lays out to catch sparks, but does not always succeed in lighting a match.

MRS. LIZIEZ W. WARREN, M. D.,
ELECTRICIAN AND HYDROPATHIST,
Corner Mason and Pacific streets.....San Francisco.

MRS. WARREN proposes to teach her patrons the means of attaining and preserving health, rather than the usual practice of physicians, of *doctoring the sick*. Believing in the old adage: "An ounce of prevention is worth a pound of cure," and also that the remedies used to eradicate disease are more deleterious to the human organization than the diseases themselves; therefore she dispenses with the use of drugs, relying on the curative power within the living organism and the supplying such conditions as the natural remedial agents afford. The natural remedies: Air, Diet, Exercise, Water and Electricity. The beneficial effects of water, properly used, are now generally understood, but the remedial effects of electricity are comparatively unknown. By the knowledge and application of a certain law, which recognizes hitherto unknown relations of the positive and negative forces to the functions of life, electricians are enabled to make a beneficial application to disturbed physical equilibrium, thereby rendering electricity the most powerful therapeutic agent; the most potent and all-pervading element which can be used, as it approximates to the principle of life, apparently identical with vitality. Its therapeutic uses are *reasonable* and *wise*, and may be relied upon whenever a cure or improvement is possible.

MRS. WARREN will be pleased to make arrangements by the year, with families requiring a better knowledge of the laws of health and the means of its preservation, as well as medical attendance and advice.

Having devoted many years in study and preparation for this profession, and having received ample testimonials from the College where she graduated, feels confident she will be able to prove her ability to attend to the claims of WOMEN and CHILDREN. To this practice she will give her *Exclusive Attention.*

As an ACCOUCHEUSE she claims to be eminently successful, and can produce ample testimonials of success in many difficult cases.

Those wishing to avail themselves of Mrs. Warren's advice will find her at her residence, on the south-east corner of Mason and Pacific streets.

☞ Arrangements have been made by which a few Patienst can be accommodated with Rooms and Board

Pulu! The Wonderful!

ANOTHER cargo still, is just received
At SCHREIBER'S Depot! 't is believed
There is a charm about the PULU crop,
It comes, and goes,—the sale will never stop;
For everybody wants a PULU BED,
So EASY to the body, so COOLING to the head;
Another charm, too, in the PULU found—
Where PULU is, no INSECTS come around.

PULU! the famous PULU, now is known
As *BEST FOR BEDS*, and it has grown
So much in favor that the People go
Always to SCHREIBER'S great PULU Depot;
'Twas Schreiber had the first 'twas ever sold,
And then it almost cost its weight in gold;
But now, his ships, they come so thick and fast,
It sells so quick, a cargo does not last
A month or more, and then, it is so low
That all who want GOOD BEDS should surely go
Direct to SCHREIBER'S STORE on Sansome street,
There they will find a stock complete,
ALL KINDS OF BEDDING, everything that's wanted,
There too, the best accommodation granted.

Now don't forget the Number, 'tis 406;
Another fact upon your memory fix—
That Schreiber's is THE DEPOT OF PULU,
And HE the PIONEER IMPORTER TOO;
The man who first this luxury gave,
Then surely he *the best of trade should have.*

Now go and make your purchases complete,
At SCHREIBER'S, 406, on Sansome street. 1

PRICE REDUCED!

PATENT

HYDRAULIC HOSE

MANUFACTORY.

HOSE

SEWED WITH FOUR SEAMS,

For 15 Cents per Yard,

GUARANTEED TO STAND THE PRESSURE OF ONE HUNDRED FEET FALL AND LAST AS LONG AS THE DUCK, WITHOUT RIPPING.

I am also prepared to sell PATENT-RIGHTS for States, Counties, or Townships, as I hold the documents from the Patent Office at Washington City, with the Seal stamped upon them.

Miners and others interested will please address

BOX No. 353 AT THE MARYSVILLE POST OFFICE,

or through Wells, Fargo & Co.'s Express. All orders thankfully received and promptly executed.

For those having a disposition to invest a small sum in a safe and profitable business, now is the time. I have made sales to Mr. John Carbold, of North San Juan Township, and to Mr. John T. Allment, of Marysville. From these I have the highest recommendations, and numerous other recommendations relative to the value of this Machine.

S. HOWARD,
Pioneer Hose-Maker.

CIRCULATION OF THE FARMER ABROAD.

WE have often urged the friends of our State, to aid us in the Circulation of our Journal in the Old States, and Europe, so that we might be more instrumental of good, and help to increase the population of California, and thus make the State more prosperous.

We have often published strong Letters, from various States, proving the good our Journal is doing in making our State truly known in all her vast resources. We now ask of all who feel a desire to have our State double her population, to this work.

We append a Proposition, and hope the Friends of this Journal and the cause it pleads, and all who wish to carry out the desires expressed by our excellent Citizen, in Paris, will coöperate with us. We will make liberal terms to all Societies for Emigration, or Clubs, and Commercial Houses.

WITH a desire to make the Resources of California known abroad as widely as possible, we feel confident that if we could Circulate the CALIFORNIA FARMER in all the Older States, it would be the means of showing the great Masses of the People, that California is the place for them to settle in; and we believe we could greatly benefit all the interests of our State, by Circulating our Journal extensively abroad.

With such views, we ask the coöperation of our Merchants, and Business Men, and all who desire to make California truly and widely known, to aid us in the Circulation of the FARMER.

Wishing to place the FARMER at so low a price, as to enable all to send it to their friends, we offer the following Terms for all Clubs to send to the Old States, and in Europe:

For eight Copies	$25
" ten "	30
(Each Copy to be mailed separately, if so desired).	
For three Copies	10
" six "	20
" single Copy	4

HUNTER'S
GRAIN SEPARATOR!

THE GRAIN-GROWERS OF THE PACIFIC COAST have now an opportunity never before offered them of cleaning their Wheat in the most perfect manner.

The undersigned would offer them his

NEW GRAIN SEPARATOR,
Patented April 9th, 1861,

As one of the best Implements ever invented. Mustard, Radish, Chess, Barley, and all other impurities, are separated entirely, leaving the Wheat in a pure and clean condition.

The importance of this Implement can be seen at once, as the

INCREASED VALUE
OF
Well-Cleaned Wheat

Will be more than sufficient to every Grain-Grower of any amount

TO PAY FOR A MACHINE.

The Patentee will visit all the principal cities and Farming districts to appoint agents at each place, and exhibit one of his Machines.

He feels confident that every Grain-Grower

WILL BE CONVINCED OF THEIR VALUE

The moment an opportunity is presented to see them work.

A. HUNTER,
Inventor and Patentee.

LONELY.

Sitting lonely, ever lonely,
Waiting, waiting for one only,
Thus I count the weary moments passing by;
And the heavy evening gloom
Gathers slowly in the room,
And the chill November darkness dims the sky.
Now the countless busy feet
Cross each other in the street,
And I watch the faces flitting past my door;
But the step that lingered nightly,
And the hand that rapped so lightly,
And the face that beamed so brightly,
Come no more!

By the firelight's fitful gleaming
I am dreaming, ever dreaming,
And the rain is slowly falling all around;
And the voices that are nearest,
Of friends the best and dearest,
Appear to have a strange and distant sound.
Now the weary wind is sighing,
And the murky day is dying,
And the withered leaves lie scattered round my door;
But that voice whose gentle greeting
Set this heart so wildly beating
At each fond and frequent meeting,
Comes no more!
[All the Year Round.

◆

THE SEA-SHELL.

BY H. CLAY PREUSS.

How is it with thee, oh lone Sea-Shell!
Why utter this ceaseless moan?
Art yearning again
For thy home on the main,
Where the sunlight hath never shone?

Like the muffled throb of a broken heart,
Thy music is sounding to me;
Art mourning thy love
In some far coral grove,
Which blossoms down under the sea?

They say that the voice of thy native waves
This melancholy dirge doth keep,
Which, though far away,
Doth ever betray
Thy birth in the wild ocean-deep.

And is it not thus with that mystical voice
Which speaks to the children of earth;
And often unfolds
To God-imaged souls,
Some trace of their heavenly birth?

Ah! many a spirit like thee, lone shell,
Now mourns in its prison of clay;
While it catches faint gleams
In soul-thrilling dreams,
Of the *Ocean that's far away!*

◆

Beautiful Illustration.—A florist will tell you that if you paint the flower-pot that contains a favorite, beautiful, fragrant flower, the plant will wither, and perhaps its blossom will die. You shut out the air and moisture from passing through the earth to the roots, and your paint itself is poisonous. Just so, mere external cultivation, superficial, worldly accomplishment, or a too exclusive regard and anxiety for that which injures the soul. The vase may be ever so beautifully ornamented, but if you deny the water of life to the flower, it must die. And there are kinds of ornamental accomplishments, the very process of which is as deleterious to the soul as the paint upon the flower-pot is pernicious to the plant, whose delicate leaves not only inhale a poisonous atmosphere during your very process of rendering the exterior more tasteful, but the whole earth is dried and devoid of nourishment. Nature never paints, but all her forms of loveliness are a growth, a native character, possession, and development, from the beginning. If the sun can ever be called a painter, it is only because the plants absorb his rays, and receive them into the very texture and life of their vegetation. So, whatever is real knowledge, wisdom, principle, character, and life, in education, is a process of the absorption and development of truth, and is not mere painting.

How to Carry Flowers.—When sent by post, nothing is better than wrapping them in oiled paper; when carried otherwise a piece of wet sponge fastened inside a wooden box, or layers of wet brown paper, or wet flannel as a lining to the box, or freshly-gathered cabbage leaves with their under side placed next the flowers are unobjectionable. If the box is of tin, well secured at the lid, then a source of constant moisture is less requisite, for the leaves and flowers themselves will form an atmosphere of sufficient dampness for a time. Another method, which answers extremely well when flowers are gathered in dry weather, is as soon as they are cut to throw them into a bag, like a carpet-bag, made of mackintosh. If the snap of such an article closes well, the flowers will remain fresh, all day long in the broiling sun, as some botanical travelers well know. The reason why such flowers are preserved is still the same—the air around them is damp. Tourists who hunt after wild flowers, or ferns, should provide themselves with a bag of this description.—[Gardener's Chronicle.

At best life is not very long. A few more smiles, a few more tears, some pleasures, much pain, sunshine and song, clouds and darkness, hasty greetings, abrupt farewells; then our little play will close, and injured and injurer will pass away. It is not worth worth while to hate each other.

Greatness lies not in being strong, but in the right use of strength; and strength is not used rightly when it only serves to carry a man above his fellows for his own solitary glory. He is the greatest whose strength carries up the most hearts by the attraction of his own heart.

Sam Slick says—"I really believe every created critter in the world thinks he's the most entertainin' one in it, and there's no gettin' on anyhow without him. Consait grows as the hair on one's head, but it's longer comin' out."

Would it be any advantage to a man desirous of becoming a public speaker to connect himself with a spoke factory? This question comes to us from the hub of the Universe, and is submitted out of regard to the public weal.

What is the difference between a supplement to a will and a certain kind of fish after having run into a net? One is a codicil; the other is a silly cod.

In order to be enjoyed, it is absolutely necessary that leisure should be preceded by occupation.

Truth itself becomes falsehood if it is presented in any other than its right relations. For there is no truth but the "whole truth."

A good many men are in the best health when they are out of spirits.

It is the grace and glory of a man to be the bondman of his word.

Kindness is stowed away in the heart like rose-leaves in a drawer, to sweeten every object around them.

He that loves only himself, has but one joy; he that loves his neighbors has many.

When is a flock of sheep like our climate? When it is composed of all wethers.

Electricity as a Remedial Agent.

DISEASES CURED
Without the Use of Medicines,
AT THE
Electropathic Institute,
625 Washington street,
Between Montgomery and Kearny streets,
SAN FRANCISCO.

When it was promulgated that disease could be entirely eradicated from the system without the use of poisonous drugs, the unthinking, or those who do not look deeply into cause and effect, scouted the assertion as chimerical, and adduced strong evidence of its utter impossibility. Long articles, replete with arguments, seemingly unanswerable, of the position that only through the digestive system could the blood be purged of the accumulation of the poisons which constitute the disease. A great cry went up from those interested in the continued supremacy of the old system of one poison to cure another; that electricity, as a curative agent, had been tried and proved to be of but little if any value—thinking, poor souls, that the world of science stood at the same point it occupied one hundred years ago. They were wrong, while those old fogies were content if they cured one in every five patients, there were those who were diving deep into the science of electricity, and finally it was discovered that the trouble was in the instruments used. From that time to the present, improvements have rapidly advanced, until every disease in the catalogue of human ills has been either cured altogether, or checked so as to enable the sufferer to seek those changes of climate which ultimately perform a perfect cure. Diseases hitherto considered incurable, have been cured, and those diseases which took months, and even years, to cure by medical process, are now cured in a few weeks; and all by the improved instruments of DR. J. H. JOSSELYN, Resident Physician at the Electropathic Institute, New No. 645 Washington street, between Kearny and Montgomery streets, San Francisco. It is astonishing to see the number of patients and diversity of diseases that have been relieved by the Electropathic system. From early morn till late at night his instrument in engaged, imparting health and strength to all who have the good fortune to obtain his services. The charges, too, are not as heavy as by the old system, besides there is no medicine to pay for, let alone the unpleasantness of swallowing the nauseous stuff. During the time that the Institute has been in operation, there has been more benefit to the human family derived from the system than from all other systems combined during the same period. Among the most troublesome diseases to which Californians have been exposed, is Rheumatism; none have given the honorable practitioner more trouble to relieve, and none have pretended to cure (if we except known empirics) permanently. But this subtle disease gives way before the Electropathic system in a very short time, enabling the sufferer to go about his business without pain or the fear and dread of relapse. And so with most other diseases, considered incurable. We mention Rheumatism because of its abundance, but we could enumerate many other diseases full as troublesome, and some far more fatal in their results.

To the nervous, the Directors would say, that you can be entirely relieved from those dreadful feelings of evil-foreboding, and your system strengthened so that nothing can disturb the current of your life. Several cases of insanity, arising from a disarrangement of the nervous system, have been permanently cured by this system. The Directors, in stating these things, do so in the hope that it may be the means of awakening the public who have not studied into such things, to a sense of their duties, and if possible, prevent those who have the care of the rising generation from poisoning their young charges with vile drugs, thereby entailing upon them troubles which in after life may cause them to curse their origin.

It is unnecessary to enumerate all the diseases in the catalogue, for that would be occupying space to no purpose. Every disease has been under treatment by this system, and there are none but have received benefit either in this State or at the East.

There are at present but few instruments in the world that can be depended upon. A good instrument costs very heavy, and must be manufactured to order, and there are very few who are able to manufacture them, for want of knowledge of the healing principle. The only instrument to be depended upon in this State is at the Electropathic Institute.

Connected with this system are the renowned Electro-Magnetic Baths. Here let us caution the public against the numerous impostors in the bathing line. The pure magnetic baths is one of the most effective aids in the removal of disease from the system, but if given at the wrong time, are likely to aggravate trouble, and cases have been known where the patient has been injured so badly as to require months to remove the injury. Persons in quest of this bath should be careful and not apply to a place where there is no physician to judge of the necessity of the remedy. In fact, the only place where they can be obtained in all their purity is at the Institute, where the Resident Physician will always be happy to examine and see that they are not unseasonably administered, and if not necessary, advise the requisite remedy.

Below will be found a list of the cases which have been successfully treated by the Electropathic system, at the Institute, during the first year of its establishment. The record is good, and challenges the admiration of the world:

Name of Disease.	*No.*
Rheumatism	421
Neuralgia	368
Dyspepsia	297
General and Sexual Debility	240
Asthma	220
Bronchial Affections	187
Fever and Ague	183
Female Irregularities	161
Mercurial Affections	130
Diseases of the Eye	85
Paralysis	78
Scrofula (long standing)	30
Catarrh of the Lungs	27
Catarrh of the Head	21
Liver Complaints	20
Deafness	18
Panama Fever	10
Consumption	7
All others, among which is almost every nameable disease	128
Total	2626

The above shows what can be accomplished by combined energy when it has truth and science upon its side. The Electropathic Institute was started amid the cry of interested charlatans, who used all the power their riches and the prejudices of the public gave them, to prevent its success. It has risen to a position that is beyond their baffled malice, and will be honored in the scientific world when they are forgotten, or only remembered for their crimes and impositions. A thinking public are fast consigning them to that oblivion their works merit.

Persons seeking remedial assistance may wish to know something of the system by which diseases are so rapidly removed from the body. Electricity is a fluid of so subtle a nature that it can only be studied by its results. We know by its action it forces everything of a foreign nature in the body from the center to the surface by its energy; while the vitality which it imparts fills up the vacuum, preventing thereby the subtle poisons from returning to the hitherto diseased parts; and here let it be understood that the Bath should never be administered until the disease has been forced to the surface, except, perhaps, in cases of cold where fever has not set in. Its action upon Mercurial Diseases is peculiar. The best authorities are of the opinion that it liquifies the mercury, which, when in a liquid state, by its own specific gravity, forces itself out of the body. This result has been arrived at by testing the water after an Electro-Magnetic Bath. After such tests have been found in the water, the patient is not troubled any more with those pains peculiar with the diseases. In all other cases it forces to the surface and is washed off by the Bath. The whole system, in its application, is a luxury, there being no pain or inconvenience attending upon it, but the reverse is the case, being one continued pleasure. Try it, you that are suffering either from disease or the injudicious use of poisonous drugs, and you will be made to rejoice that you have had the courage to strike out from the beaten path.

Below are a few certificates from patients that have been cured at the Institute:

CERTIFICATES OF CURES:

San Francisco, April 18th, 1861.

This is to certify that I have been under the treatment of Dr. Josselyn, at the Electropathic Institute, and that he has cured me. My disease was mercurial, accompanied by chills. I applied to him on the 11th day of this month. I recommend all afflicted to employ him. He has cured me without medicine, by the use of his Electropathic Instrument.

JOHN CALLAGHAN.

State of California, City and County of San Francisco, ss.
Subscribed and sworn to before me, this 18th day of April, A. D., 1860. P. BARRY, Notary Public.

Hornitos, Nov. 1st, 1860.

Well, Doctor, I am at home, and have been to work in the water for several days, and there is no return of the Rheumatism, as I call it, and mercurial pains, as you stated them to be. I feel as gay as a lark, no pain or bad feelings, no stiffness, but perfectly well, and all done by you in three weeks, without one drop of medicine. You had hard work to make me believe before you commenced that you could cure me, but now I find it very easy to believe. Although my friends look rather incredulous, but they cannot doubt my sober earnestness. Doctor, you have my thanks, and I will benefit you all I can by spreading your fame up in these parts.

Respectfully yours, GEO. PERKINSON, Jr.
To J. H. Josselyn, M. D., Resident Physician at the Electropathic Institute.

CAUTION.

The public are informed that I cannot be seen at any other place in the State except at the Electropathic Institute (179, old No.) 645 new No., Washington street, south side, a few doors below Kearny. The reason of this caution is, certain Quacks have placed my name upon their doors, and have deceived strangers who wished my services.

19 J. H. JOSSELYN, M. D.

THE VERMONT
SEED-SOWER AND REVOLVING HARROW!
FARMERS, ATTENTION!

With this machine, any person that can manage a pair of horses, can perform the operation of
Seeding and Harrowing at the same Time.

It is adapted to the sowing of ALL KINDS OF GRAIN, and is regulated by the guage to DISTRIBUTE EVENLY OVER THE SURFACE any desired number of pounds of Grain per acre, covering the Seed immediately, so that NONE OF IT IS LEFT IN SIGHT FOR THE BIRDS TO DESTROY.

IT IS SIMPLE IN CONSTRUCTION, STRONG, AND DURABLE,

Just the mplement the Farmer needs at the present time, to enable him to raise Grain profitably at the prevailing low prices.

It now makes its first appearance on the Pacific Coast. For sale by

PATENT RIGHTS FOR SALE.

The following Patent Rights of very new and valuable inventions (of which we have models to show their value, are now offered for sale. We hold the rights for the States of California and Oregon, and Utah and Washington Territories.

A Fortune for a Mechanic.

We have the PATENT RIGHT for the whole Pacific Coast for the best and most celebrated HORSE HAY-RAKE known.

ALSO—A CIDER-MILL and PRESS of the most approved construction.

A fortune can be made with either of these machines, by an energetic mechanic. The models may be seen at our office.

No. 1. A New Rotary Subsoil Plow.
Patented April 6, 1858.

This invention completely pulverizes the soil after lifting it. a very valuable implement, and one which will receive universal commendation.

No. 2. A Corn Cultivator.
Patent now pending; papers expected.

With this implement the soil is first thoroughly plowed and deeply pulverized, and upon the return it smoothly and perfectly hills up and harrows the ground between the rows. A very new and valuable implement.

No. 3. An Improved Clothes Reel and Bar.
Patented January 3, 1860.

This valuable domestic piece of furniture can be used in the Laundery, the Kitchen, the Nursery or Chamber, and can be made plain or ornamental; standing in the same relation as a piece of important furniture as does Wheeler & Wilson's Sewing Machines; neat when used and ornamental when not in use.

No. 4. The Mechanic's Spirit Level.
Patented September 13, 1859.

This implement will be of great value to Contractor and Builders, being one of the most valuable inventions yet out. 2000 were ordered for the New York market just before the sailing of the steamer. Builders will do well to examine this model.

No. 5. A Musketo Bar.

This will be much wanted in California. It is simple in its contrivance, perfect in its working, and can be affixed very cheap to all styles of bedsteads. Hotels, public houses and private families will find it a useful invention.

Also, Hyde's Patent Post-Driver,

A most excellent labor and money-saving machine, for which we offer rights, as will be seen by a card in our columns.

Holding the rights to all these new inventions, we invite the public to call and see the models. All persons who may be desirous to purchase either County, City, Town, or Individual Rights, can do so on application to
2 COL. WARREN, Editor Farmer.

Saddle-Horse For Sale.

A FINE SADDLE-HORSE, FOUR YEARS old, got by Imp Lawyer; is well broken, and can run a mile in 1:55, when in racing order. Is just fifteen hands high, bright bay, with a star and white hind foot; a perfect gentleman's horse. The owner wishes to sell him for want of use for him. Apply to
T. B. MERRY;
21 Farmer Office.

Colby's Patent Improved
CLOTHES WRINGER

THIS MACHINE IS ATTACHED TO A TUB WHEN IN operation. It consists of a pair of India Rubber Rollers, hung in a framework of galvanized malleable iron of peculiar form, held together by a single rod, or tie, which forms a joint in the frame, by means of which the rollers are held in their proper place, and the Machine clamps itself firmly to the tub or box.

I give seven good reasons why every family should have a Machine of some kind for this purpose; and if we allow each reason given to make a saving or be worth but two cents per week, you will have the price of the Machine in one year, and it will last a lifetime.

1st—It will save time, which is money.
2d—It will save strength, which cannot be bought.
3d—It will save the clothes, which cost money.
4th—Any man, boy, or girl, can use it, who could not wring clothes by hand.
5th—It helps to wash the clothes, and by running them a few times through the Machine, out of hot suds, it will clean them as well as half the Washing-Machines in use.
6th—It leaves the clothes in a better condition to dry.
7th—It helps to make Washing-Day more pleasant.

It will be seen by the above that no family can afford to be without such a Machine.

I can give many excellent recommendations, if necessary.
For sale by T. M. CHAPMAN, Petaluma.
TREADWELL & CO., Sacramento.
W. HODGES, Sacramento street,
9-3m San Francisco.

BAILEY'S PATENT
COMBINED
WASHING AND WRINGING
MACHINE.

Patented April 5th, 1859;

and March 27th, 1860.

THIS MACHINE IS ADAPTED TO ALL KINDS OF Clothes, from a pocket handkerchief to a bed-quilt. You can wring your clothes in less than one quarter of the time, and so much dryer that they will dry in one half the time, and not injure your clothes one half as much as when twisted by hand. This Machine is formed with

TWO SPRING ROLLS COVERED WITH RUBBER,

And so constructed as to run together with great pressure, and turn fast and easy. The springs in the rolls are so constructed as to yield the most in the center, where the bulk of the clothes are conducted as they pass between them. By this means the springs with the rubber close so tight around the clothes that they come through

NEARLY DRY ENOUGH TO IRON.

However uneven the garment may be, it receives an equal amount of pressure. It is also sufficiently strong and so arranged that it can be run by power for LAUNDRIES, FACTORIES, LARGE HOTELS, &c. Although it is a small and simple Machine, it is able to do a large amount of work in a short time.

This Machine has been thoroughly tested for sixteen months past, and found to do everything that it was designed to do. And after any one buys one of them, and finds it will not do what I claim for it, they can return it and have their money, as all my agents are authorized to do this. So there is no chance for you to get humbugged by giving them a fair trial, and it may be just the thing you want.

To wash with this Machine, put your clothes to soak for about twenty minutes in strong soap-suds and warm water, then run them through the rolls five or six times back and forth into the suds, when they will require no rubbing excepting the very dirtiest parts, such as collars and wristbands, which will require but a slight rub with the hands. By this process you will be able to do your washing in less than half the time you can by hand, or any other Machine in use, and much easier, and no wear or tear to your clothes, like the rubbing-board and twisting to get the water from them—as you can see the principle of my Machine is to squeeze instead of rub and twist, which evades all friction.

CHAS. T. DARROW, San Francisco.
General Agent for California and Oregon.

A Machine will be on exhibition at F. D. Cottle's Carpenter Shop, Pine street, below Sansome.

Price—20 to 25 Dollars.

THE CATARACT
Washing Machine
AND WRINGER.
Rubbing and Wringing Done Away!

THIS MACHINE IS REMARKABLE FOR THE FOLLOWING QUALITIES WHICH IT IS WARRANTED TO POSSESS:

It will wash and rinse the finest Lace Collar, or the largest Bed-Quilt.
It washes Flannels without shrinking them.
It does not wear the Clothes and never breaks a button.
It is perfectly simple, very strong and durable, and cannot get out of repair.

A common hand can with ease and perfect safety to the Clothing, wash Faster and Better than Four Washer-women can by hand.

Wringing is Done Five Times as Fast as Clothes can be wrung by hand, and removes the water so thoroughly that the Clothes Dry In Half the Time.

☞ The Machines can be seen in operation at our store. Always for sale by

Wholesale Produce Report.

This represents the prices paid by the dealer to the producer.

[Corrected weekly, by A. H. Todd & Co., No. 42 Clay Street.] Nov. 7.

There has been a very material falling-off in the receipts of all kinds of Grain for the last ten days. Wheat, in particular, has come into Market very sparingly; and when we compare the receipts of the two years for a corresponding period, 1860 and 1861, we find a very material deficit in 1861 from 1860, amounting to over 160,000 sacks. That there is plenty of Wheat in our State, and that Oregon has a large surplus of Flour and Wheat to ship here, is almost positive, and argues that we have more than enough for Home-consumption. The surplus will doubtless establish a price for all. It therefore remains for holders and Farmers to decide whether they will continue to supply the requirements of shippers and reduce our stock on hand at the prices they can pay, and realize a sufficient amount more for the balance, or to hold on and force our shippers to leave our Market. Our own local demand is not sufficient to sustain even present prices.

Barley has decidedly improved, and is ready sale at prices from 90c to $1 ⅌ 100lbs.

The demand for Oats has also improved, and prices are hardening.

Hay, in consequence of the light receipts, has advanced, and is quotable at from $12 to $15 ⅌ tun, with an upward tendency.

Potatoes, in consequence of the liberal supply, have declined in price, and are dull sale at from $1 to $1 60 ⅌ 100lbs.

The quantity of Rye and Buckwheat coming to Market is very small, and the demand good. Prices of the two Grains must prove remunerative at quotable prices.

Within the past week the following ships have completed their loading and have sailed or are ready to sail, viz: The ship Nimrod, taking 2000 qr-sks Flour, 1534 sks Wheat, 2067 sks Barley, 11,725 sks Oats, and 25,000 ft Lumber; value $21,854. Ship Nabob, for Cork and orders, takes 31,325 sks Wheat. Ship Serpent, for Hongkong, has 224 bbls Beef, 500 bbls Flour, and 995 flasks Quicksilver. The following ships are now on the berth to load with California Products, viz: the Cutwater, for Boston, in Meader, Loler & Co.'s line; the David Crockett, for New York; the George Peabody is loading for Cork and orders, with Wheat and Flour. We hear that the ship Independence was chartered for a round voyage; she came with Coal, and was to take a return cargo of Wheat and Flour, but as prices have advanced beyond their supposed limits, there is a doubt of her being loaded. The Avon is loading rapidly, principally with Oats.

Receipts of Produce during the week around the Bay have been as follows: Wheat, 36,809 sks; Flour, 18,487 qr-sks; Barley, 10,294 sks; Oats, 4700 sks; Beans, 1493 sks; Potatoes, 5469 sks; Bran, 1117 sks; Middlings, 101 sks; Corn, 995 sks; Corn Meal, 300 qr-sks; Hay, 504 tuns; Wool, 380 bales; Salt, 4216 sks; Mustard Seed, 202 sks; Onions, 780 sks.

San Francisco the Head-Quarters for the Whale Fleet of the Pacific.

For more than seven years we have advocated measures for securing to this port the valuable trade that would accrue to us if the Whale Fleet could be induced to make this their resort. We know we can fit out the whalemen better and cheaper than any of the Islands; besides, whalemen's drafts here, instead of being at a large discount, command a premium. The trade too, of sail-making, and ship-chandlery, and ship-stores, are an item that would greatly benefit our merchants; while the sale of flour, pork, beef, and fresh vegetables would be a great help to our producers.

Seven years since and the only whaleship owned at this port was that of Wm. Bailey; now there are several,—and at this time there are eight whalemen in port, and such are the facilities offered and securities given that seamen are safe, that we doubt not the whole fleet of nearly fifty sail will soon make this their head-quarters, and thus bring a new and valuable aid of business to various branches of industry; and this is what the Farmer has urged and prophesied for seven years, while others have always been saying such a thing could never be accomplished. The work is already done.

Insure! Insure!

We have repeatedly urged our Farmers and all our friends in the country to secure themselves from the chance of ruin by having their buildings, their stock, household furniture, grain, tools, etc., *insured.* It costs but little to do so now, and to do it safely. We have now in our city a large number of Insurance Co's., with well paid-up capitals, in which an insurance is safe. If fire makes a loss it will be promptly paid, and those little technical loopholes will not be made available to avoid paying the insurance.

We can refer with much pleasure to the card in our columns of the Messrs. Bigelow Brothers & Flint, who are agents for some of the best Insurance Companies in our country, and by reference to their card it will be seen that nearly *one hundred thousand dollars* is now deposited here in bank to meet any losses that may occur under their policies. We, therefore, say to all who are not insured, do so at once and *sleep safely.* Farmers, do not delay: a few days and you may be ruined by a large fire. *Get insured now.*

Belleview.—This is a new but a very beautifully located "Rural Home," near the entrance of the road which leads from the open part of Napa Valley to the Sulphur Springs. We remember this place for many years as the residence of Mr. Lilly, formerly proprietor of the Sulphur Springs, but now, or very recently, purchased by our fellow-citizen, Lewis Gibson, Esq., long known as one of our esteemed merchants. "Belleview" has been so improved that we hardly knew it. By the excellent taste of Mrs. Gibson, the "Home" has been remodeled, rebuilt, added to, and improved, and thus made truly a Home. Soon as the clouds shall cast their softening influence upon the earth, great improvements will be made in all the grounds around; Garden, Orchard, Vineyard, and Floral Parterres, with fountains, arbors, and walks, will complete the already anticipated ideal beauty that the refined taste of Mrs. Gibson has designed. We regretted to find Mr. Gibson in poor health, but we hope such a clime, and the quiet and glory of such a Home, will recuperate the energies and health that a too close application to a city life has impaired.

T T T T T T T T.'s.

There is no one beverage now used so universally as T.

At the present time California, particularly San Francisco, can boast a great advantage over even New York, for we believe we are getting some of the *pet* sorts; at least one would think so if they call at the East India T Store, Washington street. Conversing with a friend the other day, he propounded to us the following questions upon T, to which we made the response to a T.

Which T does your Goddess Flora prefer? We answered *Flowery* Pecco T. What is the highest kind of T? We say, Mon-te. What kind of T are our armies contending for? We think, of course, the *Black* T, as both North and South are fighting for Liber-T. What kind of T ought Bachelors to drink? They should have "Green" T. What kind of T do our merchants like best? They always try to get good Guaran-T. This discussion was held over a dish of that exquisite new T, called the Flowers of T, just imported, for the first time, and found at the place named, surpassing all others in purity and fragrance.

Increase of Sewing-Machines.—We learn from the statistics of this artice that 48,444 Sewing-Machines were sold in the States the first six years after their invention, from 1853 to 1858. The next year, 1859, 46,510 were sold. In 1860 and 1861 there have been sold as follows: Grover & Baker, 10,280; J. M. Singer & Co., 10,963; Wheeler & Wilson, 21,305. The facts are astonishing, making 137,492! And the same ratio of increase is continued. The relative proportions of Machines show which are considered the best.

Farmers of San Joaquin.—We call your attention to the extensive stock of all kinds of goods suited to the farm and the family, now advertised by Messrs. Jones & Hewlett. Their large facilities in the Eastern markets and among manufacturers are of such a character that they can always offer better and greater advantages to the purchasers than any other house in that section of country. By referring to their advertisement it will be seen they are prepared with merchandise of every description.

Seedling Apples and Tuscany Wheat.—We received a box of very fine seedling apples from J. M. Patterson, Esq., of San Jose, who says they will keep till April. They are a beautiful red-streaked apple, of rich spicy flavor, one that will prove a valuable acquisition to horticulture. We also received a small sheaf of Tuscany Wheat, from seeds furnished from this office; for both favors we are thankful. The wheat and apples can be seen at our office.

Why is Love like a canal? Because it is a source of "Internal" *transport.*

Splendid Family Flour.—We have tried very carefully the Flour exhibited at the Alameda County Fair at Oakland. It was very carefully and repeatedly tried as family bread; the samples were from the Oakland Mills and also the Clinton Mills, and so excellent was the bread, so pure, light, and sweet, that a committee of three found it hard to decide. Another trial will be made, however; but thus far it is the most superior flour we have had for a long time; and those who will try it will find it so. We would also state that Boardman's Yeast Powders were found to operate better than any other kind.

The Big Broom.—Home-Manufactures in California are progressing so rapidly that we can say they will soon "sweep" all opposition; and as an emblem of this "good time coming," see the "Big Broom" on the Manufactory of Mr. J. H. Ward, on Drumm street. This Broom is believed to be the largest ever made in the United States. Twelve pounds of Broom-Corn was used in this one Broom. Mr. Ward excels in making Brooms, having fairly beat all competitors at the State Fair, and bearing off the First Premiums against the large Sacramento Broom Manufacturers.

Consul to Batavia.—I. S. Diehl, for so many years a Temperance Lecturer in California, has been appointed to the Consulship at Batavia, on the East Indian Island of Java. The position is a lucrative one, but the climate reported the hottest and sickliest in the world.

We are glad our friend has a good appointment; he deserves it. We trust, however, a kind Providence may shield him from the pestilential breath of a sickly climate. We shall speak from his interesting letter, just received, in our next.

A Grand Opportunity for a Home.

For sale in one of the interior Mountain Towns, a good House and Garden, with outbuildings, including a Smoke-House in successful use, being capable of realizing a good income.

The buildings are good. The Orchard is in full bearing, with Peaches, Plums, Apples, Grapes, etc., and small Fruits. There are also on the estate several small tenements, which bring in an income of about $50 a month. The Fruit sold from the Garden, together with the certain income, will pay in two years or less the price now required for the estate. It is offered low for an immediate Cash sale, as the owner desires to locate in a different part of the State, where he has other property which requires his attention.

For particulars inquire of Editor of Farmer. 24

Full-Blood Durham Stock.

Purchasers of very choice Durham Stock will do well to call and see our Lists of Stock for sale. We have some for sale as fine as can be found in this country.

We have a number of Full-Blood Durham and also Devon Stock, of perfect pedigrees, worthy the attention of those who desire to find the very best blood. The pedigrees we can show, and give full particulars.

Also, about twenty fine Grade animals, of superior stock and parentage, to which we invite particular attention.

Another Herd of Noble Stock for Sale.

We can offer to those who want the best kind of Blood-Stock, the following:

A Full-Blood Devon Bull; pedigree perfect.

Several Calves, Full-Blood, and crous of same.

Several extra fine Dairy Cows; very superior.

A noble Draft Stallion, sired by a high-blood English Draft Stallion, from a Vermont Morgan Mare.

Several Mares and Colts of high grades.

All the above will be sold at a bargain. Inquire of Editor of Farmer. 5

Valuable Blood-Stock For Sale.

We would invite all who desire Dairy-Stock of the very highest character, to call on us, or write to us, as we have for sale about twenty-five head of as choice Durham Stock as there is for sale in the State, as follows:

One Full-Blood Durham Bull, 2 years old, of the highest pedigree, and as handsome an animal as has ever been offered in this or any other country.

One young Full-Blood Calf, 8 months, a perfect picture.

Several younger Blood Calves.

About twenty Cows and Calves, Durham, Devon, and Ayrshire, with Calves by their sides.

Among the Cows are some of the very best milkers in the State. Inquire at the Farmer Office. 18

National Loan.

PURSUANT TO INSTRUCTIONS FROM THE SECretary of the Treasury, a book will be opened on the 14th day of November next, at the Office of the Assistant Treasurer U. S., in this city, at the hour of 9 o'clock, A. M., for subscriptions under my superintendence for Treasury Notes, to be issued under the Act of July 17, 1861. These notes will be issued in sums of fifty dollars, one hundred dollars, five hundred dollars, one thousand dollars, and five thousand dollars each, dated 19th August, 1861, payable three years after date to the order of the subscriber or as directed, and bearing interest at the rate of 7 3-10ths per cent per annum, payable semi-annually; such interest being at the rate of two cents for each day on every hundred dollars. For the convenience of the holder, each note will have coupons attached expressing the several amounts of semi-annual interest, which coupons may be detached and presented for payment separately from the note.

Subscriptions for such Treasury Notes will be received during fifteen days from the day of opening the book as aforesaid. No subscription for less than fifty dollars nor for any fraction of that sum can be received. Subscriptions of fifty dollars or one hundred dollars must be paid in lawful coin of the United States at the time of subscribing. Subscriptions of more than one hundred dollars may be paid at once; or, if preferred, one-tenth at the time of subscribing, and one-third of the whole amount on every twentieth day thereafter until the whole shall be paid. No payment of less than fifty dollars can be accepted, that being the smallest sum for which Treasury Notes can be issued.

Certificates will be granted in duplicate to subscribers for the amounts so paid, the original of which the subscriber will transmit by mail to the Secretary of the Treasury, when Treasury Notes as aforesaid will be issued thereon to such subscriber or his order, carrying interest as expressed in such certificate; but in cases where only a part of the amount subscribed is paid at the time of subscribing, Treasury Notes will be issued only for the payments made subsequently to the first, which will remain until the whole amount subscribed by such person shall be paid, when Treasury Notes will be issued for such first payment also. On payment of each deferred instalment, the subscriber will pay, in addition thereto, a sum equal to the interest accrued thereon from the 19th August to the date of payment, and on final payment like interest on the amount paid on subscription, which payments of interest will be reimbursed to the subscriber in the payment of the first coupon.

The Treasury Notes issued upon such certificates by the Treasury will be sent to the subscribers by mail, or such other mode as may be indicated by them when they transmit their original certificates. The duplicate certificates may be retained by them for their own security.

D. W. CHEESMAN,
Assistant Treasurer U. S., and Subscription Agent.

JOB-WORK.—Of every description, done with promptness, at fair rates; orders will be faithfully attended to.

Success in Grape-Growing.

WE ask attention to the following letter. We wish without criticising the plan of our correspondent to have other Vine-growers write us and give us their plans; and we also prefer they should speak of this plan, and give their opinion of it.

ST. HELENA, Napa County, Cal, Nov. 18, 1861.

EDITOR FARMER: In the FARMER of November 1st, you refer to the culture of my vineyard as an example worthy the imitation of Vine-growers. My ground is so easily kept in order that I should be more than ordinarily inexcusable were I to allow it to become foul.

I regret my absence from home at the time of your call, as I lost thereby an opportunity of obtaining from you valuable practical suggestions in reference to the future treatment of my vines.

With their past history I am familiar, and in view of the prominence which the Grape-growing interest, as an industrial pursuit in our State, has acquired, I am thinking that an outline of my brief experience in the business may possibly afford some useful hints to that portion of your readers who are about to embark for the first time in Vineyard planting.

The business, as yet, is but an experiment in this country. Facts are needed and very many of them must be collected, collated, and compared, before a system best adapted to our climate, soil, and cost of labor, can be framed.

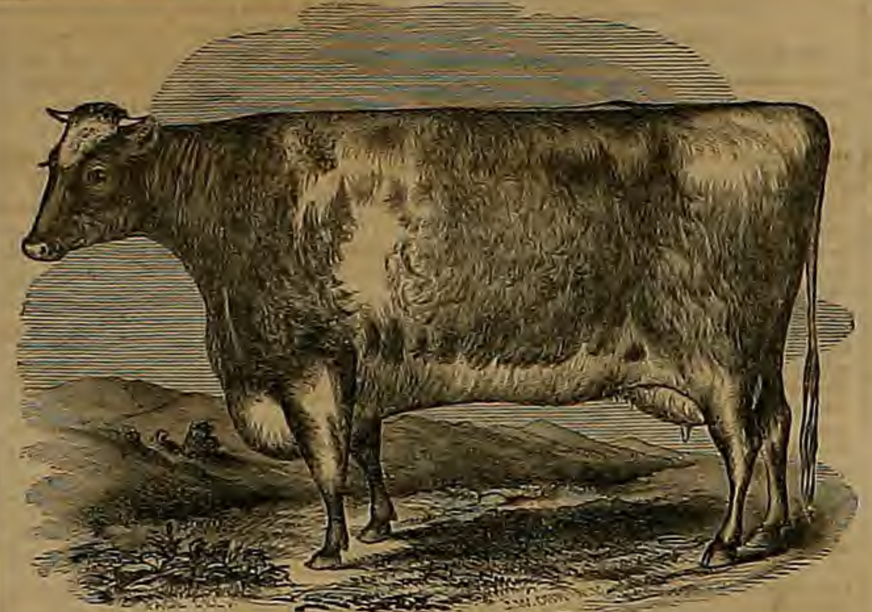
Now claiming to be but a tyro in the business in question, I wish it to be specially understood that I am writing mainly for the benefit of those who are as ignorant of its general principles and details as I was in January, 1859, when I had my ground (virgin-soil) cleared and broken up preparatory to my first essay at Vine-culture, if peradventure, any such can be found among your numerous readers. The ground was partially covered with different varieties of oaks, pines, manzanito, and some madrone trees, and the soil was deemed so poor by the wheat-growers of this valley, that it would not pay to fence and cultivate it. The plow, however, revealed a soil of considerable strength, of a dark brown color, in which quantities of pebble stones partially in a state of decomposition and quartz of different hues, and obsidian and other stones indicative of volcanic action were mingled.

The subsoil is very open and porous, and well water cannot be obtained in the dryest part of the season short of 25 to 30 feet below the surface, while in the wettest it is reached in from four to six.

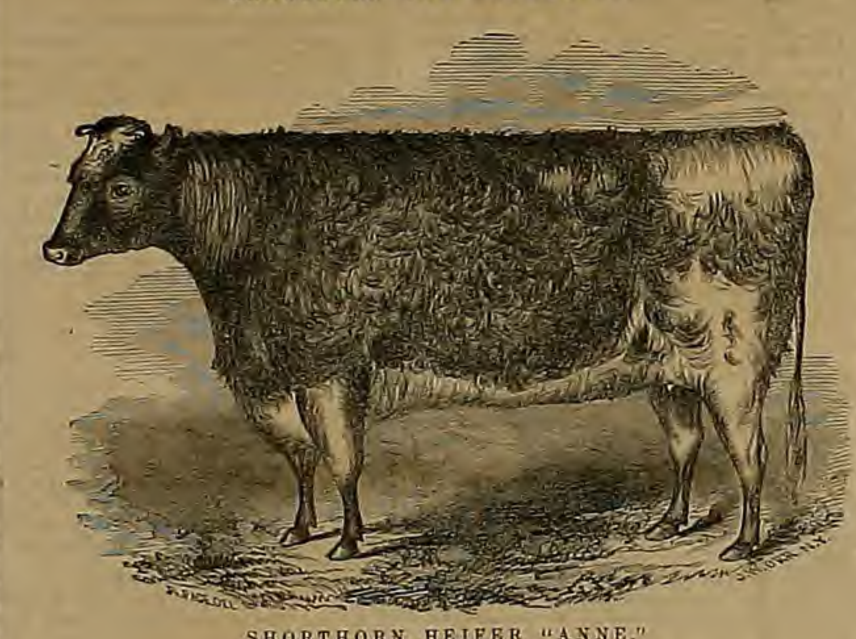
By the instruction of a friend who *claimed* to be an experienced *vigneron*, I had the ground (12 acres) surface plowed, harrowed, and furrows run seven feet apart. Some of them were tolerably straight, and none perhaps quite as serpentine as that made by the darkey who was directed to run a furrow to a cow when "de ole cow wouldent stan' still." Holes two to three feet deep and two inches or less in diameter were made with iron bars at the angles, and a cutting pushed down to the bottom of each, and earth rammed around it with a long stick. This gave the vine a little better chance to strike root than if it had been encased in a lead pipe. About all of them leaved out nevertheless, yet not more than one-half made roots, and were dead the next winter. Some that struck root and made pretty fair shoots, were found the next winter to be mouldy below the surface.

My planters knew no difference between long-jointed watersprouts, and well ripened short-jointed wood, for cuttings, and they knew about as much as I did. Neither did it matter with us whether a half-inch or four inches of blank wood was left below the bottom joint.

In February and March the next year (1860) I replanted by digging holes in the missing places two feet long and one and a-half deep. In the ends of each hole a good cutting was placed, the lower ends of each cutting firmly covered with surface-soil, then turned so as to bring the upper ends out together in a line of the row, and the holes filled. The cutting being thus bent is not in danger of being injured by the plow. They nearly all lived, and with the same cultivation that one in a place would have required. I obtained the next (which was last) winter some thousands of large vigorous virgin plants by removing one of these from each hill in which both had lived, and at an expense not equal to one-sixth of what I could have sold them for. G. B. C.



SHORTHORN COW "NYMPH 2D."



SHORTHORN HEIFER "ANNE."

Durham Cattle.

WE call attention to the beautiful Milch Cows that appear on the first page of this number. This is the kind of Dairy Stock that will pay for keeping; *common Stock will not pay.* If Dairymen had kept a strict account for two or three years, they would find that their common Stock had eaten their heads off. We know many cases of persons who have kept common Stock who have been ruined by it. We repeat, a Dairy of 30 good Cows is better than 150 common Cows; the cost of keeping is less, and the income more, thus securing a double gain.

We invite all who desire to succeed in the Dairy or Stock business to look to the matter of the Improved Stock.

We can show to all who desire to secure the best breeds of animals now in our State a list of the finest animals for sale, and many opportunities are now offering of securing the very best animals in the country.

◆

Root Crops for Dairy Stock.

WE are glad to hear from our subscriber in the following letter. We are glad to know that some attention is being paid to Root crops for stock by some of our Farmers; and it is to the great loss and discredit of many who have dairy stock that they should allow their stock to run down and often starve for want of food in the Autumn, when root crops, and even fodder could be raised so easily and cheaply. And it is also greatly to their loss and discredit that our State should be obliged to *Import Butter* by the thousands of firkinds every steamer in the Autumn to supply that demand of our own citizens, which a wise and judicious management of their own farms and stock would provide for them, and for which they could receive the thousands of gold that is now leaving our State to pay for *foreign Butter*.

The Sugar-Beet would produce from 30 to 50 tuns per acre; the Turnip 20 to 30 tuns; the Carrot 20 to 30 tuns per acre. As our subscriber says *he* uses the *Imported* Seed because he knows it is *pure and good*, while there is great risk in all the seed raised *here* of their being mixed and worthless. Too much pains cannot be given in order to get *pure and good Seed*. One pound, true to variety, fresh, and pure, and fully matured, is worth twenty pounds of an ordinary kind. Cheap seeds are of no account; better burn than plant them. It is a very great mistake in a Farmer to suppose he can raise all his seeds. It requires great knowledge and skill to grow and mature Seeds for Garden or field. It requires many years' study and as many more experience to understand the science of seeding. More hereafter.

EDITOR FARMER: Can you tell me the reason why the Farmers of California do not raise more Sugar-Beets, Carrots, and Turnips, for their stock than they do? In the Summer and Fall months their cows lose flesh and fail in their supply of milk, owing to the scarcity of grass, and of a consequence up goes the price of Butter to 75 cents and $1 per pound. On the contrary, if they fed their cows on plenty of Beets, Carrots, or Turnips, they would give as much milk in the Summer and Fall as they do during the Winter and Spring, and then we would have plenty of Butter at a fair price. I am a farmer and am making butter, and have realized some of these high prices, but I prefer to have a less price if we can only keep out this Importing Butter, when California ought to be able to supply from her own resources all the Butter that she can consume and even some for exportation besides.

Perhaps many of the Farmers may have planted enough seed to produce plenty of these root crops, but the seed may have been *promiscuously* raised and did not yield as well as the Imported Seed, which we all know produces tremendous crops. I know that the Farmers in the Eastern States as a general thing, prefer Imported Seed, to that raised by themselves, as they say it does so much better; and that accounts for such quantities of the Imported Seed being sold in the Eastern cities. I should like to hear your views as to these matters, and oblige a FARMER AND SUBSCRIBER.

◆

The Nonpareil Wheat—Good Yield.

WE have received several reports and some samples of the Nonpareil (a straw-braid wheat) which we sent out last spring to our subscribers. The following letter from our correspondent at Lower Lake tells of a yield of *nine pounds for one ounce*, and planted in March. We venture the assertion that if it had been planted in December the yield would have been nearly *double*. It was *too late* to expect the *half* the return given.

Our correspondent will find a remedy for Blindness in Cattle by referring to Number 24 of Volume XV of the FARMER. We recommend its trial; it will be found efficacious.

ED. FARMER: I planted about one ounce of the Nonpareil Wheat near the end of March last; it did not come up well, but after getting a start, grew finely and headed well. The heads were long and handsome, but I think rather loose, which might have been caused by late planting.

I cut it green, as the birds and squirrels were destroying it. I thrashed out nine pounds and four ounces, and think if it it could have stood until fully ripe, there would have been twelve pounds. The grains were not as plump as the seed sown, but I will give it another trial, and let it have a fair chance.

The grain crops in this locality were about middling. Prices range from one to two cents per pound, mostly barter, as there is very little cash to pap for anything. Feed is scarce, and many a poor cow will die for want of care and a little feed.

I hear considerable complaint about cattle going blind. Water commences to run from the eye, which in a few days becomes white, and is blind. I have seen several with one eye out, and have heard of those that were blind altogether.

We had a heavy rain on the 12th instant, and the land is in good order for the plow. O. S. C.

Lower Lake, Cal., Nov. 14, 1861.

◆

Unreliable Nursery Stock.

ONE of the greatest evils which Orchardists and Vineyard-planters suffer, arises from the wrong practiced by Nursereymen in sending out Trees, plants, and Vines, *incorrectly* named. Many persons in the Nursery business are undoubtedly in error themselves as to the true name of the Tree or Plant. Many are careless in their manner of labeling. Stakes are lost or mislaid. Labels get off, and in their haste many mistakes occur when the vendor does not mean to commit an error. But there are many who grow and peddle Trees who do not know one Tree from another; they hardly know an Apple-tree from a Pear-tree, and gross mistakes occur.

We have for years urged that buyers should avoid purchasing from peddlers, and auctions, and transient growers. A person who wishes to plant an Orchard or Vineyard, should bear in mind that he is planting for a future return, and a few cents, or even twice the cost of a tree, is nothing compared to the difference that will be returned to them in the crops of coming years.

We call to mind at this moment the difference between a few Apple-trees in two Orchards planted the same year. In the one instance, the purchasers planted six Apples, of fine form and thrifty, costing 75 cents each; the other bought twelve trees, at 25 cents each; this was in '56–'57. The present year, the crop of the first, the six trees, Red Astrachan and Strawberry Apples, yielded the splendid return of $256 beyond all expenses; whild the yield of the second, twelve trees, common varieties, yielded the planter the enormous sum of $10 25; a difference of $245 75 in favor of good reliable Trees. Never buy any but the best, and never buy except of old and well established Nursereymen.

We have for years refused to advertise any but the best. In a brief time we shall show to our readers such Nursereymen as they can rely upon.

We do not wonder that our correspondent feels sore. We visited his grounds last season and saw nearly 300 Cherry-trees which were sent him for genuine, but which were wrongly named, and far from what they were represented to be; and in addition, there were many Grape-Vines that were named as foreign varieties of the best kind, yet found only the Los Angeles. Besides this some of the Trees were full of worms, tree-louse, and scale, such as were a disgrace to any Nursereyman. But our correspondent speaks plainly, just the words needed now as the season of planting is near by. Hear what he says:

"With the planting-season upon us, it is of the utmost importance to many of your readers to get acquainted with reliable Nursereymen, men of principle and character, who would spurn for the sake of immediate profits to inflict a grievous injury upon their confiding customers, as the substitution of worthless varieties, untrue to name, or Trees so entirely neglected in the Nurserey as to resemble more gnarled brush than Fruit-trees; the stems infested with borers, with neither taproots nor side-roots, and in many instances entirely 'barked' by rabbits or gophers, would entail.

"The most obvious remedy would seem to be, to buy only from long-established, well-advertised Nurseries. But, alas! my own experience teaches me how fallacious such security is. To check this evil successfully, a kind of moral police, exercising its influence through through the pages of the FARMER, should be established. The consciencious Nursereyman would be approved, the fraudulent be known and exposed, and through self-interest be compelled to act honestly." *

◆

Nepaul Barley.

ALHAMBRA, Nov. 16, 1861.

ED. FARMER: I have the pleasure to send you a sample of Nepaul Barley, for the purpose of drawing the attention of Farmers to this valuable acquisition of cereals, so far but little known in our State. As a forage plant, it is far superior to the common Barley, from the absence of beard, which appendage is so obnoxious to tender hands, young chickens, and pigs. The straw is soft and nutritous, and is eaten with avidity by stock; its great productiveness and early ripening; also, being less objectionable if mixed with Wheat, as it does not materially deteriorate the quality of Flour. Respectfully, J. STRENTZEL.

We invite all who feel interested to call at our office and see the splendid samples; both a sheaf in the head, and a bag of the same, which are truly very superior. We wish our correspondent would have reported to us the quantity grown per acre.

Catching Fleas!

THE torments of the —— "——." Many persons who are annoyed by these lively little creatures whose constant practice is to present their "bills" to their *patients*, and shylock-like take their "very heart's blood," has been esteemed worthy the artist's pencil, and the famed picture of "catching fleas" has been classed as among the most laughable pictures of the times.

We have been favored at this time with a communication upon the subject of "Killing Fleas," by an esteemed lady friend, which we lay before our readers, and we hope some genius will go into the growing of the "plant" named, and thus make a "lucky strike" of it, as there can be no doubt of its efficacy and value.

Where's the man, that will grow the plant, that will make the powder, that will kill the Fleas?

Insect Killer.—It may not be generally known that the basis of "Lyon's Magnetic Powder" for the destruction of vermin, is a plant belonging to the same genus with the common ox-eyed daisy of our Eastern meadows. This plant is of easy culture, and, as it is a native of the Caucasian Mountains, about 5650 feet above the level of the sea, in a mean temperature of 68°, it would be very well adapted to the climate of California.

There are three species used for this purpose,—the Pyretheum carneum, the P. roseum, and the P. purpureum. They thrive well in Germany, Holland, and France, where they have been introduced, and are largely cultivated. This plant flowers in June, and is propagated by layers, as well as seeds. About two years ago there was a quantity of the seed at the Patent Office in Washington, which they were intending to distribute to different parts of the country. The advantages to be derived from its presence here are too obvious to require assertion. A quantity of the herb laid under the carpets or between our beds would effectually expel all unwelcome intruders, especially of the *back-biting* species, that swarm so among the magnetic winds and sands of California.

The powder is made from the dried flower-heads. The leaves are also used. One hundred square rods of soil will, it is said, produce 100 pounds of powder. Nearly 1,000,000 pounds of it is consumed in Russia alone, and twenty villages near Alexandropol, are engaged in its culture and preparation.

The effects upon its victims are extremely curious and interesting. Sprinkle a few grains on the back of the largest roach, and he will instantly whirl over on his back, struggle and die in a few seconds. A common fly treated in the same way, will at first spin around like a top, then suddenly stop and appear to be quite dead, which sometimes is actually the case; but usually the fly revives in a short time and runs about, pitching and staggering, vaulting and making somersaults quite blindly for a while; then he falls again, but presently revives. This is repeated a few times, and he even makes some short flights, so that he deceives you, and you may think him convalescent, but watch him a few minutes and you will see him drop somewhere, spin round more violently than before, and stop suddenly. He is dead.

The picturesque and artistic effects of musketo killing in New York, have been thought worthy of illustration with pen and pencil, but for real piquancy of effect commend me to the Flea-Hunting of California. PULOUS.

◆

Want of Sociability Among Farmers.

WE hear great complaints among the Farmers in our rural districts of the secluded life in which they live for the want of that good neighborly sociability to which they had been accustomed in their "old homes." This is, of all others, the last kind of complaints that should arise; and all that is needed in every community to bring about the needed reform, is for the residents in each neighborhood to throw off that cold formality and reserve, and visit each other in the true spirit of kindness, and make known the value of social intercourse. The loss to every community where there are no neighborly visits made from house to house cannot be computed in dollars and cents, for not only is there a pecuniary loss to a large amount by reason of a non-exchange of the general information upon farming topics, but there is a loss of intellectual and moral wealth, and of the highest social amenities of life that can never be estimated, and when lost can never be recovered. It is to be hoped that those who have felt the want of this higher life, will not permit the present winter to pass away without their making an effort to establish each in their own circle a series of friendly family visitings.

◆

The Grain Market.

FARMERS be wise! Improve every opportunity that is offered for your benefit. England and France want Grain, but there are limits to which purchasers are confined, beyond which they cannot go. Would it not be wise to keep the wheat moving abroad, even if growers send a part of their crops from time to time. Let Farmers consider well the condition of the market, and consider their own condition, and be governed by reason, and they will then act wisely and well. Our opinion we reiterate again, it is better to keep sending grain abroad, and thus relieve the country of our surplus, and relieve the Farmers of debt.

◆

LOOK FOR YOUR STOCK.—Stockmen should provide themselves with the famous Marine Glasses, by which they can see their Stock a distance of several miles. See Lawrence & Houseworth's advertisement of same.

California Notes.

BY ALEX. S. TAYLOR.

THE INDIANOLOGY OF CALIFORNIA

THIRD SERIES.

No. 62 of whole Series; continued from Farmer of Nov. 8, 1861.

XI.—K.

Miscellaneous.

HUMAN FOSSILS.

Gigantic Human Remains and Fossils in Mexico.

Clavijero says, there have been Spanish writers who, building upon the traditions of the natives and upon the discovery of bones, skulls, and entire skeletons, of prodigious size which have been dug up at different times in *many parts* of New Spain, have imagined that the first inhabitants of that country were giants. I, for my own part, have no doubt of their existence there, as well as in other parts of the New World, but we can neither form any conjecture as to the time in which they lived, although we have reason to believe they must be very ancient, though not existing as whole nations of people, but rather as exceptions.

The places where gigantic skeletons (human) have been found in New Spain, are, Atlancatepec (a village in the Province of Tlascala, Tezcuco,) Toluca, Quaubximalpan, and in our days (1750–1786) upon a hill in Lower California, not far from the Mission of San Ignacio de Kadakaman, in the year 1765. I know from the testimony of innumerable writers, and particularly of two eye-witnesses of unquestionable credit, Hernandez and D'Acosta (Spanish-American writers), who were men of learning, correctness, and veracity, that human skulls, and even whole skeletons, of astonishing size, have been found in New Spain (vide History of Mexico, vol. I). I know also that some of the great bones above mentioned have been found in tombs which appear evidently to have been made on purpose; but I am yet to learn of tombs ever having been constructed for hippopotamus, elephants, or any other animals of uncommon sizes, as has been intimated was the case by European philosophers, when treating of these Mexican remains. Among the civilized nations of America, it was a current tradition that a race of men had existed in former times of extraordinary hight and bulk (see p. 111, Vol. I. of Clavijero's Mexico).

A fact of this kind is related in the second series of Indianology as occurring in Tuolumne county, in Dec., 1860, and is noted in connection with Clavijero's detailed account of the Lower California skeleton of Kadakaman.

A correspondent in Hutching's California Magazine for March, 1858, relates the discovery of a human collar-bone in Nov., 1857, one thousand feet beneath the forest-covered surface of the Mountain, and as many feet more above Cañon and Oregon Creeks. It was made by some miners while drifting in Keystone Tunnel, at Smith's Flat, Sierra county (41° N. in the Sierra Nevada), in a perfectly sound state among the gravel-drift of an ancient river-bed under the mountain.

The Gigantic Human Remains of the Canary Islands and other Countries.

Prichard, in his Natural History of Man, vol. I., p. 272, says that Scorey, an old voyager-author, ante 1500, was assured that in the sepulcher of the Kings of Guiman, of the old race of the Guanches, in the Canary Islands, where embalmed and preserved bodies were found in great numbers (1750–1820), a skeleton was found measuring fifteen feet, the skull of which contained 80 teeth. Some of the Guanche bodies were found with the back and breast covered with hair. It is stated that the Guanches of Teneriffe were a people of gigantic stature. The population given by the old authors was, for the whole Canary group, 14,000 people; or 5000 for Teneriffe, and 9000 for Grand Canary, etc.

This subject of gigantic human remains is well worth searching out by a competent European scholar, who has immense libraries of the Old and New World books at his command. A complete account should be given of each instance in the very words of each author. For ourselves, we believe that such a research will confirm the Bible accounts, and in the future we may look for their actual remains to be found.

Note of 1 July, 1861.

For many years past, strange stories have circulated of the existence of petrified human skeletons on the ocean beach immediately above Santa Barbara town, near the Calera or lime-burnings. On On a personal examination of these remains a few days ago, we found them indeed curious and interesting, but they *were not human fossils*, but those of Cetaci or Phocidi. These remains were found under the sea-cliffs, immediately on the sea-shore, and in the vicinity of the Volcanita de Azulfre, where sulphurous fumes are often given out plentifully, and which discolors all the rocky formations of the vicinity, and is the center of old volcanic action, known to the Californians for the last seventy years.

These remains are extraordinarily abundant, and are found imbedded in sandstone and clay-rocks, which have become completely silicated or petrified. Some of them are found on the surface, as in that of a small seal, with the distinct impression of the ribs of the chest, looking very human; while other are under the sedimentary layers of the deposited clay while in suspension in the ancient times, and set good five feet in the center of the bowlders. Great quantities of fine limestone formations are found with coarse quartz veins, not only in the vicinity, but are found penetrating in many parts of the formations where these remains so abundantly show themselves by the sea-side.

The Country of Cinnabar.

Clavijero, in his History of Mexico, makes the following note on the Tlahuican nation, who inhabited portions of the Valley of Mexico, anterior to the arrival of the Mexican Aztecs. All the Mexican nations preserved traditions of their emigration from Northern countries:

"The Tlahuicas, from the land Tlahuican, so called from its abounding in Cinnabar (possibly a district in Sonora, or the lands north of the Gila, or of the Californias—A. S. T.). Tlahuitl is the Mexican name of Cinnabar, and Tlahuican means the place or country of Cinnabar. Some authors call them Tlahuicas, and derive the name from a place of that country called Tlalhuic, but besides that we never heard of such a place, the name does not appear conforming with the language (of the Mexican Aztecs)."

It would be a very curious subject of inquiry to note down the term for Cinnabar among the various Indian tribes of Sonora and California, as throwing a light on this matter, for no part of the earth can compare to Sonora and California in the production of mercurial minerals.

Fossil Human Bones.

The Grass Valley National of Sept., 1861, says: J. Ware brought into our office on Monday, a large piece of petrified wood, apparently cedar, which was taken from the earth at a depth of 63 feet, near Red Dog. What is very peculiar about this relic is the fact, that, imbedded in the very center of it, and ranging longitudinally with it, is what appears to be the forearm bone of some human being, with the ball of the socket-joint complete. The interior of the bone, where the marrow should be, is perfectly crystalized. This apparent bone is also thoroughly petrified. Good judges differ as to whether it is an actual bone-formation, or only the heart of the ancient tree. The illusion, if illusion it is, is complete, and the relic certainly a most remarkable one. Mr. Ware also exhibited to us, in connection with the above, a piece of petrified sugar-pine, with the resin completely crystalized.

Remains of the Ancient Indians in Placer County.

An ancient skillet, made of lava, hard as iron, circular, with a spout and three legs, was washed out of a deep claim at Forest Hill, a few days since. It will be sent to the State Fair, as a specimen of crockery used in the mines, several thousand years ago.—[Sept., 1861.

Hint to Artists.

It is highly desirable that photographers should take copies of all such remains, as they are of the highest interest to science, if properly marked, located, and dated. Such sketches will always sell with illustrated journals and Museum speculators.

HOW THE NEVADA TERRITORY INDIANS FIGHT.

A correspondent of the S. F. Evening Bulletin, writing from Fort Crook, in the Pitt River country, 11th Aug., 1861, details an account of a fight with the Indians of that section (to the Eastward), of which the following is an extract:

Poisoned Arrows.

Lieut. Kellogg. This energetic officer, prompt to obey the dictates of humanity, immediately dispatched Lieut. Feilner, with 21 men, in pursuit of the red-skinned vampires, who had committed the double crime of theft and murder. One of the drovers died from the effects of his wounds on the 6th inst. He was wounded with poisoned arrows.

It may be of some interest to know with what substance the Indians poison their arrows, and how they do it. The substance is rattlesnake poison, and they make use of it in the following manner: When they kill a deer, antelope, or any other animal of the kind, they fix the liver on the point of a stick, and place it in front of a rattlesnake; then they tease his snakeship until he has bitten the liver several times. The liver is then left in the sun until it is putrid, when the Indians smear their arrows with the putrid mass, and set them in the sun to dry.

* * * * * * * * *

The Pursuit.

Immediately after the above statement was made, the commanding officer dispatched Sergeant Kane and the Hospital Steward (with the proper remedies for poisoned-arrow wounds) in search of Lieut. Feilner and his command. The Sergeant and Hospital Steward returned on the night of the 11th inst., and report as follows: On the 9th, left Fort Crook at 11 A. M., and crossed the mountain into Big or Round Valley; tracked the command in a northeasterly direction for about thirty miles; camped a little after dark. Next day passed through Pitt River Cañon, to the entrance into Upper Pitt River Valley. Found eight head of cattle that had been killed by the Indians. Followed up the trail, and saw the swamp where Lieut. Feilner made his grand charge, and left the enemy on the field. Took a northeasterly direction toward Goose Lake for about five miles. Owing to the immense number of cattle that had passed over the trail at this point, the horse-tracks were completely obliterated, and it was impossible to track the command any further. Having no alternative but to return to the post, they turned about and traveled till 9 P. M. Although they had not seen an Indian during the day, they were confident that there were plenty of them around, for the grass had been set on fire on the trail they had passed over in their morning travel. Left camp at 5 A. M., and passed through the cañon. At 11 A. M., entered into the trail in Big or Round Valley, when they met two Indians. Not knowing how many Indians there might be in the brush, they advanced pistol in hand. The Indians were armed with bows and arrows, and did not appear to like the appearance of the six-shooters. They said that there were a great many Indians coming on behind them. These two were allowed to pass, as there were four mounted Indians with rifles who came charging over over a little knoll which the trail crossed. The chief sprung from his horse and asked them (the Sergeant and Steward) to stop and have a talk, but they declined being caught in an Indian trap, and started off at a gallop, when there was a yell heard that made the earth quake. Ascending a little knoll, they saw the trail lined for three miles with parties of Indians, four and eight in a party, each party about 500 yards apart. All were mounted, and most of them had rifles. Those whom they had passed came after them at their utmost speed, whooping and yelling like so many fiends, while those in advance took up the war-cry and tried to head them off; but having fleet horses, they run the gauntlet without receiving a scratch.

Not wishing to keep the trail after the ordeal they had passed through, they crossed the river and took a southwestly direction, across a small mountain, which they hoped would bring them into the open prairie, which it did. But just as they got down into the valley, they saw two Indians riding carelessly along, apparently not paying any attention to them. Yet they had a sharp eye on the Indians, being well aware that "Vigilance was the price of Liberty" in their particular case. About a mile to their left they saw a cloud of dust rise from behind a clump of willows in a sharp bend of the river, and in an instant after about 50 Indians came toward them, whooping and yelling, and urging their horses to their utmost speed. The contest that ensued was unequal—their horses did their best, and soon increased the distance between the pursuers and pursued. Just as they thought that they could safely slacken their pace, and at the same time keep the Indians at a proper distance, they found themselves in a perfect network of sloughs. Every way that they turned there was a slough in the way. Thus, although they were in the open prairie, they were actually caught in a corner. Here they came to the conclusion to charge through the Indians if possible; and if they could not, they would sell their lives as dear as possible. They then advanced slowly towards the Indians, who saw their dilemma, and when about 300 yards distant, the Indians gave a yell, which they suppose was intended for their death-knell; but it had the contrary effect. Their horses took fright, and *a la* Putnam, cleared the slough at a single bound, leaving a barrier between them and the Indians that defied pursuit.

Just as they were congratulating each other upon getting clear so far, they were reminded that they had violated the old adage which says, "Don't halloo before you get out of the woods," for another party of Indians were seen coming towards them at full speed. Here, again, they ran the gauntlet successfully. Their horses being considerably jaded, they crossed the river in the vain hope that if there were any more Indians on the trail, they would not cross the river in pursuit of them; but in this particular they deceived themselves. Having rode about two miles from where they crossed they river, they saw a band of Indians on the opposite side of the stream, who did not appear to notice them. The willows on the bank of the river being very thick and high, the Indians disappeared for a moment; but they soon informed the Sergeant and Steward of their whereabouts by pushing their heads through the willows, whooping and yelling in the wildest manner. Here, again, horse-flesh stood the test, and distanced them about half a mile in five.

HOW THE APACHES FIGHT IN EASTERN ARIZONA.

The Massacre at Cook's Springs.

From Messrs. Daguerre and Thibault, who last week passed the scene of the late massacre at Cook's Springs of the San Antonio and San Diego mail party, we have received further particulars of that terrible deed. These gentlemen buried the bodies. They describe the encounter as having evidently been a most desperate struggle. It had occurred several days before they passed. It would seem that the Indians first succeeded in stampeding the mules; the coach was upset, and the pole breaking, the Indians probably followed the mules, giving the mail party time to secure their arms and retreat to a hill, where they built a small rock wall. The fight appears to have lasted two days. All about this wall the ground was strewn with battered bullets. Every rock and stone within many yards, which could have partially secreted an Indian, had bullets lying near. One small tree, some 150 yards from the wall, had the marks of eleven balls on it. The horrors and sufferings which these men must have undergone is inexpressible. Nearly all had their arms broken; all were wounded in the arms, and had been shot through the head. Four of the bodies were found within the wall; one in front of it, and two some fifty yards in the rear. It is supposed that the Indians numbered at least one hundred.—[Mesilla Times, Sept., 1861.

[TO BE CONTINUED.]

◆

The Riches of the West.

THE West is sharing in the activity manifest in the manufacturing districts. The surplus of farm products, essential to sustain a large army, in the hands of the producers at the commencement of the troubles, was immense. The wheat crop of the present year, though not so large as heretofore, and in some sections seriously injured by the late rains, will yield a fair amount for shipment, and the world can draw on the West for any amount of corn without any fear of having the drafts dishonored. Beef, pork, and provisions of all kinds are in full supply, and no fear should be entertained that the Government will need supplies, even for a million of men, should that number be needed to put down the rebellion. Our armies will consume most of the produce from the West which in former years has gone to a Southern market. In addition to what the Eastern States and the grand army will require of the products of the West, it is now certain that both England and France will be large purchasers of our cereals. Prices here, stimulated by this foreign demand, would be satisfactory and highly remunerative, were it not for the enormous freights caused by a scarcity of vessels and the clogging of railways by the immense shipments which have been pressing on to the seaboard. But, like all other evils of this class, by another season it will have cured itself, and the charges for freight will no longer consume nearly all the profits of the farmers. So far, therefore, as the present prospects will warrant an opinion, the West can cheerfully wait the progress of current events. She has an abundance of food, and our own country and Europe are likely to require all she can spare. The money for our surplus is rapidly placing the West in an independent position, and with the economy and the energy practiced by our people for the past few years, they have every reason to hope for substantial prosperity. Let the Government vigorously prosecute the war against the traitors. The West is ready and most willing to do her part of the fighting, and to bear her share of the burdens. Let the rebellion be put down, cost whatever it may of blood and treasure.—[Chicago Tribune.

◆

RECENT ENGLISH RAM LETTINGS.—The Ram lettings in the Eastern counties continue to show, as stated recently in the Times, a great development of enterprise on the part of Sheep-breeders and the Agricultural interest generally. At the letting of the Tathwell rams, for instance, the 117 offered made a total of £1200, being an average of £10 7s each. The highest price for shearlings was £27, and the highest price for two shears and upwards was £55. At the annual Biscathorpe ram letting, 120 fine animals were offered, and several of the shearlings were let at prices ranging from £20 to £30 each, one lot realizing £42, another £50, and a third £71. The two and three shears also went off well, three lots making upwards of £30 each, and another lot £52 10s. The shearlings averaged £15 1s 4d, the two shears £14 13s 10d, and the three shears £14 14s 7d each. The total sum realized for the 120 lots offered was £1786 10s, and the average was higher than at any previous letting at Biscathorpe, having been £14 17s 9d in 1861, £13 12s 6d in 1860, £14 14s in 1859, and £11 9s 4d in 1858. Mr William Torr, another well known Lincolnshire breeder, has held his letting in the course of the last few days, and offered 40 shearlings, 24 two shears, and 26 three shears and upwards. For some reason best known to himself, Mr. Torr—who is known throughout England as "Torr of Aylesbury"—did not conduct his letting publicly, but put his rams off by private contract. It was stated, however, that the average price obtained was satisfactory. Taking into consideration the increasing prices paid at these lettings, there seems little reason to doubt that the Agricultural interest, notwithstanding the unfortunate barvest of last year, is still in a satisfactory and buoyant condition, and has abundant resources at command. The good prices obtained for Meat and Wool have caused additional attention to be devoted to their production, and hence the high prices willingly paid for first-class rams, from which Sheep calculated to yield the utmost possible amount of mutton and the heaviest fleeces are likely to spring.—[The Field.

GREAT SALE OF HEREFORD STOCK.—The great Hereford sale at Cronkhill, as we learn from our English exchanges, resulted as follows: First day, 104 head old and young, sold for £2959 17s; Second day, 42 Heifers, sold for £1018, and 34 Bulls for £1353; Being an aggregate for 180 head, in round numbers, of about $26,800, and an average of not quite $150 per head all around; about $135 per head for females, and about $195 per head for males. The highest prices paid were 100 guineas for the bull Retribution, and 70 guineas for the bull Canning, both to go to Australia. Several head were purchased for Fred. Wm. Stone, Esq., of Canada West, who was the only purchaser whose name we find as coming from this side of the Atlantic; his purchases were, Jenny, for 26 guineas; Agatha, 30 guineas; Graceful, 23 guineas; Wildrose and Sweetheart, heifers, at 40 guineas each; and the bull Sailor, at 20 guineas. Among other purchasers were, Col. Hood for the Windsor Farm of Prince Albert, and many prominent land-owners and occupants of the neighborhood. The prices are probably all that could have been hoped, on so large a sale, while they are very possibly below the standard of value at which the late Lord Berwick would in many instances have rated the individual members of the herd. The sale also included a flock of about 600 Sheep, chiefly Shropshire, about one-half breeding-ewes; "a lot of handsome white Berkshire Pigs;" some dairy Cows and Heifers, and half a dozen Bretonne Cattle.

CALIFORNIA WINE.—It must be gratifying to Wine-growers in the State to know that their Wines are beginning to attract attention in the East. Speaking of some of Sansevaine Bros.' brand, which was on sale at a house in New York city, the Times remarks that "It is a White Wine of very excellent quality; decidedly better than the ordinary German Wines sold at anything like the same price, and eminently worthy the attention of the public."

Is the Supply of Plant-Food in the Soil Inexhaustible?

[WE select the following from the Irish Country Gentleman's Newspaper and Weekly Agricultural Review. Although prepared for the "Old Country," it will apply as well to California in the facts shown as to the crops removing certain substances from the soil. It will be found interesting to Grain-growers:]

"Agriculturists ought to know that a field will indeed lose its productive power when left altogether unmanured.—[COLUMELLA.

There are not a few of the most scientific and practical Farmers of the present day who believe that the application of manure to the purpose of fertilizing the soil is a useless expenditure of time and money.

If such a belief rests upon a foundation of fact, what an enormous amount of motive power has not mankind uselessly expended in the operation of manuring the soil—for the practice (notwithstanding Hesiod's silence on the subject) is as old as Homer! If it be true, we must cease to sympathize with Professor Daubeny and the other denouncers of Hercules, for the enormous losses occasioned to Agriculture by his reckless cleansing of the Augean stable.

The question, whether or not thorough tillage is capable of wholly superseding manure, is one of such vast importance to the whole community—for the rural and urban populations are equally concerned in the production of food—that its satisfactory solution would be one of the most important contributions to the science of our times. Let us see what we can do in placing the matter in a clear light before our readers.

There are two questions which the Agriculturist who combines in himself the knowledge of the man of science and the practical Farmer can readily answer. They are as follows: *What* is a fertile soil? One which is capable of yielding a long succession of crops without receiving manure in return. *Why* is such a soil fertile? Because it contains in *notable* quantities, and in an *available* condition, *all* the materials required to build up the vegetable fabric.

If we then admit what is indeed incontrovertible, that the fertility of soils is dependent on their containing a *certain* amount of matter capable of being used as food of plants; and as it is equally true, that a certain portion of this stock of nutriment is annually removed in the shape of crops, the inquiry is narrowed down (to our mind) to the simple question of the amount of food required by the crop, and the quantity of food contained in the soil.

Although it is generally considered that Wheat exhausts the land to a greater extent than any other crop, it is a fact that there are but few crops which remove less mineral matter from the soil; this will be evident from the following table:

CROP.	Pounds of mineral matter removed from a statute acre.	Including Phosphoric Acid.	Including Potash.
Wheat......	150	20	33
Potatoes	180	72	100
Oats	200	34	42
Hay.........	400	28	136
Turnips	450	42	130

Now, if we take as an experimental crop that which least exhausts the soil of its mineral matter, and if we compare the amount of nutriment which it annually requires, with the stock on hand, so to speak, in the soil, it becomes a simple matter of calculation how long such a crop can be grown. And this being determined, the important point arises—during what period of time can the crop be economically raised?

Disregarding such substances as lime, magnesia, and silica, which either occur abundantly in soils, or may be inexpensively added thereto, the two substances, the supplies of which in the soil chiefly concern us, are Phosphoric Acid and Potash. The first of these is rarely found to constitute more than a half per cent of the so-called fertile soils; in many of them it exists to the extent of but one-fourth of one per cent; and, in most of the light soils in this country, it forms scarcely two-thousandths of their weight.

In a soil containing a quarter per cent of Phosphoric Acid (and this we take to be the average proportion of this ingredient in Irish soils, at least), we have a quantity equal to that contained in nearly three hundred crops of Wheat. But are we to assume that Wheat-crops could be grown in such soils for three hundred years without manure? Assuredly not, and for the following reason: It has been clearly proved that plants must have their nutriment brought into absolute contact with the spongioles, or little openings at the extremities of their roots. It has also been shown that the water which percolates through the soil does not perform the office (until lately ascribed to it) of bringing the nutriment of the plants to their roots, but that the latter are obliged to go in quest of their food. From this it is evident that the greater amount of absorbing root-surface possessed by a crop, the less necessary it is te supply the soil in which they grow with manure.

Granting that a field contains a sufficient quantity of Phosphoric acid to supply the wants of 300 crops, it is evident that the plants forming the 300th crop must have their rootlets at some time during the period of their growth in absolute contact with every particle of the soil. But it requires no argument to prove the utter impossibility of this. Therefore, although a soil might contain a quantity of Phosphoric acid more than sufficient to supply the wants of a crop of Wheat, yet as the latter is not capable of throwing out a sufficient number of rootlets with which to gather all the Phosphoric Acid contained in the soil, the crop cannot be brought to maturity, and the soil will be considered *absolutely* barren.

The fact, that the addition to a fertile soil of four or five hundred-weight of Guano, or Superphosphate of Lime, increases to a very sensible extent the amount of the crop grown upon it, whilst this manurial application to a (chemically) barren soil will produce no effect whatever, is a striking proof that the soil must contain a much larger quantity of fertilizing matter than is necessary to make up the mineral portion of one, two, or even twenty crops. This would not be the case if the food of plants were conveyed to them by the water which moves through the soil, or were the vegetable mechanisms enabled to place themselves in contact with every particle of the soil.

◆

COATING FOR FENCE POSTS.—It is said that hydraulic cement makes a hard and durable paint, mixed with flaxseed oil, for woodwork and outdoor machinery much exposed to weather, and is impervious to water. After once mixing it with water, and suffering it to harden, it cannot be again dissolved, and on plastering cisterns when fully dried, it is there for all time, and as hard as adamant. A writer proposes the preparing a solution of this cement in water, and give the fence-posts several successive dippings, to the depth they are to stand in the ground—might it not make some of the less durable timber more durable for posts—equally so with the yellow locust or cedar? The materials are cheap, and it is easy to try it.

The Cinnamon Crop in Ceylon.

THE cinnamon gardens in the neighborood of Columbo, although for the most part gone to decay, nevertheless impart to the whole scene a singularly cheerful, agreeable aspect. The bushes, from four to six feet in hight, with their smooth, beautiful, light green leaves, resembling those of the bay-tree, and their pale yellow flower-stamens shoot up doubly fresh and succulent, from the snow-white quartz soil in which they best thrive. The flowering season of the cinnamon is in January, and the fruit ripens in April, when the sap is richest in the shrub. In May the boughs are begun to be "barked," which process continues till October. The pruning and gathering of the yearling shoots, which are about the thickness of a man's thumb, is very laborious, and employs many hands. Each laborer cuts off as many as he can conveniently carry in a bundle, then, with the point of a crooked knife, made for the express purpose, strips the entire rind from the wood, carefully scrapes off the exterior corticle and innermost layer, and lays the stripped-off cinnamon rind, now reduced to the thickness of parchment, in the sun, where it dries and curls together.

All around the hut, in which the peeling of the rind is carried on, is diffused a most exquisite aroma, caused by the breaking of the leaves or twigs. What is related, however, by travelers of the fragrance of the cinnamon forests, which they have scented at a great distance seaward, would seem to indicate that this delicious odor emanates from various other aromatic plants in which Ceylon is so rich, rather than the cinnamon groves, the aroma of which, indeed, is not perceptible beyond the immediate vicinity. The best description of cinnamon is not so thick as stout paper; and is fine-grained, flexible, light-brown or golden yellow, sweet and pungent; the coarser qualities are thick-skinned, dark-brown, acrid, stinging, and leave a bitter aftertaste. In the warehouses, the cinnamon rinds and canes sorted for shipping are piled upon each other, packed in bales of about 90 pounds weight each, and carefully sewed. In all cavities and spaces between each layer an immense quantity of pepper is strewn, to preserve the cinnamon during its sea voyage, by which both spices are benefited, the black pepper absorbing all the superfluous moisture, and gaining by the fragrance of the cinnamon.

◆

Cloves.

CLOVES are unopened flowers of a small evergreen tree that resembles in appearance the laurel or the bay. It is a native of the Molucca, or Spice Islands, but has been carried to all the warmer parts of the world, and is largely cultivated in the tropical regions of America. The flowers are small in size, and grow in large numbers, in clusters at the very end of the branches. The cloves we use are flowers gathered before they are opened, and whilst they are still green. After being gathered they are smoked by a wood fire, and then dried in the sun. Each consists of two parts, a round head, which is the four petals or leaves of the flowers rolled up, inclosing a number of small stocks or filaments. The other part of the clove is terminated with four points, and is, in fact, the flower cup and the unripe seed vessel. All these parts may be distinctly shown, if a few leaves are soaked a short time in hot water, when the leaves of the flowers soften and readily unroll. The smell of cloves is very strong and aromatic, but not unpleasant. Their taste is pungent, acrid, and lasting. Both the taste and smell depend upon the quantity of oil they contain. Sometimes the oil is separated from the cloves before they are sold, and the odor and taste in consequence is much weakened by this proceeding.

◆

THE BUSINESS PROGRESSING.—The present year the cultivation of Sorghum or the Chinese Sugar-Cane, has so greatly increased throughout the Western States as to make it a crop of considerable importance. The States of Ohio, Illinois, Indiana, Iowa, &c., will very nearly if not quite supply all the molasses that they need; and in certain localities sugar also. In Chester county in this State (Pa.), the present year, we see it stated that the crop was so extensive that Mr. James Cloud, near Cochranville, has established a steam molasses manufactory, and that it is running day and night! The fine fall has been extremely favorable for thoroughly maturing the cane, but a little frost upon it we believe does not damage it—some say it is even beneficial.—[Germantown Telegraph.

A USEFUL DISCOVERY.—It is known that turpentine is a contraband article—the product of North Carolina mainly. It has been considered an essential article in mixing paints, and since the rebellion, has advanced from thirty cents per gallon to $1 25, or even higher at retail. The supply in the East has because nearly exhausted. It is now stated by painters who have tried it, that the naptha or benzole, as it is generally called, taken from the Petroleum oil, is equally as good, and on some accounts better than the turpentine, and we observe the Pennsylvania and Ohio papers say it is in general use among all painters. In the car works at Cleveland and Pittsburg, it is entirely used.—[Albany Argus.

PRODUCT OF A HOG.—S. Comstock, Esq., of Watsonville, says the Monterey Union, had a Hog weighing 300 pounds gross, which he had tried into lard, and the comparative profit of selling Hogs on foot, or trying them into lard, is as follows: price, on foot, 4 cents per pound, gross, $12. Lard produced, 160 pounds, at 20 cents, $32. Carcass of Hog, $5. Total value of Hog, $37. Expense for killing Hog, $2 50, and sixteen 10-pound cans, at 25 cents each, $4, total $6 50. Value of Hog, tried, $31 50. Take off price on foot, $12. Clear profit in favor of trying, $19 50. This experiment might be profitable to our Hog-dealers.

GEORGE WILKES in a late letter, says there are in Washington 11,000 horses and 3000 mules belonging to the Government. They are cared for by 2000 men. There are also 2000 army wagons and 700 ambulances. The horses cost $120 each, and the Government has got the worth of its money. The Government pay for hay delivered there $20 per thousand, while private parties have to pay $25, and for oats 43 cents per bushel, while private parties cannot purchase them at less than 50 to 52 cents.

HENRY MEIGGS has made a contract with the Government of Chile, in which he agrees to complete the Valparaiso and Santiago Railroad in four years, for $4,500,000, exclusive of the salaries of engineers; but should the Government wish the road completed in three years, he is to have an additional sum of $500,000.

GREAT HUMBUG.—The Memphis Avalanche of October 5th, pronounces the "peace" parties in the Federal States "arrant humbugs," and says "they may hold their Conventions, whine about peace, and pass their canting resolutions until doomsday, but will never effect a peace on their terms."

THE United States steamer State of Georgia has been robbed of her entire silver plate, valued at $1000. No clue whatever to the robbery has been discovered.

THE Second Regiment New Hampshire Volunteers has sent home more than $12,000 of the last payment. Difficult to put a genuine Yankee where he can't save up a little something.

Conflict and Coronation of the Art-Discoverer.

[CONTINUED.]

The French King wanted money for his wars, and the salt marshes of Saintonge were capable of yielding it; so it was determined to have them surveyed, in order to the adjustment of the famous gabelle or salt-tax. And who so fitted for this work as Palissy, the surveyor? And singularly enough, the King's commissioner came just at the right time. A few days before, and in the agony of his last desperate experiment, he would not have left his furnace, even for the King himself. But his last experiment had failed; his council with prudence had been held, and his surrender to Madame Palissy duly made. He thankfully, therefore, accepted the appointment "to map the islands and the country surrounding all the salt-marshes in his part of the world"; and thus, for about a year and-a-half, he plentifully fed his children, and sufficiently clothed his wife, and at the same time diversified his own studies; for, you will remember, that he was a great naturalist, and he knew how to find both "tongues in trees" and "sermons in stones." He studied, therefore, the geology of the district, and more especially the earths in the salt-marshes of Saintonge, whereof he has given to the world an account in his "Essays on Manures and on Divers Salts." He became, in short, a kind of anticipatory Liebig.

For a year and-a-half, then, Palissy was outwardly and conjugally a happy man, regularly employed and regularly paid; but, alas! genius is like conscience—whatever sop you give it, it refuses to be permanently quieted. The fire, during these eighteen months, has been secretly smoldering, and every louis saved had been fuel heaped upon it; and to the dismay of Madame Palissy, it broke out afresh, and fiercer than ever. "Then," says Palissy, "when the said commission was ended, and I found myself paid with a little money, I resumed my affection for pursuing in the track of the enamels." The sure instinct of victory that blinded Nelson to the signal that would have kept him from battle, blinded Palissy to all that his family might suffer. What wonder that poor Madame Palissy stood aghast! If his was a martyrdom of determination, was not hers a martyrdom of endurance—and uninformed by the intelligence, unsustained by the instinctive hope, uninspired by the noble ambition that animated him?

What, if she did remonstrate, or even scold! Could flesh and blood endure to see home stripped desolate again, and children starved? Startling enough was the first symptom of the outbreak. "I broke," says he, "about three dozen earthen pots, all of them new, and having ground a large quantity of different materials, I covered all the bits of the said pots with my chemicals, laid on with a brush." Three or four hundred pieces, with various mixtures of chemicals laid on them, were carried to the glass-houses, in the hope that some one might chance to prove the right combination, and that its intenser heat might melt them. "Then," he continues, "since their furnaces are much hotter than those of potters, the next day, when I had drawn them out, I observed that some of my compounds had begun to melt; and, for this cause, I was still more encouraged to search for the white enamel upon which I had spent so much labor."

For two years more, then, Palissy persevered, and Madame Palissy was provoked; for children were multiplying annually, subject only to the sad subtraction of two, whom he buried. She lived as women live whose husbands bring home no wages, and who have no faith to follow the footsteps of genius. His whole time was consumed in preparing chemicals, and burning them. His wife thought him heartless; his neighbors thought him mad.

For five years he had walked this dark and arduous path—three of them without any encouragement at all, and two with only the encouragement that some of his chemicals had melted. But when did the alchemist ever complain either of the cost of his experiments, the fumes of his furnace, or the wasting of his years? Success at last will more than compensate a lifetime of toil. But, then, alchemists are not often married. Newton may forget his own dinner; but there is no children's dinner to forget. Diamond can care for himself. The Penates, under the leadership of Madame Palissy, were about to conquer again. And again poor Palissy is brought to the resolution of a *last* experiment; and promising his wife that if it fail, he will, like a good and sensible man, make the best of glass-painting and land-surveying. But this last effort must be a great one; there is a fearful destruction among the pots—a crucial quest for chemicals, three hundred different combinations of which are prepared, and duly marked and registered.

Again, then, we imagine the patient philosopher, having prepared the sacrifice to his patience, about to offer it—but, as his poor wife thought, to the Moloch of their home. Pale with long vigils, having "outwatched the bear" over his furnace fires, his man bearing this holocaust of his hopes, he reaches the furnace; the grim glass-blowers deposit them, and for some hours he has no refuge from their gibes; he adjusts himself for a patient watching. The first hour passes, and the second, and the third, and the fourth, when the furnace is opened that he may look at his potsherds. One of his chemicals at least has decidedly melted; but, then, they have melted before, and there is not much in that; at all events he will take it out to cool. It gradually hardens; it grows unusually white. *Eureka!*—he has found it; it is transparent and beautiful, white and polished; in a word—white enamel.

But he himself must tell us what he felt and did. "For two years I did nothing but go and come between my house and the adjacent glass-houses, aiming to succeed in my intentions. God willed that, when I had begun to lose my courage, and was gone for the last time to a glass-furnace, having a man with me carrying more than three hundred kinds of trial pieces, there was one among those pieces which was melted within four hours after it had been placed in the furnace, which trial turned out white and polished in a way that caused me such joy as made me think I was become a new creature; and I thought that, from that time, I had the full perfection of the white enamel; but I was very far from having what I thought."

One wonders in what way he would exhibit his discovery to Madame Palissy, or in what way she would receive it. The blessing to her was somewhat inscrutable. Had he not succeeded so well, he would have relinquished his experiments altogether—for a while. As it was, partial success only urged him on. More money must be spent, more hunger endured. He was so near the discovery of his secret, that he must now have a private furnace of his own, lest the glass-blowers should become acquainted with it, and the reward of his labor be lost. If he can but accomplish this, his golden visions of fame and wealth will all be realized. But, alas! he is in a miserable plight of *impecuniosity*; he has no money, and but little credit.

"This trial," he says, "was a very happy one in one sense, but very unhappy in another; happy because it gave me entrance upon the ground which I have since gained; but unhappy because it was not made with substance in the right measure or proportion. I was so great an ass in those days, that, directly I had made the said enamel, which was singularly beautiful, I set myself to make vessels of earth, although I had never understood earths; and having employed the space of seven or eight months in making the said vessels, I began to erect for myself a furnace like that of the glass-workers, which I built with more labor than I can tell; for it was requisite that I should be the mason to myself, that I should temper my own mortar, that I should draw the water with which it was tempered; also it was requisite that I should go myself to seek the bricks, and carry them upon my back, because I had no means to pay a single man for aid in this affair." At length he succeeds, after eight months of experiment, in making and baking his pottery; but now it is to be enameled. "I succeeded with my pots in the first baking; but when it came to the second baking, I endured suffering and labor such as no man would believe. For, instead of reposing after my past toil, I was obliged to work for the space of more than a month, night and day, to grind the materials of which I had made that beautiful enamel at the glass-furnace; and when I had ground them, I covered therewith the vessels that I had made; this done, I put the fire into my furnace by two mouths, as I had seen done at the glass-houses; I also put my vessels into the furnace to bake and melt the enamel which I had spread over them. But it was an unhappy thing for me, for, though I spent six days and six nights before the said furnaces, feeding it with wood incessantly through its two mouths, it was not possible to make the said enamels melt, and I was like a man in desperation."

It was, in fact, another failure. Pale, haggard, desponding, he had sat for six days and six nights among his potsherds, the very Job of art, his wants supplied perhaps only by his children, half-pitying, half-terrified at their possessed father—Madame Palissy, not unlike Mrs. Job, probably wringing her hands, and loading him with reproaches, and, in her way, bidding him "curse God and die"; or else seriously meditating a commission "De Lunatico." The failure is indubitable. What then? He will try again; the next experiment may crown all with success.

"Although quite stupefied with labor, I counseled to myself, that in my enamel there might be too little of the substance which should make the others melt; and seeing this, I began once more to pound and grind the before-named materials, all the time without letting my furnace cool. In this way I had double labor, to pound, grind, and maintain the fire. When I had thus compounded the enamel, I was forced to go again and purchase pots in order to prove the said compound, seeing that I had lost all the vessels which I had made myself." Thus he spent three more weeks wrestling with the angel of discovery; who would not yet let the secret go. His faith and patience must be still further tried. He had borrowed money for his last experiment; he borrows more for this, so determined is he to "force a path to the unknown." The new vessels are placed in the furnace, which for three weeks he has kept heated. But another and fatal embarrassment now occurs, his fuel fails him, his furnace fires will go out in the midst of his experiment, and his new baking be spoiled: first, then, he tears up the palings of his garden, a few perhaps may suffice, the enamel may at any moment melt. In vain does Madame Palissy protest, and weep, and wring her hands—he neither heeds nor hears; his demon has assumed a terrible form just now. The last stake disappears. He is a gamester grown desperate. Still the insatiable furnace craves; still the enamel does not melt. The probabilities at this moment are in favor of Madame Palissy, that he is insane, although not as a cause, but as an effect. There are no more palings to burn, and, like a spirit possessed, his eye glaring, his lips compressed, his countenance haggard, he rushes to the house. A tremendous crash; a table is split up and carried away; then follows a chair, then another, for the furnace consumes them all. At last he tears up the flooring. Madame Palissy is frantic at first; then, quelled by the strong and vehement spirit that was working within him, she looks on passively and fearfully, while her household furniture is carried away, and her house pulled down—questioning, perhaps, whether the next log will be one of the children or herself. At length she rushes out of the house, and into the streets of Saintes, proclaiming aloud that her demented husband was burning the house. And what were Palissy's feelings? who shall conceive the terrible agony of his spirit? His was the frenzy of the Pythoness as well as her inspiration. But calmness would succeed; perhaps self-reproach; perhaps a sense of heart-desolateness. Palissy was a devout man; and we can imagine his troubled prayer in snatches of pious psalm: "Have mercy upon me, O Lord, for I am in trouble. Consider and hear me, lest mine enemies say, We have prevailed against him; and they that trouble me rejoice when I am moved. They gape on me with their mouths, as a ravening and roaring lion. All they that see me laugh me to scorn; they shoot out the lip; they say, Aha! aha! I am poured out like water. My strength is dried up like a potsherd, and my tongue cleaveth to my mouth. I may tell all my bones, they look and stare upon me. Have mercy upon me, O Lord, for I am weak. O Lord, heal me; my soul is sore vexed. It is not an enemy that reproveth me, then could I have borne it—I would have hid myself from him; but it is mine old familiar friend, in whom I have trusted, who did eat of my bread—the wife of my bosom. O Lord, be merciful unto me; make haste to help me."[*]

---

[*] Provocations of Madame Palissy.

THOS. DAY,
2 No. 732 Montgomery street, San Francisco.

1000 Acres of Land,
120 COWS,
AND
A Good Milk and Dairy Business,
For Sale at a Great Bargain.
A SPLENDID OPPORTUNITY IS NOW OFFERED to a man or men with a moderate amount of cash to secure one of the greatest chances in the Dairy Business ever offered in our State. The location is near Suisun City, within five miles. There is 960 acres good Land, well fenced, which can be had at $10 per acre, and 120 select COWS for $20 each, together with Engine and Boiler for feeding Stock, Cheese-Presses, Butter-Churns, Cans, Pans, Tools, etc., valued at $1000. All these implements will go to the purchaser without cost.
The Title to the Land and Property is undoubted. There are also 1000 acres of good Land adjoining leased for two years at $1 per acre; this goes also, and the lease can be renewed.
To a good and responsible party this property will be sold on the most liberal terms — say ONE-THIRD CASH, balance on such time as will be satisfactory. Persons wishing to buy will please call on or address COL. WARREN, Editor California Farmer, who will furnish all needed information.

Warm Springs Hotel!
Near the Mission San Jose,
28 MILES FROM OAKLAND.
THIS BEAUTIFUL PLACE OF RESORT is now open for the season for the reception of private families, tourists, invalids, and general visitors.
The Warm Springs are so widely and generally celebrated throughout California, that it is unnecessary here to recapitulate their various qualities. To invalids, they offer the greatest advantages; their medicinal virtues being unsurpassed even by those of the Rhine, so extensively patronized from all parts of Europe and America.
The buildings are new and extensive, affording accommodation for a great number of guests, and containing every requisite usually appertaining to a fashionable Watering-place.
The assistants are the best that can be procured in the State, and being under the immediate supervision of the proprietor, visitors may rely that every attention will be paid to their comforts.
The Table is supplied with every delicacy which can be procured in the State.
Fine hunting grounds and trout-fishing within a short drive the Springs.
14-6m LEWIS BRADY, Proprietor.

Union Hotel, Sonoma.
EBENHARDT & GLASSEN, HAVING purchased the UNION HOTEL, of the late proprietor, Mr. A. G. Oakes, are prepared to give the best accommodations to the traveling public. [15-3m

SPERRY'S HOTEL.
Murphy's Camp.
THE COMMODIOUS FIRE-PROOF BUILDING, lately erected by the subscribers, at Murphy's, has been elegantly furnished throughout, after the most approved style, and is now ready for the reception of guests. Parlors and suites of rooms for the use of ladies exclusively, and parties visiting the "BIG TREES," or other natural curiosities in the vicinity.
The management of the Domestic Department is confided to Mrs. Perry, a lady of experience.
The Bar is stocked with fine WINES, and the larder daily supplied with seasonable delicacies.
Stages arrive and depart daily for Mokelumne Hill, Sacramento, Stockton, Sonora, and Columbia.
Parties of pleasure and transient guests will find every accommodation for their comfort.
20-3m SPERRY & PERRY.

PRESTON'S PLACE
Tomales Bay, Marin Co.
I WISH TO INFORM MY FRIENDS AND the public, that the demand for a house of entertainment at this place has been such as to induce me to fit up my house for that purpose. To parties wishing to pass a few days pleasantly in the country, this locality has few equals. Boat-Sailing, Fishing, Hunting, and gathering Shells on the Bay and Ocean-Beach, are among the pastimes; and then all have "a claim" in the Clam-Beds free of charge. The place is situated 18 miles westward from Petaluma, and is a nice drive, over a good road, through a fine farming country. It will be a pleasure to endeavor to make your visits agreeable.
21 R. J. PRESTON.

UNION HOUSE!
Corner of Main and Center streets,
MOKELUMNE HILL.
Henry Atwood, Proprietor.
THIS SPLENDID THREE-STORY STONE Building, long acknowledged equal, if not superior, to the best Hotels in the Mountains, has been thoroughly renovated and greatly improved and a
SPLENDID BILLIARD TABLE ADDED.
The Dining-room has been divided into a Family Dining-room and Restaurant, both hard-finished, and newly and elegantly furnished. The former will be for regular boarders who may prefer it; the Restaurant will be open at all hours, and be supplied with the best products of the market.
The parlors and chambers have all been thoroughly renovated and elegantly furnished, and will accommodate seventy-five persons.
The Stages all arrive and depart from the "UNION," and for the accommodation of travelers the House is kept open all night.
The proprietor avails himself of this occasion to say to travelers *en route* to the various places of recreation in the Eastern portions of Calaveras county, that no pains will be spared to make their sojourn at the Union pleasant and agreeable.
HENRY ATWOOD.
Mokelumne Hill, May 11th, 1860. 20-3m

DOWNIE HOTEL,
South End of Durgan Bridge,
Nevada street, Downieville.
W. M. DOWNEY, Proprietor.
WITH INCREASED BUSINESS, I HAVE enlarged facilities for accommodating my guests.
The Hotel has just been painted, papered, and carpeted, from top to bottom; and a large number of sleeping apartments, well furnished and ventilated, added to the usual number.
REDUCTION OF PRICES:

Board, per week	$7 00
Single meals	50
Board and Lodging, per week	$8 50 and 10 00
Lodging, per night	25 and 50 cents
Liquors and Cigars	12 cents

[23-3m

Jebb's Patent Churn.
THIS NEW PATENT CHURN IS NOW READY TO be seen and tried. It is beyond question one of the best and simplest constructed Churns ever invented, and Dairymen should call and examine it.
By the action of the crank, three distinct currents are made which moves the cream with such rapidity that Butter is made in from three to five minutes with ease.
This Churn can be seen at the Farmer Office.
Patent-Rights can be had for all the counties in the State, and any experienced carpenter can make a fortune easier by these Churns than by gold digging. They only need to be seen to be approved. 12

The California Farmer.

SAN FRANCISCO:
FRIDAY..............................NOV. 22, 1861.

The "Ladies' Department" of this Journal, under the charge of Mrs. Lizzie Wiley Warren, M. D., will be found on the sixth page, and to which we call especial attention.

Look to Our Special Advertisements.

Our readers will always find important advertisements in our Special Advertising columns. We have at this time Stock-Farms, Orchards, Saw-Mills, and Property to Exchange or for Sale, all worthy Special notice.

Who Grows Flax!

Growers of Flax can have the highest price paid for their crop by applying to this Office, or sending samples of their crop and the quantity for sale.

Advertise Your Trees Early!

Those Nurserymen who have Fruit-Trees, and Grape-Vines, and Garden-Stock, for sale, should by all means make known what they have for sale at an early day.

It is now a well established fact that Orchards and Vineyards should be prepared early in the Autumn, and those who are about to plant wish to know where they can purchase on the best terms. It is therefore for the interest of all who have this kind of Stock for sale to make it known early. By this means they secure the first and best customers.

Our wide circulation will enable all sellers to make known their plans over the whole State.

Durham Cattle.

We invite special notice to the splendid Durham Cattle offered for sale by us in our Special column. Such chances are very seldom given as we now offer.

There is also other valuable Stock offered worthy special notice.

◆

Durham and Devon Cattle, Blood Horses, Leicester and Cotswold Sheep, American Ewes and Lambs, and other Stock, for sale. See advertisements in the Special column.

Sales of Grain and Wool.

Those who desir to realize the very highest price for their Grain and Wool, can be informed of the best chances in our city, where, on all special occasions, they can realize high prices without delay. Samples sent to us from the country, with particulars, will be responded to.

◆

Ten Reasons why every Farmer and Stock-Raiser Should take the California Farmer.

1st. Every Farmer and Stock-raiser should be a reader of the Journal connected with the interests of his own profession in his own State.

2d. Every such person should give his sanction and support, generously and voluntarily, to a Journal that advances his own particular business in his own State.

3d. Every such person is *benefited* by the publication of such a Journal, and is in justice bound to reciprocate such labors.

4th. No person engaged in these employments can be without such a Journal without the loss of many times its cost annually.

5th. The Farmer and Stock-raiser will always be better advised of the markets, and that kind of information so important to his interests by the constant access to a Home Journal.

6th. The California Farmer has faithfully advocated the best interests of the Farmer and Stock-raiser for eight years, and is the only Agricultural Journal in California.

7th. The California Farmer contains the most important information relative to their interests in every branch of Agricultural science.

8th. The California Farmer contains the announcement of all New Seeds, Grains, Grasses, etc., together with all New Implements that will advance the cause of the cultivators of the soil.

9th. The California Farmer contains the arrival and introduction of all the best Stock of all kinds as soon as known, together with the full Market Reports of all the interests appertaining to Ariculture.

10th. The California Farmer is now the *only paper* on the Pacific Coast that is continued by its *original Editor and Proprietor*, commencing at the time this Journal commenced; and having been constant in its efforts for the good of these interests, deserves the cheerful patronage of all good men.

◆

TO CORRESPONDENTS AND READERS.

We are pleased to acknowledge the reception of a well written communication, Health and Happiness, from "Scratchall." It is in type, and will pay for its careful perusal. We hope our correspondent will continue to *scratch* until *all* the errors to which he alludes are eradicated, and in their place the blessings instituted.

The length of our Sierra Valley communication precludes it this week.

We call particular attention to the several communications in this week's issue.

There are several letters on file for coming numbers.

◆

Our Thanksgiving.

A word for ourselves; we would like to enjoy our Thanksgiving Day. Now among the thousands of our subscribers there are many to whom we have sent *compliments* that will help us materially in preparing our "Thanksgiving Dinner"; and the manner in which they respond too, will materially affect our appetite that day for the enjoyment of our Thanksgiving Dinner.

Now seriously and earnestly, can it be that we have many persons who after gathering the bounteous harvest of the present year, would deny us in the enjoyment of our "Thanksgiving Dinner." How can *we* best enjoy on that day as we review our labors of the past year? We can best enjoy by receiving the evidences that those who have had our Journal and our labors remember what is justly due our Journal, and help us with the means that shall prepare us to enjoy our "Thanksgiving Dinner." Such deeds on the part of those who owe us large sums when put together will give us the appetite to enjoy our dinner, and put us in a condition to do as we desire by others.

How much better a man can enjoy his "Thanksgiving Dinner" when he can say, I've paid the Printer, the Minister, and the Doctor, for then he would be free of debt; for these three creditors are generally the last paid.

◆

Are You Insured?—If not, go at once and get insured at Bigelow Brothers & Flint.

Thanksgiving.

Thursday next has been appointed by our Chief Magistrate as a day of *Thanksgiving* to God for the many mercies we enjoy, of Harvest and Home, of Liberty and its many blessings.

The good old "New England" Thanksgiving is near at hand; the day of "roast turkeys," "plum-pudding," and "mince pies;" the day of social gatherings around the family board, where whole households, parents and children, grand-parents and grand-children, meet and are made happy. A glorious day, made more glorious by the blessings growing out of these social gatherings.

Would that the day could be forever perpetuated as it was wont to be kept in good old "New England" twenty-five years ago!

Times have changed, and people have changed, and fashions have changed. This day, though kept alive, is not kept as it should be, and sadly will it be neglected the present year, even in New England, the Home and Birthplace of this glorious day.

Thanksgiving Day in the Old States was the day of all others when the family-circle, as they gathered around the bounteously prepared "feast," would mark the "changes" that had occurred during the year. It was then the "vacant seats" would be seen, and blessed were those families into whose circle death had not come that year!

Alas! this year how many will be called to notice "vacant seats," made so by the calamity of the present war. How many hearts will bleed afresh as they come together and see the "vacant chair," of fathers and brothers fallen on the battle-field, or perhaps now prisoners of war, or wounded, sick, or dying.

The true horrors of this terrible war will come home to New England and all the "Old States" on Thankgiving Day. How terrible the changes made in our country's Fame, Prosperity, Glory, and Happiness, in one short year! From the very highest degree of Prosperity and Happiness at Home, and of Honor and Glory abroad, to the most deplorable position ever befallen human beings—that of Civil War. A war among the people of one nation, one language, one religion; a rebellion and an insurrection in the Family Household.

When and where it shall end God alone knows, but while we gather at the festive board the present year *in this State*, how ought we feel and act in this State. Enjoying as we do, the very highest degree of Prosperity, and being almost beyond the reach of this desolating war. If there is one State in our country more than another that should be thankful to God for special privileges on this day, that State is California; for the horrors of this war and its blighting effect upon business, with its desolation upon "Homes" and human affections, has scarcely cast a shadow upon our golden land.

How thankful, then, ought we as a people to be; how ought we to remember those who have suffered and are suffering; and how ought we to remember and care for the poor and destitute in our midst; as well as those with whom we may be allied who are far away, and now "under the cloud" that darkens all the land.

"Thanksgiving Day" of 1861 will be a *momentous day* for our country, and while we mourn and lament for the darkness that now overshadows our land, we look forward with an eye of faith to the day near at hand when the darkness shall pass away, when "wars shall cease," when blood shall be no more shed in this fair land, when the whole entire country shall be again United under *one Constitution and one Flag!* Then shall the Stars and Stripes be unfurled with Glory, and a new Thanksgiving Day be appointed; then to the family table, embracing our whole country, North, South, East, and West, the Atlantic and Pacific, all shall come to the feast, and bless God that amid all the perils through which we have passed, we are now a Free, United, Happy, and Prosperous people again.

God grant that we may so enjoy the present year's Thanksgiving Festival as to be prepared to enjoy that great and glorious one of 1862, that we have described above, our National Redemption and National Reunion, whose Thanksgiving Chant shall echo from sea to sea, and from the utmost Eastern shore to the Rocky Mountains!

◆

Sugar-Beet—Beet-Sugar.

The California Farmer recommends the raising of the Sugar-Beet in that State, for the purpose of manufacturing its juice into sugar. The thing has been tried in the Eastern States and proved a failure. The Chinese Sugar-Cane and the African Imphee, are much better saccharine plants. They yield a large amount of rich juice, so as to give from 100 to 200 gallons of sirup per acre. California would undoubtedly produce these plants in great perfection. There has been difficulty in effecting granulation; but thorough chemists have made discoveries by which this is easily effected. We should have great confidence in an effort to supply California with sirup and sugar from the African and Chinese canes, but none from the beet.—[Oregon Farmer.

Not so fast neighbor; the Chinese Sugar-Cane and the Imphee will do very well, and will undoubtedly be extensively cultivated for Sugar and Sirups, and so will the "Sugar-Beet." It may be all true that some trials were made in the East without success, on account of climate and want of knowledge, but when you say the *Sugar-Beet will not produce Sugar*, you speak without proof. It has been successfully tried more than five years ago in this State, and millions of pounds of Sugar are now imported into this State from France and Germany, made from the Beet-Root. Perhaps our neighbor of the Oregon Farmer is not aware that France realizes 900,000,000 francs annually from the Beet-Root—nearly two hundred million dollars; and California has a climate and soil equal and even superior to France, as our crop of the Beet-Root has shown. Many instances have been given where forty and fifty tuns per acre has been raised.

We look forward to but a little time hence when we shall have large manufactories for the extracting of the Sugar from the Beet-Root, and to the saving of one-half the cost of the Sugar now imported into our State.

Napa County Farms.

Napa is a rich county, and has rich lands and good homes. In our late hurried trip thither to collect some data of the Grain crop, we found much to interest. Beside those we named in our last number, we called at the vineyards of Mr. Miner and Dr. Southwell; both good vineyards and fine locations; regretted the absence of the proprietors. At Brown's Valley, Mr. Amesbury has a fine farm, as also Mr. Dewees; thence to the Napa road to Messrs. Sigrists Brothers. Mr. Edginton, a fine grain farm and stock farm; Mr. Bacchus a grain farm; Mr. Mansfield a very extensive grain ranch; thence to Mr. J. Reed's, Mr. Norton's, and Mr. Latson's. This entire route is full of extensive and practical farmers; being at the hour of twilight, we had to forego much of the investigation we had desired. Higher up the valley is the farm of the late Gov. Boggs, a large and valuable grain farm, and orchard full of fruit yet on the trees. This farm has about 3000 sacks Wheat. Farm of A. G Boggs, near by, a good farm, about 3000 sacks Wheat. E. Randall, a fine grain farm, 90 acres, yielding 1700 to 1800 sacks Wheat, planted too late. The Wheat was admirably cleaned. We noticed, too, the saving of the Wheat straw, stacking the same. This is wisdom; those who burn their straw regret the same before the winter is over. Mr. Thomas B. Hopper's stock farm. Here was a fine show of brood mares, and also some young blood stock of the Cheatem and other choice blood. We saw some young colts which were perfect pictures. From this on all the roads the valley is full of fine Farms. Several splendid Farms of the family of Boggs, Mr. Fisher, Mr. Clarke, and a host of the real live working Farmers, and many Stock Ranches.

Napa Valley is, indeed, a veay beautiful spot. Rich in soil, beautiful in scenery, and full of all the materials for a great population, and a very prosperous one, too.

We could not but notice with regret that so many were burning their straw. This we esteem bad policy, for Wheat and Barley-straw can be used for Stock with great advantage, and when not wanted for food or fodder, it should be carted to one side of the field to make manure.

◆

The Sulphur Springs, Napa.

While among the Farmers in this region recently, we enjoyed a ride in the saddle through the wild and beautiful scenery that surrounds and overhangs the road that leads through the cañon to the Sulphur Springs. Even at this season when all vegetation is parched and faded, there is still a glorious charm in this region; the great variety of forest trees and mountain shrubbery with their changing foliage presents a picture of beauty and grandeur beyond the skill of any human artist to copy.

It was near the sunset hour we galloped briskly onward; the bright rays of the departing "god of day" cast a peculiar tint of beauty over all that they touched, sending a thrill of more than ordinary pleasure to the heart,

> As fall the snow-flakes from light clouds o'erhead,
> Or diamond rain-drops when from sun-clouds sped,
> So fell bright "Autumn leaves" upon the ground,
> Strewing our path with beauty all around.

Our visit was brief, yet comprehensive; all our senses were awake and tuned aright for the enjoyment of such a scene; the lark was caroling its evening anthem; fleecy clouds played about the mountain tops, gathering rainbow tints from the sun, and throwing them at our feet, as it kissed a bright and loving "good night"; the gentle wind made music with the foliage of the trees like an hundred eolian harps, while the gurgling waters with their yellow foam swept over their pebbly bed as the chorus to the other harmonies around.

We cannot but wonder that a place so beautiful and so charmingly quiet has so few visitors, even at this season of the year. This spot should be better known, and although far removed from our city it is worth all the trouble and cost when found and enjoyed. A few years and a Railroad from Benicia will place it within three and-a-half to four hours from our city. Then for a rest to the Elysian bowers and famed baths of marble that will be enjoyed, while a spacious hotel which will accommodate three hundred guests with luxurious comfort will grace this magnificent rural retreat.

◆

Increase of Gold in the United States.

It would be supposed that the war would impoverish us, make money scarce, and bring on national bankruptcy and ruin; that it deranges the ordinary channels of trade is true, but while it may bankrupt some, it builds up others, and our country instead of growing poorer is growing richer, as will be seen by the accumulation of the specie in the country.

In order to account for this, we must understand that the immense cost of this war, is not *lost* to the country; treasure only changes hands; the immense cost of all the forage, arms, ammunition, horses, clothing, transportion: all this is paid for by the Government into the hands of the Producers and Manufacturers, and this again loaned to the Government—it only changes hands.

All this while Gold is increasing all over the country in a greater ratio than ever before, and our exports are beyond that of any former year. It is estimated that our exports in 1861 exceed the ordinary amount by nearly *one hundred millions of dollars*, while our imports will fall short of former years nearly *one hundred million dollars more.* Here is an amount greater than the cost of the war up to the close of the year 1861, and it is equal to an actual gain of four hundred millions of dollars.

By the reports of all the Banks, at the close of this year it will be found that the United States will hold in specie an amount that will control the exchanges of the world, and will be vastly greater than ever known before.

◆

Fine Turnip.—We received from J. M. Patterson, Esq., of San Jose, a sample of some fine turnips raised by him,—the large white Russian. One sample sent weighed six pounds. We tried it and found it of solid texture; flesh fine, sweet, and very excellent; a turnip that should be grown, as it keeps very late, and retains its qualities.

Truly Magnificent.

Whatever there has been of elegance and beauty in other States, in any department of art or science, of manufactures, or of inventive skill and genius, it has not been long known ere California would copy and improve upon it. This has been the case with many manufactures and inventions. It seems to be the "forte" of California to *progress* beyond former efforts.

In a few days the public will be invited to visit the *magnificent new store* of J. W. Tucker & Co., on Montgomery street, which will be found to prove what we have just said, and to surpass all former styles in fitting up ever before attempted in this country, and to rival the famous marble palaces of the "Stewart's," the "Tiffany's," and other gorgeous and costly establishments in the old States.

Tucker's new store will present to the eye an entire new and unique design in store fitting and furniture, at once chaste and beautiful, yet most superbly magnificent. It were impossible to give in detail all minute items of finish; suffice it to say, the whole interior of the store is fitted up with rich mahogany side cases, embellished with carved work and mouldings of the most finished designs. The glasses in the side cases are of the heaviest and most costly plate, being each 40 by 60 inches, encircling the entire store; the shelves and back of the cases being lined with royal purple velvet. Every article shown will appear as if suspended, thus showing in bold relief. Mirrors intersect the upright cases at proper distances to give relief. In center and at extreme other mirrors of gorgeous dimensions and style as reflectors. The counters are of the finest and richest-grained mahogany, with carved supporters of the most elaborate workmanship, and upon these are placed ten glass cases, each eight feet long; each case having plate glass of the entire size, the whole of the highest finish.

The front windows are the "chef-d'œuvre" of all, in the richness and grandeur of their appearance, the entire front being but one plate of glass to each window, of enormous thickness, yet purely clear, and being each *five feet wide* by *eight feet high*, with side and top mirrors to complete their grand appearance. It will be impossible to conceive of anything more grand and beautiful than this design, and when the store is fully furnished with the rich silverware on all sides, the cases filled with costly wares and sparkling with gems; the contrast with the dark cases and the shining ware, and the pure white frescoed ceiling overhead, it will prove a truly grand tableau; then, when the brilliant jets of gas shall give their brilliancy, it will show like some fairy cell of hidden treasures illumined by Aladdin's Lamp over the treasures of fabled genii.

We have thus spoken at length of this magnificent fitting up, because we are proud to say the whole of the carving, finishing, and putting up will redound to our own California workmen.

To Messrs. Tucker & Co., will be accorded the deserved honor of showing to their patrons the most superb establishment on this coast, and it is not too much to say their stock of goods of all kinds will always compare with the elegance of their store, to which many thousands will soon flock to witness what can be done in California by California workmen for California merchants.

◆

Triumph in Silver Manufactures.

A few years since and every silver spoon, fork, butterknife, goblet, or napkin ring, was made across the water. California was dependent on Foreign manufactures for every article made. Now, thanks to the genius and enterprise of our workmen, California can turn out as beautiful Silverware as any part of the world.

The manufactory of Vanderslice & Co., is worth a visit. Some of the finest artistic work known in pitchers, goblets, knives, forks, spoons, and every variety of Silverware is manufactured in our own city. This firm keep eleven men constantly at work, and it should be the pride of every citizen to give their preference to *California-made ware.*

Christmas and New Year's is near at hand, and we hope every family in the State when they go to buy ware of this kind, will always be sure to *ask for and buy only* Home-made ware. Purchasers can visit the manufactory and give their orders, or go to *Tucker's* in his magnificent new store, that will be opened in a few days, and have them made to order.

There is one thing of great importance to new beginners at House-keeping, it is much cheaper for them to buy Silver tumblers or goblets, than to buy glass-ware. Any person that will make the experiment will find it much more economical to buy Silver than Glass. The amount of broken tumblers in a family would buy Silver ones twice over in a term of ten years; for six fine goblets can be bought for $75 to $100, and the interest on that sum is broken many times in a year, while the silver ones last a life time, and then are worth almost the original cost.

The public owe their best encouragement to Vanderslice & Co., for what they have done to introduce California Silver-ware of beautiful workmanship at prices even below that of Imported ware, and far better in style, and quality also.

◆

Loss of Cattle, Sheep, Etc.

We hear of losses of large quantities of cattle in various parts of our State by actual starvation, and many by exposure. We are not surprised at this, for we have seen large herds of common cattle upon barren fields without a vestige of feed, when it would have been mercy to have knocked them on the head. How much better would it be for such owners to sell thousands of such cattle even for a trifle, and have them better cared for, then sell thousands of their acres of land (useless to them), and then improve and cultivate hundreds of acres, next procure a few dozens of good stock, and in a few years such farmers would be rich instead of poor as they now are, with their large herds of stock and extended farms. We have lately had evidences of what the result has been to those farmers who desire to "own all out doors," and have the largest farms, and the most extensive herds and flocks in the State; the consequence has been ruin to them and great injury to all connected with them. We hope to hear a better song soon, that of "a little farm well tilled."

◆

Hobbs & Gilmore's Wine.—Messrs. Hobbs & Gilmore have at their Wine Depot some Wine that will do credit to our State. They *guarantee* all their Wine pure, and purchasers can rely upon it.

Medical Department of the University of the Pacific.

The regular course of lectures in this institution commenced on the 4th instant, the first Monday in this month. The class of students already numbers twenty, and it is probable that this number will be considerably augmented during the progress of the course.

The opening lecture was delivered by Dr. Henry Gibbons, the newly-appointed Professor to the chair of Materia Medica. He began by passing an encomium on the efforts of the members of the faculty who had founded this institution, and which despite the severe and uncalled for opposition that had been brought to bear against it by certain members of the Medical Profession here, had ever continued to live and flourish. He stated that he would have been proud to be numbered among the founders of this School. The remainder of the lecture was devoted to giving a brief history of Medicine, and to detailing some of the systems which were taught by the Greek and Roman Physicians.

In the evening, there was a public introductory lecture, delivered by Dr. L. C. Lane, late of the U. S. Navy, and recently elected to the Professorship of Physiology in this School. This was listened to by a full audience, and regarding it as the initiatory effort of Professor Lane as a public lecturer, it was considered as highly creditable to him, and if taken as a criterion to judge by augers well for a brilliant career in his new capacity, as lecturer upon Medicine.

We will take the liberty of making an extract or two from those portions of his lecture which struck us as highly eloquent and beautiful. In speaking of the immutability of the laws which govern animal life, he said:

"The principles of Physiology are interesting on account of their perpetuity and unchangeableness; they remain to-day and in future, constant, and fixed as they were thousands of years ago. Similar to the Draconian laws, they are engraven in blood, though unlike them in brevity of existence, their duration is coeval with organized life. Though laws, customs, manners, tastes, and language, together with the objects and pursuits of human ambition, are ever changing, still the laws which control life and organic existence remain forever the same, more enduring than the granite and sandstone on which our hills rest. The note of the nightingale, which singing 'dashling' enraptured the ear, or the rainbow-tinted plumage of the humming-bird which hovered around and sipped mellifluous sweets from the convolvulus which spread its floral munificence over the azaleas and rhododendra of Eden, were govered by the same laws of vibration and reflex as to-day govern the same objects.

"Geology, in the numerous contributions which it has made to comparative anatomy, in bringing forth from the chambers of the earth, where they had been concealed for ages, the relics of numerous animals, some of which do not now even exist, has furnished ample evidence of the constancy and continuity of plan that has been adhered to in the introduction of the varied forms of animated existence, on the part of the Author of Nature. In the *fossilized* eye of the trilolite that exists abundantly in the Silusian formations of the Ohio Valley, when its various facets and general conformation are studied with reference to the reflexion, refraction and transmission of light, it is discovered that the light-wave was governed by the same laws, myriads of years ago, as to-day. And though no Newton was there to note the equality between the angle of incidence and that of reflection, or to observe that when a ray of light passed from a rarer into a denser medium, it was bent from its original course; and though the cone had been cleft by no mathematician's hand to study its sections, and to apply the principles of the ellipse and parabola to the construction of lenses, still the same laws which now govern the light-wave then existed, and were obeyed by every ray that painted its image on the retina."

Near the conclusion of his lecture, in recommending industry and application to the student, he said:

"In the practice of our profession, one is constantly reminded of the brevity of human existence. Hippocrates, the illustrious and ever to be venerated Father of Medicine, commences his Aphorisms with the remarkable sentence: *Vita brevis, ars vero longa;* that is, "Life is short, but art is long," or of vast extent. Still, with proper application, it is surprising how much may be accomplished within even a limited period of life. This was illustrated in the career of the immortal Bichat, one of the most successful cultivators of science of physiology, who died at the age of thirty-one years. So highly are his discourses in this department estimatated, and so profoundly venerent are his countrymen of his genius, that, as an imperishable evidence of their admiration, they have assigned him a prominent place in the illustrious group, which, in the marble frontispiece that emblazons the portico of the Pantheon, are placed as the first representatives of the glories of France, and, as such, are receiving from the Goddess of Fame, crowns of immortality. Besides this monument, erected by a grateful people to the glory of Bichat, he has left his name in a still more enduring one, viz., the Fissure of Bichat, engraven by the temporal bone on the human brain, where it will remain imperishable and indelible, and secure against the revolutions, which at times have threatened the destruction of the Pantheon, and have disturbed the repose of the dead that slumber beneath it."

◆

The National Loan.

Every friend of our country that has Means that he can spare, should now invest it in this Loan. We hope the Land of Gold will prove true to our Union, and show its faith and devotion by a liberal subscription. We are glad a public meeting is to be called at Platt's Hall, in our city, to-morrow evening, for the purpose of arousing proper attention to the subject. Starr King will address the meeting. Let it not be said that our State is backward in so noble a cause. Let it not be said that the patriotism of the Golden State is all for the "loaves and fishes" gathered by fat contracts, but let it show itself in a solid testimonial of its abiding faith in the Union.

◆

Wine Manufacturing.—We spent a very pleasant hour at the large Wine Manufactory of Messrs. Grozinger & Co., of this city. We found all the material, machinery, warehouse, wine-cellar, as well as the care and attention necessary on the part of the enterprising firm for a successful business. One thing is certain, what they do they do well and faithfully; they have now on hand as pure and good Wine as any house, and they are determined to *win* a name and fame for good Wine that shall secure success. We have many items which are shall give hereafter. Messrs. Grozinger & Co. are also successful manufacturers of Starch at the same warehouse, of which we shall speak hereafter.

STATE SUMMARY.

The attaches of the Custom House of San Francisco, subscribed $16,000 to the National Loan; those of the Mint, $10,400—making a total $26,400 from the two establishments.

A heavy haul was made by Messrs. Dungan & Co., with a seine at their Eel river salmon fishery, on the 7th instant, when they caught 2,600 salmon—making 140 barrels of fish.

The trial trip of the little steamer "76" up the San Joaquin and Tuolumne rivers proved a failure, the boat having been compelled to lay up at Shepherd's Ferry to wait a rise in the river.

Sleigh riding has commenced in Sierra county, and sleighs are now making regular trips from La Porte to St. Louis, Pine Grove, Watsonville, and Newark. The sleighing on Thursday and Friday, the Messenger says, was excellent.

A new style of express is to be used in the mountains this winter. In Sierra county, Robert Francis has procured harness for three dogs, to be hitched tandem to a sledge, and expects to carry 800 pounds, going over the snow like a Laplander with his reindeer.

The entire expense of running the Sacramento Valley Railroad between Sacramento and Folsom for the month of October is reported to be $9432 80; the entire receipts, $28,820 05; profits for the month, $18,367 25.

The regiment of Col. Bowie will be full by the 1st of December. All the companies of Col. Lippett's regiment have attained the minimum requirement of members, say 58. Col. Connor's regiment will be filled on or before the 1st of December.

A resident of Clear Lake gives the following as the contributions of cheese to San Francisco market, by three dairies located in that vicinity. A. Spencer, about 12,000 pounds; Dan Giles, about 20,000; and Orren Brown about 12,000—total 44,000 pounds, or 22 tuns.

The soil beyond French Camp has been found to be peculiarly adapted to the successful growth of rye, says the Stockton Independent, and for several years past the principal part of that cereal produced in this county has been grown in the locality above named. The demand, however, is too light to warrant the cultivation of large crops.

California's share of the direct tax is $354,000; amount of customs collected here, $1,604,000; total of one year's payments to Government, $1,958,000. In return Government will expend here the coming year eight or ten millions of dollars, for military purposes; leaving us with a clear profit of from six to eight millions on that one item alone. Can we not *afford* to take liberally on the loan?

San Francisco and San Jose Railroad is being rapidly pushed forward. All the necessary ties, rails, and bridge timbers have been contracted for and will be delivered on the ground by the 1st of April next. The Supervisors of Santa Clara county have just authorized the issuance of $20,000 (being 10 per cent of the county's subscription), in bonds for the further prosecution of the work.

The late rains may have been of great benefit to farmers, but the rat interest has been unfavorably affected by them. The Union says: "At Richards' slaughter-house, on the lower Stockton road, two and a half miles from the city, two hundred and fifty of these innocent creatures were drowned out of their holes and killed, a few days ago. Like Jim Lane on the mule question, Richards and his dogs considered it 'not much of a rat day either.'"

One of the most successful cultivators of the grape at Columbia, the Courier says, is Gen. O. H. Allen: "He will manufacture, this season, about 1500 gallons of most excellent wine. Last year he made 340 gallons, which were sold to one dealer here at $1 37 per gallon. All that can be manufactured of a quality equal to that of Gen. Allen's will find a regular market in this city, at about the price named. He estimates that at present the person who manufactures a good wine realizes about ten cents a pound for his grapes."

The city of Sacramento has established a grade for the principal streets of that city. The grade of I street to be twenty-two feet six inches above low water mark, J street to be six inches lower, and each succeeding street to be six inches lower than the next street north. The streets running north and south to be on a grade forming a straight line across the other streets from I to R, thus giving a uniform descent of six inches to a block. J street will have to be raised about twenty-one inches to conform to this grade, and will then be just on the high water line.

Judge Hoffman has rejected the survey of the Folsom grant, in Sacramento county, and decided that it should be located in a tract two leagues wide, commencing at Sutter's grant, and extending four leagues along the general course of the American river, on its southern banks, by two leagues wide, constituting eight square leagues, in a form not far from rectangular, and as near as may be such as the grant and description clearly show was intended to be given. By this decision the town of Folsom is not included in the grant.

The Rainy Season fairly commenced on the night of the 10th instant. The first storm has been a long one, a good quantity of rain has fallen, and it seems desirable to make a particular record of it. In San Francisco, during Sunday evening, the 10th, quite a breeze seemed to set in from the South, and about ten o'clock the rain commenced and continuing liberally through the night. The storm lasted through the week, raining mostly at night, with occasional glimpses of sunshine in the day-time. On Monday morning, 18th, the weather was clear, and frost with some ice was visible in spots. Rain commenced the following night, however, and Tuesday was one of the *regular* rainy days. On Wednesday the weather was fair, and so it continues; therefore the storm appears to be over. The rain seems to have extended generally over the State, and the time of commencement varied but few hours from San Francisco, except in the mountains. Of course the streets of cities are muddy enough, and the roads in the country are heavy for traveling. But the Farmers will rejoice, for many had waited anxiously for the signal to commence the season's work, and the ground is supposed to be sufficiently soaked to admit of plowing. Now then commences the busy season with the Farmers and Orchardists, that is, if they would "take time by the forelock." In the mountains it appears the storm commenced earlier than in the valleys, and was mostly snow, giving a touch of real Winter. Over the Placerville route to Carson Valley the snow was six or eight feet on the summit, and the stage and other travel was somewhat impeded. At La Porte, Sierra county, the Messenger says, the storm commenced Saturday (9th) with rain, the first of any account this season, then turned to hail and snow, with high wind, and finished off Tuesday, leaving about a foot of snow on the ground. The stage from Marysville has continued regular in spite of the storm. The Marysville Appeal says, on Tuesday (19th) the foothills were seen to be streaked with snow as low down as at any time last winter. All of the incoming coaches from the upper country reported that the snow was coming pretty nearly to the usual winter line. Private letters inform us that snow was four feet deep only ten miles above Nevada on Monday night last. The Appeal adds, "the sudden transition from dry to wet weather has been attended with a cold snap, which, in these parts, is a thing to be sneezed at. Tuesday morning ice was found in shallow pools of standing water, and all day the cold wind blew through the town, while the rain fell at intervals throughout the gloomy day. The weather is clear and beautiful here in San Francisco, now.

The Pioneer Temperance Laborer.

It is with great pleasure we give our readers the following letter from our highly esteemed friend, the Rev. I. S. Diehl, whom we are glad to know has been appointed U. S. Consul to Batavia, a place that he will fill with honor to his country, as well as to himself.

This is one of the right kind of appointments, from which we anticipate great good to our country, for with a self-sacrificing spirit we know he will labor faithfully for the Government in its highest and truest interests. We rejoice to know he has so kindly and faithfully remembered our State. For his kind personal regards and attentions to ourselves we are truly proud. We remember the calamity that befel him in the ill-fated steamer that blew up, by which he lost a limb, and suffered greatly. We know the author of his suffering. But now his good fortune smiles on him, and we rejoice with him. We shall do as he desires, and shall reciprocate all his kind favors, and shall be most happy to hear from him often. His letter will be found of interest to our readers:

Boston, Mass., Oct. 15th, 1861.

Editor Farmer: I sail to-day for Batavia, Java, the place of my appointment as U. S. Consul. I must confess it is a new field and world to me, and I accepted the position and go with some degree of reluctance and misgivings as to my ability and pleasure to reside there. But I go determined to discharge faithfully my duty to my country, myself, and my Maker. I am taking out with me a large supply of "Seeds" and "Reports," from the Agricultural Department, Patent Office, Washington; also, Catalogues from nearly all the leading Agricultural and Manufacturing establishments from Philadelphia, New York, and Boston, with the intention of liberally distributing the Seeds for experimenting, and the procuring all the varieties of Cereals, Fruits, and Flowers of Java I can, that may be of interest to our country, and return them to the Patent-Office. As you are the "Agricultural Depository," "Bureau," "Pioneer," and "Reformer," of California, I shall be very happy to send you all Seeds, Fruits, and Flowers, I can, for distribution in California, in which I take an abiding interest. As a thorough Californian, I wish to promote her interest in every way, by contributing to her Agricultural, Commercial, or Manufacturing, as well as I endeavored to her Moral, interests. I hope I may stand, as one of her Pioneers and adopted sons, as a sentinel upon the highway to China and India, and be a link in the great chain of commerce and travel that will soon be thoroughly formed and surround the world. Java has 11,000,000 of inhabitants, Batavia 118,000, and near the center and emporium of Malaysia with her 30,000,000 of inhabitants; mostly in the possession of the Dutch, and being somewhat of a Dutchman myself, as well as Pennsylvania German, I hope to be able to succeed. I am taking with me two interesting cameras, and a complete Photographing establishment, to practice at my leisure and *take the country*, illustrate it if permitted and able, when I may send friend R. H. Vance specimens of California enterprise—I hope I may add, success.

The History of Java is truly interesting, dating back into the unknown past, thousands of years, as they say, while her ruined temples, once magnificent and great, now tell of her once flourishing condition, far advanced in Arts, and Civilization, and Religion, above what she is now; but more of that anon. I shall be very happy to send you per every opportunity something of and for your department and for distribution.

Any suggestions, information, advice or speciality, you have to make or have collected, I shall be happy to receive. I should like to see the California Farmer in Java, and if you can send it to me, and I can repay you by a communication or items as far as able, I shall be pleased to receive it. My kind regards to my old friends, and success to you.

I have the honor to be, very respectfully,
Your obedient servant,
Israel S. Diehl,
U. S. Consul, Batavia, Java.

From the East.

The Overland Telegraph does not work very regular as yet, as frequent interruptions occur from storms and other causes. The latest dispatch published yesterday, is dated New York, November 15. The capture of Messrs. Mason and Slidell is confirmed. They were taken by the steam-frigate San Jacinto, with all their documents and papers, from an English steamer at the Bahamas, the captain of the latter protesting.

The steamer San Jacinto has just arrived at Fortress Monroe from the coast of Africa, via the West Indies, where she had been cruising six weeks. The Fort was electrified by the tidings that the San Jacinto had on board Messrs. Slidell and Mason, who were going abroad as Ministers of the Southern Confederacy. Com. Wilkes would report at headquarters in person. The Belvidere had been repaired, and will leave for Port Royal to-morrow, with mails and dispatches.

It is reported, but not confirmed, that the Union men of Tennessee have taken possession of Bristol.

It is reported from Savannah that, in consequence of the victory of the Federal fleet at Port Royal, everybody was greatly alarmed. Several parties who were packing up to leave, had been notified by the authorities that they would not be permitted to carry off their goods.

Previous dispatches state Wm. M. Gwin, Calhoun Benham, and J. L. Brent, of California, were arrested by Gen. Sumner on the Uncle Sam, just before reaching Panama, and taken to New York, notwithstanding the Governor of Panama endeavored to prevent the passage of the prisoners across the Isthmus. They have since been released on parole not to leave the country without the permission of the Government.
